(Order No. 3,012.)

U. S. Patent Office, *Washington, May 10, 1927.*

Acting under the provisions of section 487 of the Revised Statutes of the United States as amended February 18, 1922, Frank Waterfield, of Fresno, Calif., whose registration number is 3,404, has this day been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

U. S. Patent Office, *Washington, June 22, 1927.*

Henry F. Bauer, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent filed by Harry Aaron, 415 North Washington Avenue, Scranton, Pa., and Patent No. 1,494,573, issued May 20, 1924, to Henry F. Bauer, Wheaton, Minn., and a notice of such declaration sent by registered mail to said Henry F. Bauer at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Henry F. Bauer, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

ADJUDICATED PATENTS.

(C. C. A. N. Y.) The Fischer patent, No. 1,337,897, for an adjustable cap, claims 1 to 4 *Held* valid and infringed. (D. C.) *Fischer* v. *Ostrofsky*, 18 F. (2d) 964, decree affirmed 18 F. (2d) 965.

(D. C. Mich.) The Hem patent No. 1,537,169, for check-link mechanism for weighing scales, claims 1, 4, 10–14 *Held* invalid, and infringed, if valid. *Toledo Scale Co.* v. *Barnes Scale Co.*, 18 F. (2d) 965.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Design Pat. 66,249, M. W. Stoll, Newark, N. J., Watch casing, decided May 25, 1927, a single claim.

Pat. 1,520,668, J. T. Wilkin, Fluid-governor meter, decided June 17, 1927, claims 1 and 2.

Pat. 1,541,609, C. W. Adams, Contact brush for electric motors and generators, decided May 26, 1927, claims 1, 2, and 3.

Pat. 1,550,666, Bates, Mercer, and Gillings, Zone metering system, decided May 16, 1927, claims 18 and 20 to 26, inclusive.

Pat. 1,584,344, A. Aldrich, Paper-making machine, decided May 28, 1927, claims 1 and 2.

Rule 72.

Rule 72. After the completion of the application the Office will not return the specification for any purpose whatever. If applicants have not preserved copies of the papers which they wish to amend, the Office will furnish them on the usual terms.

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Sketches filed to show proposed changes in construction must be in permanent ink. (See Rule 30.) Substitute drawings will not be admitted in any case unless required by the Office.

Printed Copies of Trade-Marks.

A printed copy of the drawing and statement of any registered trade-mark can be obtained for ten cents.

2251

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE SCHLAICH.

Decided October 1, 1925.

1. PATENTABILITY—INVENTION—FLATTENING OF CAPILLARY TUBE.

Where applicant lessened the area of his capillary tube by flattening the tube throughout its length, and in the patent to H. the tube was flattened to accurately gauge the area and a wire was passed into the principal part of the tube and the area of the opening in the other part reduced, and deformed tubes were shown in many prior patents, *Held* that the claims are unpatentable over the cited art.

2. SAME—SAME—SAME—DIFFERENCE IN BORE IMMATERIAL.

Where applicant urged that he was dealing with very fine capillary tubes, while some of the references relate to capillary tubes of large bore, *Held* that this difference is immaterial, since there is no patentability involved in converting a large machine into a small machine or the reverse.

[Affirmed by the Court of Appeals of the District of Columbia, 360 O. G. 5.]

APPEAL from Examiners in Chief.

Application for patent for small-bore tubing and the making of same filed April 10, 1918, Serial No. 227,754; application for patent for temperature-indicating device filed February 23, 1918, Serial No. 218,801.

Mr. Wm. F. Nickel and *Mr. Edmund Quincy Moses* for the applicant (*Mr. Joseph H. Milans* of counsel).

FENNING, *Assistant Commissioner:*

These two appeals were argued together, and a single brief entitled in both cases was filed. The concept of the two applications is the same, and they will be treated here together.

[1] The Hodgkinson patent [No. 1,063,349] points out the defects of the prior art which the applicant seeks to obviate. Hodgkinson also says that they can be overcome by making the cross section of the capillary tube as small as possible. He shows such a capillary tube flattened so that "it is possible to accurately gauge the area" of the tube. Hodgkinson proposes to pass a wire into the principal part of his capillary tube and reduce the area of the tube opening to the part not occupied by the wire. Applicant proposes to lessen the area of his tube by deforming or flattening the tube throughout its length. Deformed tubes are shown in many prior patents. Bourdon [No. 9,163] shows substantially the same deformation as applicant. Serpollet [No. 535,866] (page 2, lines 39–55) explains that the area of capillary tubes may be varied by deforming the tubes to a greater or lesser degree. See also Fig. 1 of Quiggin [No. 434,804].

A detailed discussion of applicant's specific claims and of the references is contained in the actions of the Examiner and the Examiners in Chief and need not be repeated here.

It may be that, as applicant suggests, no one had put into commercial use a deformed capillary tube in connection with a thermometer before applicant; but invention may nevertheless be negatived if the possibility of so doing is indicated in the prior patents, as it clearly is.

[2] Applicant objects to some of the references, and even to some of those which specifically refer to capillary tubes. In some instances where the prior patents employ the term "capillary" with respect to their tubes applicant says they are not the same capillary tubes as his capillary tubes, that he is dealing with very fine capillary tubes, and that the prior patents relate to capillary tubes of large bore. This may be so, but there is no patentability involved in converting a large machine into a small machine or the reverse. (*New England Motor Co.* v. *B. F. Sturtevant Co.*, 150 Fed. 131; *Philips* v. *Page*, 24 How. 164; *American Road Machine Co.* v. *Pennock and Sharp Co.*, 77 O. G. 633, 164 U. S. 26; *In re Pein*, 201 O. G. 570, 41 App. D. C. 586; *Willamette Iron & Steel Works* v. *Columbia Engineering Works*, 252 Fed. 594.)

Since the argument applicant has filed amendments reducing the number of claims. Those amendments will be entered.

After a very careful review of the record in view of the elaborate brief and the argument I am unable to find patentability.

The Examiners in Chief are affirmed.

FORD MOTOR COMPANY v. MCADOO.

Decided June 29, 1926.

1. TRADE-MARKS—"FORD"—FOR CIGARS, CHEROOTS, ETC.

Decision of the Examiner of Interferences dismissing a petition by the Ford Motor Company for the cancellation of trade-mark registration by John A. McAdoo for cigars, cheroots, stogies, and little cigars affirmed, said trade-mark consisting of the word "Ford" and the grounds of the petition being that the mark is the name of a corporation and is identical with petitioner's registered trade-mark.

2. SAME—CORPORATE NAMES—ACT OF 1920.

Under the Trade-Mark Act of March 19, 1920, a corporate name may be registered as a trade-mark when a trade-mark right thereto has been established by using it in commerce on goods of different descriptive properties from the goods of the corporation.

APPEAL from Examiner of Interferences.

Petition No. 1,210 for cancellation of trade-mark of John A. McAdoo, registered January 29, 1924, No. 178,954, for cigars.

Mr. E. L. Davis, (*Mr. Clifford B. Longley* and *Mr. C. R. Halbert* of counsel) for Ford Motor Company.

Mr. Henry M. Wise for McAdoo.

MOORE, *Assistant Commissioner:*

[1] This is an appeal by the Ford Motor Company from the decision of the Acting Examiner of Interferences dismissing its petition for the cancellation of trade-mark registration No. 178,954, January 29, 1924, by John A. McAdoo, for cigars, cheroots, stogies, and little cigars, said trade-mark consisting of the word "Ford."

The stated grounds for the application for cancellation are:

1. That the mark Ford is unregistrable because it is a word "which consists merely in the name of a * * * corporation, * * * not written, printed, impressed or woven in some particular or distinctive manner.

2. That the word Ford is identical with the registered trade-mark Ford of the applicant for cancellation so would be likely to damage the applicant for cancellation by misleading and deceiving the public into believing that the goods of the applicant are goods of or authorized by the applicant for cancellation.

3. That the mark Ford is not the exclusive property of the registrant in the United States.

The registration sought to be canceled was registered under the Trade-Mark Act of March 19, 1920.

[2] 1. Under this act, as it has been interpreted by the Solicitor of the Department of the Interior, 1920 C. D. 89, and in *Certain-Teed Products Corporation* v. *Clark*, 337 O. G. 476, 1925 C. D. 57, a corporate name may be registered as a trade-mark when a trade-mark right thereto has been established by using it in commerce on goods of different descriptive properties. The goods of the registrant admittedly are not the same as the goods of the petitioner.

2. Nor does the fact that the registrant's trade-mark is the same as the applicant's trade-mark constitute a legal ground for the cancellation of the registrant's mark.

The mere fact that one person has adopted and used a trade-mark on his goods does not prevent the adoption and use of the same trade-mark by others on articles of a different description. (*American Steel Foundries* v. *Robertson, Commissioner of Patents, and Simplex Electric Heating Company*, 342 O. G. 711.)

3. While the mark "Ford" may not be the exclusive property of the registrant, yet the registrant has the right to the exclusive use of said mark when used as a trade-mark for cigars, cheroots, and like tobacco products, and it is not apparent that the use of the word "Ford" as a trade-mark by the registrant would result in confusion and uncertainty in the mind of the public as to the authorship or ownership of the tobacco products of the registrant any more than in any case where the same mark is adopted and used by different persons on articles of different descriptive properties. As stated by the Supreme Court in the "Simplex case"—

there is no property in a trade-mark apart from the business or trade in connection with which it is employed,

and it must be remembered that the word "Ford" is not necessarily confined to the corporate name of the petitioner. It is a common word of our language used not only as a name for many persons, but also as a common noun and as a verb. There are many celebrities in addition to Henry Ford who bear the name Ford, and it is not at all certain that the word when spoken would necessarily convey to the mind of the public an idea corresponding to Henry Ford or the Ford Motor Company or the Ford automobile. The word might suggest the "Ford Theater" with which the public mind is so familiar. It is believed that neither Henry Ford nor the Ford Motor Company has the right to the exclusive use of the word "Ford."

The decision of the Acting Examiner of Interferences is affirmed.

Court of Appeals of the District of Columbia.

IN RE BOYCE.

No. 1,894. Decided February 7, 1927.

INVENTION—CLAIM UNPATENTABLE IN VIEW OF PRIOR ART.

The idea of a double dial, indicating both exact and approximating temperatures, being old in the prior art, *Held* that a claim drawn to coacting fixed means and movable means for indicating exact temperature, coacting fixed means and movable means for indicating approximate temperature, and means responsive to temperature variations for simultaneously actuating said movable means is not patentable.

APPEAL from the Patent Office. Affirmed.

Mr. J. H. Milans, *Mr. C. T. Milans*, and *Mr. E. Q. Moses* for Boyce.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.*:

Appellant appeals from a decision of the Commissioner of Patents denying two claims for an invention relating to temperature indicating devices to be utilized in indicating the thermal condition of internal combustion in motors, aeroplanes and the like. The claims in issue are as follows:

3. In an instrument of the character described, coacting fixed means and movable means for indicating exact temperature, coacting fixed means and movable means for indicating approximate temperature, and means responsive to temperature variations for simultaneously actuating said movable means.

9. In a temperature indicating instrument for indicating engine temperatures of a motor vehicle engine, the combination of an actuating element within the instrument, movable in response to temperature variations, a rotatable arbor actuated thereby, a dial plate bearing a scale of words designating temperature conditions, an index hand carried by said arbor and adapted to cooperate with said word scale, and means actuated by said arbor in cooperation with said dial for indicating exact temperatures in degrees.

The object of the invention in issue is to indicate to the driver of a vehicle the thermal condition of the engine. The function of the instrument is dual; one, to indicate the exact temperature so as to enable the operator to make proper adjustments of the machine; and two, to enable the driver to observe approximately at a glance the temperature, this function serving as a danger signal to the operator. The thermometer or indicator thus contains two scales; an exact numerical scale, indicating the exact heat condition, and the danger signal scale, less exact but easily read, and merely indicating the approximate condition of the temperature as "cold, cool, warm, hot", etc.

A number of claims have been allowed for the patent, and the question before us is whether or not the broad claims in issue are allowable in view of the prior art. It will be observed that claim 3 broadly covers any coacting means for indicating exact or approximate temperatures. This claim, we think, is as broadly covered in the claims allowed as should be awarded in view of an existing patent to Wilbur [No. 555,275] of February 25, 1896, and a patent to St. John [No. 367,863] of August 9, 1887. It is true that these prior patents are crude compared with the invention in issue, but the idea of the double dial indicating exact and approximate temperatures, we think, is sufficiently set forth to avoid the right of appellant to claim 3.

Coming to claim 9, which was held by the Patent Office to be anticipated by a former patent to appellant [No. 1,206,783] dated November 28, 1916, we find in the specification upon which that patent was based the following statement:

My present invention provides means whereby this actual hot-water temperature is indicated at all times, and which will also be subjected to the action of any steam which may form in the system. Thus, with this invention, it is possible to secure an indication of actual water temperature without sacrificing the advantages of obtaining immediate knowledge of the condition of damages suggested by the formation of steam.

Further describing this former invention, appellant says:

I am by these means enabled to obtain a relative indication of the temperature of the cooling water and also obtain a danger signal immediately upon the formation of steam in the system, which steam passes into the air space, thus causing a sudden increase in the temperature indication of the instrument.

While claim 9 restricts the device to registering engine temperatures of motor vehicles, it will be observed that this function was fully embraced in appellant's 1916 patent. The only difference between that construction and the construction set forth in claim 9 is that appellant is now applying the double indicating dial feature, which, as we have said, is anticipated by St. John and Wilbur.

The decision of the Commissioner of Patents is affirmed.

Court of Appeals of the District of Columbia.

IN RE SCHLAICH.

No. 1,913. Decided March 7, 1927.

[For Commissioner's decision see 360 O. G. 3.]

APPEAL from the Patent Office. Affirmed.

Mr. J. H. Milans, *Mr. C. T. Milans*, and *Mr. E. Q. Moses* for Schlaich.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a decision of the Patent Office refusing certain claims of an application for patent covering capillary tubing, apparatus for making it, and the process.

This tubing is used in fluid-operated measuring instruments installed in automobiles and airplanes and is said to eliminate, to a marked degree, the inaccuracies and inefficiencies hitherto common to such measuring instruments.

The Examiner, in a carefully-prepared opinion, rejected the claims involved because, in his view, the construction therein disclosed differed in degree only from the prior art. The Board of Examiners in Chief, on appeal, again considered the contentions of applicant and found against him, as did the Commissioner. Giving due consideration to the oral argument and brief on behalf of applicant, we are not convinced that the conclusion of the Patent Office is wrong. This is a highly-technical subject matter, with which the experts of the Patent Office are more familiar than we, and there is no such clear showing of error as would be required to warrant us in disturbing their finding. The decision therefore is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

IN RE SCHLAICH.

No. 1,914. Decided March 7, 1927.

[For Commissioner's decision see 360 O. G. 3.]

APPEAL from the Patent Office. Affirmed.

Mr. J. H. Milans, *Mr. C. T. Milans*, and *Mr. E. Q. Moses* for Schlaich.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a decision of the Patent Office refusing to allow claims Nos. 20 to 24, inclusive, of appellant's application, claims Nos. 1 to 19 having been allowed.

This invention relates to an instrument for indicating temperatures in connection with internal-combustion motors and is closely related to the case just decided, patent appeal No. 1,913. Here, as there, the Patent Office tribunals severally considered and rejected the claims involved. For the reasons set forth in our opinion in that case, we affirm the decision in this.

Affirmed.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

TRADE-MARKS

OFFICIAL GAZETTE, JULY 5, 1927.

[VOL. 360. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 178,427. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) CARBOCITE INCORPORATED, Huntington, W. Va. Filed Apr. 2, 1923.

Carbocite

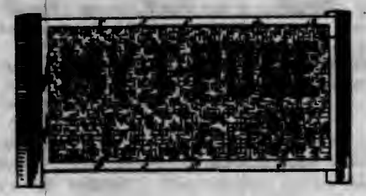
Particular description of goods.—Fuel in the Form of Briquettes and in Granular or Powdered Form.
Claims use since Mar. 26, 1923.

Ser. No. 207,968. (CLASS 45. BEVERAGES, NONALCOHOLIC.) CITRUS PRODUCTS CORPORATION, Los Angeles, Calif. Filed Jan. 12, 1925.

RIPE-FRU

Particular description of goods.—Nonalcoholic, Maltless Fruit Juices for Beverage Purposes.
Claims use since Nov. 20, 1924.

Ser. No. 214,319. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) GOLF SHAFT & BLOCK COMPANY, Memphis, Tenn. Filed May 14, 1925.



"Arrow." The lining used in the corner squares of the mark is for shading only. No claim is made to the word "Brand" apart from the mark shown.
Particular description of goods.—Shuttle Blocks or Dimension Stock Used for Making Shuttles, Picker-Stick Blanks or Dimension Stock Used for Making Picker Sticks, Lawn-Mower Handle Blanks or Dimension Stock Used for Making Lawn-Mower Handles, Shoe-Last Blocks and Handle Blanks or Dimension Stock Used for Making Tool Handles.
Claims use since about 1914.

Ser. No. 218,502. (CLASS 39. CLOTHING.) THE SHOE-TREAD CORPORATION, Boston, Mass. Filed Aug. 6, 1925.

No claim is made to the words "Wescott Sole" apart from the mark shown.
Particular description of goods.—Soles and Heels for Shoes.
Claims use since Apr. 1, 1925.

Ser. No. 218,596. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN H. BULLOCK, Cohoes, N. Y. Filed Aug. 10, 1925.

The color lining on the drawing indicates yellow. The word "Pure" by itself apart from the mark shown is disclaimed.
Particular description of goods.—Bread.
Claims use since on or about July 22, 1925.

Ser. No. 220,259. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) STRONAH CORPORATION, New York, N. Y. Filed Sept. 14, 1925.

Comprising two concentric broken circles with an equilateral triangle of broken sides inscribed within the inner circle and having the words "Stronach Non-Splitting Nails" about the several sides of the triangle. Applicant disclaims the surname "Stronach" and the words "Non-Splitting Nails" appearing on the trade-mark separate and apart from the trade-mark as shown.

Particular description of goods.—Special Triangular-Pointed Nonsplitting Nails.

Claims use since Sept. 9, 1925.

Ser. No. 221,693. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CLARK RESTAURANT COMPANY, Cleveland, Ohio. Filed Oct. 14, 1925.

The word "Coffee" is disclaimed apart from the mark shown. The lining on drawing indicates the color green. The mark consists of the name "Clark's" printed on a base or block of green color.

Particular description of goods.—Coffee.

Claims use since Nov. 20, 1913.

Ser. No. 223,319. (CLASS 39. CLOTHING.) NON-SKID BALLOON HEEL CORPORATION, Chicago, Ill. Filed Nov. 14, 1925.

WAK-ON-AIR

Particular description of goods.—Rubber Heels.

Claims use since Nov. 1, 1925.

Ser. No. 224,536. (CLASS 12. CONSTRUCTION MATERIALS.) UNIVERSAL GYPSUM COMPANY, now Universal Gypsum & Lime Co., Chicago, Ill. Filed Dec. 10, 1925.

GYPSOLITE

No claim being made to the exclusive use of the word "Gypsum" apart from the mark shown on the drawing.

Particular description of goods.—Boards—Namely, Wall Board, Plaster Board, Sheathing, and Plaster.

Claims use since on or about May 1, 1925.

Ser. No. 228,792. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) APEX MOTOR FUEL COMPANY, doing business as Apex Laboratories, Chicago, Ill. Filed Mar. 18, 1926.

APEX

Particular description of goods.—Dry Cleaner.

Claims use since Feb. 4, 1926.

Ser. No. 228,962. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANNA HELEN ARLT, Brooklyn, N. Y. Filed Mar. 22, 1926.

VERAGEN

Particular description of goods.—Witch-Hazel Extracts, Dusting Powders, Liquid Nail Polish, Liquid-Nail-Polish Remover, Depilatories, Hairdressing, Cold Creams; Rouges (Liquid, Paste, and Compact); Face Powders, Toilet Powders, Talcum Powders, Bay Rum, Facial and Skin Creams, Skin Lotions, Sachets, Perfumes, Toilet Waters, Hair Tonic, Hair Wash, Brilliantine; Lip Rouges (Paste, Liquid, and Stick Form), Eyebrow Pencils, and Smelling Salts.

Claims use since Aug. 4, 1914.

Ser. No. 229,378. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DUNCAN, SPRANKLE & TURGEON, New York, N. Y., assignors to Oasis, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1926.

SPHINX

Particular description of goods.—Sandwiches and Coffee (Bean or Ground).

Claims use since Mar. 19, 1926.

Ser. No. 229,379. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DUNCAN, SPRANKLE & TURGEON, New York, N. Y., assignors to Oasis, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1926.

PYRAMID

Particular description of goods.—Sandwiches.

Claims use since Mar. 19, 1926.

Ser. No. 229,380. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DUNCAN, SPRANKLE & TURGEON, New York, N. Y., assignors to Oasis, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1926.

MIRAGE

Particular description of goods.—Sandwiches and Coffee (Bean or Ground).

Claims use since Mar. 19, 1926.

Ser. No. 229,381. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DUNCAN, SPRANKLE & TURGEON, New York, N. Y., assignors to Oasis, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1926.

CARAVAN

Particular description of goods.—Sandwiches.

Claims use since Mar. 19, 1926.

Ser. No. 229,382. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DUNCAN, SPRANKLE & TURGEON, New York, N. Y., assignors to Oasis, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1926.

OASIS

Particular description of goods.—Sandwiches and Coffee (Bean or Ground).

Claims use since Mar. 19, 1926.

Ser. No. 231,180. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) BEHR BROS. CO. INC., New York, N. Y. Filed May 6, 1926. Under 10-year proviso.

Behr Bros. & Co.

Particular description of goods.—Pianos and Player Pianos.

Claims use since 1882.

Ser. No. 231,284. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SIMONCELLI BROS., Scranton, Pa. Filed May 7, 1926.

Applicant disclaims the right to the exclusive use of the word "Pisa" apart from the mark shown in the drawing.

Particular description of goods.—Olive Oil.

Claims use since June 1, 1925.

Ser. No. 231,523. (CLASS 39. CLOTHING.) CARSON PIRIE SCOTT & CO., Chicago, Ill. Filed May 13, 1926.

S. O. S.

Particular description of goods.—Men's and Boys' Union Suits of Textile Fabric.

Claims use since August, 1925.

Ser. No. 231,798. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE EUCLID CANDY COMPANY, Cleveland, Ohio. Filed May 18, 1926.

LOUD SPEAKER

Particular description of goods.—Candy.

Claims use since August, 1924.

Ser. No. 232,112. (CLASS 7. CORDAGE.) AMERICAN CABLE COMPANY, INC., Wilmington, Del., and New York, N. Y. Filed May 24, 1926.

No claim is made to the term "New York" nor to the words "Preformed Wire Rope" and "Preformed Stress Free, Lasts Longer," and to the representation of the goods appearing on the drawing apart from the other features of the mark.

Particular description of goods.—Wire Rope.

Claims use since Apr. 19, 1926.

Ser. No. 232,814. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CRACKER JACK CO., Chicago, Ill. Filed June 7, 1926.

CRACKER JACK

Particular description of goods.—Raw Popcorn.

Claims use since May 25, 1926.

Ser. No. 232,931. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE DR. J. H. MCLEAN MEDICINE CO., St. Louis, Mo. Filed June 9, 1926.

BALME

Particular description of goods.—Medicinal Preparation—Namely, a Diuretic Stimulant for the Kidneys.

Claims use since Oct. 1, 1925.

Ser. No. 233,539. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRIEDMAN-CRAMER COMPANY, Kansas City, Mo. Filed June 21, 1926.

No claim is made to the word "Slicker" apart from the mark as shown.

Particular description of goods.—Preparations Used in Dressing the Hair.

Claims use since Apr. 1, 1926.

Ser. No. 233,652. (CLASS 12. CONSTRUCTION MATERIALS.) MOTOR SHOPPERS PARKADROME MARKETS, INC., Reno, Nev. Filed June 23, 1926.

Particular description of goods.—Building Structures for Use in Parking Automobiles.

Claims use since June 3, 1926.

Ser. No. 235,110. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) CHICAGO MAIL ORDER COMPANY, Chicago, Ill. Filed July 26, 1926.

ROADSTEAD

Particular description of goods.—Rubber Tires for Vehicles, Bicycles, and Automobiles, Both Solid and Pneumatic; Inner Tubes for Pneumatic Tires, Plasters and Patches Therefor, Tire Covers, and Tire Boots.

Claims use since Jan. 8, 1926.

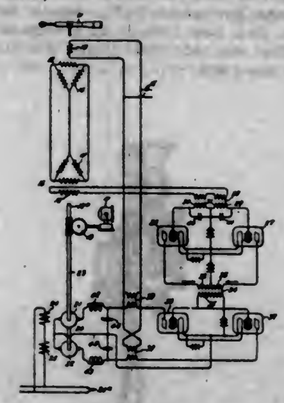
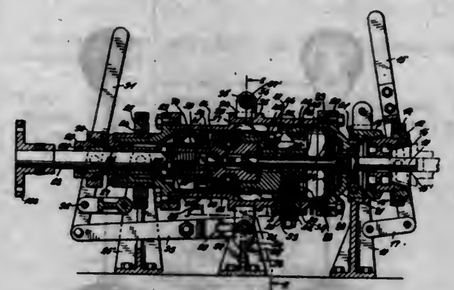
REISSUES



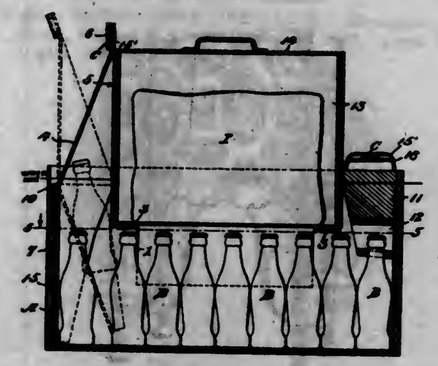
JULY 5, 1927.

16,666. AUTOMATIC WEIGHER. FRANK HEDDEN, Passaic, N. J., assignor to Merrick Scale Mfg. Company, Passaic, N. J., a Corporation of New Jersey. Filed Apr. 3, 1926. Serial No. 99,655. Original No. 1,490,270, dated Apr. 15, 1924, Serial No. 166,804, filed May 7, 1917. 26 Claims. (Cl. 265—9.)



1. In a measuring mechanism, the combination of adjustable means for determining the measurement, driven means for operating said adjustable means, a drive disc having a friction drive surface, a member pivoted adjacent the said friction surface, for controlling the said driven means, an idler wheel on the said pivoted member having a frictional engagement with the said rotary disc and controlling means for changing the position of the said idler so as to cause it to travel spirally on the face of the disc and thereby oscillate the pivoted member for controlling the said driven means.

16,667. MEANS FOR REPRODUCING POSITION. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed May 10, 1927. Serial No. 190,355. Original No. 1,547,392, dated July 28, 1925, Serial No. 655,359, filed Aug. 2, 1923. 13 Claims. (Cl. 172—239.)

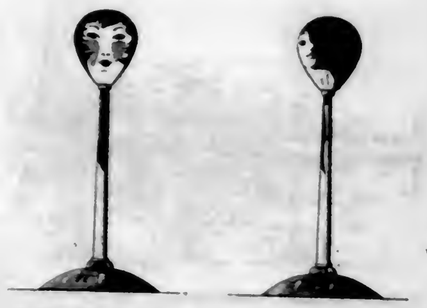


3. Means for reproducing position comprising in combination with a controlling object and a driven object remote from said controlling object, a driving motor for said driven object, means for producing an alternating magnetic field rotating in accordance with the movements of said controlling object, a coil inductively associated with said field in which an electromotive force is induced by said field, control means responsive to said electromotive force for starting said motor upon angular movement of said controlling object, and means for changing the angular relation of said field and said coil in accordance with the movements of said driven object whereby said voltage is varied to stop said motor when said driven object is moved into positional agreement with the controlling object.

16,668. REVERSING OIL CLUTCH. JOHN A. MALM, Denver, Colo. Filed Nov. 17, 1926. Serial No. 148,965. Original application filed May 31, 1921, Serial No. 474,008. Renewed Apr. 18, 1924. Original No. 1,525,038, dated Feb. 3, 1925. 26 Claims. (Cl. 74—14.)

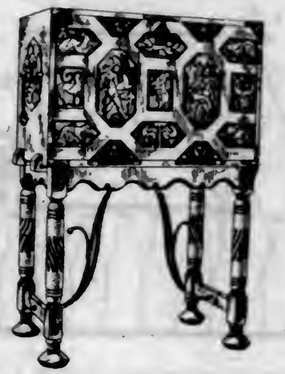
1. In a hydraulic transmission, a rotary casing, a pair of shafts extending into said casing, a cam member reciprocable upon one shaft, a cam member nonrotatably mounted on the other shaft, each cam member having a cam groove therein, one of said grooves having more nodes than the other, rollers carried by said reciprocating cam member and extending into said groove in the other cam member and other rollers adapted to be fixedly positioned and extending into the groove of the other cam member.

16,669. COOLER FOR BOTTLED GOODS. SAMUEL KAYE, Columbus, Miss., assignor, by mesne assignments, to Chester A. Frick, Muncie, Ind. Filed May 24, 1926. Serial No. 111,175. Original No. 1,566,099, dated Dec. 15, 1925, Serial No. 563,527, filed May 25, 1922. 13 Claims. (Cl. 211—8.)



1. A cooler for bottled goods including a channel member for containing a row of articles side by side in contact therein, and a movable filling chute associated with said member for receiving articles and normally directing them into the channel, said chute being mounted to be moved out of normal position for engagement with an article in the channel to move the articles therein forward.

DESIGNS



JULY 5, 1927.

72,974. HAT TREE. ARTHUR F. ALLEN, Alameda, Calif. Filed Mar. 9, 1927. Serial No. 21,073. Term of patent 14 years.

The ornamental design for a hat tree, substantially as shown.

72,975. SECRETARY. OSCAR B. BACH, New York, N. Y. Filed Apr. 5, 1927. Serial No. 21,460. Term of patent 3½ years.

The ornamental design for a secretary, as shown.

72,976. FINIAL FOR LIGHTING FIXTURES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,584. Term of patent 3½ years.

The ornamental design for a finial for lighting fixtures, as shown.

72,977. FINIAL FOR LIGHTING FIXTURES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,585. Term of patent 3½ years.

The ornamental design for a finial for lighting fixtures, as shown.

72,978. CANOPY FOR ELECTRIC-LIGHTING FIXTURES OR SIMILAR ARTICLES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,588. Term of patent 3½ years.

The ornamental design for a canopy for electric lighting fixtures or similar articles, as shown.

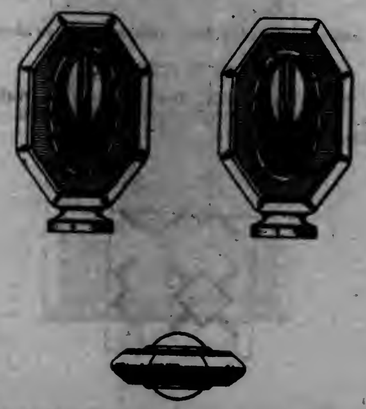
72,979. BODY FRAME FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,589. Term of patent 3½ years.

The ornamental design for a body frame for lighting fixtures or similar articles, as shown.

72,980. STRAP LIGHTING FIXTURES OR SIMILAR ARTICLES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,590. Term of patent 3½ years.

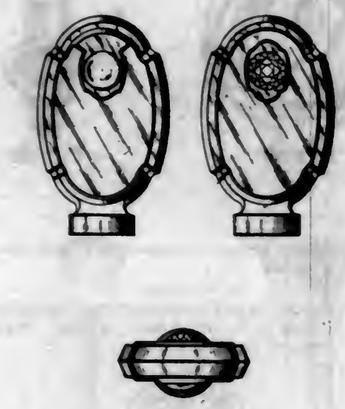
The ornamental design for a strap for lighting fixtures or similar articles, as shown.

72,981. MOTOR HEAT INDICATOR. HARRISON H. BOYCE, Jericho, N. Y. Filed Mar. 25, 1927. Serial No. 21,336. Term of patent 14 years.



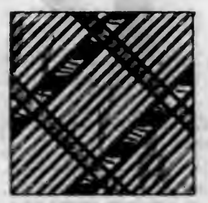
The ornamental design for a motor heat indicator, substantially as shown.

72,982. MOTOR HEAT INDICATOR. HARRISON H. BOYCE, Jericho, N. Y. Filed Mar. 25, 1927. Serial No. 21,337. Term of patent 14 years.



The ornamental design for a motor heat indicator, substantially as shown.

72,983. MOTOR HEAT INDICATOR. HARRISON H. BOYCE, Jericho, N. Y. Filed Mar. 25, 1927. Serial No. 21,341. Term of patent 14 years.

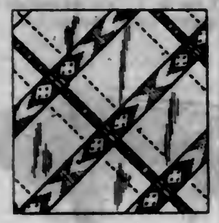


The ornamental design for a motor heat indicator, substantially as shown.

72,984. MOTOR HEAT INDICATOR. HARRISON H. BOYCE, Jericho, N. Y. Filed Mar. 25, 1927. Serial No. 21,342. Term of patent 14 years.

The ornamental design for a motor heat indicator, substantially as shown.

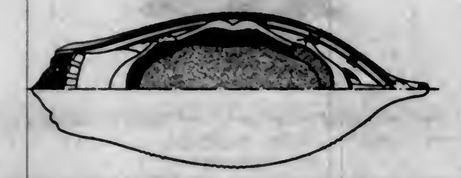
72,985. TEXTILE FABRIC. RICHARD COCKING, Waltham, Mass. Filed May 10, 1927. Serial No. 21,905. Term of patent 3½ years.



The ornamental design for a textile fabric as shown.

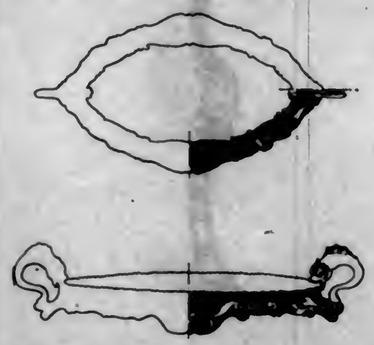
72,986. TEXTILE FABRIC. RICHARD COCKING, Waltham, Mass. Filed May 10, 1927. Serial No. 21,910. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

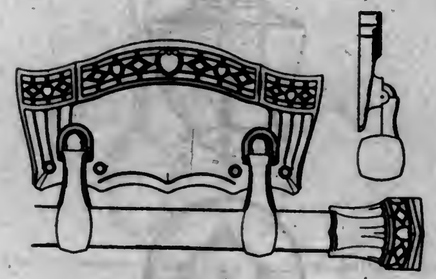


72,987. TEXTILE FABRIC. RICHARD COCKING, Waltham, Mass. Filed May 10, 1927. Serial No. 21,011. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.



72,988. TABLE ORNAMENT OR ANALOGOUS ARTICLE. PAUL CRICCHIO, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc., a Corporation of New York. Filed May 16, 1927. Serial No. 21,998. Term of patent 3½ years.

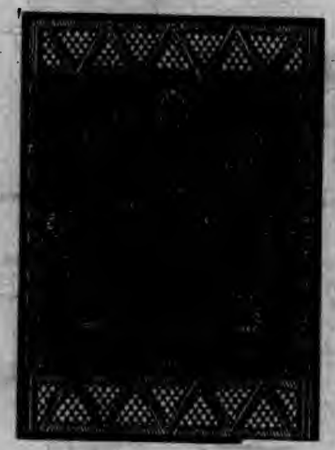


The ornamental design for a table ornament or analogous article substantially as shown and described.

72,989. TRAY OR ANALOGOUS ARTICLE. PAUL CRICCHIO, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc., a Corporation of New York. Filed May 16, 1927. Serial No. 21,999. Term of patent 3½ years.

The ornamental design for a tray or analogous article substantially as shown and described.

72,990. BURIAL-CASKET HANDLE. MICHAEL F. DAVORAN, Cincinnati, Ohio, assignor to The Crane & Breed Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 14, 1927. Serial No. 20,761. Term of patent 7 years.

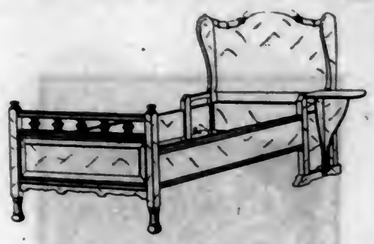


The ornamental design for a burial casket handle, substantially as shown and described.

72,991. TOY DOG. PHILIP DE LEMME, New York, N. Y. Filed Jan. 31, 1927. Serial No. 20,567. Term of patent 3½ years.

The ornamental design for a toy dog as shown.

72,992. PILLOW TOP. JOSEPH DERK, Philadelphia, Pa., assignor to The Derk Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1927. Serial No. 21,695. Term of patent 3½ years.



The ornamental design for a pillow top, as shown.

72,993. TABLE SCARF. JOSEPH H. DERK, Philadelphia, Pa., assignor to The Derk Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1927. Serial No. 21,696. Term of patent 3½ years.

The ornamental design for a table scarf, as shown and described.

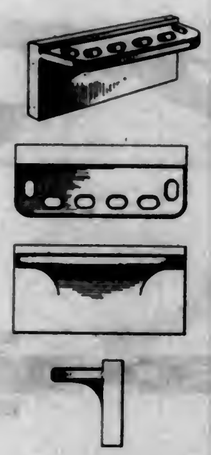
72,994. BEDSTEAD. RALPH C. ERSKINE, Stamford, Conn., assignor to Erskine-Danforth Corporation, a Corporation of New York. Filed Dec. 1, 1925. Serial No. 15,599. Term of patent 7 years.

The ornamental design for a bedstead as shown.

72,995. CHAIR. RALPH C. ERSKINE, Stamford, Conn., assignor to Erskine-Danforth Corporation, a Corporation of New York. Filed Dec. 2, 1925. Serial No. 15,618. Term of patent 7 years.

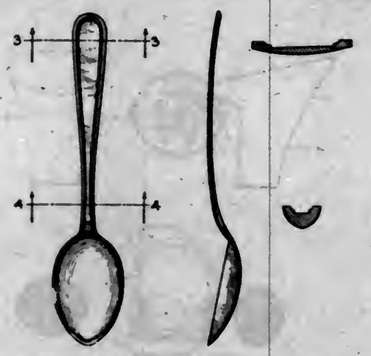
The ornamental design for a chair as shown.

72,996. LAMP. VERN R. GERSMEHL, Cheyenne, Wyo. Filed Sept. 17, 1925. Serial No. 14,802. Term of patent 7 years.



The ornamental design for a lamp substantially as shown.

72,997. ELECTRIC LAMP. MANUEL GORDON, Chicago, Ill. Filed Apr. 29, 1927. Serial No. 21,785. Term of patent 14 years.



The ornamental design for an electric lamp, as shown.

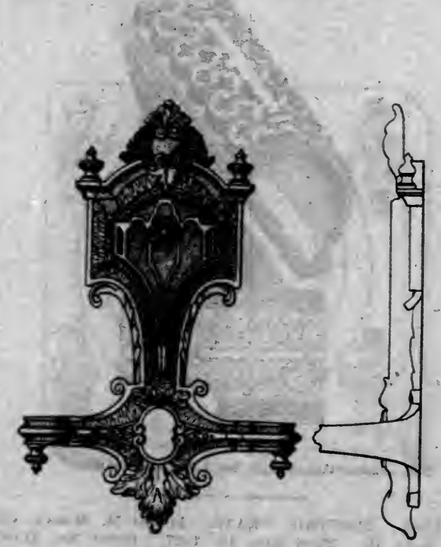
72,998. TOOTHBRUSH HOLDER. ROY E. JORDAN, Newark, N. J., assignor to The Mosaic Tile Company, a Corporation of Ohio. Filed Mar. 4, 1924. Serial No. 8,817. Term of patent 14 years.

The ornamental design for a toothbrush holder, as shown.

72,999. SPOON OR SIMILAR ARTICLE. HENRY C. KIRK, Baltimore, Md., assignor to Samuel Kirk and Son, Incorporated, Baltimore, Md., a Corporation. Filed Jan. 20, 1927. Serial No. 20,486. Term of patent 14 years.

The ornamental design for a spoon or similar article.

73,000. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,019. Term of patent 3½ years.



The ornamental design for a wall bracket as shown.

73,001. DRESS. RENÉ LEMOINE, Paris, France, assignor to David Crystal, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 8, 1927. Serial No. 21,510. Term of patent 3½ years.

The ornamental design for a dress, substantially as shown.

73,002. LIGHTING FIXTURE. NORMAN LIPSKY, New York, N. Y., assignor to Golden Lighting Fixture Co., Inc., a Corporation of New York. Filed Apr. 29, 1927. Serial No. 21,795. Term of patent 3½ years.

The ornamental design for a lighting fixture substantially as shown.

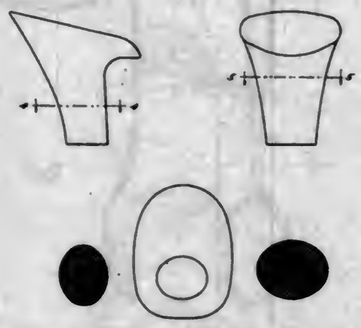
73,003. CANDLESTICK. ERIK MAGNUSSEN, Providence, R. I., assignor to Gorham Mfg. Co., Providence, R. I. Filed Mar. 21, 1927. Serial No. 21,242. Term of patent 14 years.

The ornamental design for a candlestick, as shown.

73,004. TIRE. HORACE MANN, Albuquerque, N. Mex. Filed Feb. 10, 1926. Serial No. 16,466. Term of patent 14 years.

The ornamental design for a tire as shown.

73,005. ELECTRIC GRATE. IRVING M. MARKS, Chicago, Ill. Filed Apr. 19, 1927. Serial No. 21,641. Term of patent 3½ years.



The ornamental design for an electric grate as shown.

73,006. ELECTRIC GRATE. IRVING M. MARKS, Chicago, Ill. Filed Apr. 19, 1927. Serial No. 21,642. Term of patent 3½ years.

The ornamental design for an electric grate as shown.

73,007. SHOE HEEL. WILLIAM H. NUTT, Newburyport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 3, 1926. Serial No. 16,755. Term of patent 14 years.

The ornamental design for a shoe heel, as shown.

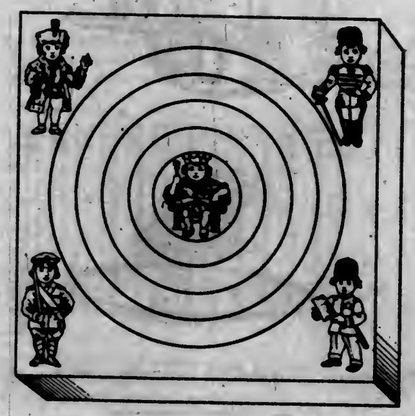
73,008. COIN BANK. JOSEPH F. PUNZAK, Brooklyn, N. Y. Filed Aug. 5, 1926. Serial No. 18,593. Term of patent 14 years.

The ornamental design for a coin bank as shown.

73,009. BUCKLE. NEUTON D. RICHARDS, Los Angeles, Calif. Filed Apr. 8, 1925. Serial No. 13,065. Term of patent 3½ years.

The ornamental design for a buckle, as shown.

73,010. RING OR SIMILAR ARTICLE OF JEWELRY. GEORGE F. RIDER, Chicago, Ill. Filed Apr. 5, 1926. Serial No. 17,188. Term of patent 14 years.

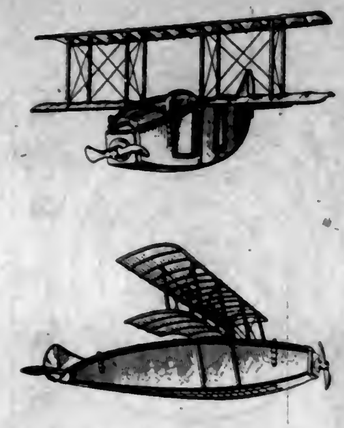


The ornamental design for a ring or similar article of jewelry, as shown.

73,011. DRESS. MARCEL ROCHAS, Paris, France, assignor to David Crystal, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 1, 1927. Serial No. 21,433. Term of patent 3½ years.

The ornamental design for a dress, substantially as shown.

73,012. GAME BOARD. ISIDOR ROSEN, Brooklyn, N. Y. Filed Feb. 28, 1927. Serial No. 20,923. Term of patent 7 years.

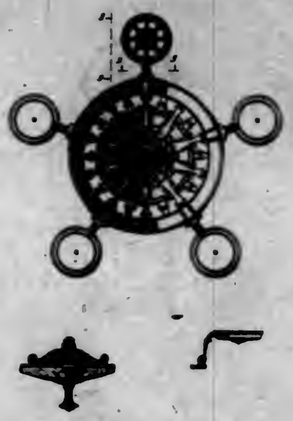


The ornamental design for a game board as shown.

73,013. DRESS. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 25, 1927. Serial No. 20,898. Term of patent 3½ years.

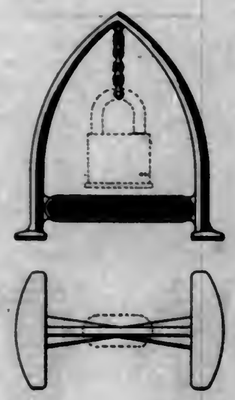
The ornamental design for a dress, substantially as shown and described.

73,014. CAR FOR AEROPLANE SWINGS. HARRY G. TRAVER, Beaver Falls, Pa. Filed Apr. 21, 1925. Serial No. 13,179. Term of patent 14 years.



The ornamental design for a car for aeroplane swings, as shown.

73,015. BRACKET BACK FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 8, 1927. Serial No. 21,516. Term of patent 7 years.

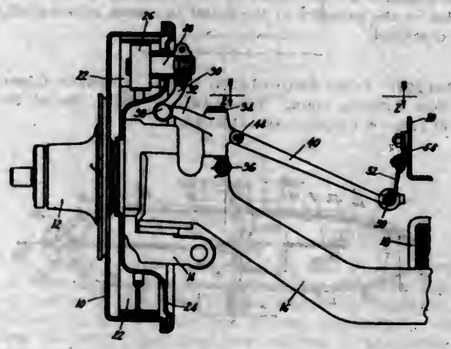


The ornamental design for a bracket back for lighting fixtures, as shown.

73,016. BASE FOR A CHANDELIER. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Owen Walsh M'f'g. Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1927. Serial No. 21,539. Term of patent 3½ years.

The ornamental design for a base for a chandelier substantially as shown.

73,017. DISPLAY STAND. SOLOMON WISE, Cincinnati, Ohio. Filed Jan. 4, 1927. Serial No. 20,270. Term of patent 3½ years.



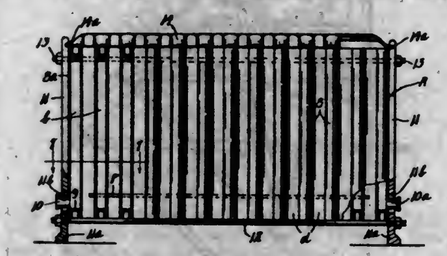
The ornamental design for a display stand substantially as shown.

PATENTS

GRANTED JULY 5, 1927.

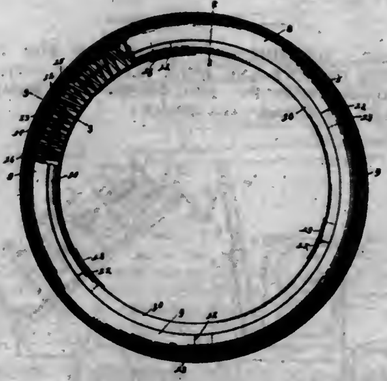
1,634,250. BRAKE-OPERATING MECHANISM. WILLIAM J. ANDRES, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1926. Serial No. 85,951. 21 Claims. (Cl. 188—194.)

1. A vehicle having a chassis frame and a swivelled wheel with a brake, and comprising, in combination therewith, a brake-applying generally-horizontal lever supported at its outer end for up and down movement with the wheel and at its inner end supported on the chassis frame, and operating means for swinging the lever to apply the brake in a plane generally perpendicular to the swivelling axis of the wheel.



1,634,251. ORNAMENT. LOUIS V. ARONSON, Newark, N. J. Filed Sept. 18, 1924. Serial No. 738,897. 2 Claims. (Cl. 40—136.)

1. A wind-shield ornament comprising, in combination, an ornamental object in bas relief, a backing of resilient material adhesively secured thereto, the thus provided unit adapted to be secured to a wind-shield by a suitable adhesive.

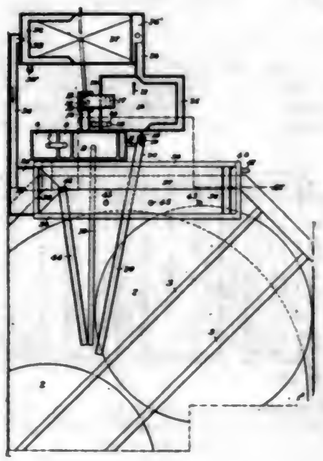


1,634,252. RADIATOR. CARL S. CARLBERG, Mound, Minn., assignor, by direct and mesne assignments, to Pressteel Radiator Company, a Corporation of Minnesota. Filed Aug. 31, 1925. Serial No. 53,462. 3 Claims. (Cl. 257—139.)

2. A radiator of the class described having two of its opposite sides provided with a plurality of vertically extending symmetrically arranged corrugations, an intake to said radiator and a horizontally extending baffle plate disposed above said intake and adapted to deflect the circulating fluid in its upward movement towards

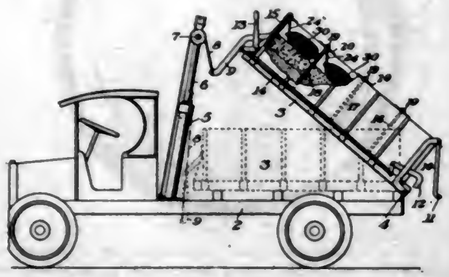
said corrugations, said baffle plate traversing said passageways and having fingers traversing substantial portions of the interior of said corrugations.

1,634,253. VEHICLE TIRE. NICOLA COSTANZO, New York, N. Y. Filed Oct. 15, 1926. Serial No. 141,731. 2 Claims. (Cl. 152—8.)



1. In a vehicle tire, the combination of a casing, an inner tube comprising inner and outer arcuate sections having their marginal edges disposed in overlapping relation, each section being divided into a plurality of parts having their abutting ends telescopically fitted together, a band extending across each jointure of the parts having its ends clinched through openings in each two adjacent parts of the sections, and a circumferentially extending coil spring disposed within said tube having its convolutions bearing against the inner and outer sections.

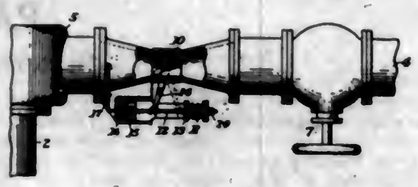
1,634,254. APPARATUS FOR GRADING SAND AND GRINDING GLASS. JAMES W. CRUIKSHANK, Pittsburgh, Pa., assignor to J. W. Cruikshank Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 5, 1922. Serial No. 558,743. 13 Claims. (Cl. 51—264.)



1. In a sand grading apparatus for plate glass grinding machines, the combination with the grinding machine, of means for receiving sand therefrom, means for re-

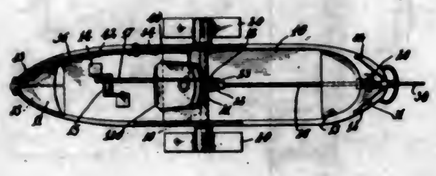
delivering the coarse portion of said sand to the grinding machine, other means for delivering the medium coarse and finer portions of said sand to a medium coarse sand box wherein a portion of the medium coarse sand is re-

tained, concentrating means for increasing the amount of medium coarse sand deposited in said box, and means for receiving sand from the concentrator and grading the same, substantially as described.



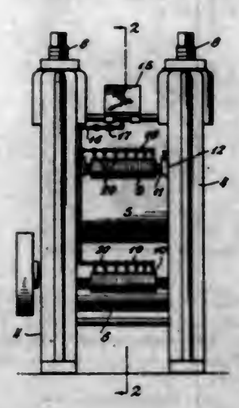
1,634,255. METHOD AND APPARATUS FOR HANDLING CEMENT AND BULK MATERIAL. WILFRED H. DRATH, Butler, Pa. Filed Oct. 20, 1923. Serial No. 669,867. 4 Claims. (Cl. 298—8.)

1. The method of handling and transporting material supplied in original packages and also bulk material, which comprises depositing the bulk material in a dumping carrier, placing an original container having its material therein above the bulk material and fastening the container to the carrier, moving the carrier to a dumping point, opening the container and dumping the contents of the original container together with the bulk material in the dumping carrier, substantially as described.



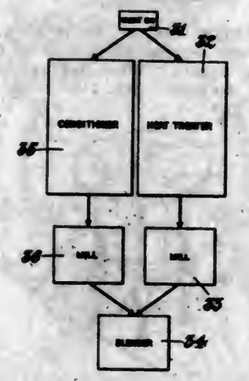
1,634,256. CONDENSER CONTROL. RAYMOND N. EHRHART, Edgewood, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 30, 1922. Serial No. 572,106. 11 Claims. (Cl. 261—69.)

1. In a condenser having an inlet pipe for supplying condensing water thereto, a valve in said pipe responsive to pressures at the outlet thereof for controlling the flow of water therethrough, and a piston subjected on one side to atmospheric pressure and on the other side to



the pressure at the outlet of said valve for closing said valve as the pressure at the outlet increases, substantially as described.

1,634,257. FOOT-PROPELLED BOAT. CARMELO GARRO, New Britain, Conn. Filed Aug. 3, 1925. Serial No. 47,726. 4 Claims. (C. 115—25.)



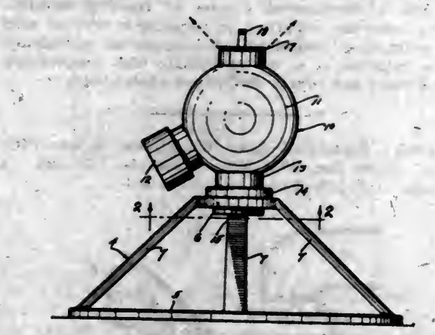
1. In a boat of the class described, in combination, a stabilizer mounted at the forward part of the boat and arranged to swing in a vertical direction, a pull-rod attached to said stabilizer, and means controlled by the seat for actuating the pull-rod to throw the stabilizer to operative position when the seat is vacated.

1,634,258. APPARATUS FOR ROLLING METAL. JAMES F. HALPIN, Derby, Conn., assignor to Seymour Mfg. Co., Seymour, Conn., a Corporation of Connecticut. Filed Mar. 8, 1926. Serial No. 92,994. 1 Claim. (Cl 29—17.)

In a metal rolling apparatus, a pair of working rolls between which is passed metal to be rolled, a laminated lubricating roll in constant engagement with each of the working rolls, a lubricant reservoir, a main supply pipe leading therefrom, branch pipes connected to the main pipe and suspended above said lubricating rolls, and means for regulating the supply of lubricant from said reservoir to the lubricating rolls.

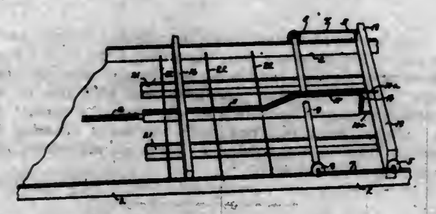
1,634,259. HEAT TREATMENT OF WHEATEN CEREALS. ROBERT HUTCHINSON, Nottingham, England, assignor to Woodlands Limited, Dover, England, a British Company. Filed July 26, 1924, Serial No. 728,419, and in Great Britain July 30, 1923. 7 Claims. (Cl. 99—10.)

1. In the manufacture of wheaten flour the combination of steps consisting in so dry heating a wheaten cereal as to render substantially all the gluten non-retainable in a washing test as described without substantially affecting the starch particles, and blending a proportion of such cereal with a proportion of cereal not so treated.



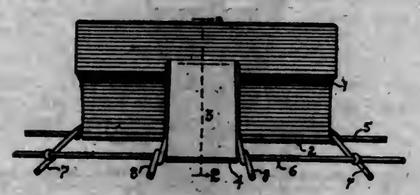
1,634,260. MOP. LANGDON C. KELLOGG, Westfield, Mass. Filed July 17, 1926. Serial No. 123,110. 2 Claims. (Cl. 15—229.)

1. In a mop construction, the combination with a handle member, a head pivotally attached thereto, the head portion comprising a pair of twisted wires between the turns of which the cleaning elements of the mop are secured said head being formed into a loop with the ends of the twisted wire spaced from each other an intermediate portion of the twisted wire being formed to provide a bearing for the handle and located directly opposite the spaced ends of the wires whereby the head may be rotated relative to the handle and through a complete circle.



1,634,261. LAWN SPRINKLER. ULYSSES G. KNAUFF, Minneapolis, Minn., assignor to C. J. Knutson, Portland, Oreg. Filed Apr. 15, 1926. Serial No. 102,215. 1 Claim. (Cl. 299—76.)

A hollow sprinkler head having a depending socketed neck provided with an annular flange and circumferentially spaced outwardly extended lugs below said flange, said flange and lugs beng integrally formed with said neck, in combination with a supporting base having in its top an opening and notches extending into said opening and through which opening and notches said

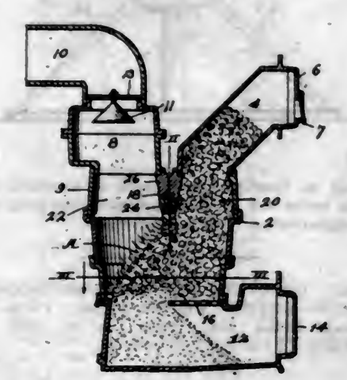


neck may be inserted and rotated to interlock the lugs with the under side of the supporting base and with the flange supported on the top of said base.

1,634,262. GROOVING AND REENFORCEMENT SUPPORTING DEVICE AND PROCESS. PETER J. MCINERNEY, Dallas, Tex. Filed Jan. 29, 1925. Serial No. 5,539. 5 Claims. (Cl. 94—45.)

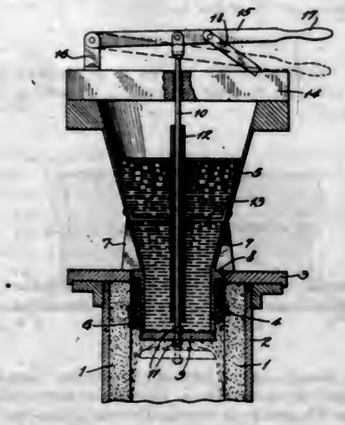
3. In a grooving device for highways and the like, a blade adapted to cleave the said highway pavement or the like, before same has mechanically set, and means to support and aline reenforcement material below the cleavage plane as the latter is formed.

1,634,263. JOINT FORM. PETER J. MCINERNEY, Dallas, Tex. Filed June 9, 1925. Serial No. 35,860. 3 Claims. (Cl. 94—18.)



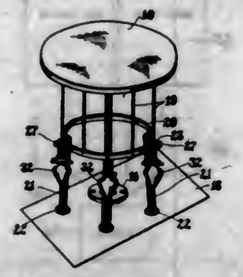
3. In a joint form for concrete or similar construction having mesh reinforcement, a rigid plate member having a plurality of planes or curves therein means to secure said member to the mesh reinforcement employed in said construction, and means forming a part of said plate member to rigidly secure said member in desired position with respect to the reinforcement mesh.

1,634,264. PROCESS FOR TREATING ASPHALTIC PAVING MATERIALS. PETER J. MCINERNEY, Dallas, Tex. Filed July 3, 1925. Serial No. 41,429. 4 Claims. (Cl. 94—23.)



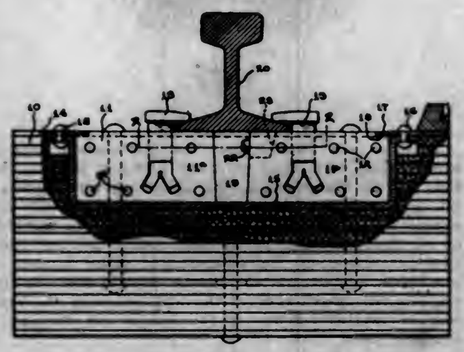
1. The hereindescribed process of treating asphaltic paving materials comprised in applying a filler of sand and water at a maintained low temperature to asphaltic paving material at a correspondingly high temperature, with a rapid and equally distributed application.

1,634,265. HEATER. LINN W. MILLIS, Kansas City, Mo. Filed Dec. 19, 1921. Serial No. 523,326. 1 Claim. (Cl. 126—73.)



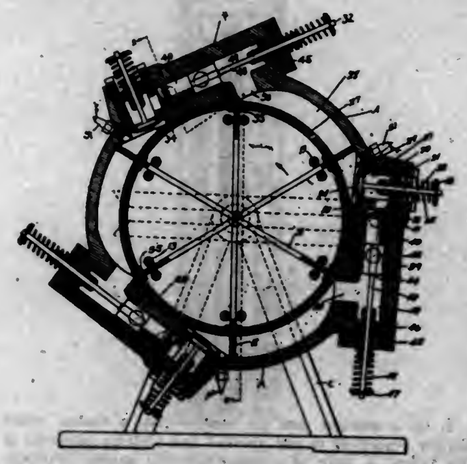
In a heater of the character described, a fire-pot having a top, a fire resistant wall depending from said top and dividing the upper portion of the fire-pot into two chambers, a fuel magazine communicating with one of said chambers, means for admitting air to said magazine, and a radiator communicating with the other chamber and spaced from said magazine to leave an air space above said fire resistant wall.

1,634,266. MOLD-FACING DEVICE. WILLIAM DAVIS MOORE, Birmingham, Ala., assignor to Sand Spun Patents Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 5, 1926. Serial No. 92,452. 13 Claims. (Cl. 22—88.)



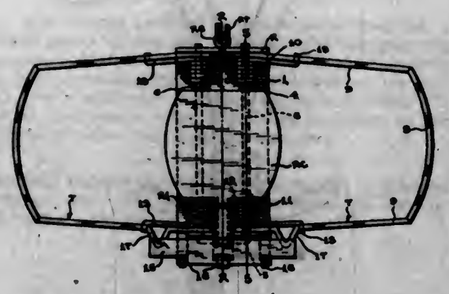
1. Apparatus for applying liquid facing to a refractory mold, having a bore of variable cross-section, including a container having an outlet and means to engage the mold to center the outlet with respect thereto, and a deflector for each portion of the mold of larger diameter so disposed with respect to the container and outlet that when the outlet is open the deflector will be adjacent said portion of larger diameter and in position to deflect the liquid flowing from said portion outwardly.

1,634,267. GRAVITY TABLE. LOUIS NAGY, Hamilton, Ontario, Canada, assignor of one-half to Laszlo Morton, Hamilton, Canada. Filed May 24, 1926. Serial No. 111,117. 4 Claims. (Cl. 114—195.)



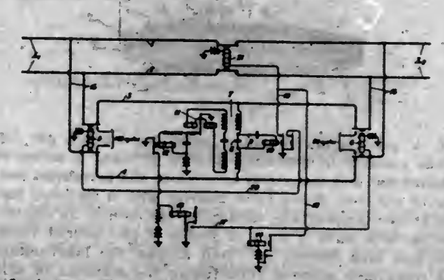
1. In a gravity table of the class described, a table top having attached thereto, a support provided with a recess located at the common center of the said support and the said table top, and adapted to receive a socket element, adapted to receive the ball element of a center leg provided with an enlarged lower extremity provided with a suitable means of attaching same to the floor of a ship or the like, so as to permit the said table top to be pivotally supported by the said center leg, said support having attached at its periphery a plurality of supporting rods, depending downward therefrom and attached to a supporting ring, coil springs attached to the said supporting ring, and to bases, adapted to be attached to the said floor, so as to permit the said coil springs to normally hold the said table top in a parallel position relative to the said floor.

1,634,268. ANCHOR BLOCK. GEORGE F. A. OCHS, Newark, N. J. Filed Oct. 5, 1926. Serial No. 139,647. 2 Claims. (Cl. 238—265.)



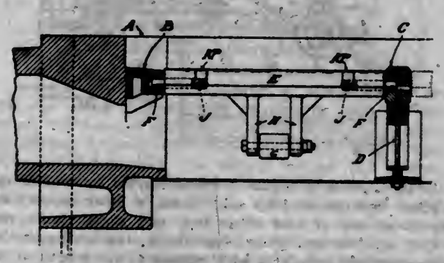
1. In combination with a tie, an anchor block consisting of complemental sections seated in a pocket formed in the upper face of the tie, the remote ends of said sections having an interlocking engagement with the tie, and a rail-retained locking member engaging said sections and consisting of a wedge-shaped member inserted between said sections, the latter on their adjacent ends being formed on converging lines corresponding to said wedge-shaped member.

1,634,269. ROTARY INTERNAL-COMBUSTION ENGINE. RICHARD L. PANNELL, Birmingham, Ala. Filed Apr. 13, 1922. Serial No. 552,883. 5 Claims. (Cl. 123—16.)



1. A rotary internal combustion engine comprising a housing, a rotor mounted rotatably in said housing, a plurality of interfitting blades extending diametrically of the said rotor and bearing at both ends against the inner walls of said housing, combustion chambers between the rotor and the walls of said housing, each chamber having an exhaust passage leading therefrom, means operable through the exhaust of gas from behind said blades in one chamber to discharge gas into the next succeeding one of said chambers, means to fire said gas, said discharge means including a piston in said passage adapted to be moved by said exhaust to compress a charge of gas in the manner described.

1,634,270. ANIMAL TRAP. GEORGE ALEXANDER SAMUCE, Brooklyn, N. Y. Filed Aug. 10, 1926. Serial No. 128,471. 10 Claims. (Cl. 43—88.)



1. A trap comprising a base plate, cooperable jaws mounted on said base plate, said jaws having lateral projections, a holding plate pivotally mounted on the base plate to one side of the jaws, said holding plate having a portion engageable with the lateral projections to hold the jaws set, and a trip plate pivotally mounted on the base plate and located between the jaws, said trip plate having a lip engageable with the holding plate when the jaws are set.

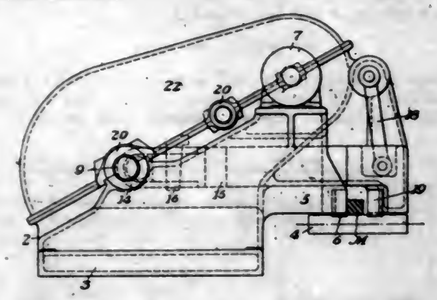
1,634,271. COMPOSITE RINGER. SAMUEL P. SHACKLETON, Wyoming, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 26, 1925. Serial No. 52,656. 3 Claims. (Cl. 179—43.)

1. A transmission line comprising two line sections, two parallel circuits interconnecting said line sections, each of said parallel circuits being designed to normally afford a closed circuit connection between said line sections whereby the continuity of said line will not be disturbed when message currents are transmitted thereover, a repeating coil having its primary winding bridged across one of said parallel circuits, and a composite ringer having its ringing responsive branches selectively connected with each of the windings of said repeating coil.

1,634,272. SINTERING PAN AND GRATE THEREFOR. GEORGE L. SHOOK, Port Henry, N. Y. Filed Feb. 21, 1925. Serial No. 10,949. 2 Claims. (Cl. 64—41.)

1. In a grate bar, the combination of a revoluble body with a socket in each end thereof, side openings leading from points near the bottoms of said sockets to the front face of the bar and through which trunnion pins in place in the sockets may be manipulated so as to be moved outward as into their appointed bearings; trunnion pins slidable in said sockets, the length thereof substantially equal to the depth of the sockets; granular material, as for instance crushed cinders, inserted through said side openings after the trunnion pins have been moved outward; and means for retaining said granular material in place whereby return movement of the trunnion pins is prevented.

1,634,273. CONVEYER PAN. EDWIN E. SLICK, Pittsburgh, Pa. Filed July 24, 1926. Serial No. 124,644. 11 Claims. (Cl. 49—47.)



1. As an article of manufacture, a pan for lehr conveyers, comprising a supporting member having strengthening means effective throughout the major portion of the length thereof, and having reinforcing means secured thereto and spaced therefrom throughout a substantial portion of the length of the pan.

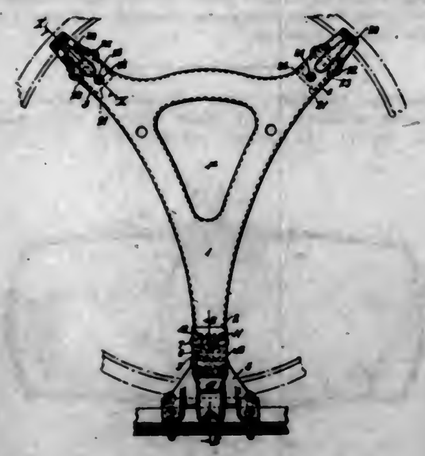
1,634,274. PROCESS OF MAKING OXYFUEL TORCH TIPS. ELMER H. SMITH, Minneapolis, Minn. Filed Mar. 18, 1926. Serial No. 95,605. 7 Claims. (Cl. 29—157.)

1. A process of making a one-piece oxyfuel gas tip which consists in providing a core, forming a series of longitudinal and transverse grooves in the peripheral surface of the core, filling these grooves with a material fusible at low temperature, immersing the core in an electroplating bath until a shell or jacket of the desired thickness has been formed over and around the longitudinal and transverse grooves, then fusing the material in said grooves, thereby forming a series of longitudinal and transverse gas ducts in the tip.

1,634,275. SHEAR. JOHN A. SMITMANS, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1926. Serial No. 81,201. 19 Claims. (Cl. 164—47.)

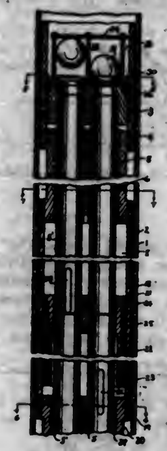
1. In a shear, a frame, a crank carried by said frame, a shear bar operated by said crank, a lever support for the outer end of said shear bar, and shear blades carried by said bar and frame respectively, and having cutting edges disposed angularly with respect to the length of the shear bar, substantially as described.

1,634,276. TAPPET FOR INTERNAL-COMBUSTION ENGINES. WILLIAM STEVENSON, Morristown, N. J. Filed June 7, 1924. Serial No. 718,433. 2 Claims. (Cl. 123—90.)



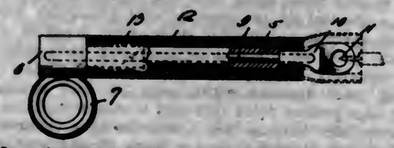
1. An engine tappet including a body member, a head member having a threaded connection with the body member, spring-including means, interposed between said members and acting lengthwise of the tappet, to releasably hold the head member against turning relatively to the body member, and a friction brake means interposed between said members.

1,634,277. WINDOW. HENRY WALTER SWITZER, Hamilton, Ontario, Canada, assignor to William H. Heimbach, Buffalo, N. Y. Filed Aug. 15, 1924, Serial No. 732,291, and in Canada Mar. 22, 1924. 7 Claims. (Cl. 20—49.)



1. In a window and in combination a frame, stiles flexibly connected to one another and slidably mounted in the frame, a pair of counter-balanced sashes pivotally mounted on the stiles, buffers for regulating the pivotal travel of the sashes inwardly, grooves in the sashes and corresponding grooves in the frame and weather strips secured to the stiles and adapted to simultaneously engage with both grooves.

1,634,278. TIRE CARRIER. HARRY A. WEAVER, Indianapolis, Ind., assignor to Martin-Parry Corporation, York, Pa., a Corporation of Delaware. Filed June 24, 1925. Serial No. 39,339. 3 Claims. (Cl. 224—29.)

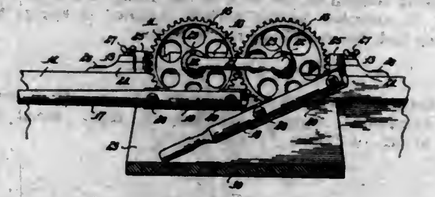


1. A tire carrier comprising a body, a pair of arms extending upwardly from the body, each arm being of channel shape in cross section, a rim seat flaring outwardly from each arm, an attached rim seat having a flaring upper portion and a channel shaped base fitted in each channeled arm, means for securing said rim seats in position, an arm extending downwardly from said body and of channel cross section, a bracket having a channel shaped extension fitting in said arm, means for uniting the bracket to the arm, a detachable rim clamp, and means for detachably securing said clamp to said arm.

1,634,279. MULTIPLE-STAGE PUMP. WILLIAM WERNER, Mexia, Tex. Filed Mar. 19, 1926. Serial No. 95,915. 7 Claims. (Cl. 103—192.)

1. A multiple stage pump including a tubing, a plurality of pump barrels, coupling heads connecting said tubing and said pump barrels together in series, said heads having two longitudinal passages therethrough, a pump rod, pistons in said pump barrels, outlet tubes slidable in said passages and connected to said pump rod and said pistons, inwardly opening valves at each end of said pump barrels, said tubes being provided with openings to allow access of fluid thereto from said pump barrels, the openings in one tube being above said pistons and the openings in the other being below said pistons, and valves at the upper ends of said tubes.

1,634,280. STORAGE-BATTERY TERMINAL. EDGAR E. ZASTROW, Chanute, Kans. Filed Aug. 13, 1926. Serial No. 129,000. 4 Claims. (Cl. 173—324.)



1. In a battery terminal of the character described, a suitable length of cast lead, a battery post engaging ring upon one end of said length of lead, an electric conducting wire extending throughout the length of the cast lead, and a lead wire attaching lug molded within the lead in engagement with said conducting wire at the opposite end from said post engaging ring.

1,634,281. BAND-SAW SHARPENER. OSCAR H. BANKER, Chicago, Ill. Filed Mar. 3, 1924. Serial No. 696,544. 6 Claims. (Cl. 76—45.)

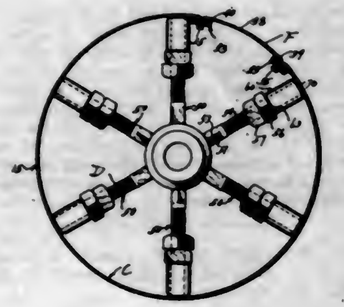
4. A saw sharpener formed with a tapered periphery and a burnishing surface, and a plurality of cutting teeth of gradually decreasing size, the larger of said teeth being arranged at the forward end of said sharpener.

1,634,282. BOW-FACING OAR. EDWARD BECHLE, Kiel, Wis. Filed Apr. 6, 1926. Serial No. 100,149. 2 Claims. (Cl. 9—25.)

1. A bow-facing oar for row-boats comprising a swiveled supporting-member having spaced apart gudgeons, gearwheels pivotally mounted on said gudgeons and in mesh with each other, a blade section attached to one of the gearwheels at the outer side of the pivot to project outwardly from the boat, and a handle section attached to the other gearwheel at the outer side of the pivot to project inwardly, in the operative position of the oar, whereby the oar sections can be folded and housed within the boat so as to extend rearwardly one above the other at the inner side of the boat.

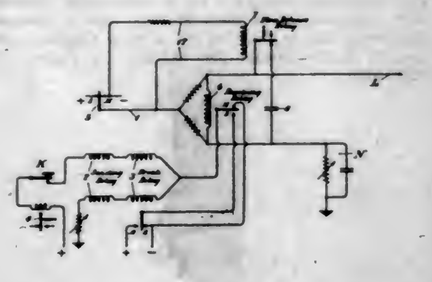
1,634,283. BUILDING UNIT. JOSEPH A. BIRKHOLZ, Orange, N. J. Filed Sept. 9, 1922. Serial No. 587,059. 2 Claims. (Cl. 72—107.)

1. A wall structure, comprising a plurality of perpendicular slabs disposed side by side in edge to edge relation, the faces of the edge portions of adjoining slabs each having between their sides a vertical longitudinal channel extending from the bottom to the top thereof, said channels of adjoining slabs being disposed in opposed matching relation to provide a vertical chamber intersecting the joint between the slabs, an integral filler element extending through said vertical chamber, a vertical batten covering the exterior end of the joint between the slabs, and vertically spaced fastening nails driven through said batten and the exterior end of said joint and into said filler element.



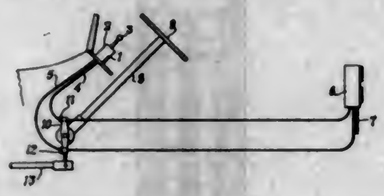
1,634,284. STORAGE-BATTERY CONTAINER. CARL J. DUNZWEILER and MALVERN W. SEVERANCE, Cleveland, Ohio, assignors to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Aug. 3, 1923. Serial No. 655,454. 1 Claim. (Cl. 220—91.)

A storage battery container having a handle in the form of a bail attached to two opposite walls of the container, said walls having protruding pads and bosses



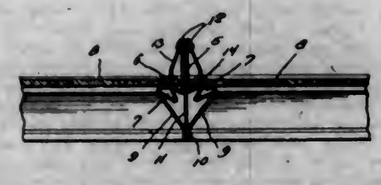
projecting outwardly from the pads and formed integrally with the container walls, and the handle having laterally extended bearing portions surrounding the bosses, retainers secured on the ends of the bosses, the inner ends of the extended bearing portions adapted to engage the pads and the outer ends the retainers.

1,634,285. EXPANSION PULLEY. ROBERT H. GARVER, Drummond, Idaho. Filed May 18, 1925. Serial No. 31,142. 4 Claims. (Cl. 64—8.)



1. As an article of manufacture a wheel rim including a main body portion of sheet metal having the ends thereof turned inwardly of the inner periphery to provide sockets, a connecting piece including a body having spaced retaining flanges providing sockets adapted to detachably receive the underturned flanges of the main body portion to connect the same, and set screw means carried by the body portion of said connecting piece radially at the inner periphery of the rim for adjustment into the joint at the ends of the main body portion to force the same into the sockets of said connecting piece.

1,634,286. TELEGRAPH CIRCUITS. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 30, 1925. Serial No. 65,874. 2 Claims. (Cl. 178—60.)



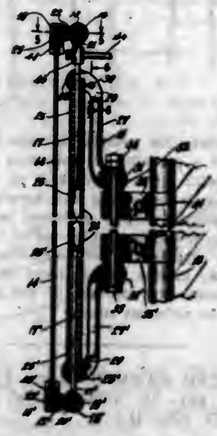
1. A duplex telegraph set comprising a line section and an artificial line section, a receiving relay associated with both of said line sections, a transmitter circuit connected to the apex of said line sections, an alternating current shunt around said receiving relay, and relay means controlled by said transmitter circuit for operating said shunt.

1,634,287. SIGNALING SYSTEM. REUBEN HILL, West Hartford, Conn., assignor of one-half to Minard A. Possons, Cleveland, Ohio. Filed Sept. 3, 1925. Serial No. 54,238. 11 Claims. (Cl. 116—36.)

1. In a signaling system, a controller unit, an indicator unit, communicating means therebetween and means to restore the indicator unit to inoperative position and means to gradually resist such restoration to delay the restoration and bell cranks connected to said resisting means and said communicating means.

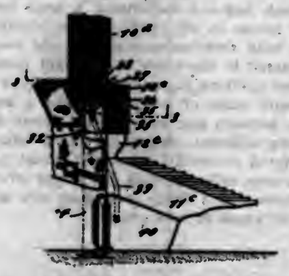
1,634,288. SKYLIGHT. FREDERICK HORFEL, Pottsville, Pa. Filed July 23, 1925. Serial No. 45,658. 1 Claim. (Cl. 108—16.)

In a skylight structure, a bar formed from a single sheet of material bent between its ends to provide a lower triangular portion of hollow form and a central upstanding vertical partition of U-shaped cross section, the free ends of said sheet being bent and connected together to form a channel at the apex of said triangular portion, the top portions on opposite sides of the partition of the triangle being bent to provide inner and outer condensation collecting and conducting gutters, a vertical reinforcing plate disposed within said bar and having its upper edge portion fitted into said U-shaped partition and its lower edge portion fitting into the apex channel, the crest of said U-shaped portion being formed with openings, and retaining tongues carried by the upper edge of said plate and extending through said opening.



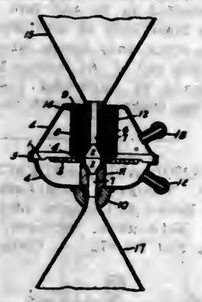
1,634,289. EDUCATIONAL APPARATUS. JENS OLAI BEENHARD JACOBSEN, Bellingham, Wash. Filed Sept. 13, 1926. Serial No. 135,103. 1 Claim. (Cl. 35—3.)

Apparatus for exemplifying some of the phenomena of the solar system, comprising a board having on the surface thereof a circle and four equi-distant marks associated with the circle and further having arrows adjacent to said marks, an element designed to represent the sun and having a stand adapted to be placed in the center of the circle and on the board and turnable about its axis,



and a horizontal arm carried by and extending laterally of the said stand, and an element designed to simulate the earth and having a globe and also having a stand movable on said board and said stand including a base upon the upper side of which is an arrow pointed in the same direction as the first named arrows and designed to be placed in parallelism therewith.

1,634,290. WIND DEFLECTOR FOR AUTOMOBILES. BERN JASSEN, New York, N. Y. Filed July 14, 1921. Serial No. 484,831. 9 Claims. (Cl. 296—84.)

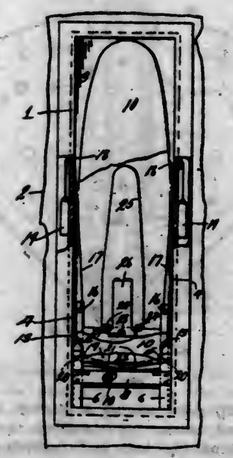


1. In a device of the character described, a wind deflector, and a frame for supporting the deflector, said frame including clamps extending therefrom and means for snapping said clamps in position against the edges of said deflector, said means comprising a rod connected to each of said clamps, a tubular member within which said rods are adapted to reciprocate, and a spring housed within said tubular member, the tension of which is adapted to restore the rod into the tubular member after being drawn out of the latter.

1,634,291. AIR-COOLED WALL. HOWARD J. KERR, Bayonne, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed June 12, 1919, Serial No. 303,671. Divided and this application filed Apr. 17, 1923. Serial No. 632,692. 12 Claims. (Cl. 110—75.)

1. In combination, a furnace wall comprising a main wall and a supplemental wall, a stoker comprising a wind box, a ventilating box communicating with said wind box, each of said walls being provided with passages for conducting air from said ventilating box to the interior of the furnace chamber.

1,634,292. ART OF THE TRANSMISSION OF SOUND. KARL MARTIN LEDERER, Newark, N. J. Filed Mar. 20, 1922. Serial No. 545,293. 12 Claims. (Cl. 179—115.)

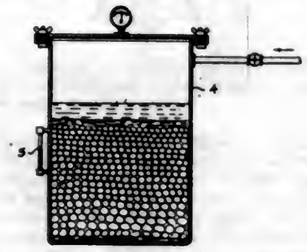


1. A diaphragm for devices of the character specified comprising a disk-shaped element provided with a cone-shaped armature, and concentrically disposed annular grooves.

9. In a device for the transmission of sound, and similar apparatus, a casing comprising a pair of sections, a diaphragm disposed between and held in place by said sections, means connected with said casing for admitting air into the same, a cone-shaped armature associated with said diaphragm, a tubular core provided with a cone-shaped opening fitted over said armature, and a coil wound upon said core.

1,634,293. MANUFACTURE OF MOLDED ARTICLES FROM LATEX. CHAUNCEY C. LOOMIS, Yonkers, and HORACE E. STUMP, Brooklyn, N. Y., assignors, by mesne assignments, to The Hevea Corporation, a Corporation of New York. Filed Aug. 22, 1923. Serial No. 658,833. 8 Claims. (Cl. 18—50.)

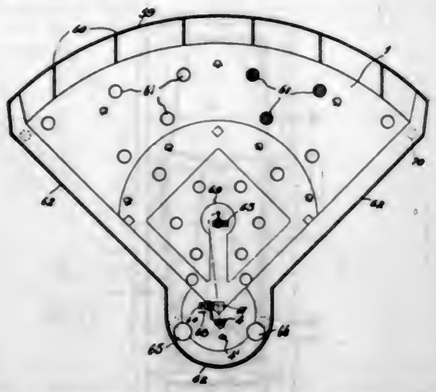
1. The process of molding articles, comprising forming a suspension of a filler, adding latex, partially coagulating the latex, removing the liquid content, drying and pressing.



1,634,294. IRONING BOARD. WILLIAM L. MCGOWAN, Galt, Mo. Filed Oct. 8, 1924. Serial No. 742,398. 1 Claim. (Cl. 68—10.)

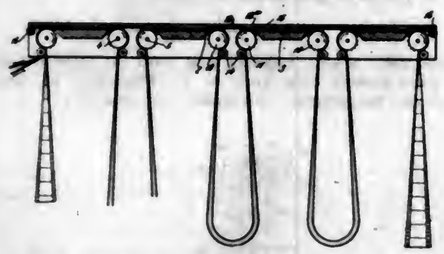
A cabinet ironing board comprising a casing having opposed vertical guide strips, a carriage slidably mounted on said strips, a board hinged adjacent one end of said

carriage, means for locking said carriage in different positions comprising a pair of levers pivotally and slidably mounted at their outer ends on opposite edges of the carriage and adapted to be slid into engagement with said strips, the inner ends of said levers being adapted to engage each other, said levers lying in the path of travel of the inner end of the ironing board whereby the board when moved to horizontal position forces said levers into locking engagement with the strips.



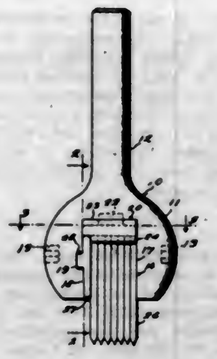
1,634,295. METHOD AND MANUFACTURE OF FRUIT PRESERVES. WHARTON B. MCLAUGHLIN, New York, N. Y.; Celia Brown McLaughlin administratrix of said Wharton B. McLaughlin, deceased. Filed Mar. 25, 1924. Serial No. 701,812. 3 Claims. (Cl. 99—11.)

1. The method of preserving fruit which consists in exposing it to the action of a concentrated sugar solution at a temperature below the boiling temperature of the natural fruit juices; maintaining on the solution a pressure in excess of the osmotic pressure between the juice within the cell of the fruit and the surrounding sugar solution until the desired amount of sugar is incorporated in the fruit substance.



2. An article of manufacture consisting of fruit preserved by a saturated sugar solution in its substance substituted for a portion of its uncooked natural juice.

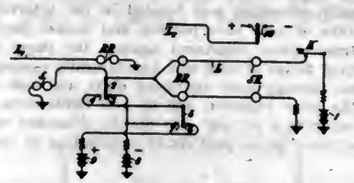
1,634,296. BASEBALL GAME. PHILIP J. MATTERN and HAROLD N. WALKER, Oelwein, Iowa, assignors of one-third to Edward C. Ballman, Oelwein, Iowa. Filed June 24, 1925. Serial No. 39,310. 6 Claims. (Cl. 273—89.)



1. A base ball game having a pitcher, batter, catcher and umpire and means for throwing the ball, batting the ball, catching the ball and operating the umpire, the said means consisting of a trigger arm operated through a counterbored push button, thereby releasing tension springs which function to operate the pitcher, batter, catcher and umpire.

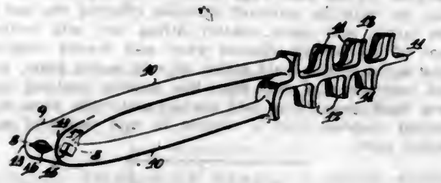
1,634,297. APPARATUS FOR PRINTING MOTION-PICTURE FILMS. FREDERIC R. MILLER, Jersey City, N. J., assignor to Artcolor Motion Picture Company, New York, N. Y., a Corporation of Arizona. Filed Apr. 25, 1919, Serial No. 292,525. Renewed Nov. 24, 1926. 6 Claims. (Cl. 95—75.)

1. In a machine for printing motion picture films, the combination of a plurality of sprockets arranged in successive rows with several sprockets in each row, means for simultaneously operating the sprockets to an equal extent, an exposure window adjacent each sprocket of a length equal to a length of film fed at each operation of the sprockets, and means for supporting the film to be printed and the master film in loops of equal length between each successive sprocket of the row and the end sprockets of the adjacent rows.



1,634,298. BUSH HAMMER. JOHN J. PADBURY, Barre, Vt. Filed Oct. 15, 1926. Serial No. 141,801. 4 Claims. (Cl. 125—41.)

1. A bush hammer comprising a head having a blade receiving recess in its lower end, a plurality of blades arranged with their upper ends in said recess, a thrust plate mounted in the upper end of said recess, said plate having end portions engaging opposite faces of said head and opposite edges of said blades, and a key adapted to be driven between one wall of said recess and the outer face of the adjacent blades, the upper edge of said key being adapted to contact with said thrust plate, the wall of said recess adjacent said key being provided with a guide groove, and a flange carried by said key and adapted to be arranged in said groove.



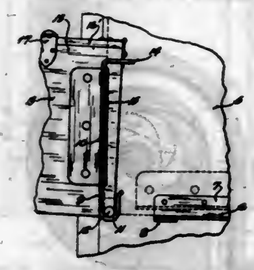
1,634,299. TELEGRAPH CIRCUITS. RALZEMOND D. PARKER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 19, 1924. Serial No. 687,369. 5 Claims. (Cl. 178—2.)

1. A telegraph system comprising a receiving relay, an armature therefor, contacts associated with said armature, sources of potential of opposite polarity normally connected to said contacts, a loop circuit connected to

said armature, a relay in said loop circuit, and means controlled by said relay for connecting said contacts to a single one of said sources of potential.

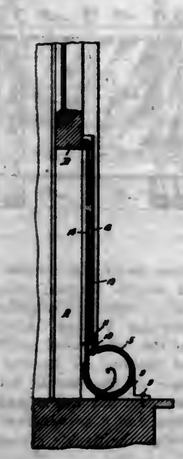
1,634,300. REVERSIBLE TOOL BRACE. CLARENCE R. POLEN, Tulsa, Okla., assignor of three-fourths to Solomon R. Mealy, Tulsa, Okla. Filed Sept. 23, 1926. Serial No. 137,295. 3 Claims. (Cl. 255—35.)

1. A tool brace comprising a rigid one-piece body having a head at one end and a double-face ratchet-lug body at the other end connected with the head by spaced arms and adapted to engage a derrick circle.



3. In a tool brace which comprises a rigid one-piece body having a head at one end and means at the other end adapted to engage a derrick circle, said head having a recess in its front and having a transverse opening merging with said recess, and a multi-sided-sharp-edged tooth member held in said opening and projecting into said recess, said tooth member being adapted to be turned to present one of its edges at a time into said recess whereby as one tooth edge becomes dull another edge may be presented.

1,634,301. THERMOSTATICALLY-CONTROLLED RADIATOR SHUTTER FOR AUTOMOBILES. JAMES F. RALEIGH, River Forest, Ill., assignor to Pines Winterfront Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 16, 1925. Serial No. 16,089. 19 Claims. (Cl. 236—35.)



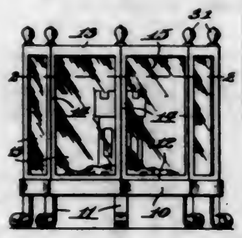
1. In a thermostatic radiator shutter, the combination of a frame, a shell, a chamber between said frame and said shell, a thermostatic element in said chamber, and a closure member for said chamber, said closure member being releasable for affording access to said thermostatic element without necessitating separation of said frame and said shell.

1,634,302. TRUNK-DRAWER ATTACHMENT. JULIUS RITTER, Jr., Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed May 14, 1923. Serial No. 638,853. 2 Claims. (Cl. 190—13.)

1. A trunk drawer attachment, comprising an open sided trunk section having a drawer support, a drawer vertically positioned on said support and having stop members mounted on its front portion for limiting the inward movement of said drawer, and being movable to a horizontal position outside of said trunk, and a bearing and a stop means for maintaining the drawer in said horizontal position, said drawer and stop means permitting the drawer to be easily removed from engagement with the trunk section by an upward movement of the drawer to disengage the bearing and the stop means.

1,634,303. WINDOW SCREEN. EMMA SCHELLER, Long Island City, N. Y. Filed Aug. 17, 1926. Serial No. 129,762. 1 Claim. (Cl. 156—39.)

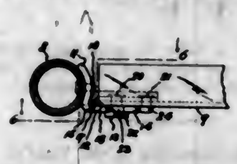
In a screen construction for windows, a hollow casing constructed for disposition upon the window sill, said casing being formed at its top side with a longitudinal slot, a predetermined length of screen material, reinforcing strips exteading along the opposite longitudinal edges of the screen material, said reinforcing strips being of spring metal and of normally coiled formation so as to normally wind the screen material in coil formation within the casing, the outer end of the screen material



being attached to the lower portion of the adjacent sliding window sash in order that when the sash is raised, said screen material will be withdrawn from the casing through the longitudinal slot.

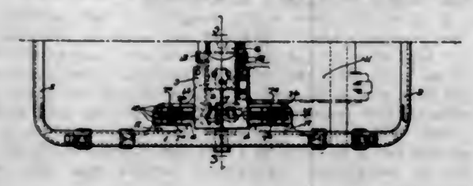
1,634,304. CENTRIFUGAL PUMP. VICTOR SCHLEYER, Anderson, Ind., assignor, by mesne assignments, to Dean Hill Pump Company, Anderson, Ind., a Corporation of Indiana. Filed Mar. 19, 1923. Serial No. 626,063. 9 Claims. (Cl. 103—103.)

1. A centrifugal pump, comprising a vertical shaft, a centrifugal impeller mounted thereon, upper and lower plates between which said impeller rotates, said plates being spaced apart to provide between them a discharge chamber into which said impeller discharges, and a single involute vane located in said discharge chamber and projecting into proximity to said impeller.



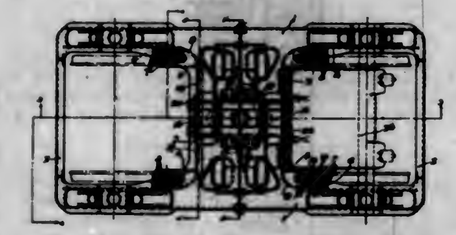
1,634,305. ILLUMINATED AQUARIUM. JOHN A. SCHRIMP, Los Angeles, Calif. Filed May 26, 1926. Serial No. 111,855. 6 Claims. (Cl. 119—5.)

1. An aquarium having a double bottom, the upper member of said double bottom, being bodily removable and shaped so as to represent miniature hills and valleys, there being openings formed through said removable upper member at the lower-most points in the depressions that are formed therein, an electric lamp supported on the lower member of the double bottom and positioned in the space between the upper and lower members of said double bottom and a transparent housing secured to the lower member of the double bottom and enclosing said electric lamp.



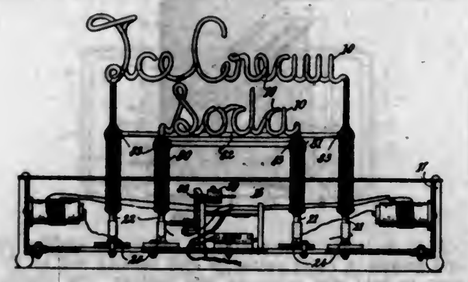
1,634,306. BEDSTEAD CORNER LOCK. ABRAHAM J. SCHULTZ, Newark, N. J. Filed June 23, 1926. Serial No. 117,959. 4 Claims. (Cl. 5—294.)

1. A corner lock structure for connection between a bedpost and angle-iron side bar of a bedstead, comprising an integral socket element consisting of a base portion to abut and be secured to said bedpost and a socket plate extending outwardly from one side of said base portion, said socket plate having an upwardly open downwardly extending socket in the body thereof bounded on its outer side by a finger-like member, said socket member having a vertically extending seat located in the interior angle of juncture of said base portion and socket plate; and an abutment plate registered against the inner side of the vertical flange of said side bar, laterally spaced rivets extending through said abutment plate and side bar to secure the same together, one of said rivets terminating at the outer face of said side bar in a headed coupling stud and the other of said rivets terminating at the outer



face of said side bar in a stop head, said abutment plate having at its outer end a vertical off-set tenon projecting endwise beyond and lying in the vertical plane of said side bar with its rearward shoulder abutting the end of the latter, said tenon slidably fitting into said vertical seat of said socket element when said headed coupling stud is entered in said socket of said socket plate, and the outer edge of said finger-like member abutting said stop head so as to be held against distortion when said headed coupling stud is entered in said socket of said socket plate.

1,634,307. TRUCK. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed June 9, 1926. Serial No. 114,742. 17 Claims. (Cl. 105—172.)



1. In a locomotive truck, a transom forming part of the truck frame and forming an air duct and having an inlet opening in its top wall, and a center plate supported on said transom above said opening and having a central opening for passage of an air current from a conduit in the locomotive superstructure.

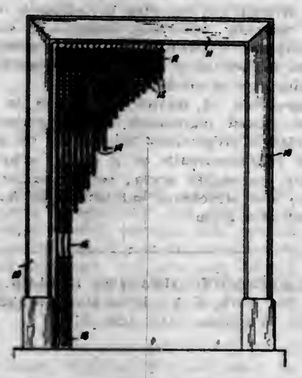
1,634,308. ELECTRIC-LOCOMOTIVE TRUCK. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed June 9, 1926. Serial No. 114,743. 15 Claims. (Cl. 105—172.)

1. In a locomotive truck transom, spaced air ducts formed by the transom walls and closed to each other.

1,634,309. ILLUMINATED ADVERTISING DEVICE. WILLIAM GENTRY SHELTON, New York, N. Y., assignor to Halliwell-Shelton Electric Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1922. Serial No. 588,784. 5 Claims. (Cl. 176—14.)

1. An illuminated sign comprising a Geissler tube having electrodes at each end, and two transformers one connected to each electrode for producing a discharge from each electrode.

1,634,310. PROCESS OF MAKING A YEAST STIMULANT. JOKICHI TAKAMINE, Jr., and NOBUCHIKA FUJITA, Clifton, N. J. Filed July 25, 1922. Serial No. 577,446. 5 Claims. (Cl. 195—20.)

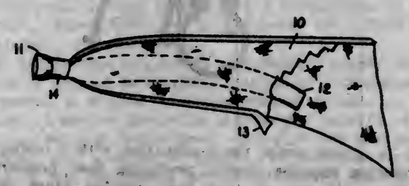


1. The process of manufacturing yeast stimulant, which consists in making a water decoction of bran, saccharifying and rendering water soluble the carbohydrates therein by means of an enzyme mixture rich in a diastatic enzyme and containing some proteoclastic enzymes, eliminating the proteoclastic enzymes, leaving a slight amount of the diastatic enzyme and separating the water soluble from the water insoluble material.

1,634,311. FURNACE FOR ELECTRICAL TREATMENT OF GASES FOR THE PURPOSE OF OXIDATION OF ATMOSPHERIC NITROGEN OR FOR OTHER PURPOSES. BRUNO THOMAS, Seattle, Wash. Filed Mar. 14, 1923. Serial No. 624,987. 3 Claims. (Cl. 204—31.)

1. A furnace for electrical treatment of gases embodying a chamber having tangentially disposed admission ports and an outlet port of such relative size as respects the said chamber that a centrifugal motion is imparted to the gases passing therethrough, whereby a reaction zone of low pressure is produced and electrodes operatively disposed with respect to said zone.

1,634,312. DOOR OR WINDOW SCREEN. MICHELE ZECCHINO, Corona, N. Y. Filed Aug. 11, 1926. Serial No. 128,539. 2 Claims. (Cl. 156—10.)



1. The herein described screen for excluding insects from a doorway or window, the same comprising a succession of strings of beads in the same plane and in close relation to one another, each string being suspended at the top of the opening from a coil spring and having other springs interposed along its length.

1,634,313. SWIMMING BAG. HACHIG A AYVAD, West New York, N. J. Filed Aug. 30, 1926. Serial No. 132,430. 3 Claims. (Cl. 9—17.)

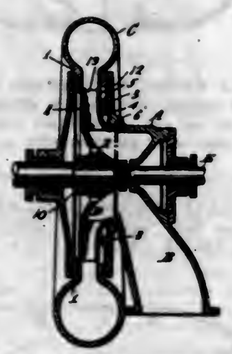
1. A pair of S-shaped swimming-bags one of which is reversed with respect to the other, one end of each bag being joined to one end of the other bag, and the other ends of the bags being provided with valves.

1,634,314. VALVE FOR SWIMMING BAGS. HACHIG A AYVAD, West New York, N. J. Filed Aug. 30, 1926. Serial No. 132,431. 4 Claims. (Cl. 9—17.)

4. In combination with an inflatable woven fabric bag, a valve consisting of a mouthpiece and a collapsible tube within the bag, the walls of which each consist of two layers of fabric.

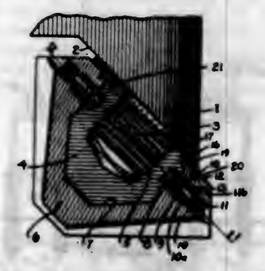
1,634,315. REMEDY FOR SEASICKNESS. GARRETT N. BANKER, Kew Gardens, N. Y. Filed July 1, 1926. Serial No. 119,897. 2 Claims. (Cl. 167—7.)

1. A composition of matter for use in overcoming and preventing seasickness by shielding the nervous system from reflex stimuli and relieving the stomach of nervous and direct muscular reactions, comprising scopolamine and ethylmorphine hydrochlorate as the shielding sedatives, cerium oxalate as a direct stomach-settling agent, and strychnine as a stomachic tonic.



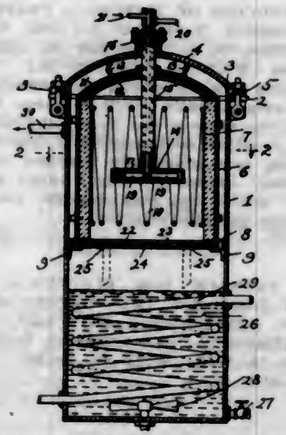
2. A composition of matter as defined in claim 1, wherein the named ingredients are intermixed in the following relative proportions by weight; to wit, scopolamine, one four-hundredth of a grain; ethylmorphine hydrochlorate, one-eighth grain; cerium oxalate, two to four grains; and strychnine sulphate, one one-hundred-and-twentieth of a grain.

1,634,316. MASSAGING HEATING ROLLER. EDWARD BECHER, New York, N. Y. Filed Mar. 27, 1926. Serial No. 97,862. 7 Claims. (Cl. 128—57.)



1. A massage instrument comprising a hollow handle, a U-shaped frame secured to said handle, a heating element fixed to said handle and projecting longitudinally therefrom and a roller mounted rotatably upon said heating element and restrained by said frame from longitudinal movement.

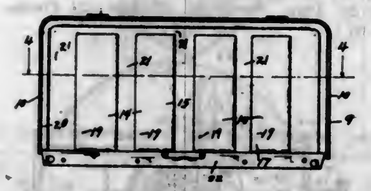
1,634,317. IMPELLER BALANCING AND SEALING DEVICE. HARRY F. BENSON, Holyoke, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 22, 1925. Serial No. 45,189. 4 Claims. (Cl. 103—112.)



1. In a fluid pump, the combination with a casing and a rotating impeller therein producing fluid pressure at discharge, of sets of axial flow pumping vanes on opposite sides of the impeller cooperating with the casing to form axial flow pumping means arranged at different radial distances to secure a resultant thrust on the impeller in one direction.

1,634,318. ROLLER-CUTTER MOUNTING. CLINTON H. M. BULL, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Mar. 28, 1927. Serial No. 178,986. 11 Claims. (Cl. 255—71.)

1. In a rotary boring drill, a spindle, a bushing on said spindle, a roller cutter on said bushing and an element to hold said cutter on said bushing, said bushing having a groove, and said element being carried by the cutter, and means to move said element partly into said groove.

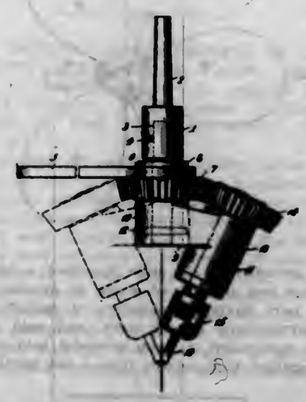


1,634,319. METHOD AND APPARATUS FOR HEAT TREATING METAL ARTICLES. THOMAS F. CALLAGHAN, Bellefonte, Pa., assignor to Erwin C. Uihlein, Milwaukee, Wis. Filed Oct. 27, 1924. Serial No. 746,094. 4 Claims. (Cl. 266—4.)

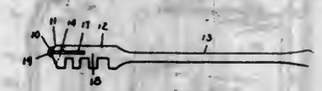
2. In apparatus of the character described, the combination of a container, one portion of said container serving as a quenching bath compartment, another portion of said container having a shell within the same, said shell being spaced from the wall of the container, means for supporting said shell within the container, a suitable refractory lining upon the inner wall of said shell, electric resistance members within the shell, a cap co-operating with said shell, said cap having a suitable refractory lining, a movable member for supporting articles to be heat treated, said movable member having portions which extend through the said cap and said closure member for the container, said movable member being adapted to move into the quenching compartment.

1,634,320. CUSHION TOP FOR WARDROBE TRUNKS. WILLIAM C. CHESNUT, Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Nov. 5, 1923. Serial No. 672,952. 2 Claims. (Cl. 190—13.)

1. A wardrobe trunk having a section provided with an upper open end and a hinged top cover, garment hanger tracks mounted within the trunk section on the opposite side walls and adjacent the open end, garment hangers slidably mounted on said tracks and having straight upper edge portions for folding garments thereover, and a cushion member mounted on the inner side of the top cover and having a base attaching portion and a covering portion between which a plurality of cushion units are formed in spaced relation, one of said units being of U-formation to engage the upper edges of the wardrobe section and the other units extending at right angles to the garment hangers, the portions of the covering between the cushion units being secured to the base member, the upper straight edges of the garment hangers and the garments draped thereon embedding into the cushion units other than the unit of U-formation when the top cover is in closed position.

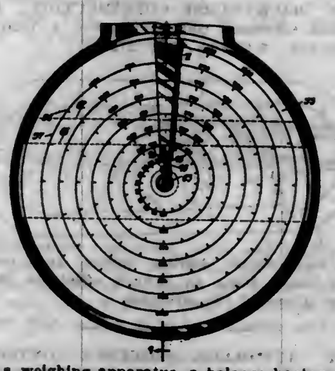


1,634,321. CLASP. JOSEPH COUSLIN, East Vandergrift, Pa. Filed Feb. 16, 1927. Serial No. 168,681. 4 Claims. (Cl. 24—137.)



4. A clasp comprising a body, a U-shaped clasp member hingedly connected to the body, and a fastening bar pivotally connected to the body and movable to and from a position against and in engagement with the back portion of the clasp member.

1,634,322. DRILLING TOOL. GEORGE DORNER, Jr., Long Island City, N. Y. Filed Mar. 2, 1926. Serial No. 91,711. 3 Claims. (Cl. 77—55.)

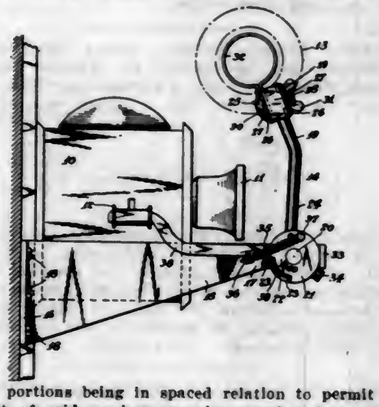


1. A glass drilling tool comprising, a shank adapted to engage the spindle of a drill press or similar rotating device, a yoke rigidly attached to said shank and provided with an inclined bearing at its outer end, a shaft rotatably mounted in said bearing, means at the upper end of said shaft for rotating the same, a chuck carried by the lower end of said shaft, a member rotatably carried by said shank for causing a planetary motion of said rotating means, and a handle for holding said member stationary when said shank rotates.

1,634,323. GLASS CUTTER. ARTHUR TERRY FLETCHER, Bristol, Conn., assignor to The Fletcher-Terry Company, Forestville, Conn., a Corporation. Filed Jan. 17, 1927. Serial No. 161,531. 2 Claims. (Cl. 49—52.)

1. In a glass-cutter, a body having a slot, a disc-like cutter entered in said slot and having an opening, a shaft of wire entered through said opening, arms extending from the ends of said shaft and forming therewith a U-shaped structure, and said body having means for operatively housing the portions of said U-shaped structure that are exterior to said cutter.

1,634,324. DIAL SCALE AND SIMILAR APPARATUS. EUGENE GABE, Saginaw, Mich., assignor to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Dec. 4, 1923. Serial No. 678,384. 12 Claims. (Cl. 265—68.)

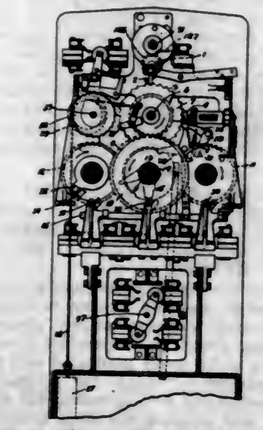


1. In a weighing apparatus, a balance having a weight arm and a weighing arm, means for applying the material to be weighed to the weight arm, spring means attached to the weighing arm adapted to apply a force to the weighing arm in direct proportions to the deflection of the said arm, dial means for registering the deflection of the said arm in proportion to the weight applied, the said means comprising a dial, a series of divisions on the said dial arranged in a spiral thereon so as to subtend equal angles; means for rotating the said dial in proportion to the said deflection and means for indicating the numbers on the dial corresponding to the deflection of the weighing arm and the weight of material on the weight arm.

1,684,325. TELEPHONE ATTACHMENT. FAIRFIELD W. HOBAN, New York, N. Y., assignor to Holdaphone, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 176,375. 7 Claims. (Cl. 179—149.)

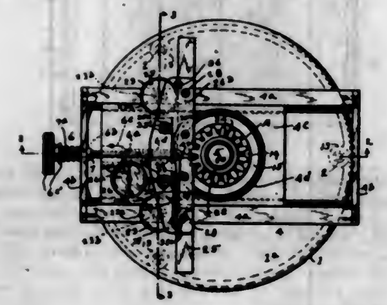
1. A telephone attachment comprising a bracket adapted to be secured in operative relation to a telephone instrument, a receiver carrying member pivoted to said bracket, a member pivoted to said bracket laterally of and in close relation to the lower portion of said first named member and adapted to engage the telephone receiver hook of said instrument for controlling the same, a portion on one of said members extending laterally into the path of travel of the other of said members, and opposing portions on said other member at opposite sides of said laterally extending portion adapted to engage the

same to positively maintain said hook controlling member in raised and depressed positions as said receiver carrying member is swung to and from operative position; said



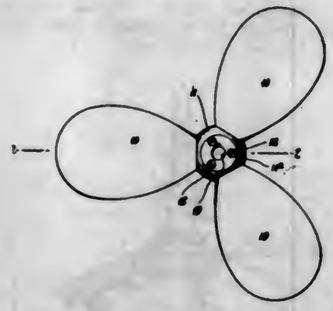
opposing portions being in spaced relation to permit of movement of said receiver carrying member for a portion of its travel independently of said hook controlling member.

1,634,326. RACE-COURSE CONSTRUCTION. JOHN F. JENNINGS, Cleveland, Ohio. Filed Dec. 1, 1926. Serial No. 151,883. 5 Claims. (Cl. 272—5.)



1. A race course having curves and connecting stretches, there being an inward offset on the inner boundary of one of the stretches.

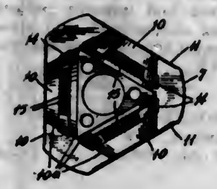
1,634,327. AUTOMATIC SEQUENCE CONTROL FOR VALVES. JAMES S. KENNEDY, Pelham Manor, N. Y., assignor to The Bartlett Hayward Company, a Corporation of Maryland. Filed Aug. 15, 1924. Serial No. 732,189. 17 Claims. (Cl. 137—144.)



1. A sequence valve control apparatus comprising main operating valves, motive means for the same, an electromagnetic operator for each of said motive means, electric circuits for controlling said electro-magnetic operators, a safety switch included in said circuits, and automatic means for throwing said switch adapted to operate on failure of current in a part of said circuits.

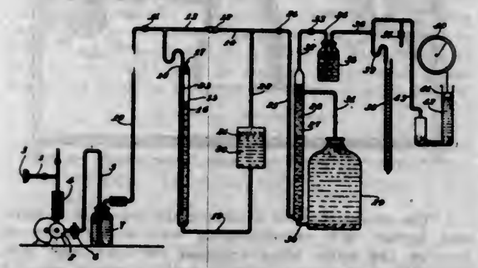
1,634,328. TESTING APPARATUS. ERNEST J. LEES, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 20, 1922. Serial No. 576,268. 24 Claims. (Cl. 73—51.)

1. In apparatus of the class described, the combination of a base, a support mounted in said base and arranged to carry a gear, an annulus corresponding in diameter to one circle of the gear fixed to said support, a frame, said shaft and frame being mounted to permit relative movement between them about the axis of the gear, a contact element engaging said annulus and disposed between it and said frame and arranged to roll on said annulus when relative movement between said frame and support takes place, and means engaging the face of a gear tooth during such relative movement to determine inaccuracies therein.



1,634,329. PROPELLER. HENRY MALM, New York, N. Y. Filed Apr. 24, 1926. Serial No. 104,331. 10 Claims. (Cl. 170—159.)

1. In a propeller of the class described, a blade member, the hub end portion of which is provided with a projecting part having a plurality of radially directed and circumferentially spaced teeth, and said projecting part being dove-tailed in form whereby said blade may be locked against displacement from a hub portion.



1,634,330. PROPELLER. HENRY MALM, New York, N. Y. Filed Sept. 13, 1926. Serial No. 135,032. 8 Claims. (Cl. 170—160.)

1. In a propeller, a hub portion divided transversely of the axis thereof to form two independent parts, said parts having on adjacent faces and arranged about the periphery of said hub portion, dove-tailed recesses, por-

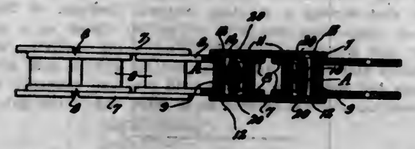
tions of the beveled faces of said recesses being grooved, and teeth or projections in the grooved portions of said recesses.

1,634,331. METHOD OF AND APPARATUS FOR QUANTITATIVE DETERMINATION OF GAS. ROSCOE P. MASS, Wilkinsburg, Pa. Filed May 15, 1926. Serial No. 109,276. 5 Claims. (Cl. 23—232.)

1. The method of continuously determining quantitatively a given constituent of a mixture of gases, comprising causing a stream of the mixture to constantly flow at a volumetrically uniform rate, removing the given constituent of the gas from said stream, causing the residue gas to flow through a constricted passage, and indicating the differential pressure of the residue gas on the opposite sides of the constricted passage.

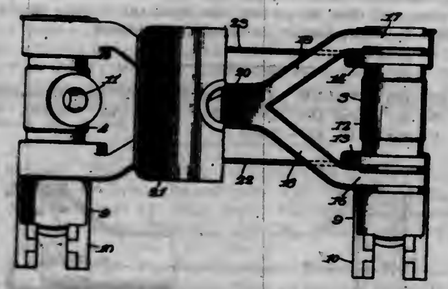
1,634,332. METHOD OF OR PROCESS OF COOKING SPAGHETTI AND SIMILAR FOODS. JAMES McGOWAN, Jr., Merchantville, N. J., assignor to Campbell Soup Company, a Corporation of New Jersey. Filed Mar. 23, 1926. Serial No. 96,878. 3 Claims. (Cl. 99—8.)

3. The method of cooking spaghetti, which consists in hermetically sealing in a container, a suitable amount of dry spaghetti, together with a sauce therefor and water, heating the same to a temperature sufficient to cook the contents of said container, and keeping the strands of spaghetti in said container in substantially constant motion with respect to each other throughout the cooking of the same whereby the strands of spaghetti are prevented from adhering to each other, the sauce is thickened and evenly distributed over all the strands throughout said container, and any coloring matter in said sauce is evenly distributed throughout said sauce and spaghetti.



1,634,333. BILL POSTING. HUGO MOCK, New York, N. Y. Filed Oct. 21, 1926. Serial No. 143,296. 4 Claims. (Cl. 41—34.)

1. A method of bill posting comprising the preparation of a paper poster, applying a layer of nitrocellulose lacquer to the wall to which said poster is to be affixed, affixing said poster to such wall while said lacquer is still

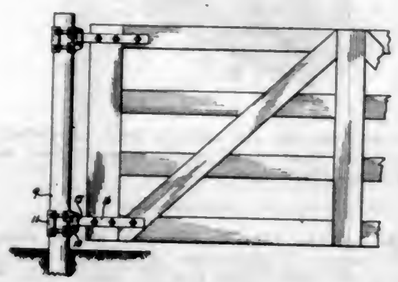


in a tacky condition, and applying fresh nitrocellulose lacquer to the front of the poster so as to have said lacquer thoroughly permeate said poster.

1,634,334. DRIVE CHAIN. FRANK L. MORSE, Ithaca, N. Y., assignor to Morse Chain Company, a Corporation of New York. Filed Feb. 21, 1924. Serial No. 694,214. 2 Claims. (Cl. 74—32.)

1. A drive chain comprising inside and outside links, two part pintles joining the links, one part of each pintle being shouldered to space the inside links and the other part of each pintle being shouldered to space the outside links, and a roller surrounding each pintle.

1,634,335. ENGINE. HENRY E. MUCHNIC, Atchison, Kans. Filed Sept. 15, 1924. Serial No. 737,735. 12 Claims. (Cl. 105—44.)

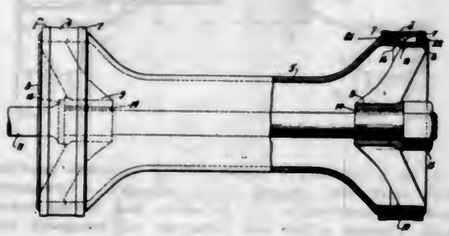


1. In a locomotive engine having cylinders provided with inlet and exhaust steam passages, a transverse member connected to the cylinders, and having spaced walls forming a box like structure, all integrally connected to the cylinders and for providing a rigid and strong connecting member between the cylinders, said transverse member having an integral center bearing for connection to a truck frame of the locomotive.

1,634,336. RUBBER-VULCANIZATION PROCESS. CLAYTON OLIN NORTH, Akron, Ohio, assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 27, 1926. Serial No. 132,041. 6 Claims. (Cl. 18—53.)

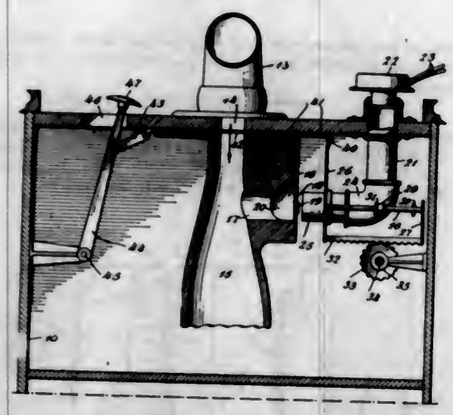
1. The process of vulcanizing rubber which comprises heating a rubber compound containing sulfur in the presence of the heptaldehyde derivative of an aniline-acrolein reaction product.

1,634,337. GATE HINGE. ANTHONY L. PANOCH, Iowa City, Iowa. Filed Aug. 21, 1926. Serial No. 130,649. 4 Claims. (Cl. 16—128.)



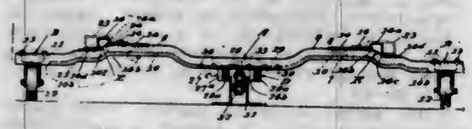
1. The combination, with a hinge part attachable to a gate and having a pivoting element thereon, of hinge means comprising means to adjustably clamp on a gate post and having a pivoting element for receiving said pivoting element on the gate, and an eye on said hinge means for embracing one of said pivoting elements and preventing removal of said hinge part and of the gate.

1,634,338. PROCESS OF MAKING PRECIPITATED BARIUM CARBONATE AND BARIUM SULPHYDRATE. JAMES B. PIERCE, Jr., Charleston, W. Va. Filed Nov. 18, 1924. Serial No. 750,676. 3 Claims. (Cl. 23—66.)



1. The method of making highly pure barium carbonate which consists in causing substantially pure carbon dioxide to react upon barium sulphide liquor while inhibiting the decomposition of the oxy-sulphur compound of barium normally present in the barium sulphide liquor by preserving approximately one-half of the barium content of the original barium sulphide liquor in the form of barium sulphydrate throughout the course of the reaction and then separating the resultant barium sulphydrate from the barium carbonate so obtained.

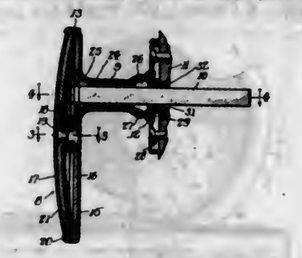
1,634,339. VALVE. CHARLES F. PRESCOTT, Brooklyn, N. Y. Filed Oct. 18, 1923. Serial No. 669,359. 6 Claims. (Cl. 121—193.)



6. A valve of the character described comprising a spindle; a follower ring having an outwardly projecting flange; a valve body also having an outwardly projecting flange, a bull ring having a flange projecting inwardly between the follower ring and the valve body, said bull ring forming packing ring grooves with the flanges on the follower ring and valve body; and shims interposed between said inwardly projecting flange and the follower ring and between said inwardly projecting flange and the valve body, to vary the width of the packing ring grooves.

1,634,340. SOUND-AMPLIFYING INSTRUMENT. RAMON RODRIGUEZ, New York, N. Y. Filed Aug. 20, 1924. Serial No. 733,046. 12 Claims. (Cl. 179—100.1.)

1. The combination of a phonograph tone-arm, a radio loud speaker unit, an amplifying horn having a branch passage, the latter being arranged for connection with said radio loud speaker unit, controlling means whereby communication between said tone-arm and horn and between the branch passage of the latter and said loud speaker unit is established and disestablished in inverse relation, and independent means for automatically closing said branch passage when its communication with said loud speaker unit is disestablished.



1,634,341. PAINT STICK FOR AUTOMOBILES. ROBERT T. ROMINE, Mount Clemens, Mich. Filed Sept. 3, 1926. Serial No. 133,372. 16 Claims. (Cl. 104—242.)

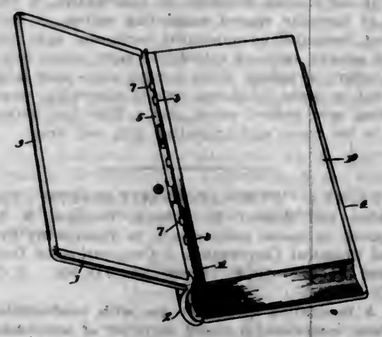
1. A device for carrying automobile bodies previous to the assembly of the body on its chassis, comprising a relatively narrow channel formed bar, means for retaining the body in position on said bar against substantial displacement, and a caster mounted beneath said bar adjacent each end thereof.

1,634,342. DOOR HANDLE. VICTOR R. SHINKEZ, Charlotte, Mich., assignor to Hancock Manufacturing Co., Charlotte, Mich., a Corporation of Michigan. Filed Sept. 13, 1924. Serial No. 737,470. 5 Claims. (Cl. 292—347.)

1. A door handle having, in combination with a spindle, a bar rigidly secured to the end of the spindle, a face plate for said bar, and a shell formed from a single sheet of metal and providing a rear wall with an aperture therein to receive said spindle, the edge portion of said

shell being bent around said face plate to form a flange, the edges of which overlie said face plate and serve to clamp the face plate in position.

1,634,343. ALLOY. GEORGE O. SMITH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1924. Serial No. 738,528. 6 Claims. (Cl. 75—1.)

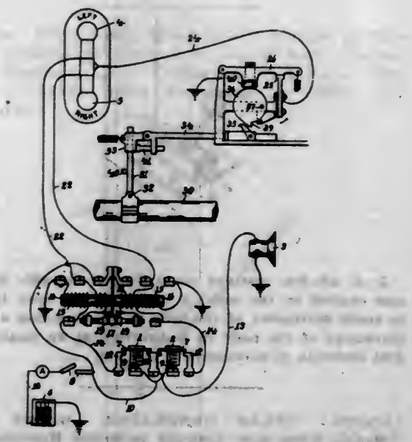


4. A high temperature spring to retain appreciable resiliency at red heat temperatures, composed of an alloy comprising as essential elements thereof the following metals in substantially the following proportions by weight:—copper at least as small as 30%, metal of the iron group 60–95%, metal of the tungsten group 5–40%.

1,634,344. PAPER FORMATION AND WEIGHT INDICATOR. RAYMOND A. STEFFEN, Hamilton, Ohio. Filed May 19, 1926. Serial No. 110,195. 7 Claims. (Cl. 265—11.)

1. The combination of two rotary shafts mounted in adjacent relation, a drive wheel on one of said shafts, a fluid actuated means on the other shaft, and means mounted in associated relation having driving connection with the shafts for indicating the relative speed of the shafts.

1,634,345. FLYLEAF FOR LOOSE-LEAF BINDERS. HARRY C. STERLING, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a Corporation of New York. Filed Aug. 9, 1926. Serial No. 128,200. 3 Claims. (Cl. 129—24.)



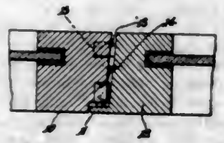
1. In a loose leaf binder of the link-and-pintle type, a fly leaf provided at its attaching edge with a longitudinally corrugated binding of durable material.

1,634,346. PROCESS FOR THE MANUFACTURE OF ARTIFICIAL WOOD AND PRODUCT OBTAINED BY SAID PROCESS. TOMMASO SUARDI, Rome, Italy. Filed Oct. 12, 1925, Serial No. 62,209, and in Italy Dec. 20, 1924. 6 Claims. (Cl. 92—3.)

1. Process for the manufacture of artificial wood consisting of disintegrating tree-branches or herbs or other similar substances either alone or in combination with each other by disintegrating machines, drying the fibres, treating them with fire-proofing substances, and subjecting them to a felting process as follows, feeding them into mixing machines with a binder, feeding them into moulds wherein they are compressed by suitable means and, in this condition and while still in the mould, are dried in hot chambers with adjustable temperature, after which they are put into stabilizing baths, dried and left standing for a maturation period.

1,634,347. SIGNAL SWITCH. GREGORY J. TUCKWIN, Boston, Mass. Filed Apr. 20, 1925. Serial No. 24,507. 1 Claim. (Cl. 200—59.)

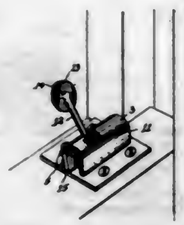
A signal terminating device for automobiles and the like, comprising a stationary contact member, a movable contact member, an arm pivotally carried by the tie rod of the steering mechanism of the automobile, a stationary stop located at substantially the midlength of said arm, a spring urging the free end of said arm toward said stop, a rod pivotally and slidably supported at the free end of said arm, means near the pivot of the rod for preventing flexure thereat in one direction, and means controlled by said rod for removing the movable contact away from the stationary one, said parts being so disposed that the movement toward normal in each direction of said tie rod will shift said pivoted rod similarly and thereby break the circuit.



1,634,348. PROCESS FOR PRESERVING CANE JUICE. ARNOLD K. BALLS, Philadelphia, Pa. Original application filed Jan. 24, 1924, Serial No. 688,307. Divided and this application filed July 30, 1926. Serial No. 126,089. 3 Claims. (Cl. 99—11.)

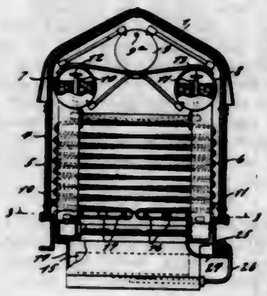
2 The process of preserving sugar cane juice for subsequent use in growing yeast which comprises inoculating the material with lactic acid forming micro-organisms, and keeping the acidifying liquid at a temperature of substantially 55° C.

1,634,349. ANTIRATTLING DEVICE. SAMUEL BARUCH, New York, N. Y. Filed May 21, 1926. Serial No. 110,631. 4 Claims. (Cl. 16—85.)



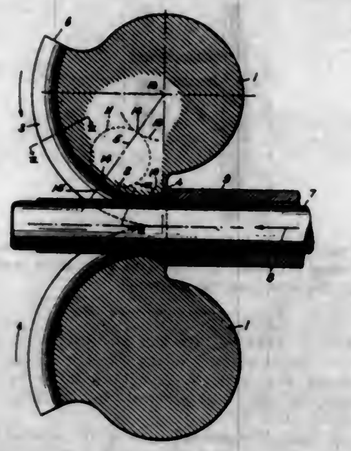
1. An anti-rattling device including a block having a bore therethrough provided with longitudinal grooves ter-

minating at a short distance from one end of the bore, a cup-shaped member slidably mounted within said bore and having flanges extending into said grooves, a spring



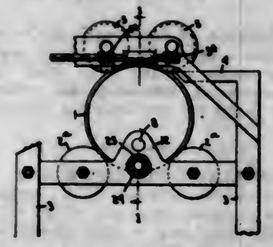
normally tending to hold said flanges at the ends of said grooves, and a removable member forming a stop for one end of the spring.

1,634,350. SASH FASTENER. GUY O. BRIGGS, Cleveland, Ohio. Filed Feb. 12, 1927. Serial No. 167,679. 7 Claims. (Cl. 292—60.)



5. A window fastener comprising a movable body, an arm carried by the body, a spring acting upon the body to resist movement of the body in one direction and urge movement of the body in a direction at an angle to the first direction of movement of the body.

1,634,351. STEAM GENERATOR. GEORGE ALFRED BRYAN, Peru, Ind., assignor to Bryan Harvester Company, Inc., a Corporation of New Mexico. Filed Mar. 9, 1922. Serial No. 542,204. 6 Claims. (Cl. 122—356.)



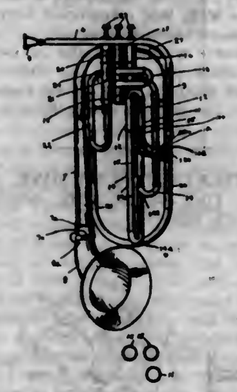
3. In a steam generator, a water circulating system including two base headers, two superposed steam separating drums, two sets of water tubes joining each header with its respective drum, the water tubes being bent upon themselves to run back and forth across the generator and having their lowermost bends shortened so as not to overlap, a steam superheating coil disposed in the said shortened bends of one set of water tubes, and a source of heat underneath the generator.

1,634,352. SWAGING MILL ROLL. SAMUEL E. DIESCHER, Pittsburgh, Pa. Filed Mar. 25, 1925. Serial No. 18,258. 4 Claims. (Cl. 80—14.)

1. A pair of rolls for swaging down a work piece fed longitudinally to them, each roll having a portion of its face provided with a working pass commencing with a swaging bell section and terminating with a uniform finishing section, the bell section being provided with a working surface variably curving toward the axis of rotation of the roll from the narrow to the wide end of the bell, and the velocity components parallel to the axis of the work piece being the same for all points of said working surface which simultaneously contact with the work piece.

1,634,353. IRONING MACHINE. WALTER A. FRANTZ, Cleveland, Ohio. Filed Mar. 11, 1922. Serial No. 542,885. 3 Claims. (Cl. 68—9.)

1. In an ironing machine, in combination, a frame, a pair of laterally spaced supporting rollers at each end thereof journaled upon parallel horizontal axes, an open ended smooth surfaced cylindrical metal drum resting on said rollers, a padded roller located above said drum and adapted to make frictional contact therewith, means for rotating said padded roller, and a fluid fuel burner carried by the frame and projecting into said drum.

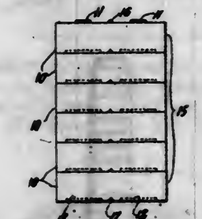


1,634,354. FUMIGATING APPARATUS. PAUL M. GROSS and ROBERT B. ARNOLD, Durham, N. C., assignors, by mesne assignments, to Tobacco By Products and Chemical Corporation, a Corporation of Delaware. Filed June 5, 1924. Serial No. 718,064. 3 Claims. (Cl. 43—127.)

3. A fumigating device for use with combustible preparations, comprising a closed container of non-combustible material, provided with outlet means for the gases of combustion restricted to a degree such that the gases will be discharged under pressure, the outlet means in the top of the container, a portion of said top about said outlet means depressed, a charge of the preparation in the container, a fuse extending through the outlet means

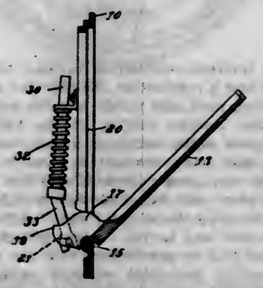
into contact with the charge and adapted to be received in the depression at its outer end, and a seal for the top of the container.

1,634,355. CONCERT HORN. JOHN HEALD, Springfield, Mass. Filed June 13, 1923. Serial No. 645,193. 4 Claims. (Cl. 84—393.)



1. A musical horn comprising a mouthpiece, a bell, passages providing communication between the bell and mouthpiece and valves controlling said passages, the bell being located at one end of the instrument and the mouth-piece at the other end and the bell facing laterally of the axis of the instrument to permit the player to press the same against his side to mute the tones produced in playing the instrument.

1,634,356. METHOD OF MAKING ARCH BRICKS. RALEIGH J. HIMMELRIGHT, Englewood, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed May 23, 1922. Serial No. 563,043. 1 Claim. (Cl. 25—157.)

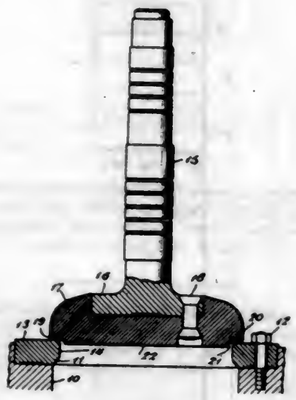


The herein described method of making arch bricks which consists in molding a plurality of units and in drying and burning them together to form a brick.

1,634,357. REFRACTORY BLOCK. RALEIGH J. HIMMELRIGHT, Englewood, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed July 31, 1922. Serial No. 578,544. 6 Claims. (Cl. 72—38.)

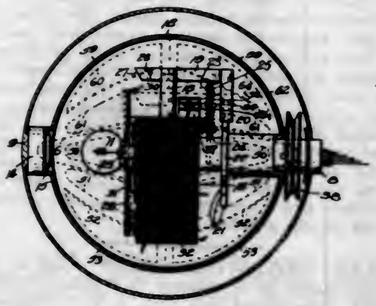
1. A refractory block for furnace construction comprising a plurality of brick units having at their juxtaposed faces cooperating dowel means, and detachably united together over areas of said faces exclusive of said dowel means.

1,634,358. OVEN-DOOR MOUNTING. STANLEY H. HOBSON, Rockford, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 54,649. 1 Claim. (Cl. 126—191.)



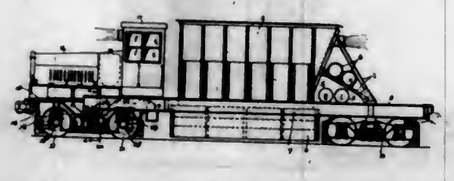
In a stove, a drop door for an oven compartment having means for differently counter-balancing the door in its different positions so that it is held closed under comparatively heavy pressure, is held open under comparatively light pressure, and is substantially balanced in an intermediate position, said counter-balancing means comprising a lever arm swinging with the door through a predetermined angularity, a counter-balancing spring to be distorted more and more as the arm swings in the opening of the door, and a plunger for transmitting the load thereof to said arm, said arm having a pivot point to provide a bearing for said plunger, the plunger having an offset end portion bearing on said pivot and having the other end portion arranged to place the spring under gradually increasing distortion in the movement of the door from closed to open position, the said pivot point being arranged to move in a predetermined arc in the swinging of the arm with the door to and from the closed position thereof, and moving the offset end portion of said plunger to vary the leverage of the spring offsetting the leverage of the door in such a way that the operations first above recited are secured substantially as and for the purposes described.

1,634,359. COATING COMPOSITION. CARL D. HOCKER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Dec. 13, 1923. Serial No. 680,343. Divided and this application filed July 6, 1925. Serial No. 41,880. 11 Claims. (Cl. 134—26.)



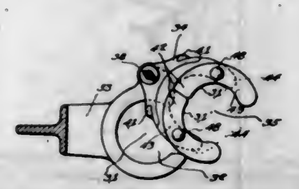
10. The process of producing a liquid coating composition which comprises heating tung oil with a smaller amount of glycerol, adding rosin oil thereto, and mixing therewith resin glyceride.

1,634,360. VALVE. FRIEDRICH HOFMANN, Mulheim-Ruhr, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed May 28, 1926. Serial No. 112,201. 2 Claims. (Cl. 251—28.)



2. In an internal combustion turbine, the combination of a nozzle and a combustion chamber for explosive gases communicating with said nozzle, a valve seat including an annular plane sealing surface at the exit end of said nozzle, a nozzle valve including a body, an annular projection on said body having an annular plane sealing surface adapted to cooperate with said first named sealing surface to close said exit end, and a deflecting member projecting through the circular space defined by the annular projection and having a plane deflecting surface located beyond and in parallelism with the sealing surface of said annular projection whereby explosive gases as they pass through said exit end of the nozzle are deflected out of contact with the sealing surface of said valve in the open position of the valve.

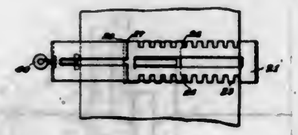
1,634,361. VEHICLE TRAFFIC SIGNAL. WILLIAM B. HUSSAR, St. Louis, Mo. Filed Aug. 10, 1923. Serial No. 656,683. 7 Claims. (Cl. 177—329.)



7. In a vehicle traffic signal, a hollow globe shaped casing having a front sight opening and a rear sight opening, a hollow globe shaped rotor having a plurality of "go" signal indicia, a plurality of "left turn" signal indicia, a plurality of "right turn" signal indicia and a plurality of "stop" signal indicia so that the signal indicia will be displayed to the front and to the rear of the case simultaneously, said latter indicia being alternately arranged and said rotor adapted to normally assume "go" position, manually actuated means for revolving the rotor from "go" position to either "left turn" or "right turn" signal position, manually controlled electrically actuated means for revolving the rotor to "stop" signal position from either "go", "left turn," or "right turn" signal position and means for returning the rotor from "stop" signal position to the signal position from which it was initiated.

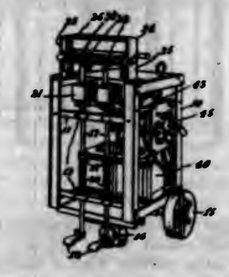
1,634,362. SELF-PROPELLED RAIL CAR. JOHN P. IRWIN, Rocky River, Ohio, assignor to Arthur G. McKee & Company, Cleveland, Ohio, a Corporation of Delaware. Filed Oct. 13, 1924. Serial No. 743,242. 6 Claims. (Cl. 105—34.)

1. In a self-propelled rail car, the combination of a supporting truck; a drive truck; and a car having walls and main frame sills, said drive truck having an operating platform spaced endwise from said car walls and disposed for clearance within the sills on swiveling movement of said truck, an engine for driving said truck mounted on said platform, and control elements both for said engine and for the car proper likewise mounted on said platform.



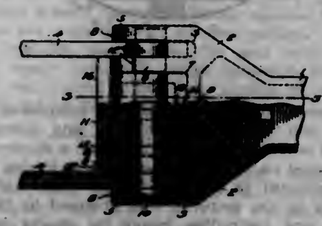
1,634,363. BOTTLE-CAPPING MACHINE. EDWARD JABS, Chicago, Ill. Filed July 14, 1926. Serial No. 122,425. 6 Claims. (Cl. 226—84.)

1. The combination with a capping machine which includes a capping element, means for operating said capping element, of means for holding a bottle and a cap thereon in position to be operated upon by said capping element, said means including a base plate pivotally associated with the capping machine, and supporting members pivotally supported by the base plate and operable upon engagement with a portion of the bottle for movement into supporting engagement with respect to the bottle.



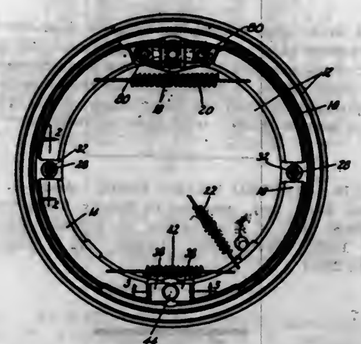
1,634,364. SHADE-ROLLER HOLDER AND CURTAIN-ROD BRACKET. KAZIMIERZ JAKUBIEC, Chicago, Ill. Filed July 15, 1926. Serial No. 122,571. 7 Claims. (Cl. 156—24.)

1. The device of the type described comprising a pair of plates, said plates being provided with coextensive slots, means upon one of the plates engaging in the slot in the second plate for pivotal and longitudinal sliding movement of the first plate in respect to the second plate, teeth upon the first plate, and means upon the second plate to



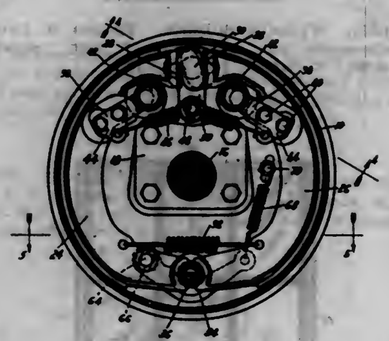
engage said teeth when the plates are placed in a certain position with respect to each other to hold the two plates in longitudinal adjusted position.

1,643,365. ELECTRIC FORGE. GEORGE A. E. JONES, New London, Conn. Filed Dec. 20, 1920. Serial No. 431,099. 3 Claims. (Cl. 219—11.)



3. In a rivet heating machine, the combination with a frame, of a transformer mounted in said frame and having an open circuit secondary winding, flexible conductors forming the ends of said secondary winding, two spindles vertically slidable in said frame, an electrode at the upper end of each spindle and connected to the free end of one of said flexible conductors and having an upper plane horizontal rivet engaging face, a bridging conductor slidably mounted in a vertical direction on said frame above the upper ends of said electrodes and having a lower plane horizontal rivet engaging face, springs for normally maintaining said spindles and electrodes in raised position to clamp rivets between them and the bridging conductor, means for depressing said spindles to release the rivets anchored between said electrodes and said bridging conductor, and means for adjusting the position of said bridging conductor relative to said electrodes.

1,634,366. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md. Filed Feb. 4, 1926. Serial No. 86,022. 7 Claims. (Cl. 213—69.)

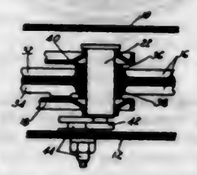


1. In a draft rigging, the combination with a yoke member provided with spaced arms, of a coupler pivotally connected to said yoke, means on said coupler for engaging the inner faces of said yoke arms, a block positioned between said arms, said block having a plurality of laterally spaced concentric bearing portions engaging said coupler, and means for pivotally connecting said block and coupler.

1,634,367. BRAKE. LUDGER ELIZE LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1925. Serial No. 49,737. 27 Claims. (Cl. 188—78.)

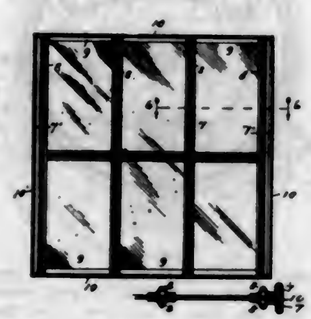
1. A brake comprising, in combination, a drum, a backing plate, shoes between the drum and backing plate, a floating joint between the shoes, and means floating with the joint and operable from outside the backing plate for expanding the joint to take up for wear in the shoes.

1,634,368. BRAKE. LUDGER ELIZE LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1926. Serial No. 80,396. 21 Claims. (Cl. 188—194.)



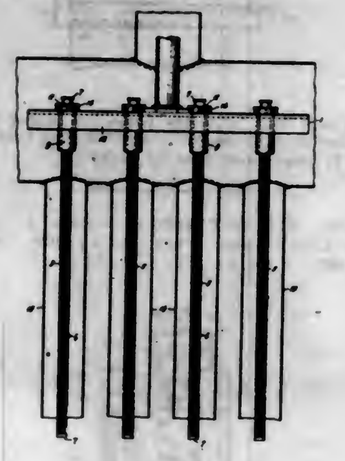
7. A brake comprising, in combination, a drum, a plurality of connected shoes shiftable with respect to the drum so that one shoe is anchored when the drum is turning in one direction and a different shoe is anchored when the drum is turning in the other direction, a support adjacent the shoes, a lever mounted on the support, means for rocking the lever when the shoes shift in either direction, and a spring tensioned by the rocking of the lever.

1,634,369. BRAKE SHOE. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1926. Serial No. 102,578. 20 Claims. (Cl. 188—250.)



6. A brake shoe comprising separate members forming a cylindrical part and two stiffening parts, the two stiffening parts engaging each other for some distance from their inner edges to form a double-thickness web and then diverging toward the outer edges of the cylindrical part to form a trussed reinforcement therefor.

1,634,370. PIVOTED BRAKE SHOE. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 22, 1926. Serial No. 110,846. 22 Claims. (Cl. 188—250.)

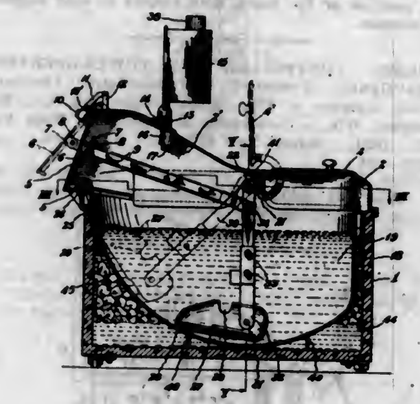


9. A brake shoe with a cylindrical friction part having at least at one point a web formed of two flanges integral with portions of the friction part and with the metal of the flanges displaced away from each other to form semi-spherical half-sockets facing each other.

1,634,371. WINDOW SCREEN. THOMAS B. LAYCOCK, Indianapolis, Ind. Filed June 7, 1926. Serial No. 114,091. 7 Claims. (Cl. 189—76.)

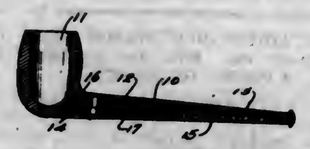
1. A frame for the purposes specified, in two equal entirely separable parts, the plane of separation being parallel with the outer and inner sides of the frame.

1,634,372. ELECTRODE. GEORGE R. LEWERS, Brooklyn, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1922. Serial No. 593,690. 5 Claims. (Cl. 183—7.)



1. A discharge electrode for electrical precipitators comprising a tube closed at its opposite ends and provided upon its outer surface with a multiplicity of relatively fine serrations, each of which is continuous in the direction of the tube, and the discharge apex of each of which is in such close parallel relation to the discharge apices of its neighbors as, in effect, to come within the range of influence thereof, whereby concentrated discharges tending to form disruptive arcs are prevented, said tube having an empty axial bore, and means whereby said electrode is freely suspended.

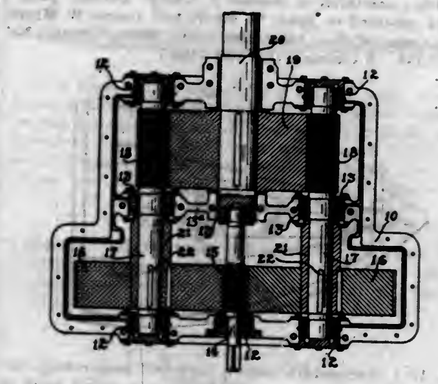
1,634,373. ELECTRIC THERAPEUTIC DEVICE. ROBERT C. MANN, St. Louis, Mo., assignor of one-half to Peter B. Behr, St. Louis, Mo. Filed Nov. 26, 1924. Serial No. 752,441. 3 Claims. (Cl. 174—89.)



1. A device of the class described comprising a casing, annular coil windings mounted in said casing, a core mounted in said annular coil windings, a diaphragm member mounted on one end of said casing having an armature positioned in axial alinement with said coil for operation by the magnetic field produced by the electromagnet, and controlling means for closing an electric circuit with a source of alternating current to energize said winding operable for producing within the human body eddy currents due to an alternating magnetic field, and for effecting vibration of said diaphragm.

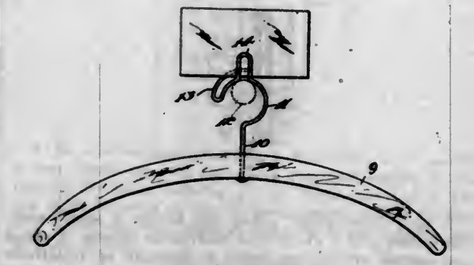
1,634,374. LIQUID-DISPENSING APPARATUS. CHARLES R. MCDONALD and ALBERT E. BEVAN, Akron, Ohio. Filed Aug. 31, 1925. Serial No. 53,450. 6 Claims. (Cl. 221—97.)

1. In liquid-dispensing apparatus, the combination of a liquid receptacle formed with a discharge opening; a movable door for said opening; a bucket; a movable support for said bucket; a link pivotally connected to said support and pivotally connected to said door; means for tilting the bucket to discharge through said opening; and means for actuating said bucket support to lift the bucket into juxtaposition with said tilting means and to open the discharge-opening door.



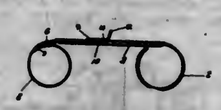
1,634,375. TOBACCO PIPE. THOMAS COST MASNEY, Boston, Mass. Filed Sept. 26, 1925. Serial No. 58,790. 3 Claims. (Cl. 131—12.)

3. A tobacco pipe having a transversely extending bore formed in the stem thereof, longitudinal bores formed in the said stem and connecting with the said transverse bore, a sleeve mounted in the lower portion of the said transverse bore, a cover plate hingedly mounted on the lower extremity of the said sleeve, a packing ring positioned about the lower edge of the cover plate, a spring member secured to the said hinge adapted to normally retain the cover plate in an open position, a locking lever rotatably mounted in the said cover plate adapted to engage a suitable recess formed in the said stem, and a cap secured to the lower portion of the said locking lever for readily rotating the same.



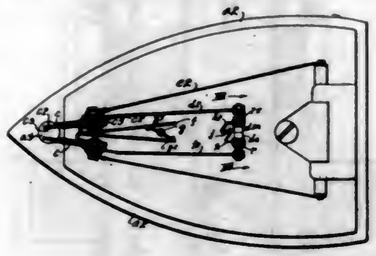
1,634,376. POWER-TRANSMISSION UNIT. FERDINAND MILLER, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed May 18, 1925. Serial No. 30,993. 5 Claims. (Cl. 74—7.)

1. A power transmission unit comprising in combination, a casing, a driving shaft, an intermediate shaft, a driven shaft, intermeshing gears on said shafts, and a sleeve keyed at one end to said intermediate shaft and



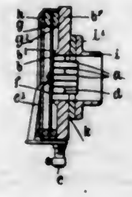
to one of said gears and closely surrounding a portion thereof whereby said shaft is strengthened against bending while permitting maximum torsional displacement.

1,634,377. HANGER. ADOLPH MONTAN, Montclair, and HENRY W. FALSTROM, Newark, N. J., assignors to Eastern Tool & Mfg. Company, Bloomfield, N. J. Filed Nov. 28, 1925. Serial No. 71,878. 3 Claims. (Cl. 223—61.)



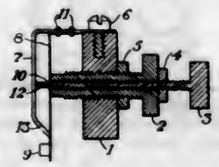
1. A hanger comprising a holder and a wire hook by which the holder is suspended, the hook having a portion thereof bent to form a card holding clip outside the circumference of the suspending part of the hook.

1,634,378. RING GAUGE. SIDNEY O. MOUNTFORD, Newark, N. J., assignor to Mountford Bros., Newark, N. J. Filed Mar. 25, 1926. Serial No. 97,178. 8 Claims. (Cl. 33—179.)



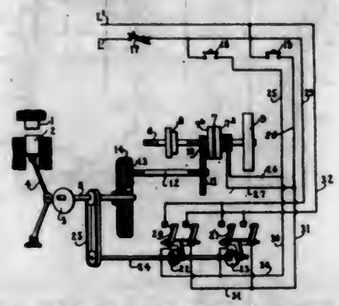
8. A ring gauge comprising; a frame having a channel shaped guideway and a support portion at one end having an opening registering with the guideway, a flexible member circularly formed and having one end fastened to said support portion and its free end passing through said opening into the guideway closely adjacent said fastened end, a hand operated member slidably carried on the frame and attached to the free end of said flexible member for the purpose described.

1,634,379. THERMOSTATIC APPARATUS. JOSEPH W. MYERS, Jackson, Mich., assignor, by direct and mesne assignments, of one-third to Joseph H. Myers, Jackson, Mich.; one-third to Arthur J. Tuttle, Detroit, Mich.; and one-third to Agnes W. Myers and Joseph W. Myers, Jackson, Mich. Filed Dec. 20, 1923. Serial No. 681,751. 6 Claims. (Cl. 200—138.)



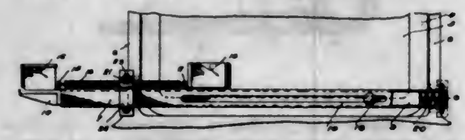
1. In a thermostatic switch with two cooperating electrical contacts, two mutually opposing resilient arms in cooperative relation to each other and said contacts, means permanently connected to each of said arms and acting between said arms to control the motion thereof and accelerate the same adjacent to the contact position.

1,634,380. SOUND BOX FOR GRAMOPHONES AND SIMILAR INSTRUMENTS. WILLIAM EDWIN NAYLER, London, England. Filed Apr. 18, 1923, Serial No. 632,935, and in Great Britain Apr. 21, 1922. 4 Claims. (Cl. 274—27.)



1. In a gramophone sound box having a sound emitting orifice and a diaphragm contiguous thereto, a sound propagation device comprising a plurality of sensitively suspended short thin tubes of graduated diametral measurement arranged concentrically the one within the other and supported in spaced concentric relationship by suspending filaments of fine wire, the structure so constituted being suspended from the wall of the said sound emitting orifice by similar filaments of fine wire.

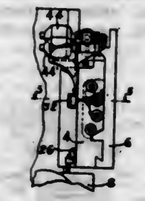
1,634,381. MEANS FOR ADJUSTING ELECTRICAL CONTACTS. LEWIS L. NETTLETON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1926. Serial No. 143,217. 2 Claims. (Cl. 200—170.)



1. In combination, a supporting member, a relatively stiff spring attached to said member, a relatively flexible contact finger attached to said spring, a screw passing through said member and co-acting with said finger to adjust the pressure of the finger against said spring, and a second screw passing through a longitudinal threaded hole in said first screw and through a hole in said finger and co-acting with said spring to adjust the normal position of the finger with respect to said supporting member.

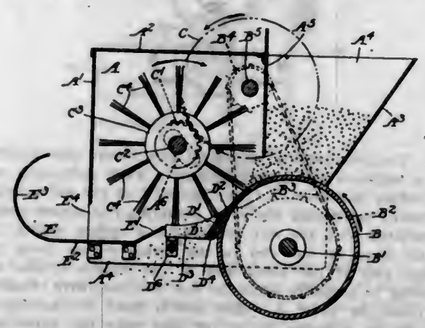
1,634,382. CONTROLLER FOR POWER-OPERATED MACHINES. FREDERICK H. OBERSCHMIDT, Cleveland, Ohio, assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 25, 1921. Serial No. 517,776. 9 Claims. (Cl. 192—131.)

4. The combination with a driven machine, of an electromagnetic clutch for transmitting power thereto, safety control means for said machine including a plurality of manually controlled switches biased to open position and adapted while closed simultaneously to establish and maintain an energizing circuit for said clutch, means actuated by said machine for establishing an energizing circuit for said clutch independently of said switches, said means being adapted to establish said independent circuit following initiation of the cycle of operation of said machine and to interrupt the same upon completion of said cycle, and means for varying the time of establishment of said independent energizing circuit with respect to said cycle of operation.



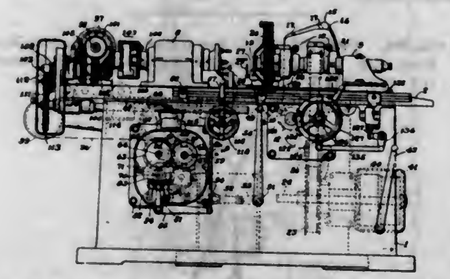
1,634,383. ADJUSTABLE MIRROR. JOHN J. OBRIEN, Palm Beach, Fla. Filed Apr. 10, 1926. Serial No. 101,082. 4 Claims. (Cl. 88—67.)

1. A mirror construction for vehicles comprising a driver's mirror disposed in front of the driver's seat in a diagonal position with respect to the direction of travel of the vehicle, a double mirror, means for normally supporting the double mirror at the side of the vehicle and in line with the driver's mirror to reflect objects upon the driver's mirror from both the front and rear surfaces of the double mirror, means for projecting the double mirror outwardly beyond its normal position to broaden the field of vision through the mirrors, and retracting means for the double mirror to return the same to normal position when said projecting means is released.



1,634,384. MACHINE TOOL. CLIFFORD F. RANDOLPH, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 31, 1924. Serial No. 703,199. 9 Claims. (Cl. 90—49.)

1. In a machine tool, the combination of a horizontal rail, a tool supporting saddle slidable thereon, screw threaded means on the saddle for clamping the saddle to the rail, power operated means including a rotary shaft

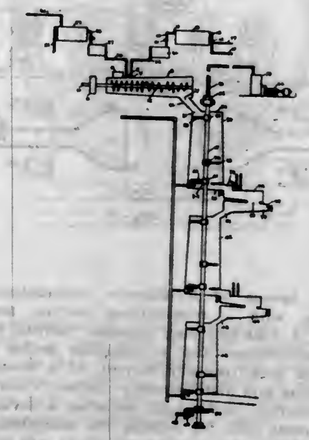


on the rail for rotating the screw threaded means in either direction to clamp and unclamp the saddle, and means supported by the rail for controlling the motor.

1,634,385. SAND SEPARATOR. AXEL G. J. RAPP, Chicago, Ill. Filed Mar. 15, 1926. Serial No. 94,708. 15 Claims. (Cl. 83—11.)

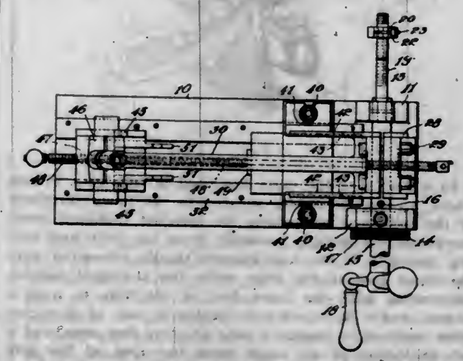
1. A material separating mechanism including a beating member, feeding means for feeding the material to be separated into the path of movement of such beater, and separating means, positioned in the line of discharge of the material delivered by such beating member, adapted to separate out the oversize and discharge means, adapted to permit the discharge from the beating zone of such oversize material.

1,634,386. DRIVING CONNECTION. CARL SCHRAMM, West Hartford, and PAUL F. VOKAL, Hartford, Conn., assignors to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 4, 1924. Serial No. 717,794. 15 Claims. (Cl. 51—95.)



1. In a machine, the combination with a lead screw, a spindle, and a train of gears for rotating said spindle and the lead screw in a forward and in a reverse direction, of means for so connecting the spindle to the train of gearing as to insure a limited rotation of the lead screw prior to the rotation of the spindle upon change in the operation of the gearing to change the direction of rotation of the lead screw and the spindle.

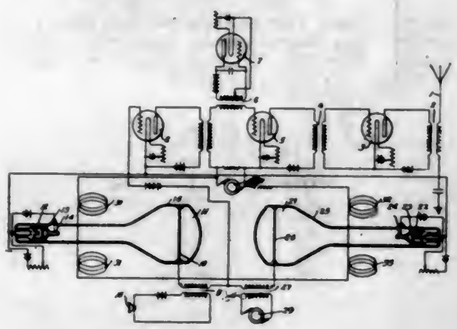
1,634,387. RAZOR-BLADE HOLDER. ROBERT J. STAPP, Northfield, Minn. Filed May 22, 1926. Serial No. 110,924. 6 Claims. (Cl. 30—25.)



1. A blade holder comprising a longitudinally extended member having clamping arms at its opposite ends projecting inwardly toward each other, and a single sleeve mounted upon and about said member and freely movable in opposite directions thereon to slide over and clamp both or either of said arms to said member.

1,634,388. PLANT FOR BLEACHING AND LIKE PURPOSES. CARL BUSCH THORNE, Hawkesbury, Ontario, Canada. Filed Dec. 13, 1924. Serial No. 755,691. 12 Claims. (Cl. 8—2.)

3. In a bleaching apparatus, a bleaching tower having a permanent inlet at the upper end and having a contracted discharge opening at the lower end and a hollow shaft forming an air chamber and extending through said upper end and through said discharge opening and suitably driven.

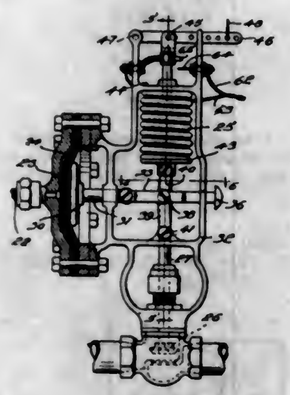


1,634,389. MACHINE FOR BORING THE BEARINGS OF CONNECTING RODS. ALBERT H. WADELL, Newark, N. J. Filed Dec. 15, 1925. Serial No. 75,506. 5 Claims. (Cl. 77—62.)

1. A boring machine comprising a base, a boring device in the base, a stop in the base, a support slidable on the base and limited in one direction by engagement

with the stop, a second support, means abutting on the first support and for moving the second support, the supports being adapted to engage the bearings on the ends of a connecting rod and thus support the connecting rod in place for boring, the connecting rod thus limiting the outward movement of the second support.

1,634,390. WIRELESS TRANSMITTING SYSTEM. VLADIMIR K. ZWORYKIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 17, 1924. Serial No. 699,629. 20 Claims. (Cl. 250—6.)

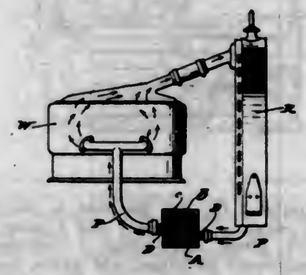


1. In a system of intelligence communication, the combination with a transmitting station, means for generating a high-frequency current thereat to create etheric disturbances, and a signalling device for controlling said high-frequency current, of a second device for controlling said high-frequency current, a source of alternating current, and means including a device having a space-current path for causing the controlling devices to become effective in turn in response to said alternating current.

1,634,391. AUTOMOBILE JACK. JAMES TOWNSEND AMISS, Baton Rouge, La. Filed Feb. 6, 1925. Serial No. 7,367. 1 Claim. (Cl. 254—94.)

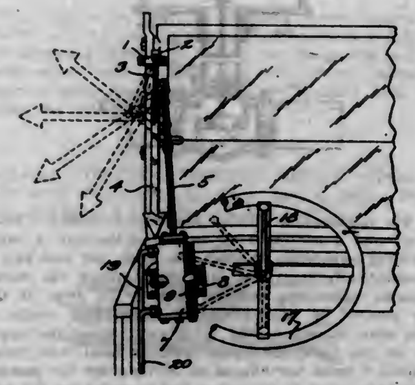
In a device of the class described, a felly of a vehicle wheel, an anchor rigidly secured to the inner periphery of the felly and comprising an inverted U-shaped member projecting radially inwardly from the felly and having the ends of the legs thereof rigidly connected with the inner face of the felly, with the U-shaped member cooperating with the inner face of the felly to form a socket, and a V-shaped jack having a pair of diverging arms adapted to engage a road at their free ends, and a lub projecting at an angle from the apex of the jack and integral therewith and adapted to be received between the U-shaped member and the inner face of the felly.

1,634,392. AUTOMATIC ALARM AND SHUT-OFF FOR STEAM BOILERS. JOSEPH M. BARRETT, Fostoria, Ohio, assignor to The "S-C" Regulator Manufacturing Company, Fostoria, Ohio, a Corporation of Ohio. Filed Feb. 27, 1922. Serial No. 539,790. 2 Claims. (Cl. 137—139.)



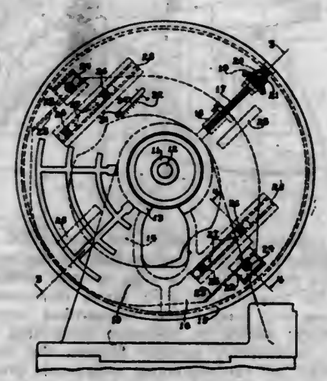
1. The combination of a fluid fuel intake pipe leading to a boiler, a valve in said pipe a valve actuating rod extending therefrom, a frame mounted on the valve longitudinally embracing the valve actuating rod, alarm means associated wtih the rod and frame, a spring within the frame fixed at one end to the frame remote from the valve, and at the other end to the middle of the rod tending to normally force the rod into the valve chamber to close the valve, a toggle loosely fixed at one end to the frame opposite the spring and near the valve and at the other end to the rod adjacent the connection of the rod and spring with the three toggle pivot points but slightly out of alignment with the rod, a lever extending transversely of the frame being limited in travel within the frame and adapted to be manually operated exteriorly of the frame and loosely connected to the middle pivot of the toggle at its mid-point and connected to a second rod at the other end, a diaphragm associated with the second rod supported at the side of the frame, a pressure chamber enclosed on one side by the diaphragm, so that the diaphragm reacts on the second rod thence on the middle toggle pivot throwing the toggle past center allowing the spring to force the first rod into the valve chamber thereby closing the valve and actuating the alarm means.

1,634,393. PROPELLER. JOHN BARTON, Matador, Tex. Filed Feb. 10, 1926. Serial No. 87,347. 2 Claims. (Cl. 170—173.)



1. In a propeller comprising a hub, a flange formed thereon adjacent the inner end thereof, a pair of substantially semicircular blades, each blade being provided with an opening to permit the blades to be disposed on the hub, one of the blades being provided with a slot which extends inwardly of the straight edge thereof, to accommodate the adjacent straight edge portion of the other blade whereby the blades are disposed in intersecting relation, a ring slidable on the outer end portion of the hub and adapted for engagement with the intermediate portions of said blades, bolts extending through the flange and the ring as well as through the central portions of the intersecting blades, the central portions of the blades being secured in abutting relation, the outer ends of the blades being curved in opposite directions.

1,634,394. METHOD OF AND DEVICE FOR PREVENTING FREEZING OF MOTOR-COOLING SYSTEMS. HENRY R. BERNARD, New York, N. Y. Filed Aug. 26, 1922. Serial No. 584,576. Renewed Oct. 28, 1926. 7 Claims. (Cl. 123—174.)



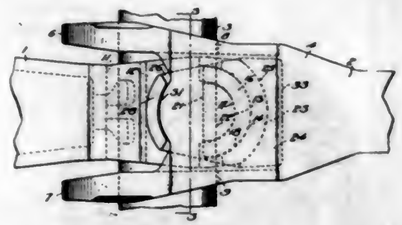
5. The hereindescribed method which consists in causing the cooling fluid in the cooling system of an engine to flow about an enclosed body of a normally crystalline material, while the engine is operating, for the purpose of utilizing the heat in said fluid to decrystallize said material, and utilizing the heat given off by the material during its return to crystalline form, after the engine has ceased to operate to retard the cooling of the said fluid and maintain a circulating thereof.

1,634,395. TRAFFIC SIGNAL. LOWELL C. BROWNING, Long Beach, Calif. Filed Oct. 18, 1926. Serial No. 142,397. 4 Claims. (Cl. 116—39.)

1. A signal for a vehicle comprising a hanger pivotally connected with a part of the vehicle, a signal arm pivotally connected with the lower end of the hanger adjacent the inner end of the arm and means connected with the inner end of the arm for moving the arm upwardly from a vertical depending position.

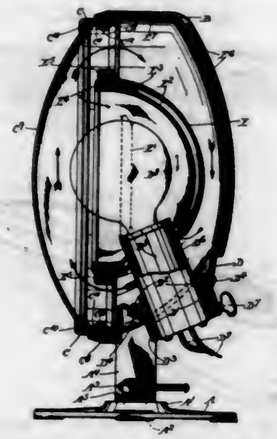
1,634,396. COUNTERBALANCE FOR LATHES. LYNDON C. COLE, Hamilton, Ohio, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 13, 1925. Serial No. 50,064. 8 Claims. (Cl. 82—40.)

1. Counterbalancing means for lathes comprising in combination, a face plate, a single counterweight surrounding the axis of rotation of said face plate, and unitary means permitting adjustment of said counterweight to vary its position from neutral to a position having maximum counterbalancing effect.



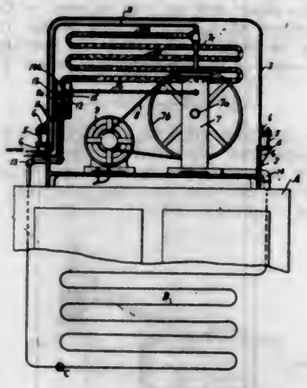
1,634,397. SHOE AND METHOD OF MANUFACTURE. LARRY L. COMEAU, Bradford, Mass. Filed Apr. 23, 1926. Serial No. 104,133. 5 Claims. (Cl. 12—142.)

1. In a process of shoe manufacture, the steps of applying a heel-and-shank-piece to the heel and shank portion of a last, applying a half-inner-sole to the forepart of the last, disposing the rear end of said half-inner-sole in overlapping relation with the front end of said heel-and-shank-piece, applying an upper having an inturned edge to the last and engaging said edge with said heel-and-shank-piece and said half-inner-sole, applying an outer sole and securing it against accidental



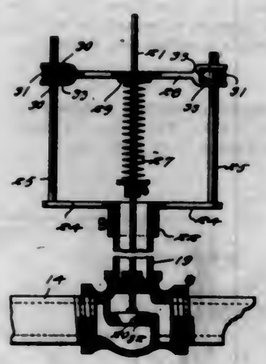
displacement, removing the assembled parts from the last, and stitching at one operation through the outer sole, through the inturned edge of the upper, through the heel-and-shank-piece and through the half inner-sole.

1,634,398. DRAFT RIGGING. GLENN F. COUCH, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Feb. 7, 1925. Serial No. 7,622. 14 Claims. (Cl. 213—72.)



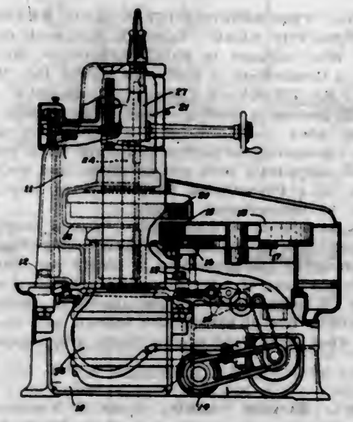
1. In a railway draft rigging, the combination with a coupler having a curved bearing face on the rear end thereof, of a yoke, means extending through said coupler and yoke for transmitting draft forces therebetween, a shim between said coupler and transmitting means permitting pivotal motion therebetween, cushioning mechanism, and an auxiliary member between the rear end of the coupler and the cushioning mechanism, presenting a flat face to the cushioning mechanism and a curved cooperating bearing face to the bearing face on the coupler.

1,634,399. ELECTRIC-LIGHT HOUSING. CHARLES W. DAKE, Chicago, Ill. Filed Oct. 27, 1924. Serial No. 745,949. 11 Claims. (Cl. 240—41.)



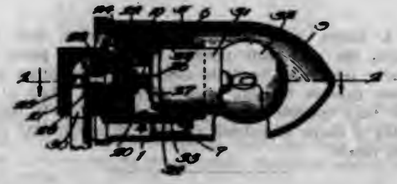
1. An electric light case comprising an hermetically sealed housing, a reflector support mounted in and out of contact with the walls thereof, a reflector carried by but spaced from the support to provide a dead air space, an electric light source in the housing and means for cooling the wall of the housing behind the reflector support, a support for the electric light source projecting inwardly through the reflector and the reflector support, and adjustably mounted in the wall of the housing.

1,634,400. REFRIGERATING APPARATUS. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 13, 1925. Serial No. 49,913. 12 Claims. (Cl. 62—116.)



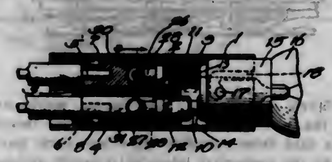
1. In apparatus of the type described, in combination, a fluid tight casing, a compressor and a prime mover therefor sealed within said casing, a condenser into which said compressor discharges, and means connecting the interior of said casing to the discharge of said condenser.

1,634,401. TEMPERATURE REGULATOR FOR INCUBATORS. JOSEPH L. DAVIS, Abingdon, Ill. Filed Aug. 5, 1926. Serial No. 127,380. 4 Claims. (Cl. 236—4.)



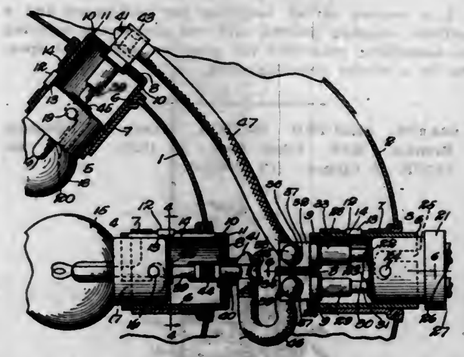
1. The combination with an incubator including a heating coil and a heating tank supplying the coil, a valve controlling circulation through the tank and coil and a thermostatically controlled lever for shifting the valve, a member embodying rods paralleling the stem of the valve secured in fixed relation to the valve casing, a spring seat secured to the valve stem below the upper ends of the rods, the upper ends of said rods being threaded, a cross bar having an opening for the passage of the valve stem at its center and openings for the passage of the rods at its ends, a spring extending between the valve seat and cross bar and surrounding the valve stem and nuts upon the upper ends of the rods for shifting the cross bar toward said spring seat.

1,634,402. WHEEL HEAD FOR MACHINE TOOLS. JOHN A. DOANE, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 2, 1923. Serial No. 672,397. 4 Claims. (Cl. 51—131.)



1. A machine tool comprising in combination, a frame, a work support, a rotatable cutting wheel, a wheel head for slidably supporting and guiding said wheel, said head comprising upper and lower portions each having guides cooperating with corresponding guide ways provided on the machine tool frame whereby the wheel head is rigidly but slidably supported on said frame at widely spaced portions.

1,634,403. COWL LAMP. HARRY A. DOUGLAS, Bronson, Mich. Filed Jan. 27, 1921. Serial No. 440,485. 1 Claim. (Cl. 173—328.)



The combination with a mounting sleeve having an annular wall at one end; of a holding sleeve housed by said mounting sleeve and having two flanges by and between which said annular end wall of the mounting sleeve is held; and a shell separably coupled with and within the holding sleeve.

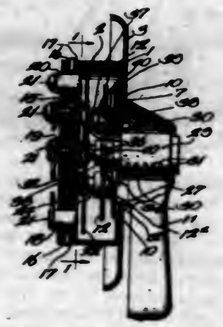
1,634,404. CIRCUIT-CONTINUING DEVICE. HARRY A. DOUGLAS, Bronson, Mich. Filed Apr. 4, 1921. Serial No. 458,555. 6 Claims. (Cl. 173—346.)

1. In an electric connector, a shell, a circuit continuing plug movably mounted in the shell, a plug operating handle detachably interfitting with said plug and extending through and movable in a slot in the shell, and means on the handle directly coacting with the shell in both on and off positions of the plug to hold the handle against disengagement from the plug.

1,634,405. CIRCUIT-CONTINUING DEVICE. HARRY A. DOUGLAS, Bronson, Mich. Original application filed Dec. 30, 1919, Serial No. 348,416. Divided and this application filed May 23, 1921. Serial No. 471,951. 4 Claims. (Cl. 173—328.)

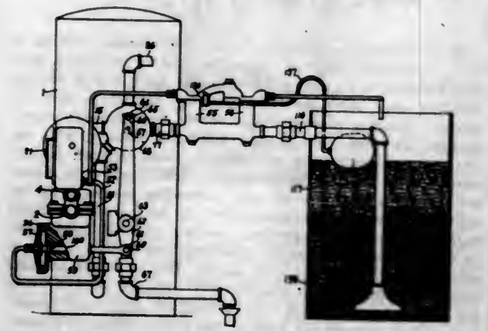
1. A circuit continuing device including a shell; a contact; a carrier for the contact surrounded by the shell and having an extension projecting outwardly beyond the main bore of the shell, the shell having seat and lip formations between and by which said contact carrier is engaged to prevent movement thereof endwise of the shell, the shell being notched by the side of said formations to receive said extension to prevent rotation of the carrier; and a rib held between said formations upon the shell and in holding engagement with said contact to prevent said contact from turning.

1,634,406. TERMINAL CONNECTER. HARRY A. DOUGLAS, Bronson, Mich. Filed Apr. 28, 1924. Serial No. 709,569. 1 Claim. (Cl. 173—324.)



In a terminal connecter, a carrier member having a bore, a contact member including a wire receiving portion adapted to be engaged within the bore in said carrier member, said wire receiving portion having a wire receiving opening formed transversely therethrough intermediate its ends, and further having a pair of wire receiving recesses formed in opposite sides thereof, respectively, said recesses opening into said transverse opening at their inner ends and extending respectively in opposite directions longitudinally of said wire receiving portion from said transverse opening thereby to provide in conjunction with said transverse opening a wire receiving passage of sinuous shape, the material of said wire receiving portion transversely opposite each of said recesses being extended transversely of said wire receiving portion beyond the base of the recess adjacent thereto for contact with the wall of the bore in said carrier member to prevent tilting movement of the contact member within said bore.

1,634,407. CONTACT CARRIER. HARRY A. DOUGLAS, Bronson, Mich. Filed Aug. 14, 1925. Serial No. 50,263. 10 Claims. (Cl. 173—328.)

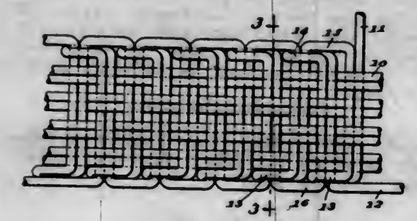


1. A contact carrier including two end plates and a resilient coupling uniting said end plates and carrying an assembling projection for reception within an opening in a carrier receiving shell.

1,634,408. ELECTRIC SWITCH. HARRY A. DOUGLAS, Bronson, Mich. Filed Sept. 3, 1925. Serial No. 54,279. 2 Claims. (Cl. 200—6.)

1. An electric switch including two contact carriers carrying complemental contacts; a contact actuator of sheet metal for moving one of said contact carriers, said contact actuator having a cup formation; a cup of insulating material received in said cup formation; a spring barrel upon the last mentioned contact carrier and in engagement with and within said cup of insulation; a plunger projecting from said spring barrel and engageable with the bottom or end wall of the cup of insulation; and a spring in the spring barrel pressing said plunger against said cup end wall.

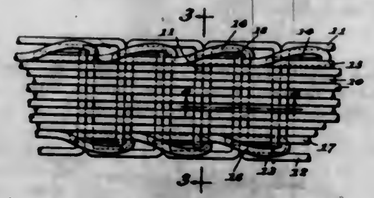
1,634,409. WATER SOFTENER. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 12, 1925. Serial No. 61,997. 11 Claims. (Cl. 210—24.)



1. In a water softening apparatus, means for controlling the operation thereof depending upon the quantity of water passing therethrough, valve means controlled thereby adapted to change the direction of water passing through the softener and to apply brine to the softening material therein, and to by-pass a portion of the hard water direct to service.

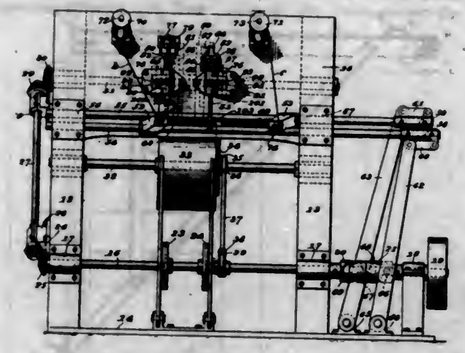
1,634,410. PROCESSED CHEESE AND METHOD OF MAKING THE SAME. ELMER E. ELDREDGE, Oconomowoc, Wis., assignor to Pabst Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 19, 1924. Serial No. 727,058. 6 Claims. (Cl. 99—11.)

1. The process of making cheese which consists in neutralizing whey, concentrating the neutralized whey to form a concentrate of pasty consistency when cold, mixing this concentrate with ground cheese and heating the mixture to a Pasteurising temperature to form a food product of homogeneous texture.



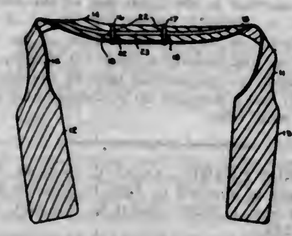
6. As an article of manufacture, a food product consisting of cured cheese and neutralized whey concentrate in substantially the proportion of ninety per cent cheese and ten per cent of whey concentrate forming a cheese product of homogeneous texture, the cured cheese being substantially free of putrefactive bacteria and the lactose of the whey being fixed against lactic acid fermentation.

1,634,411. WOVEN FABRIC. JOHN E. FEPEL, Bridgeport, Conn., assignor of one-half to Frank J. Hoey, New York, N. Y. Filed Mar. 25, 1926. Serial No. 97,230. 8 Claims. (Cl. 139—383.)



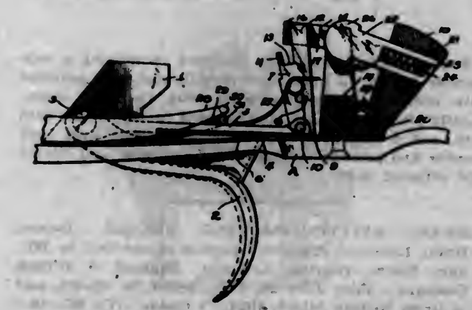
1. A fabric comprising interwoven warp and weft threads, the said weft threads occurring in pairs successively laid from opposite sides, the succeeding pairs of weft threads forming loops on opposite edges of the fabric that encircle the adjacent pairs of weft threads forming a chain of knitted stitches along opposite edges of the fabric.

1,634,412. WOVEN FABRIC. JOHN E. FEPEL, Bridgeport, Conn., assignor of one-half to Frank J. Hoey, New York, N. Y. Filed Mar. 29, 1926. Serial No. 98,066. 7 Claims. (Cl. 139—383.)



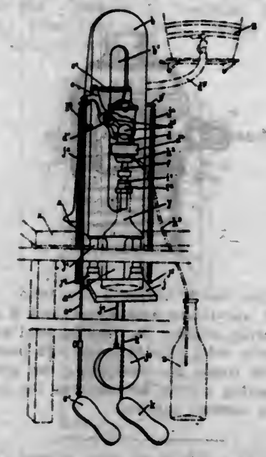
1. A fabric comprising interwoven warp and weft threads, the weft threads comprising two threads symmetrically laid from opposite sides and each having loop portions at the respective edges alternately arranged with respect to the other weft thread, and selvedge threads having looped portions passing through said loop portions of said weft threads at each edge and embracing the successive other weft thread at the same edge.

1,634,413. FABRIC-WEAVING MACHINE. JOHN E. FEPEL, Bridgeport, Conn., assignor of one-half to Frank J. Hoey, New York, N. Y. Filed May 21, 1926. Serial No. 110,619. 16 Claims. (Cl. 139—124.)



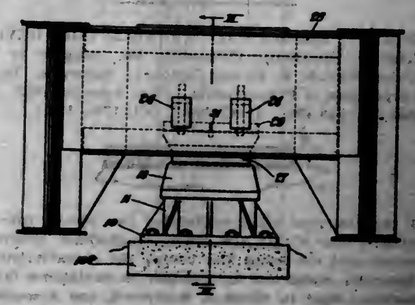
1. In a fabric weaving machine, warp feeding means, weft feeding means including a weft carrying element adapted to be projected between sheds of the warp, and looper means adapted to produce loops in a thread through which the weft thread carried by said element is passed.

1,634,414. ADJUSTABLE NECKTIE. SOLOMON FINE and HARRY DWORKIN, Montreal, Quebec, Canada. Filed June 23, 1926. Serial No. 118,022. 1 Claim. (Cl. 2—155.)



In an adjustable necktie, two tie pieces each having an adjusting and clamping member formed of a depressed holding cross bar terminating at each end into inturned sewing bases extending transversely therefrom and having sewing holes.

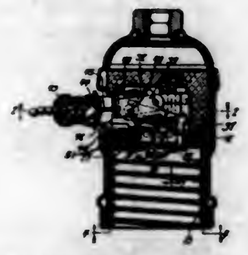
1,634,415. SINGLE-TRIGGER MECHANISM FOR MULTIPLE-BARRELED GUNS. DOUGLAS W. FRANCHOT, Tulsa, Okla. Filed Aug. 13, 1926. Serial No. 129,049. 20 Claims. (Cl. 42—42.)



1. In a single finger trigger firing mechanism for multiple barreled guns comprising, hammer-holding sears, a finger trigger, a sear lifter, an independently movable fire control means operatively engaged by the trigger and co-operating with said sear lifter for automatically controlling the operation of said sear lifter relative to said sears.

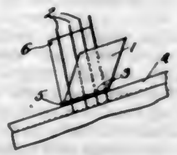
1,634,416. BOTTLE-FILLING APPARATUS. ALFRED JEAN GALLAND, Paris, France. Filed June 2, 1925, Serial No. 34,457, and in France July 9, 1924. 3 Claims. (Cl. 226—126.)

1. An apparatus for filling bottles, flagons and similar containers, comprising a support for the container, a liquid supply cock with control lever, a filling tube with a lower aperture, a sealing member for the container and an air escape passage with a lower aperture, a spring device whereby the container-support is normally brought towards the filling tube, the lower aperture to the air escape passage being arranged adjacent to the lower aperture of the filling tube and at the same level as the second said lower aperture, the sealing member for the container being adjustable in position along the said filling tube, means for locking said sealing member in the desired position upon said tube, a contact member, and means for adjustably connecting said member to the support, the said contact member being adjusted so as to lock the control-lever for the cock in its closed position, when the support is in its position nearest to the filling tube and to release the said lever when the support is moved away into the filling position.



1,634,417. TURNTABLE CENTER. CHAUNCEY MARSH GOODRICH, Windsor, Ontario, Canada. Filed Dec. 23, 1926, Serial No. 156,687, and in Canada Apr. 2, 1925. 8 Claims. (Cl. 104—46.)

2. A turntable structure, including a top casting recessed in a middle casting engaging therewith in such a manner as to permit a small rotation of the top casting

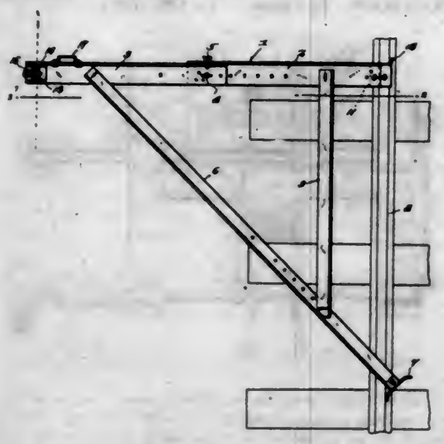


about an axis transverse to the main girders, but preventing rotation of the top casting and the turntable as a whole about an axis parallel to the main girders.

1,634,418. LAMP-SOCKET SWITCH. DAVID D. GORDON, Chicago, Ill., assignor to McGill Manufacturing Company, Valparaiso, Ind. Filed Apr. 14, 1921. Serial No. 461,227. 1 Claim. (Cl. 173—354.)

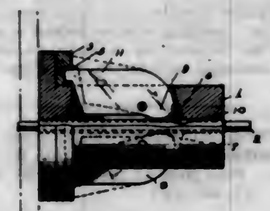
In an electric switch having a box frame, a U-shaped arm pivotally straddling said frame and a reciprocable floating operating member for moving said arm movable between opposite sides of said frame; an insulating yoke embracing said frame and insulating the arm from the frame, and having a stop for limiting the movement of said operating member thereon.

1,634,419. IDENTIFICATION DEVICE. JOHN GRIESINGER, Los Angeles, Calif. Filed Nov. 27, 1925. Serial No. 71,695. 2 Claims. (Cl. 40—20.)



1. An identifying device for articles of fabric, comprising in combination with such fabric, a strip of suitable material having identifying marks thereon and perforations intermediate the ends thereof, and means for attaching said strip to such fabric including threads passing through the edge of and into said fabric in the plane thereof, said threads being interlocked with said fabric and extending through the perforations in said strip, and said strip being bent upon itself to form contacting parallel plane surfaces with the threads interposed and extended beyond said contacting surfaces, the contacting surfaces of said strip with the interposed threads being interlocked.

1,634,420. ELECTRICAL TRANSLATING DEVICE. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 29, 1923. Serial No. 648,458. 11 Claims. (Cl. 179—171.)



1. An electrical relay comprising two spaced tube-like electrodes one within the other, a substance interposed between said electrodes and having the characteristic of varying its resistance in response to variations in the amount of light to which it is exposed, and a source of light located within the inner electrode, the inner electrode being capable of retaining said substance and transmitting light to it.

1,634,421. SOD-LINE MARKER. ARNOLD HEDRICK, Latham, Kans. Filed Apr. 7, 1926. Serial No. 100,355. 1 Claim. (Cl. 97—230.)

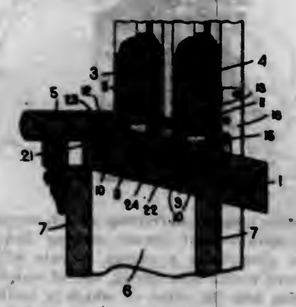
In a line marker of the class described, a supporting and carrying frame comprising a main bar composed of adjustably connected angle irons, this bar being adapted to be extended at right angles to the rail, a diagonal angle iron connected at its outer end to the outer end portion of the main bar, a connecting brace between said angle bars disposed in parallelism to the rail, a curved drag shoe connected to the inner end of the diagonal bar and adapted to slidably contact the head of the rail, brackets attached to the top and bottom of the inner end of the main bar and forming a guide for slidable reception of the rail head, an upstanding tube at the outer end of the main bar, and a marking strip slidably and adjustably mounted in said tube.

1,634,422. ROD CLAMP. ALLAN T. HOLMES, Richmond, Va., assignor of one-half to Julie D. Holmes, Richmond, Va. Filed Nov. 1, 1926. Serial No. 145,660. 6 Claims. (Cl. 24—249.)

3. In a device of the class described, comprising a body member having an axial bore therethrough and provided with radial slots communicating with the bore, eccentrically pivoted gripping jaws adapted to extend into said bore, and a rotatable member mounted upon said body member and provided with means for opening and closing said gripping jaws.

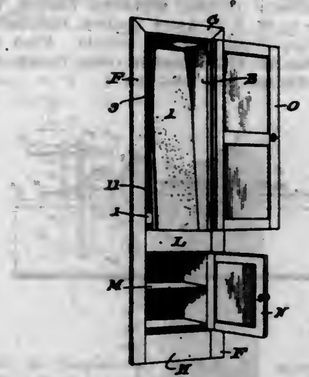
1,634,423. KNITTING-MACHINE NEEDLE. JOSEPH HULL, Leicester, England, assignor of one-half to William Spiers, Limited, Leicester, England, a British Company. Filed June 23, 1925, Serial No. 39,035, and in Great Britain July 4, 1924. 1 Claim. (Cl. 66—13.)

A knitting machine needle, comprising a hook part consisting of a stem having an open hook and a rounded swelling on the front edge of the stem below the hook, and a guard part situated entirely in front of said hook part and consisting of a shank having a rigid pointed extremity, said two parts being adapted for operation independently by cams so as to co-operate with a relative sliding movement, the guard part in one position being continuous with the front edge of the stem below the



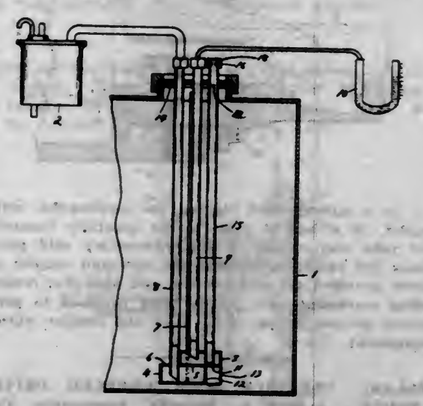
swelling thereon which latter projects beyond the line of that part of the stem against which the guard part rests, and said guard part when assuming the operative position being deflected outwards from the stem by the swelling thereon whereby it is inclined relatively to the hook part when covering the point of the hook.

1,634,424. METHOD OF PRODUCING IMPROVED LIME HYDRATE. WILLIAM K. HUNTER, Knoxville, Tenn., assignor of one-half to Marion F. Nichols, Knoxville, Tenn. Filed July 22, 1925. Serial No. 45,428. 4 Claims. (Cl. 23—188.)



2. The method of producing a hydrated lime having a high plasticity, comprising subjecting a lime bearing rock to the action of a roasting temperature for producing lime, and immediately discharging the lime from the heat treatment and at the roasting temperature into water which is present in excess to the amount required for complete hydration of the lime, while allowing the free escape of steam and gases from the water whereby a violent ebullition of the water in contact with the lime occurs during the slacking operation, and allowing the slacking operation to be wholly completed in the presence of the excess water.

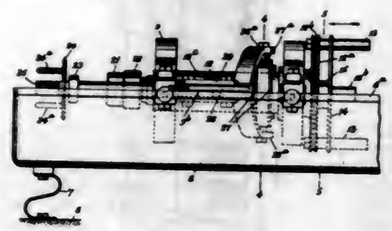
1,634,425. SLIDING WINDOW. WILLIAM D. IRVING, Charlestown, Mass. Filed Mar. 5, 1926. Serial No. 92,398. 6 Claims. (Cl. 20—52.)



1. In a sliding window, the combination with a window stool having outer and inner tracks each formed by a metal strip, the outer track being lower than the inner track, an inner and an outer sash slidable on said tracks, the inner face of the lower rail of the outer sash having a horizontal groove and the outer edge of the strip forming the inner track extending beyond the outer face of said inner sash and into said groove thereby making a tight joint.

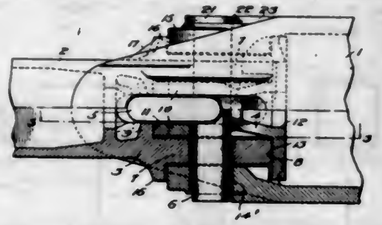
1,634,426. BUILT-IN IRONING TABLE. WILLIAM D. JOHNSTON and GEORGE M. SULLIVAN, Waco, Tex., assignors to Wm. Cameron & Company, Incorporated, Waco, Tex. Filed Sept. 8, 1926. Serial No. 134,312. 3 Claims. (Cl. 68—10.)

1. A built-in ironing table comprising a cabinet open at the front and having a front cross-piece at the lower end of said opening, a rear stop at the rear of the cabinet, the lower side of which is disposed above the horizontal plane of the top of said front cross-piece and an ironing board having a rear edge portion adapted to engage the under side of said rear stop and provided on its under side with a stop adapted to engage the rear portion of the front cross-piece and a curved guide in the cabinet for the board below and extending downwardly and forwardly from the rear stop for the purpose specified.



1,634,427. DEPTH-INDICATING DEVICE. HORACE W. KING, Ann Arbor, Mich., assignor to King-Seeley Corporation, Ann Arbor, Mich., a Corporation of Michigan. Filed Dec. 18, 1922. Serial No. 607,658. 3 Claims. (Cl. 73—54.)

1. In a depth indicating device for liquids, the combination with an air chamber closed at its upper end and having an opening communicating with the liquid to be measured, of means for automatically introducing air into said chamber, said air introducing means communicating



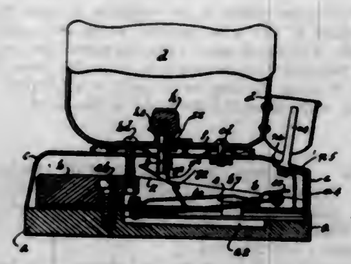
with said chamber at substantially the same level as said chamber communicates with the liquid, a pressure gage, means whereby said gage is connected with said chamber and communicates with the air contained therewithin, and means forming a relief passageway communicating with said chamber at substantially the same level as said chamber communicates with the liquid and extending from the chamber to above the level of the liquid.

1,634,428. METHOD OF AND APPARATUS FOR TESTING THE DYNAMIC BALANCE OF ROTARY BODIES. CHARLES MONTAGUE LINLEY, Highbury, London, England, assignor to W. & T. Avery Limited, Birmingham, England, a Corporation of Great Britain. Filed Mar. 26, 1926, Serial No. 97,708, and in Great Britain Mar. 30, 1925. 7 Claims. (Cl. 73—51.)

1. An apparatus for testing the balance of rotary bodies comprising a bed mounted on a plurality of resiliently mounted supports, a pair of hollow mandrels carried by the said bed and adapted for connection to the body to be tested, a pair of shafts secured within said mandrels and axially slidable relatively thereto, eccentrically displaceable weights carried by said shafts and adapted for radial displacement upon an axial movement of said shafts, means for varying the degree of eccentricity of the said weights as occasioned by said radial movement and means for effecting the rotation of the body.

1,634,429. DRAFT RIGGING. ERNEST F. MECHLIN, Washington, D. C. Filed Feb. 4, 1926. Serial No. 86,011. 15 Claims. (Cl. 213—69.)

1. In a railway draft rigging, the combination with a coupler, of a hooded yoke, means pivotally connecting said yoke and coupler, a key intersecting said pivotal means and extending through the yoke and coupler, and means provided on said coupler and yoke for resisting buffing movement, said means being designed to permit relative pivotal action of the yoke and coupler when in engagement.



1,634,430. FLEXIBLE FOUR-WHEELED DRIVING TRUCK. ALBERT R. MEISTER, Sacramento, Calif. Filed June 29, 1925. Serial No. 40,158. 3 Claims. (Cl. 180—22.)

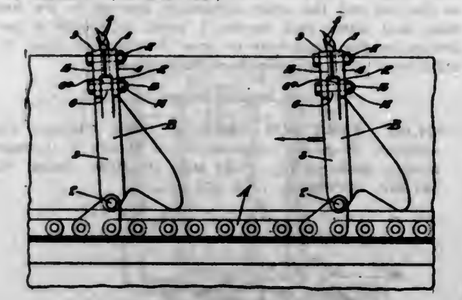
1. In combination with a motor vehicle having a chassis and front wheels mounted on the chassis there being means for steering said wheels, of a rear driving truck for said vehicle comprising axles, wheels on the axles, a yoke extending forwardly from the front of the two axles and having a universal joint connection with the chassis, a yoke extending rearwardly of the two axles and having a universal joint connection with the chassis, springs fastened to the chassis and disposed between the

axles, means for establishing a flexible connection between the springs and said axles, which means permits of lateral swinging of the axles and vertical movement thereof also relative to the springs and a driving connection between the axles, wheels and motor of a motor vehicle providing for driving the four wheels of said rear truck.

1,634,431. FLATIRON. JOSEPH W. MYERS, Jackson, Mich., assignor, by direct and mesne assignments, of one-third to Joseph H. Myers, Jackson, Mich.; one-third to Arthur J. Tuttle, Detroit, Mich.; and one-third to Agnes W. Myers and Joseph W. Myers, Jackson, Mich. Filed Jan. 8, 1925. Serial No. 1,186. 14 Claims. (Cl. 219—25.)

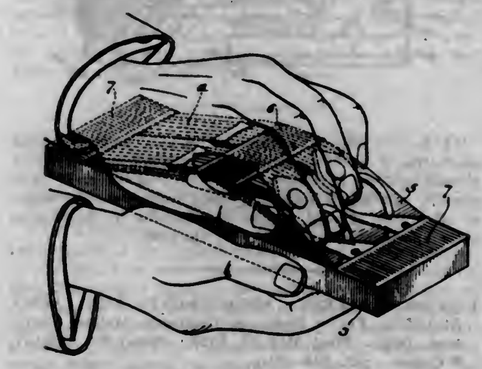
1. In an apparatus of the kind described, the combination of a heating element, and a thermostatic regulator therefor, united together to form an integral structure adapted to be removed and replaced as a unit.

1,634,432. ELECTRIC SWITCH. JOHN H. NELSON, Chicago, Ill., assignor to Caskey-Dupree Manufacturing Company, Coldwater, Mich., a Corporation of Ohio. Filed June 3, 1925. Serial No. 34,550. 2 Claims. (Cl. 200—43.)



1. An electric circuit controlling switch constructed to prevent its unauthorized circuit making and breaking manipulation comprising a casing, a pair of rotatable contact carriers within said casing, one of which is in the form of a ring and the other of which is located within the one of ring form, a lug projecting inwardly from said first mentioned contact carrier and a lug projecting outwardly from said second mentioned contact carrier, said lugs cooperating to produce a lost motion connection between said contact carriers, and an operating handle outside said casing connected with one of said contact carriers.

1,634,433. SELF-SUPPORTING CARRIAGE BODY FOR MOTOR-DRIVEN VEHICLES. ALBIN ORTLOFF, Meiningen, Germany. Filed July 22, 1925, Serial No. 45,322, and in Germany July 22, 1924. Renewed Jan. 22, 1927. 4 Claims. (Cl. 296—28.)

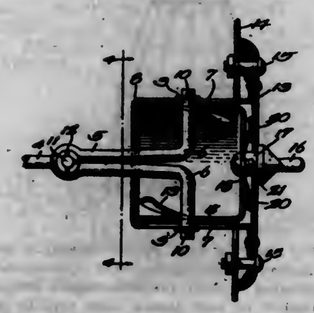


1. Self-supporting carriage body for motor driven vehicles cast in one piece with the frame, the engine bonnet, the bensine reservoir, the oil reservoir, the casing for the steering gear, and the cross and longitudinal stiffenings.

1,634,434. MINING-MACHINE TOOL. EDWARD O'TOOLE, Gary, W. Va. Filed June 15, 1926. Serial No. 116,115. 5 Claims. (Cl. 262—33.)

1. A combined conveyer flight and cutting tool for mining and loading machines comprising an elongated flight-bar, and a cutting tool-head removably mounted on one end of and adjustable about a horizontal axis relative to said flight-bar.

1,634,435. DISPLAY BOX AND SUPPORTING ELEMENT FOR SUSPENDERS. HENRY A. PETER, Philadelphia, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed Jan. 30, 1925. Serial No. 5,714. 1 Claim. (Cl. 206—44.)



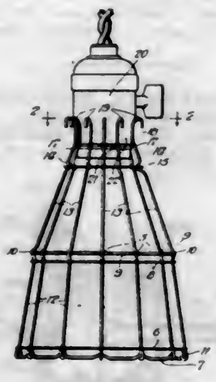
The combination of a display box and supporting element for suspenders, comprising a container having bottom, side and end portions, and top portions permanently secured to the end portions and extending therefrom a relatively short distance and secured along said extensions to the top edges of the side portions, a flexible supporting element corresponding approximately in dimensions with the dimensions of the bottom portion within the box, said supporting element provided with a pair of suspenders extending longitudinally around said supporting element with retaining means for securing the suspenders in said position with respect to the supporting element, said supporting element adapted to be flexed in order to introduce the ends thereof, with the suspenders supported thereby, beneath the said short extensions and then to assume the flat position, as and for the purpose described.

1,634,436. LINE HOLDER. WILLIAM F. POLSON, Buffalo, N. Y. Filed Jan. 27, 1925. Serial No. 5,067. 5 Claims. (Cl. 242—96.)

1. A line holder formed of sheet metal stamped to provide an inwardly-curved longitudinal member, an outwardly substantially curved longitudinal member spaced from said inwardly-curved member, end members connecting opposite ends of said longitudinal members, retainer-arms extending outwardly from the angles of said longitudinal members with said end members, and an integral handle formed by metal taken from between said longitudinal members and bent over the central portion of said outwardly-curved longitudinal member.

1,634,437. CHOKE-VALVE MECHANISM. WILLIAM SCHMID, Coldwater, Mich., assignor to Harry A. Douglas, Bronson, Mich. Filed June 18, 1926. Serial No. 116,861. 2 Claims. (Cl. 137—139.)

1. The combination with a choke valve for an internal combustion engine; of a push and pull rod connected with the valve to operate it; a handle mounted to turn; a

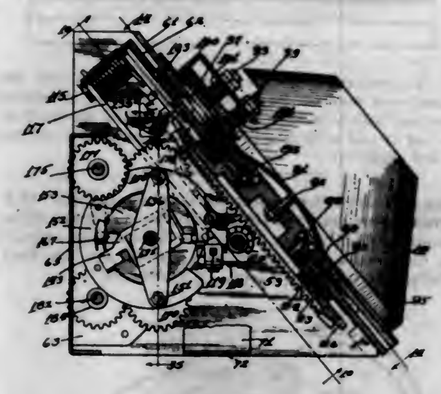


shell secured to and coaxial with the handle and formed with opposite inclined cam slots; an operating member connected with said rod and in the form of a T constructed of a rod folded at its mid portion to form a stem; a second shell having guiding slots, the ends of the head of the T-shaped operating member being received in the slots in both shells, these head ends carrying portions which engage the outer side of the second shell and which serve to exert spreading action upon the stem of the T-shaped operating member.

1,634,438. PULLEY. CHARLES C. SPREEN, Detroit, Mich., assignor to Electric Refrigeration Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 31, 1926. Serial No. 126,309. 4 Claims. (Cl. 64—17.)

1. A belt pulley comprising hub means having an annular felloe connected therewith, said felloe having a radially projecting rib spaced inwardly from an edge thereof, an annular member substantially V-shaped in cross sections, positioned on said felloe in contact with said rib and means for securing said annular member in position on said felloe.

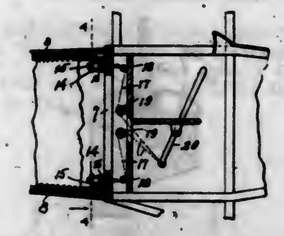
1,634,439. LAMP GUARD. ALLEN G. URBAHNS, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed Sept. 12, 1925. Serial No. 56,013. 2 Claims. (Cl. 240—102.)



2. In a lamp guard, a body portion having a plurality of resilient fingers projecting endwise therebeyond, and a ringlike stiffening member for said fingers limiting the outward movement of said fingers, said ringlike member having a greater radial width than thickness to make the same unyielding and having an annular series of wire receiving notches at the inner edge thereof.

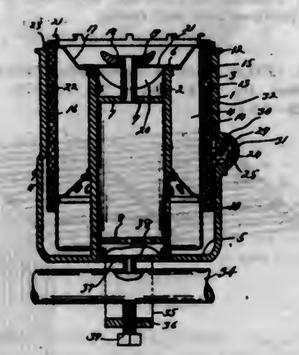
1,634,440. TRANSFORMER. THOMAS DONALD ADAIR, Jr., Dorchester, Mass., assignor, by mesne assignments, to Leonard L. Elden, Brookline, Mass., and Davis S. Boyden, Boston, Mass. Filed Apr. 8, 1921. Serial No. 459,574. 3 Claims. (Cl. 116—114.)

2. Overload indicating apparatus for transformers having, in combination, a semaphore, heat responsive means, a rod connected with the heat responsive means adapted to be actuated thereby upon changes of temperature, said rod being provided with two disks, one rigidly secured to the rod and the other adjustably secured to the first disk, said latter disk having a notch to permit a projection on the semaphore to pass therethrough upon the attainment of a predetermined temperature.



1,634,441. FARE BOX. HUGO J. BAUR, Chicago, Ill., assignor, by mesne assignments, to Sidney S. Gorham, trustee, Chicago, Ill. Filed Mar. 19, 1920. Serial No. 367,057. 20 Claims. (Cl. 235—32.)

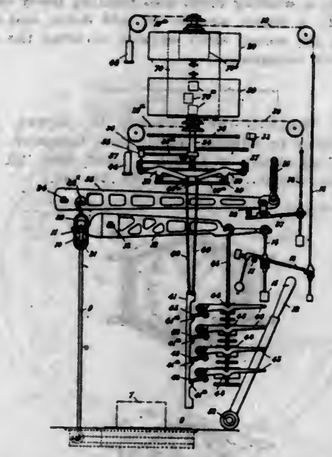
11. In a counting mechanism, a coin carrier, means contacting a coin to be shifted by the coin, a plurality of moving fingers, gearing normally at rest adjacent each thereof, and means shifted by said coin-contacted means to offset one of said fingers and entrain its gearing to effect appropriate registration of the coin.



1,634,442. SAFETY ATTACHMENT FOR AEROPLANES. FRANK BENI and DOMINICK IARUSSI, Cleveland, Ohio. Filed May 19, 1926. Serial No. 110,151. 6 Claims. (Cl. 244—21.)

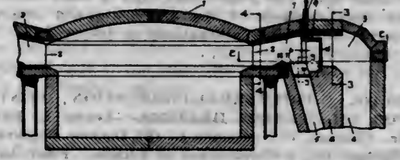
1. The combination with an aeroplane having a fuselage, of a parachute adapted to be folded about the fuselage frame and attached at its center to the rear end portions of the fuselage frame, cover plates separate from the parachute and completely enclosing the parachute and fuselage frame, releasable means for securing

said cover plates to the frame, and means for operating said securing means to release the plates from the frame to permit the parachute to open.



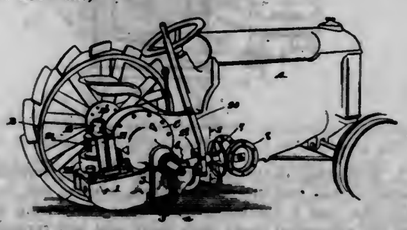
1,634,443. OIL BURNER. FREDERICK F. BENNETT, Ypsilanti, Mich. Filed Oct. 13, 1924. Serial No. 743,484. 13 Claims. (Cl. 158—04.)

1. An oil burner comprising a cast metal container having a bottom portion and spaced inner and outer cylindrical walls integral with said bottom portion forming an annular oil-receiving chamber therebetween, a cylindrical member within said annular chamber and spaced from said outer wall to form an annular wick chamber between said member and outer wall, an annular wick in said wick chamber, an annular wick-supporting member having helically arranged perforations therein, and means for adjusting said wick.



1,634,444. WEIGHING APPARATUS. WILLIAM ALFRED BENTON, Birmingham, England, assignor to W. & T. Avery, Limited, Birmingham, England. Filed Aug. 11, 1924, Serial No. 731,466, and in Great Britain Dec. 21, 1923. 8 Claims. (Cl. 265—48.)

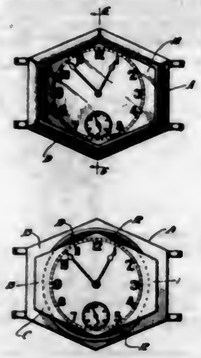
1. In a weighing apparatus the combination of an automatic resistant for initially determining an approximation of the load, means for transmitting the load to said resistant, a weight indicator for indicating the measure of the load as to its major units, means connected to said resistant for effecting the actuation of the said indicator, a series of weights for counterbalancing the load as to its major order, means in operative connection with the aforesaid indicator for selecting the required weight for counterbalancing the major order of the load as determined by the indication recorded by the indicator, a series of levers having their fulcra disposed in a horizontal plane, a weighbeam, means actuated by the levers for depositing the required weights for counterbalancing the



major order of the load on the weighbeam, and manually operable means acting through the aforesaid selecting means for controlling the operation of the said levers.

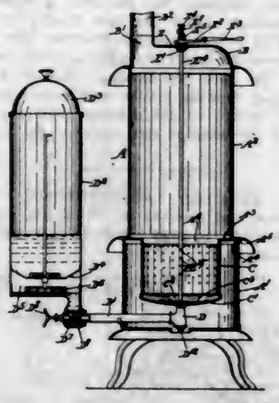
1,634,445. BURNER FOR FURNACES. WILLIAM G. BERGMAN, Point Place, Ohio. Filed Nov. 27, 1925. Serial No. 71,528. 10 Claims. (Cl. 158—109.)

1. In a burner for furnaces, a combustion chamber and a gas mixing chamber, the gas mixing chamber having a mouth through which the gas mixing chamber communicates with the combustion chamber, the wall of the mixing chamber having a plurality of ports for admitting streams of air into the mixing chamber to form air streams located between planes that extend vertically and towards the mouth of the mixing chamber, and means for directing streams of gas between the layers of air streams.



1,634,446. TRACTOR ATTACHMENT. RHINEHARD BOLLHEIMER and EDWARD T. WILKENS, Fort Loramie, Ohio. Filed Jan. 9, 1926. Serial No. 80,197. 6 Claims. (Cl. 180—53.)

1. An attachment for tractors comprising a supporting frame adapted to be supported on the tractor, a horizontal shaft mounted in said frame, means for driving said



shaft, a gear on said shaft, a second gear meshing therewith, a second shaft at right angles to the first on which said second gear freely rotates, a clutch member on said second gear, a winding drum also rotating freely on said second shaft, a clutch member on said drum, and means for moving the second shaft endwise to bring the clutch members into engagement.

1,634,447. WATCHCASE. GEORGE W. BOWEN, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Sept. 25, 1925. Serial No. 58,532. 4 Claims. (Cl. 58—88.)

1. In combination, a watch case center, a dial plate extended in part to overlie one face thereof, and ribs upstanding in spaced relation on the case center with their ends adjacent the edges of the dial plate to position the same upon the case center, and a bezel shaped to cover the periphery of the dial plate and removably connected to the ribs, substantially as described.

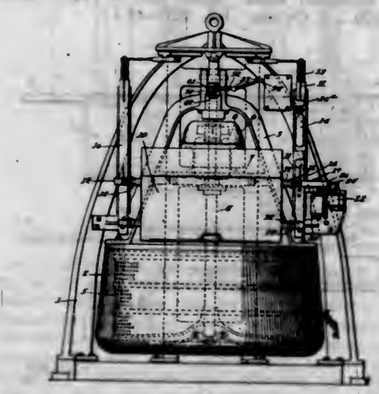
1,634,448. ISOTHERMAL-COMBUSTION CONTROL FOR OIL-BURNING HEATERS. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1926. Serial No. 127,217. 13 Claims. (Cl. 236—15.)

1. A heating device and control therefor, including a burner, a fuel line extending thereto, a valve seat in said fuel line, and a thermostatic member comprising a hollow rod suspended above such valve seat and terminating in a valve member shaped to conform to such seat, and an outside air connection adapted to permit air to circulate through the interior of such rod.

1,634,449. SLIDING WINDOW FOR VEHICLE BODIES. HORACE H. BUGGIE, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed June 19, 1920. Serial No. 390,243. 1 Claim. (Cl. 296—44.5.)

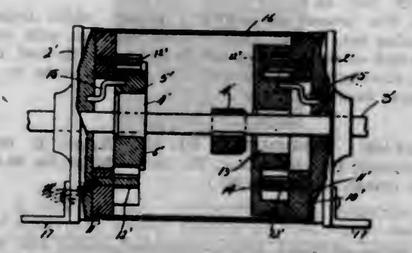
In a window, the combination with a sashless transparent panel, of a yieldable runway slidably engaged in by said panel, a frame having a shoulder engageable by said runway, a member secured to said frame and cooperating with said shoulder to compress said runway, said member being formed of sheet metal folded to tubular shape and having spaced inner and outer marginal portions engaging said frame, a wall extending from said inner marginal portion and engaging said runway and a second wall extending from said outer marginal portion to said first-mentioned wall, and securing means extending through said second wall and between said marginal portions into said frame.

1,634,450. FILE. ALVAH BUSHNELL, Philadelphia, Pa. Filed Sept. 16, 1924. Serial No. 737,970. 13 Claims. (Cl. 129—15.)



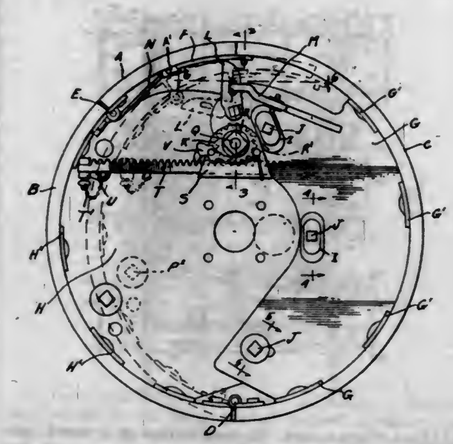
1. A file comprising front and back walls, expansible side walls connected with the front and back walls, an expansible bottom wall connected with the front, back and side walls, partitions attached to the bottom wall and free at their ends, and an expansible division strip fixed to the front and back walls and coacting with the partitions to hold the latter in relatively fixed positions while permitting movement thereof when desired.

1,634,451. GAME PROJECTILE. WILLIS C. CAMPBELL, Yonkers, N. Y. Filed Mar. 24, 1927. Serial No. 178,051. 1 Claim. (Cl. 273—128.)



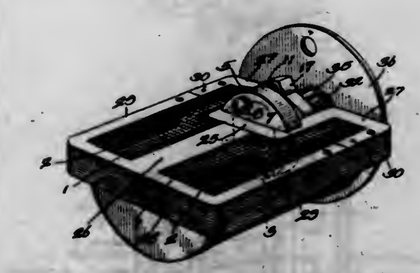
A slidable projectile used in playing a game comprising a thick disk having its upper and lower faces parallel to each other, and a straight handle projecting from approximately the center of the disk diametrically and at an angle of forty-five degrees to the top, said handle projecting slightly beyond the vertical plane of the edge of the disk.

1,634,452. EXTRACTOR CONTROL. EMIL J. CARROLL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 22, 1921. Serial No. 486,717. 20 Claims. (Cl. 192—136.)



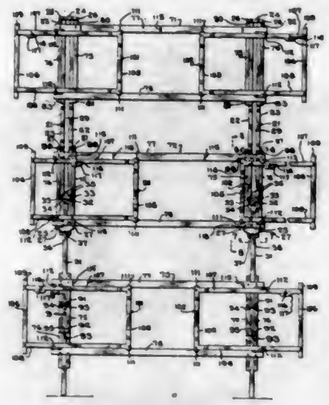
16. A centrifugal extractor, comprising a rotatable basket, motor means for driving said basket, a cover for said basket having a normal tendency to open, means controlled by said cover for causing said motor to rotate said basket for the extracting operation, and means for automatically stopping said basket at the end of a predetermined extracting period and opening said cover with all parts ready for the next operation.

1,634,453. MECHANICAL MOVEMENT. JOHN E. CARROLL, Saginaw, Mich. Filed July 8, 1924. Serial No. 724,158. 1 Claim. (Cl. 74—35.)



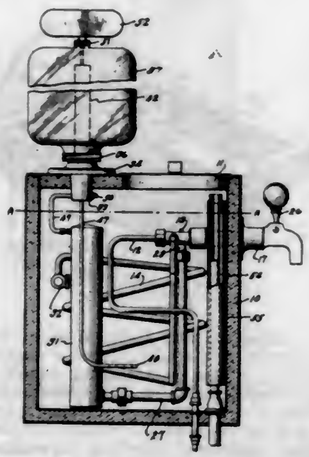
A mechanical movement for use as a change speed mechanism comprising, in combination, a pair of end plates, a shaft rotatably and slidably mounted in said end plates, eccentrics fixed on said shaft, an internal gear for cooperation with one of said eccentrics, an external gear for cooperation with the other of said eccentrics, means to hold the gears against rotation while permitting an oscillatory movement thereof due to the revolving of the eccentrics, lantern wheels each having one more spindle than teeth in the gears and coacting with said gears, and a drum fixed to the periphery of said lantern wheels.

1,634,454. WHEEL. GEORGE CHRISTIA and PETER CHRISTIA, Detroit, Mich. Filed Aug. 28, 1926. Serial No. 132,053. 5 Claims. (Cl. 152—20.)



2. In a disc wheel, the combination, with a plurality of segmental rim sections, hinge connections for all but one of the pairs of meeting ends thereof, partially overlapping web plates connected with two of said rim sections, means for regulatably effecting the inward and outward swing of two of said rim sections and their attached web sections about one of said hinges as a pivotal center, means for locking said web plates and their corresponding rim sections in extended position, and means for supporting the third rim section in peripheral alignment with the adjacent ends of the other rim sections when the latter are in extended position.

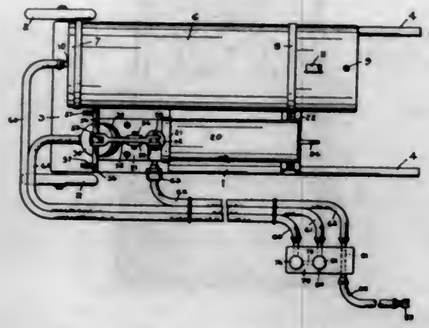
1,634,455. ELECTRIC SWITCH. GEORGE L. CRAGG, Chicago, Ill., assignor to Harry A. Douglas, Bronson, Mich. Filed Dec. 27, 1926. Serial No. 157,153. 20 Claims. (Cl. 175—361.)



1. The combination with a current conducting winding element provided with a magnetizable U-shaped core portion that has a stem, said winding element having a bore of step formation in one part of which the U-shaped core portion is received and in the other part of which the core stem is received; of a circuit controlling switch in electrical association with and surrounded by said winding element and positioned in said U-shaped core portion; and a locking structure in controlling relation to the switch.

1,634,456. DISPLAY RACK. CARL DEUSCHLE, Cincinnati, Ohio. Filed Aug. 13, 1926. Serial No. 129,070. 3 Claims. (Cl. 211—14.)

1. In a display rack, the combination of a stand comprising a plurality of supporting members arranged side by side and collapsible with relation to each other, a plurality of cross-frames slantingly arranged one above another between said plurality of supporting members, releasable securing means between said cross-frames and said plurality of supporting members, oppositely laterally movable slantingly arranged display frames on said plurality of cross-frames, said cross-frames and said display frames arranged for display of goods thereon, and adjustable connecting means between said display frames and said cross-frames for selective lateral overhanging relations of said display frames with relation to said cross-frames whereby to increase the display area of said display rack.

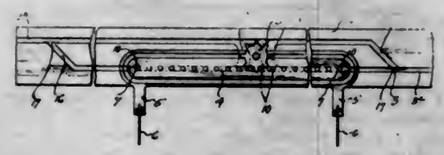


1,634,457. CARBONATED-BEVERAGE-DISPENSING APPARATUS. WILLIAM E. DOUGHTY, Detroit, Mich., assignor to James Vernor Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 12, 1926. Serial No. 148,015. 11 Claims. (Cl. 225—30.)

1. In a carbonated beverage dispensing apparatus, a display chamber, means for trapping a display medium in said chamber a source of gas liberated from the beverage and means for introducing said gas into said display chamber to agitate said display medium.

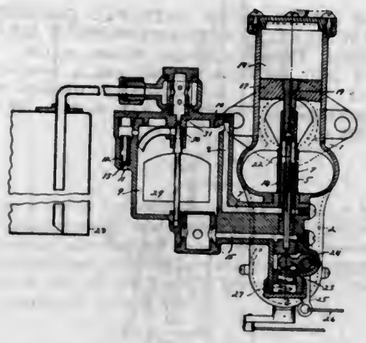
10. In a carbonated beverage dispensing apparatus, the combination of means for containing a display medium, means for containing a cooling medium, a source of gas liberated from the beverage, and means for utilizing the said gas for agitating the display medium and the cooling medium respectively.

1,634,458. LUBRICATING APPARATUS. FENTON E. EVANS, Redmond, Wash. Filed Apr. 9, 1925. Serial No. 21,870. 5 Claims. (Cl. 221—47.1.)



1. A device of the class described, comprising a frame, a compressed air motor having a piston, a compressed air cylinder, a grease pump, a rocking shaft, a rocking lever mounted on the shaft and operatively connecting the motor with the pump, a spring control for the piston disposed between the lever and the frame, a grease reservoir, a valve control member for compressed air, and, operable through said member, means for establishing communication for compressed air from the cylinder to the motor, means for discharging air from the motor, and means for discharging grease from the pump.

1,634,459. PROCESS OF MANUFACTURE OF PLASTER MATERIAL. OSCAR GERLACH, La Salle, Ill. Filed Mar. 13, 1925. Serial No. 15,365. 3 Claims. (Cl. 106—34.)



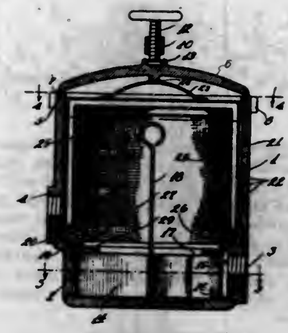
1. The process of making a plaster, which includes treating hot, freshly burnt crushed limestone with about one-fifth of its weight of 60° Baumé sulphuric acid, mixing thoroughly and crushing the reaction mass to the desired fineness.

1,634,460. WINDSHIELD WIPER. RALPH B. GRAY, Chicago, Ill. Filed Mar. 15, 1926. Serial No. 94,669. 2 Claims. (Cl. 15—253.)

1. A windshield wiper comprising a support having an endless guideway, a carriage, projections on said carriage extending into said guideway, means for alternately shifting said carriage longitudinally and vertically of the support, and wipers mounted on said carriage adapted to be moved longitudinally and vertically by said carriage.

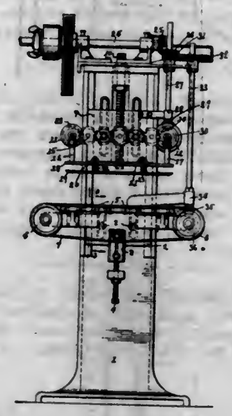
1,634,461. CARBURETOR. WILLIAM GRIKSCHEIT, Detroit, Mich. Filed Sept. 25, 1922. Serial No. 590,472. 1 Claim. (Cl. 201—44.)

In a carburetor, the combination with the body having an air inlet and an outlet, of a cylinder, a plunger slidable within said cylinder for controlling the communication of said air inlet with said outlet, an air tube depending from said plunger and adapted to variably communicate with said outlet upon movement of said plunger, a liquid fuel tube extending upwardly within said air tube and spaced therefrom, a metering pin secured to said plunger and cooperating with said liquid fuel tube to variably control the flow of liquid fuel therethrough, and means for placing the interior of said cylinder in communication with said outlet.



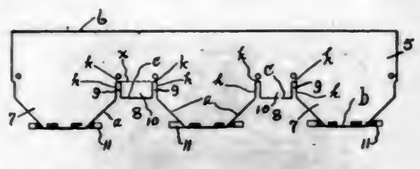
1,634,462. COMPOSITION BOARD AND METHOD OF MAKING THE SAME. FRANK J. HALLAUER, Madison, Wis. Filed Nov. 2, 1925. Serial No. 66,139. 8 Claims. (Cl. 154—28.)

1. A light, strong composition board, comprising a rigid network of slender shavings of wood, lightly coated with and bonded together at their numerous points of contact with one another by a protein glue, employed in such an amount and distributed in such manner as to leave numerous dead air spaces throughout the mass, the whole being in a strongly compressed condition.



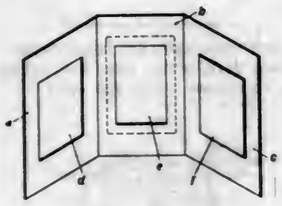
8. The process of making a light, strong composition board, which consists of preparing long, slender, curly shavings of natural wood, forming them into an even layer of tangled, open masses, spraying them with a fire-resistant, water-resistant protein glue so that the shavings are lightly coated therewith, folding the sprayed layers into a roll or bundle, heavily compressing said roll or bundle into a board in such a manner that the shavings are forced to lie substantially in the plane of the board, and then drying the board.

1,634,463. LIQUID TRAP AND STRAINER. HENRY A. HILLS, Grand Rapids, Mich. Filed Dec. 1, 1922. Serial No. 604,181. 6 Claims. (Cl. 210—165.)



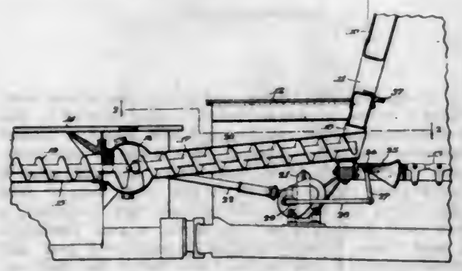
1. In a fluid trap and strainer, a casing, a sediment pan located in the lower portion thereof, strainers opening downwardly above the pan and serving to hold the pan in place, a deflector in said pan adapted to cause upward motion of the entering oil into said strainers, and a baffle in said pan adapted to impart a rotary motion to the upwardly flowing oil.

1,634,464. BOTTLE-CAPPING MACHINE. JOHN A. JOHNSON, New York, N. Y. Filed Feb. 25, 1925. Serial No. 11,496. 2 Claims. (Cl. 226—80.)



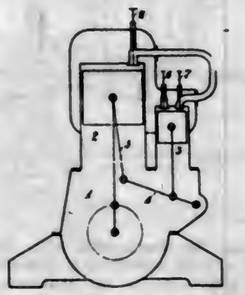
1. A machine for affixing closures to containers comprising a frame, a pair of drums, a gear secured to one of said drums, a belt running over said drums, a presser head over said belt, a pair of crank disks on said head, crank pins thereon, links suspended from said pins, a presser plate rigidly secured to the lower ends of said links, means for moving said presser head vertically, a drive shaft journalled on said frame, a gear journalled on said frame, a shaft passing through said gear and splined thereto, a gear on the lower end of the shaft engaging the drum gear, means for driving said journalled frame gear from the drive shaft and for rotating the crank disks in synchronism with the splined shaft whereby the belt and presser plate will travel laterally at the same speed when the plate is in contact with a closure.

1,634,465. ROOFING STRIP. HARRY G. KELLY, Omaha, Nebr. Filed Nov. 7, 1925. Serial No. 67,545. 1 Claim. (Cl. 108—7.)



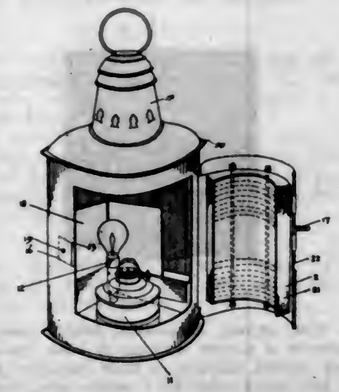
A roofing strip having spaced polygonal wings, secondary wings intermediate said polygonal wings, said polygonal wings having sides converging toward said secondary wings, and fasteners associated with said polygonal wings, said fasteners having projecting ends terminating intermediate the converging sides of the polygonal wings of the underlying strips in a depressed position to be freely slidable under said polygonal and above said secondary wings of the adjacent strip to insure proper registry thereof.

1,634,466. EMBOSSING APPLIANCE FOR PHOTOGRAPHS AND THE LIKE. HEINRICH AUGUST ERNST KRAFT, Dresden, Germany, assignor to Firma Kraft & Steudel Fabrik Photographischer Papiere G. m. b. H., Dresden, Germany. Filed Apr. 1, 1926, Serial No. 99,178, and in Germany Sept. 21, 1925. 6 Claims. (Cl. 101—3.)



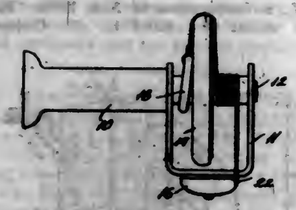
1. In an appliance for use in embossing photographic prints to produce a plate-sunk margin the combination of a pair of sheets having equal apertures therein and between which sheets the print to be embossed may be placed, a third sheet formed with a raised surface similar in shape to the openings in the said pair of sheets, and means hingedly connecting the sheets together to form a unitary structure.

1,634,467. LOCOMOTIVE STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed June 14, 1926. Serial No. 115,771. 2 Claims. (Cl. 110—101.)



1. In combination, a locomotive boiler provided with a fire box and having an aperture in its back head adjacent the lower margin thereof, means for delivering fuel through such aperture, a reciprocating lifter acting upon the fuel as it enters the firebox, and means for scattering the fuel from the mound thus formed.

1,634,468. FOUR-CYCLE INTERNAL-COMBUSTION ENGINE WORKING WITH AN INJECTION AIR COMPRESSOR. FRIEDRICH MÜLLER, Vienna, Austria. Filed Aug. 9, 1921, Serial No. 491,006, and in Austria July 3, 1917. 6 Claims. (Cl. 123—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

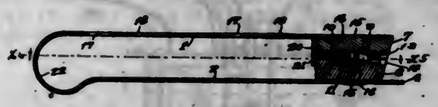


1. In a four cycle engine, including a working cylinder, means including a single compressor actuated by said cylinder, for compressing and delivering charging air and injection air at different times during each cycle and during separate operations of said compressor.

1,634,469. MARINE LAMP. LOUIS EDWARD PERKINS, New York, N. Y. Filed Mar. 10, 1926. Serial No. 93,629. 1 Claim. (Cl. 132—31.)

As an article of manufacture, a marine lamp having a casing, a door removably hinged to the casing, said door having a lens receiving aperture, and inwardly directed bevel surrounding said aperture; flanges on the inner side of said bevel, a lens in said aperture; straps conforming to the lens having ears at each end, removable fastening means passing through the ears and the bevel, said straps being secured to the bevel to hold the lens against the flanges; removable guards secured to the door across the aperture; and a slidable latch attached to the door securely fastening the door.

1,634,470. GYROSCOPIC TOY. FRANK M. PIERCE, Chicago, Ill. Filed May 31, 1923. Serial No. 642,393. 4 Claims. (Cl. 46—14.)

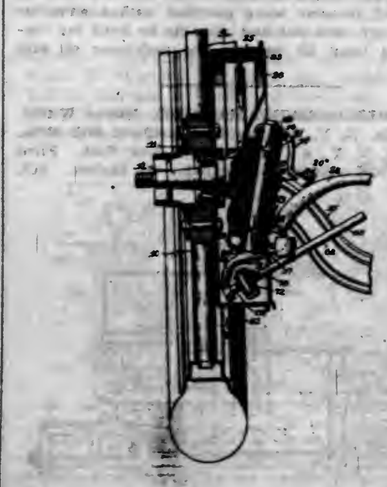


1. In a toy of the class described a handle, a frame, a pin passing through said frame, a pair of spacers freely rotatable on said pin, and a rotatable wheel journalled on said pin between said spacers and a cord adapted to be wound on one of said spacers by said wheel, said cord being connected to said wheel.

1,634,471. DRY-STEAM SLEEVE BOARD. IRWIN W. COX, Denver, Colo. Filed Mar. 21, 1927. Serial No. 176,965. 3 Claims. (Cl. 68—9.)

1. A steam finishing board comprising a finishing arm having three compartments, the walls of one of said compartments being imperforate and adapted to contain steam under high pressure, the other two compartments each having a wall provided with a plurality of foraminations, said last mentioned compartments being separated by a partition having an opening and a valve for controlling the passage through said opening.

1,634,472. BURGLAR DETECTOR. WILLARD G. THORPE, Los Angeles, Calif. Filed Dec. 27, 1926. Serial No. 157,331. 7 Claims. (Cl. 116—83.)



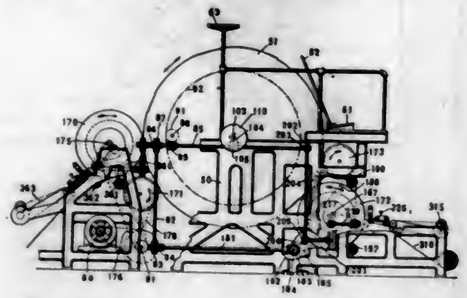
1. A detonator having sound amplifying barrels and split its entire length from breech to the muzzles.

1,634,473. PROCESS OF MAKING N-DIHYDRO-1-2-2'-1'-ANTHRAQUINONEAZINE. LYNNE H. ULICH, Racine, and ROBERT J. GOODRICH, South Milwaukee, Wis., assignors to The Newport Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 4, 1925. Serial No. 20,618. 3 Claims. (Cl. 260—31.)

1. The process of producing a coloring matter of the anthracene series, which consists in heating dibrom N-dihydro 1:2:2':1'-anthraquinone azine with alcoholic potash to form N-dihydro 1:2:2':1'-anthraquinone azine.

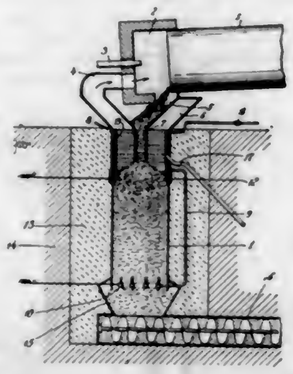
1,634,474. BRAKE MECHANISM FOR STEERING WHEELS. NILS ERIK WAHLBERG, Kenosha, Wis., assignor to Nash Motors Company, Kenosha, Wis., a Corporation of Maryland. Filed June 25, 1924. Serial No. 722,219. 15 Claims. (Cl. 188—194.)

1. In combination with a vehicle axle having a wheel and spindle mounted for pivotal steering movement on a substantially vertical pivot pin, a brake drum carried by the wheel, brake means supported by the wheel spindle, and means for operatively engaging said brake means with said drum, comprising a lever pivotally supported on a bearing rigid with said axle and having intermediate pivotal connection with said brake means, said connection being movable transversely of and in a path substantially intersecting the axis of said pivot pin.



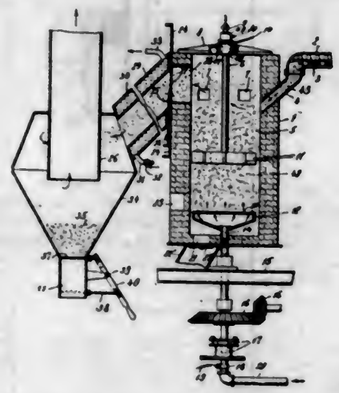
1,634,475. BATTERY CASING. REINHOLD H. WAPPLER, Yonkers, N. Y., assignor to American Cystoscope Makers, Inc., a Corporation of New York. Filed May 10, 1923. Serial No. 637,974. 3 Claims. (Cl. 240—10.5.)

1. A device of the character described comprising a hollow casing of substantially cylindrical form and provided with a slot, a battery mounted within said casing and provided with a contact member, a disk of insulating material mounted within said casing, a rheostat mounted upon said disk of insulating material and provided with



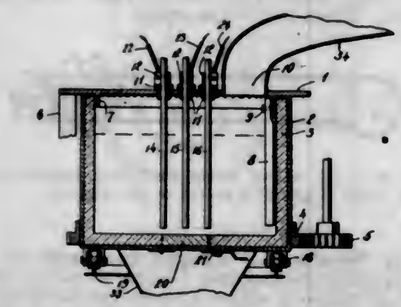
a contact member engaging said contact member of the battery, said rheostat being disposed adjacent said slot and provided with another contact member extending from said disk of insulating material, an incandescent lamp carried by said hollow casing and provided with a contact member extending from said disk of insulating material, said rheostat being provided with a slide extending through said slot and operable by hand for controlling said lamp by varying the resistance of said rheostat.

1,634,476. SILK-DRESSING MACHINE. HENRY WHITE, Glens Falls, N. Y., assignor to Champlain Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1926. Serial No. 99,041. 36 Claims. (Cl. 19—117.)



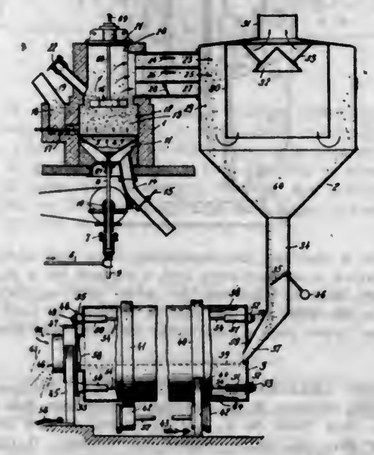
1. In a dressing machine, a series of clamping bars for holding ends of fills, a carrier therefor, means for drawing and grasping the other ends of the fills between adjacent bars and means for automatically releasing the first mentioned ends of the fills after the other ends have been grasped.

1,634,477. PROCESS FOR MAKING DECOLORIZING CARBON. LEONARD WICKENDEN, Flushing, N. Y., and STANLEY A. W. OKELL, Tyrone, Pa., assignors to Industrial Chemical Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,157. 10 Claims. (Cl. 204—64.)



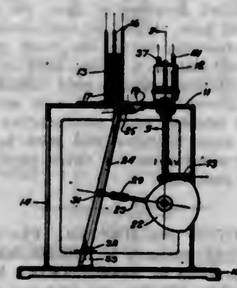
1. In a process of making decolorizing carbon continuously passing carbonized dissolved vegetable material through a slightly inclined rotary kiln and thence through an electric furnace, while passing suitable treating gases through said furnace and kiln in the opposite direction and maintaining a temperature of upwards of 800° C. in said kiln and furnace substantially as described.

1,634,478. PROCESS AND APPARATUS FOR MAKING DECOLORIZING CARBON. LEONARD WICKENDEN, Flushing, N. Y., and STANLEY A. W. OKELL, Tyrone, Pa., assignors to Industrial Chemical Company, New York, N. Y., a Corporation of New York. Filed Feb. 18, 1922. Serial No. 537,571. 51 Claims. (Cl. 204—64.)



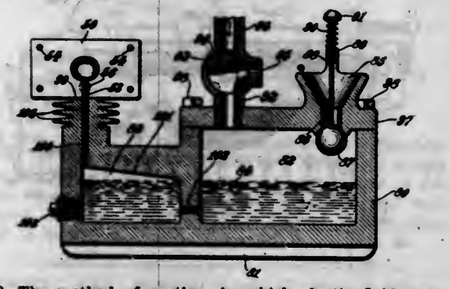
1. The process of making decolorizing carbon which comprises continuously feeding granular calcined dissolved vegetable carbon material into a tubular vertical electric furnace, heating the granular carbon by the electric current passing between an upper electrode and a lower rotary blast electrode slowly rotating adjacent the bottom of the furnace and simultaneously injecting hot treating gases comprising steam and carbon dioxide through said blast electrode into the mass of heated carbon to violently agitate the same and carry upward to relatively greater distances the smaller particles of softer and more friable activated carbon, carrying such smaller particles of activated carbon out of the furnace while suspended in the current of treating gases, cooling the same and centrifugally separating such carbon particles from the gases.

1,634,479. ELECTRIC-FURNACE APPARATUS AND PROCESS OF REVIVIFYING DECOLORIZING CARBON, ETC. LEONARD WICKENDEN, Flushing, and WALTER F. DEMMERLE, New York, N. Y., assignors to Industrial Chemical Company, New York, N. Y., a Corporation of New York. Filed July 3, 1922. Serial No. 572,384. 16 Claims. (Cl. 204—64.)



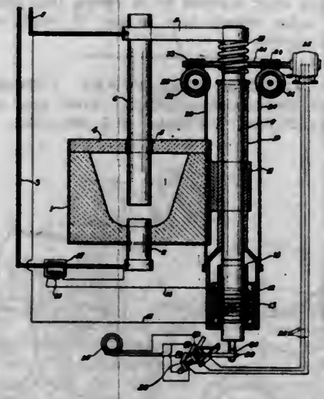
1. The rotary electric furnace for revivifying decolorizing carbon, etc. comprising a substantially vertical cylindrical furnace having a refractory lining and mounted to be rotated about its axis, cooperating rotating means, a discharge door adjacent the center of the furnace bottom, a cover cooperating with said furnace and having a depending flange fitting substantially closely the upper end of the furnace, a scraper mounted on said cover to cooperate with the side of the furnace, a feed chute in said cover and three transverse rows of depending agitating and heating electrodes extending into said furnace adjacent the bottom thereof and insulating supports between said electrodes and the furnace cover.

1,634,480. ELECTRIC-FURNACE APPARATUS AND PROCESS FOR MAKING DECOLORIZING CARBON. LEONARD WICKENDEN, Flushing, N. Y., and STANLEY A. W. OKELL, Tyrone, Pa., assignors to Industrial Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1923. Serial No. 626,935. 30 Claims. (Cl. 204—64.)



1. The continuous process of activating porous granular decolorizing carbon formed from dissolved vegetable material, which comprises heating the carbon particles to high temperatures of about 800 to 900° C. and injecting reducing treating gases into a mass of such carbon particles to agitate the same and separating therefrom some of said treated carbon particles, and continuously agitating and subjecting a mass of such treated carbon particles to the action of limited amounts of air or activating gases while maintained at a considerably lower temperature of about 350 to 450° C. to activate the carbon while minimizing oxidation losses thereof.

1,634,481. COMPOUND LINING HEAD. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 17, 1921. Serial No. 508,102. 15 Claims. (Cl. 113—80.)

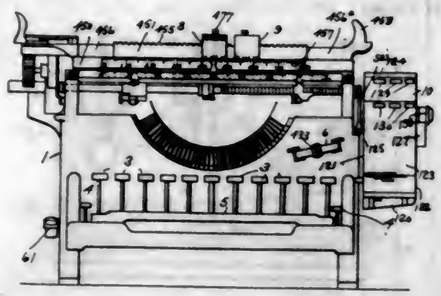


1. An apparatus for lining the flanges of can ends with gasket material, comprising means for supporting and rotating a can end, a head having a reservoir for gasket material therein, a measuring member having a plurality of measuring chambers adapted to receive charges of material from said reservoir and having means for intermittently cutting off the supply of gasket material to a roller, and a roller adapted to subsequently receive said charges from the measuring member and apply the same to the can ends.

1,634,482. CASTING METHOD AND APPARATUS. FLOYD S. YOUTSEY, St. Louis, Mo., assignor of one-half to Clarence D. Lukens, St. Louis, Mo. Filed Feb. 26, 1919, Serial No. 279,227. Renewed Oct. 30, 1926. 47 Claims. (Cl. 22—209.)

2. The method of casting, in which elastic fluid pressure is applied to the molten metal to force the same into the mold, characterized by the feature that there is provided after the application of the pressure, a time interval sufficient to establish the applied pressure to its maximum before the metal fills the mold.

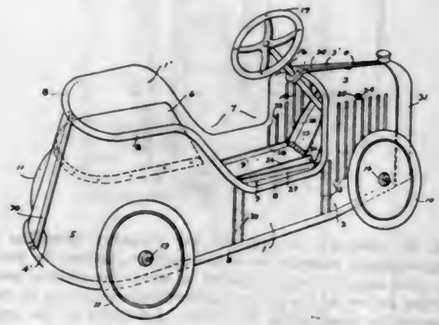
1,634,483. ELECTRODE CONTROL FOR ARC FURNACES. THADDEUS F. BAILY, Alliance, Ohio. Filed May 24, 1926. Serial No. 111,437. 11 Claims. (Cl. 204—64.)



1. An electrode control for arc furnaces including a longitudinally movable electrode support, means for moving said support longitudinally, a motor controlling said moving means and a magnet operatively connected to the support for controlling the closer regulation of the support.

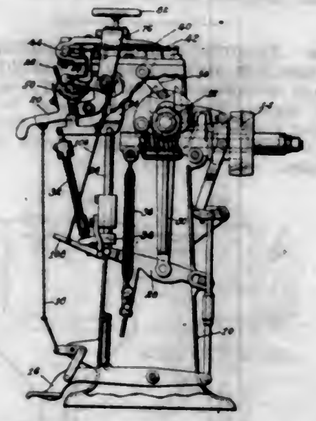
1,634,484. [WITHDRAWN.]

1,634,485. CALCULATING MACHINE. HIESTER AZARUS BOWERS, Reading, Pa. Filed Aug. 26, 1921, Serial No. 495,458. Renewed Mar. 15, 1927. 69 Claims. (Cl. 235—59.)



5. In a calculating machine the combination with an index wheel, an operating shaft, an adding gear on said

shaft operatively connected with the index wheel, a pinion loose on the operating shaft, means for rotating the pinion, a ratchet wheel carried by the adding gear, a driving arm carried by the pinion, a pawl support loose on the shaft carrying a pawl adapted to engage the ratchet wheel, means carried by the driving arm for causing the pawl to engage said ratchet wheel to rotate it; the pawl being so constructed that the driving arm will move through a definite arc without causing the pawl to engage the ratchet wheel and, on the completion of such movement, force the pawl to engage and rotate the ratchet wheel.



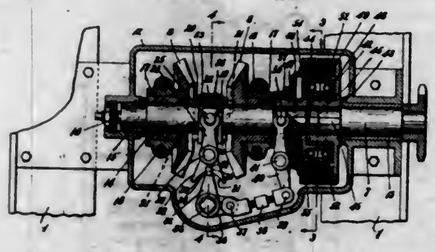
60. In a calculating machine, the combination with a series of index wheels arranged on a single axis, an intermediate gear for each index wheel, the intermediate gears being arranged on a single axis, a master gear and means for shifting it into mesh with each of the intermediate gears successively, means for rotating the master gear including means for reversing the direction of rotation of the master gear, of a subtotal register comprising a shaft carrying a series of index wheels adapted to mesh with said intermediate gears, a swinging frame carrying said shaft adapted to be swung into position to carry the index wheels into or out of mesh with the intermediate gears.

1,634,486. CHILD'S FOOT-POWER AUTOMOBILE. JULIEN A. BRIED, Oakland, Calif. Filed Apr. 30, 1925. Serial No. 27,029. 8 Claims. (Cl. 208—33.)

1. A child's foot propelled automobile comprising a body having two sides and a seat adapted to support a child with its feet positioned between the sides, wheels supporting the vehicle, and a pair of treadles longitudinally arranged within the body adapted to receive the child's feet and arranged for propelling the vehicle thereby, said treadles substantially filling the body space between the sides and arranged to cooperate with said sides to prevent the formation of foot catching interstices therebetween in the operation of the treadles.

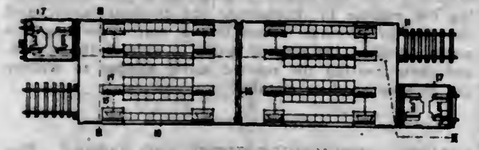
1,634,487. MACHINE FOR SEPARATING LASTS AND SHOES. MICHAEL F. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 12, 1921. Serial No. 469,006. 32 Claims. (Cl. 12—15.1.)

19. In a machine for separating lasts and shoes, in combination, a support for a last, a support for a shoe on the last, means relatively to move said supports to separate the shoe and the last, a member to turn back the shoe upper, and a cam bodily to move said member.



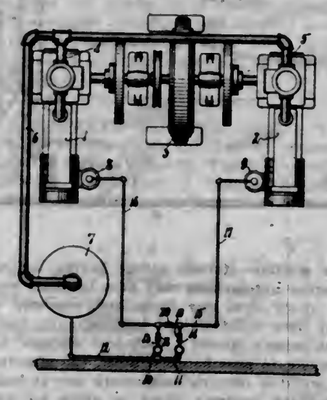
1,634,488. LEAD-KEG-CLOSING DEVICE. WILLIAM F. BUTLER, Hillside, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 28, 1925. Serial No. 33,583. 9 Claims. (Cl. 113—18.)

1. A closing device for lead kegs, or like containers, comprising a chuck arrangeable upon the cover of the container, closing jaws pivoted to said chuck and having inward lever extensions beyond the pivot points, a stem arising from said chuck, a collar slidably mounted on said stem and slidably engaging said extensions, and operating levers pivotally connected with said collar and said chuck and adapted upon manipulation to slide the collar on said stem to move said jaws in and out to bend a closing element on the cover about a retaining element on the container.



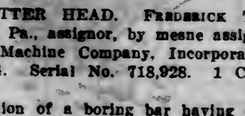
1,634,489. CLUTCH MECHANISM. FRANK CARTLIDGE, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 28, 1918. Serial No. 225,278. 10 Claims. (Cl. 192—48.)

1. In a clutch mechanism, a positive clutch, a friction clutch, means for transmitting power through one to the other including constantly meshing gearing, longitudinally stationary shafts upon which the same are mounted, and interlocking controlling mechanism between said clutches operable to vary the pressure of said friction clutch without varying the connection of said positive clutch and to lock said positive clutch against disengagement.



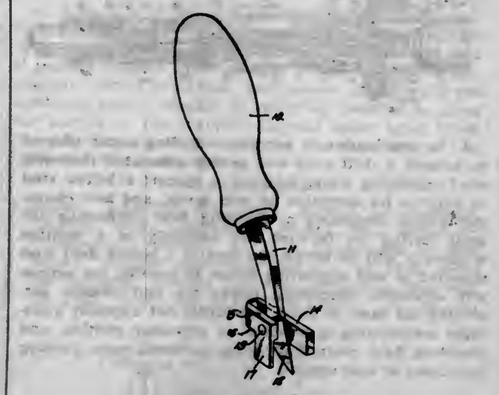
2. In a clutch mechanism, a positive clutch including a rotatable element and a reciprocable cooperating element, a braking means on said reciprocable element operative to produce a braking force having a component passing substantially radially through said reciprocable element, and means for applying said brake to produce a braking force on said reciprocable element.

1,634,490. RAILWAY TRAIN. LLOYD COLLIS, New York, N. Y. Filed Apr. 8, 1925. Serial No. 21,472. 4 Claims. (Cl. 105—1.)



1. A railway car in sections united at the floor levels by hinges with transverse axes.

1,634,491. COMPRESSOR UNLOADER MECHANISM. OSCAR R. CUNDY, Dormont, Pa., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 31, 1924. Serial No. 703,105. 9 Claims. (Cl. 230—24.)

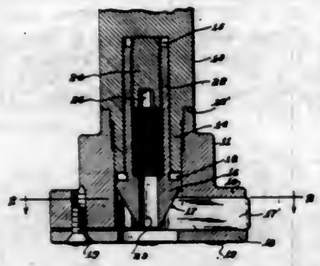


1. In combination, in a compressor system, a plurality of independent compressors, a plurality of pilot valves set for different unloading pressures, and means whereby said several valves may separately unload said several compressors at said different unloading pressures or one of said valves may effect unloading of all of said compressors at its specific unloading pressure.

1,634,492. PAPER TUBE. CHARLES K. DUNLAP, Hartsville, S. C., assignor to Sonoco Products Company, Hartsville, S. C., a Corporation of South Carolina. Filed Mar. 31, 1926. Serial No. 98,885. 17 Claims. (Cl. 242—119.)

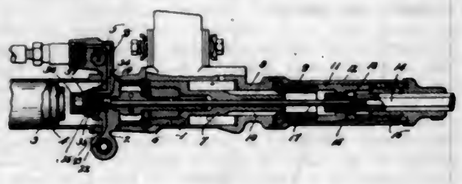
1. The method of treating a paper tube preparatory to its use in the textile industry as a core for a thread cop or winding, consisting in subjecting a surface of the same to an abrading action, whereby the ability of such surface to retain thread or yarn thereon without slippage is increased.

1,634,493. CAN OPENER. HEDLEY FALLA, Milford, N. H. Filed June 18, 1926. Serial No. 116,965. 2 Claims. (Cl. 30—3.)



1. In a can opener, a cutting blade and shank portion, and a yoke within the shank portion is pivoted, a downwardly extending guide carried by one arm of the yoke, for engaging the outer side of the can, the middle portion of the yoke and the remaining arm extending below the lower edge of the arm first named and adapted to engage the outer cut edge of the can top and bend it over, incident to the cutting operation.

1,634,494. CUTTER HEAD. FREDERICK T. FLINCHBAUGH, York, Pa., assignor, by mesne assignments, to Flinchbaugh Machine Company, Incorporated. Filed June 9, 1924. Serial No. 718,928. 1 Claim. (Cl. 77—58.)

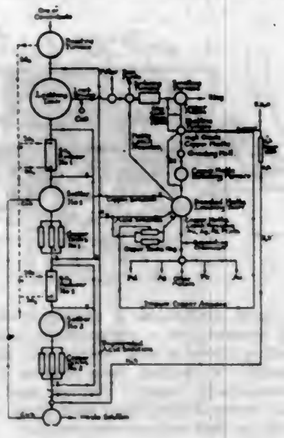


The combination of a boring bar having an annular outer shoulder and an axial bore, a cutter head in threaded engagement with the reduced portion of the bar and having a radial flange at its outer end, cutters arranged in radial slots in said flange, a removable end plate bearing on said cutters for clamping them in place, clamping screws entered in said head at right angles to

said cutters, a conical head bearing against inclined faces at the under sides of said cutters said head having an elongated internally-threaded shank in said axial

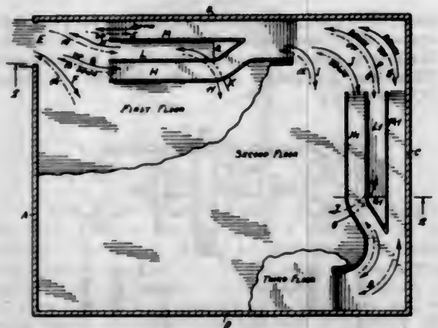
bore, and a screw plug in said shank bearing at its inner end against the bottom of said bore, substantially as set forth.

1,634,495. HOLE-CLEANSING DEVICE. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 24, 1924. Serial No. 701,369. 8 Claims. (Cl. 121—10.)



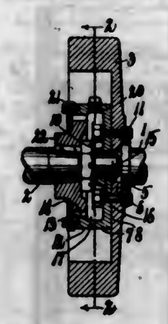
1. In combination, a percussive drilling motor adapted to actuate a drill steel and having associated therewith steel supporting means adapted to support a hollow steel in position for actuation by said motor, and hole cleansing means comprising a cleansing fluid conducting element having its forward end normally in a position wherein it will lie within the bore of a hollow drill steel mounted in said supporting means in position for percussive actuation, supporting means for said element permitting the same to yield rearwardly but normally yieldingly maintaining it in its most advanced position, and cleansing fluid controlling means actuated upon yielding movement of said element.

1,634,496. CEMENTING APPARATUS. GEORGE J. GORSUCH, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 15, 1921. Serial No. 492,413. 36 Claims. (Cl. 91—49.)



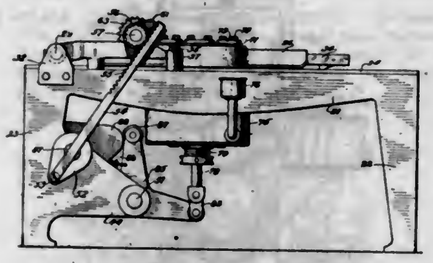
26. In a cementing apparatus, an applying member, a yieldable support, and a pressure member yieldable with respect to the support and co-operating with the applying member.

1,634,497. METALLURGICAL PROCESS. WILLIAM B. GREENAWALT, Denver, Colo. Filed Dec. 6, 1926. Serial No. 152,802. 30 Claims. (Cl. 75—18.)



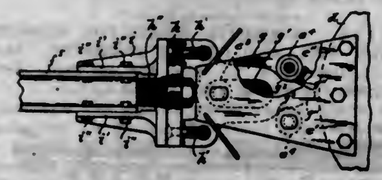
1. A process of treating copper concentrate containing rare or precious metals comprising, roasting the concentrate, leaching the roasted concentrate with a solvent for the copper, then when the copper has been sufficiently extracted from the roasted concentrate by leaching, smelting the residue to concentrate the residual copper and the rare or precious metals into a matte, roasting the matte, leaching the roasted matte to extract the copper, and then treating the roasted matte residue to recover the rare or precious metals.

1,634,498. AUTOMOBILE HOTEL AND GARAGE. ROY C. HECOX, Denver, Colo. Filed May 15, 1926. Serial No. 109,279. 5 Claims. (Cl. 20—1.13.)



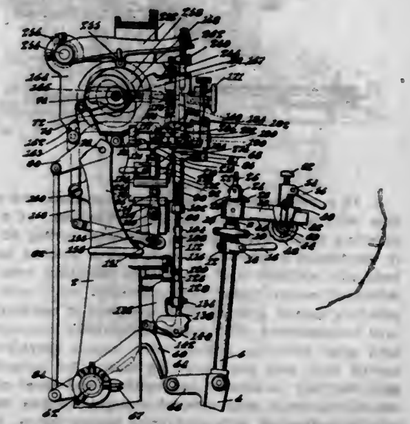
1. In a multiple storage garage having inclined roadways whereby automobiles may pass by their own power up to or down from any floor, each roadway where it leaves any floor being divided longitudinally and its two parts transversely spaced a sufficient distance to permit an automobile to pass between them, the structure being provided with an opening underneath one at least of the spaced inclined roadway parts to allow an automobile on that floor to reach the said space between the two parts of the roadway or to pass from said space to the open floor space, as may be required.

1,634,499. SHAFT COUPLING. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 24, 1924. Serial No. 701,364. 8 Claims. (Cl. 64—32.)



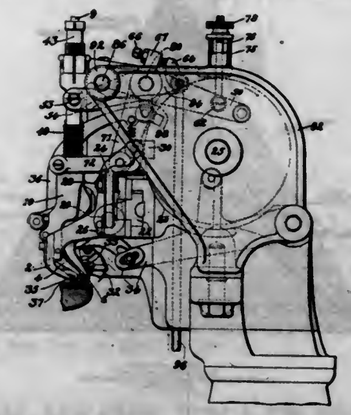
1. In combination, a shaft having a fly wheel, a second shaft, a shaft coupling for connecting said shafts comprising members affording directly engaging internal and external surfaces, said members bearing a fixed relation to their respective shafts, and means for maintaining alinement between said shafts including a second set of cooperating engaging surfaces disposed within the transverse limits of the first set of surfaces.

1,634,500. METHOD OF AND MACHINE FOR LINING THE FLANGES OF CAN ENDS. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 13, 1923. Serial No. 668,267. 27 Claims. (Cl. 113—80.)



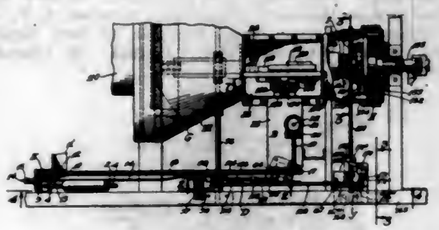
1. A gasket lining machine, comprising means for delivering flanged can covers to a lining station, and a substantially annular continuous die member reciprocable upward and downward relative to a cover to be lined, and from a supply of lining compound, to apply a gasket to the cover flange.

1,634,501. DRAWBAR REVERSE LOCK. VILAS H. JACKSON, Cleveland, Ohio, assignor, by mesne assignments, to The Gustav Schaefer Wagon Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 29, 1925. Serial No. 59,315. 11 Claims. (Cl. 280—33.44.)



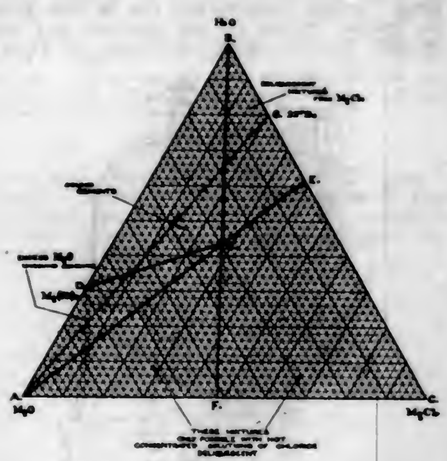
1. The combination with a prime mover and a follower, of a separate tractive-member connected rigidly with each and flexibly with each other, and means for rigidly locking said tractive-members in a horizontal plane upon the reverse movement of the prime mover, substantially as set forth.

1,634,502. ASSEMBLING AND LASTING MACHINE. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 10, 1919, Serial No. 270,495. Renewed Mar. 24, 1925. 69 Claims. (Cl. 12—14.)



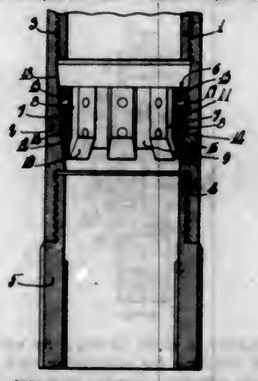
1. A machine of the class described having, in combination, means for deflecting the upwardly projecting margin of an upper extending about the heel seat of a shoe into a position inclined over the shoe bottom but out of substantial contact therewith, and means acting while the deflecting means remains in deflecting position to press the portion of the inwardly disposed upper lying inside the deflecting means relatively to the shoe bottom into contact with the shoe bottom.

1,634,503. LASTING MACHINE. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Mar. 28, 1919, Serial No. 285,804. Divided and this application filed Apr. 20, 1925. Serial No. 24,400. 28 Claims. (Cl. 12—6.)



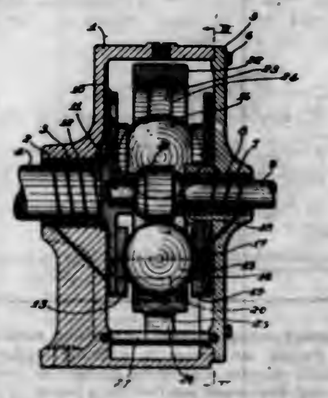
1. In a machine of the class described, the combination of securing means, means for working successive portions of an upper over a last bottom into position to be secured progressively by the securing means, and means for moving the over-working means bodily out of operative relation to the securing means.

1,634,504. AUTOMATIC POWER-TRANSMISSION CONTROL MECHANISM. OVID B. MARK, San Diego, Calif. Filed Feb. 9, 1925. Serial No. 7,856. 23 Claims. (Cl. 74—58.)



1. In a mechanism of the class described, the combination with a power transmission mechanism, of a manual selecting means comprising a quadrant having an inwardly positioned quadrant channel, and a pivoted and longitudinally resilient and depressible selecting arm, a gear selecting means operatively connected with said manual selecting means, gear shifting members in connection with said transmission mechanism operatively connected with said gear selecting means, lever means operatively connected with said gear selecting means for actuating said gear shifting members, and ratchet and pawl means in connection with said manual selecting means and operatively connected with said lever means for so operating said gear selecting means as to consecutively and variously shift said gear shifting members, the pawl of said ratchet and pawl means being shifted into operative relation with the ratchet thereof when said selecting arm is depressed and shifted into the quadrant channel of said quadrant.

1,634,505. OXYCHLORIDE CEMENT AND PROCESS OF MAKING SAME. WILLIAM J. MCCAUGHEY, Columbus, Ohio, assignor to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 1, 1922. Serial No. 557,513. 23 Claims. (Cl. 106—29.)



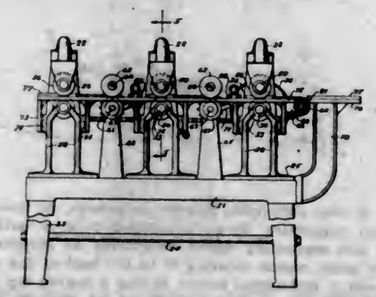
1. An oxychloride cement comprising in combination a comminuted mixture of magnesian limestone of which substantially all the magnesium carbonate ($MgCO_3$) is calcined and substantially all the calcium carbonate ($CaCO_3$) is uncalcined, additional magnesium oxide (MgO), and an alkaline earth chloride.

1,634,506. CORE DRILL. JOSEPH S. MITCHELL, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 30, 1924. Serial No. 710,180. 11 Claims. (Cl. 255—72.)

1. A core lifter comprising separate spaced wedge shaped core engaging members having inclined external surfaces, a conical shaped split spring encircling said members, and means for rigidly securing each of said members to said spring.

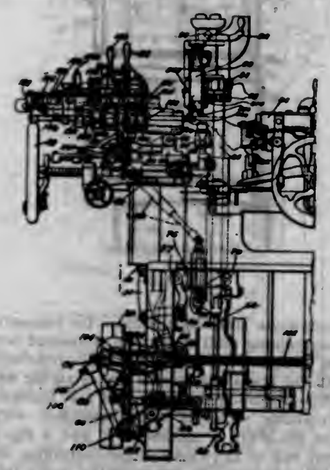
1,634,507. BALL TRANSMISSION. GEORGE SMITH MORISON, Pittsburgh, Pa., assignor to Morison Incorporated, Pittsburgh, Pa., a Corporation of Delaware. Filed June 19, 1926. Serial No. 117,167. 10 Claims. (Cl. 74—34.)

1. A transmission device comprising a pair of shafts journalled for rotation in conxial alignment, a cage member adapted to rotate with one of said shafts, a plurality of rollers disposed in said cage in aagular spaced relation and revoluble therewith, and a race for said rollers free to move eccentrically but held against rotation, said rollers being wedged between said race and the other of said shafts whereby to transmit rotation from one to the other of said shafts.



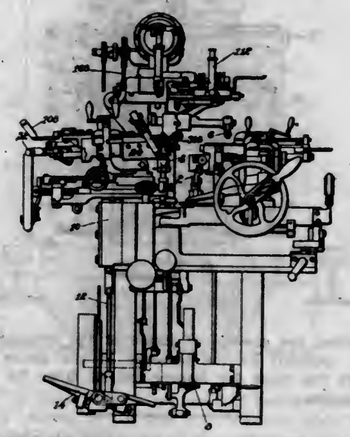
1,634,508. COMPOSITE BLADE FOR SCISSORS, SHEARS, ETC., AND CUTTER THEREFOR. ISAAC PATRICK, Jamaica, N. Y. Filed Apr. 16, 1925. Serial No. 23,506. 10 Claims. (Cl. 30—13.)

1. A composite blade comprising a cutter and a supporting part and means for fastening said parts together,



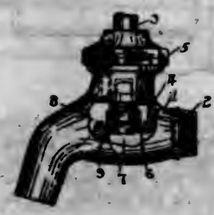
said cutter being a flat plate comprising resilient means at the rear edge thereof extending longitudinally with respect to the cutter, said means engaging over the rear edge of the supporting part.

1,634,509. SCORING MACHINE. JOHN F. PETERS, Rochester, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 11, 1924. Serial No. 685,628. 10 Claims. (Cl. 113—15.)



1. A scoring machine, comprising a plurality of successive scoring units constructed for cutting only part way through sheets of metal and disposed in such spaced relationship as to permit a blank to be freed from one unit before being engaged by another, and blank-feeding means for directing the blanks to said scoring units and arranged between each scoring unit and the next succeeding scoring unit.

1,634,510. UPPER-SHAPING MACHINE. ARTHUR F. PYM, Clifton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 15, 1922. Serial No. 568,446. 145 Claims. (Cl. 12—14.)

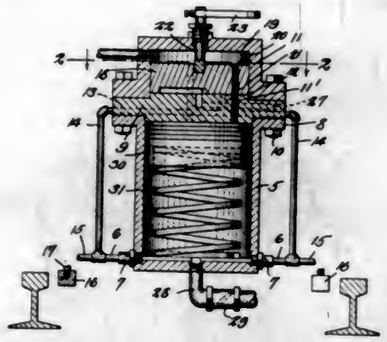


1. A machine of the class described having, in combination, a shoe support, toe embracing wipers, operating mechanism for moving said wipers heightwise of the toe in wiping engagement with the upper materials, said operating mechanism comprising parts relatively adjustable to vary the limit of such movement of the wipers, and a device controlled by engagement with the shoe for effecting such relative adjustment in accordance with the location of the plane of the shoe bottom.

1,634,511. LASTING MACHINE. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 11, 1922. Serial No. 581,170. 89 Claims. (Cl. 12—14.)

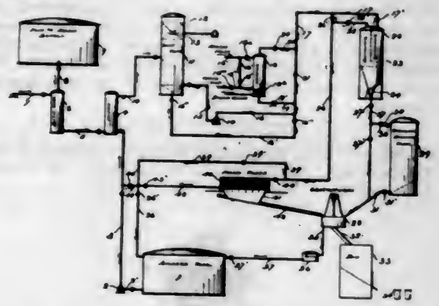
1. In a machine of the class described, the combination with end lasting mechanism having means for applying a binder about an end of a shoe to hold the upper in lasted position, of mechanism for forming a binder for use on a shoe, and a binder transferring device constructed to receive a binder from the forming mechanism and adapted to be controlled by the operator independently of the lasting mechanism to transfer the binder from said forming mechanism to the lasting mechanism.

1,634,512. VALVE SEAT AND HEAD. JAMES E. PYNE, Toledo, Ohio. Filed Sept. 2, 1925. Serial No. 53,985. 1 Claim. (Cl. 251—139.)



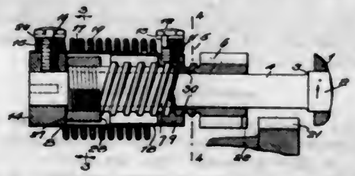
1. In a device of the character described, a cylinder valve seat having a conical flange tightly press fitting the opening and having a spherical surface, a threaded block rotatably supported in the valve and having a central bore, a movable valve member having a spherical surface fitting the spherical surface of the valve seat and a conical stem, the base of the conical stem contacting with the block and having a diameter substantially equal to the diameter of the bore, the said stem having a length less than the depth of the bore.

1,634,513. RAIL OILER. HARRY A. REED and FRANCIS J. REILLY, Jerome, Ariz. Filed Jan. 13, 1927. Serial No. 160,895. 2 Claims. (Cl. 184—3.)



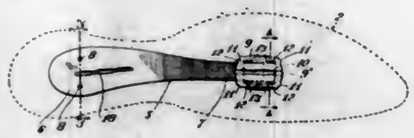
1. In a device of the character described, a cylinder adapted to be supported by railway rolling stock, pipes communicating with the cylinder for receiving oil from the cylinder, nozzles on the pipe for delivering oil to the

rails of the track over which the rolling stock is moving, a steam chamber above the cylinder, an automatically controlled valve operating within the steam chamber for



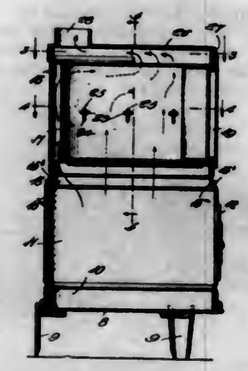
controlling the passage of steam to the cylinder, and a piston operated by the pressure of the steam passing through the valve for forcing the oil from the cylinder and nozzles.

1,634,514. PROCESS OF PREPARING AN ADSORBENT FOR OILS. WIRT D. RIAL and EARLE W. GARD, Wilmington, Calif. Filed Sept. 8, 1925. Serial No. 55,007. 5 Claims. (Cl. 252—2.)



1. The process of preparing an adsorbent for liquid petroleum oils which consists in mixing sulfuric acid with a purified liquid petroleum distillate, in then mixing water insoluble clay with such mixture of acid and distillate, in agitating the mixture, and in then expelling the excess distillate.

1,634,515. DRIVE FOR ENGINE STARTERS. CLARENCE RINGWALD, Chicago, Ill., assignor of one-half to John A. Dienner, Evanston, Ill. Filed Mar. 20, 1925. Serial No. 16,899. 7 Claims. (Cl. 74—7.)

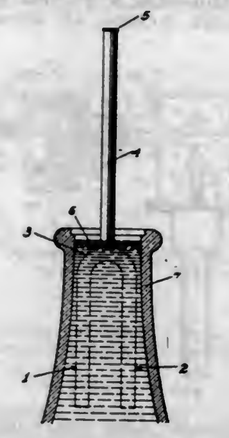


1. In combination, a tubular member having a pinion at one end, a threaded sleeve at the other, a threaded collar on said threaded sleeve, an attaching collar, and a helical drive spring connected to and lying between said two collars, said sleeve being long enough to engage endwise the inside face of the attaching collar when the sleeve is threaded back through the threaded collar as by starting of the engine.

1,634,516. FOOT SUPPORT. HARRY R. ROGERS, Chicago, Ill. Filed Nov. 5, 1923. Serial No. 672,701. 3 Claims. (Cl. 36—70.)

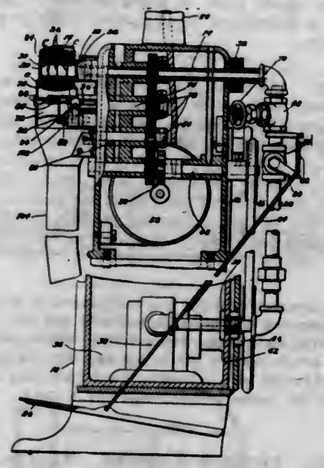
1. A shoe embodying therein an outsole, an insole, and a foot supporting device positioned between said soles, said foot supporting device comprising an elongated metallic plate, means securing it to the heel of the shoe at one end, a metatarsal button having a convex top portion under which the opposite end of said plate is slidably mounted relative to said metatarsal button, said plate being twisted at a point between its ends, whereby said ends when considered transversely extend in different angular planes.

1,634,517. KNOCKDOWN CAMP STOVE. MORRIS ROTSTEIN and ROBERT NICHOLSON, Vicksburg, Miss. Filed Feb. 28, 1927. Serial No. 171,621. 3 Claims. (Cl. 126—9.)



1. A knock-down stove comprising a fire-supporting bottom, a fire-retaining wall removably connected with said bottom, an oven-and-flue-containing wall removably connected with the upper end of said fire retaining wall, said oven-and-flue-containing wall being of less diameter than said fire-retaining wall and being receivable within the latter when the stove is disassembled, and a top secured to the upper end of the oven-and-flue-containing wall and also receivable within said fire-retaining wall; the aforesaid bottom being re-applicable to the lower end of the fire-retaining wall after insertion of the other wall and the top therein.

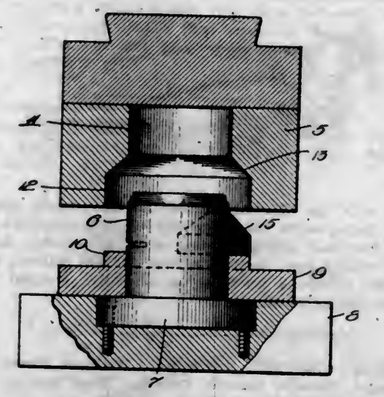
1,634,518. AUTOMATIC SIPHON. JOHN F. ROTTGER, Modesto, Calif. Filed June 2, 1926. Serial No. 113,130. 1 Claim. (Cl. 137—20.)



A siphon comprising an inverted U-shaped tube whose legs are of equal length and open on their lower ends,

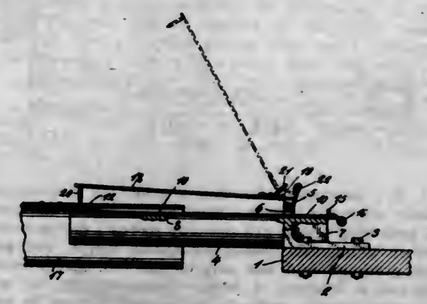
said legs being spaced apart a distance sufficient to enable both to be inserted simultaneously in the neck of a

milk bottle, and an air passage member also serving as a handle, projecting upwardly from the top of the tube member.



1,634,519. PASTING MACHINE. ERNEST E. SABIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 3, 1922. Serial No. 592,187. 25 Claims. (Cl. 12—80.)

25. In a pasting machine, a casing, a brush projecting from one side of the casing, means for rotating the brush, a paste-receptacle situated within the casing below the brush, a pump immersed in the contents of the receptacle, a conduit connecting the pump and interior of the brush, and a conduit arranged to receive the excess of paste from the brush and leading to the receptacle.

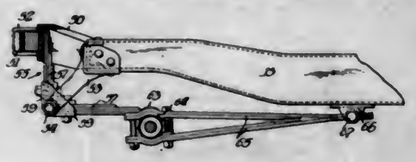


1,634,520. APPARATUS FOR AND METHOD OF MAKING ROD PACKING. HERBERT C. SNYDER, Chicago, Ill., assignor to Stewart Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Mar. 10, 1924. Serial No. 698,150. 5 Claims. (Cl. 78—60.)

2. In an apparatus of the class described, the combination of compression die members for compressing packing ring segments to accurate finished size and shape and having an annular recess of greater width and lesser height than the unfinished segment, the unfinished segment being finally finished in said recess, and a master

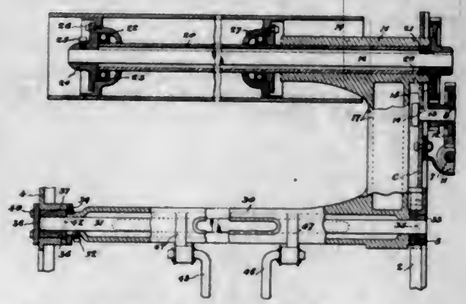
segment of hard metal free in said recess adjustable annularly therein by the flow action of the metal in the segment being formed.

1,634,521. RIVETING MANDREL. FREDERICK STAPP, Denver, Colo. Filed Dec. 28, 1925. Serial No. 77,984. 2 Claims. (Cl. 78—46.)



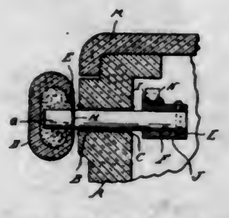
1. A device for use in riveting tubular articles comprising, in combination, a support, a mandrel secured at one end to said support and projecting outwardly therefrom, said mandrel having a dovetailed groove extending longitudinally thereof and located in its upper surface, a strap slidably mounted in said groove and having means at one end for holding a rivet, and a stop at the other end for determining the maximum distance that the strap can be moved in one direction whereby a rivet may be moved to a predetermined position, an indicator arm hingedly connected at one end to said support, said arm carrying a pin and being substantially straight beyond the hinge in the direction of the pin, the length of the said arm from the axis of its hinge to the pin being predetermined so that the rivet when the strap is extended to the maximum distance, is in alignment with the pin, and means for holding the indicator arm in the inoperative position.

1,634,522. SHOCK-ABSORBING MEANS. FREDERICK J. STOLPE, Chicago, Ill. Filed Nov. 9, 1922. Serial No. 599,786. 3 Claims. (Cl. 267—19.)



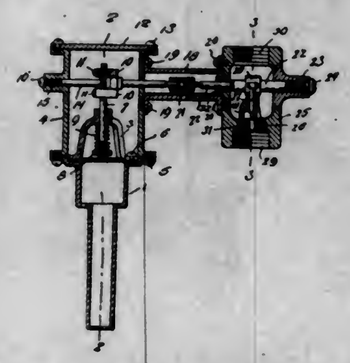
1. Shock absorbing means comprising the combination of leaf springs secured adjacent to the ends of the chassis so as to flex in a horizontal direction, brackets rigidly secured to the chassis so as to depend beneath,

and bell-crank levers pivotally connected at the intermediate point or angle to said brackets so as to oscillate vertically, the arms of said bell-crank levers being composed of juxtaposed resilient metallic plates, with one end of each bell-crank lever having frictional sliding rela-



tion with the adjacent end of the horizontally disposed leaf spring while the other end of each bell-crank lever has frictional sliding relation with the adjacent axle of the running gear, the leaf springs and the resilient plates of the bell-crank levers being normally arranged under slight flexure or tension.

1,634,523. IRONING MACHINE. WILLIAM HENRY SUMBLING, Toronto, Ontario, Canada. Filed Mar. 6, 1926. Serial No. 92,926. 8 Claims. (Cl. 68—9.)



1. In a machine of the class described, in combination, a roll; internally-located supporting-bearing means therefor projecting beyond one end only thereof; driven means located within said supporting-bearing means, and projecting beyond said end only of the roll, and whereby said roll is revolved; a frame; means whereby the said supporting-bearing means is horizontally pivoted in said frame below said roll; a fixed shoe supported by said frame adjacent said roll, and spring-provided lever mechanism to dominate the position of said roll with respect to said shoe through the means of said supporting-bearing means.

1,634,524. OPERATING HANDLE FOR FLUSHING TANKS. JAMES M. TEAHEN, Detroit, Mich. Filed Jan. 31, 1927. Serial No. 164,983. 5 Claims. (Cl. 4—67.)

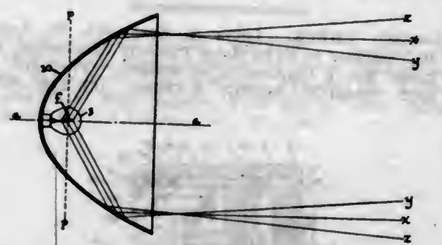
1. An operating device for flushing tanks comprising a hollow vitreous handle, a metallic shank therefor having an arm projecting laterally within said hollow body and a cementitious filling for said hollow body in which said arm is set.

1,634,525. AUTOMATIC TEMPERATURE-CONTROL VALVE FOR LIQUIDS OR STEAM. WILLIAM H. THOMAS, 3d, Little Falls, N. Y. Filed Apr. 13, 1926. Serial No. 101,774. 2 Claims. (Cl. 236—99.)

1. In a thermostatic control valve, a liquid filled bulb to be inserted in a milk or other liquid passage, a metallic diaphragm closure at one end, a rock shaft, a lever extending from the rock shaft, an adjustable contact member fitted so as to transfer any motion of the diaphragm to the rock shaft through the lever, a second rock shaft, a chest, the first rock shaft being adjustably connected to the second rock shaft in the chest, and automatically adjusted taper seat bearing to prevent water or steam leakages around the second shaft, a needle valve, a lever adjustably mounted on the second shaft in contact with the needle valve to which the motion of the diaphragm is transferred in proportion to the length of the two levers.

1,634,526. LOCOMOTIVE. HEINRICH WIRTH, Munich, Germany, assignor to the Firm J. A. Maffei, Munich, Germany. Filed Oct. 15, 1926, Serial No. 141,704, and in Germany Apr. 9, 1926. 3 Claims. (Cl. 105—37.)

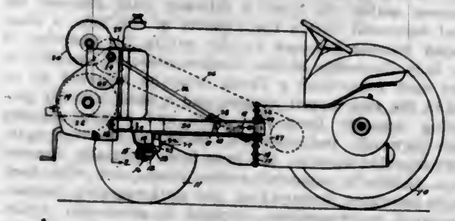
1. A locomotive having two independently driven bogies, one supporting the main frame only and the other supporting the main frame and a storage container, the main frame, which carries the boiler and cab, having a rearward extension with a bunker or a bunker and tank thereon, and the forward bogey carrying a tank.



1,634,527. STORAGE BATTERY. WILLIAM H. WOOD, South Euclid, Ohio. Filed Oct. 15, 1924. Serial No. 743,844. 8 Claims. (Cl. 136—150.)

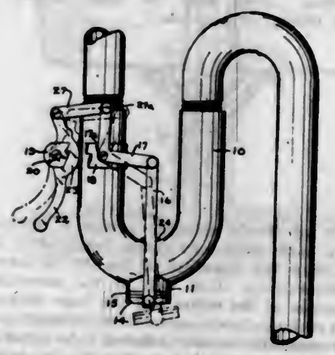
1. The process of treating the wood separators of lead accumulators which contains the step of immersing them in sulphuric acid of a specific gravity above 1.300 and below 1.500 until sufficient cellulose is removed therefrom to increase the porosity sensibly, but without disintegration of the organic structure and afterward reducing the concentration of the adherent acid.

1,634,528. LAMP. WILLIAM H. WOOD, South Euclid, Ohio. Filed July 18, 1925. Serial No. 43,159. 1 Claim. (Cl. 240—41.)



The combination with a reflector having a substantially horizontal axis and a focal point, of an incandescent lamp bulb having a filament consisting of a metallic

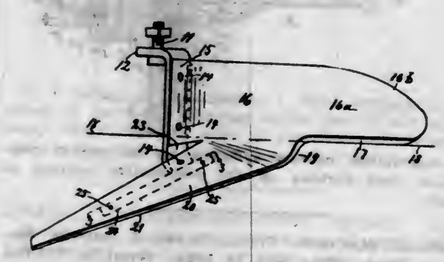
strand wound in a closely adjacent series of oblong turns producing a flattened helix which exhibits substantial length and breadth combined with a compara-



tively small thickness and defines a plane which is symmetrically arranged relative to the vertical plane which includes said axis.

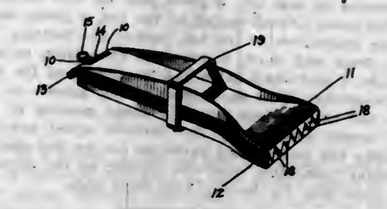
1,634,529. HOISTING APPARATUS. CLIFFORD E. ALLISON, Portland, Oreg., assignor to Willamette Iron and Steel Works, Portland, Oreg. Filed June 1, 1925. Serial No. 33,931. 4 Claims. (Cl. 180—53.)

1. In a hoisting apparatus, the combination of a tractor including a tractor frame and front axle bracket with a pair of attachment frames rigidly attached to the sides of said tractor frame, said attachment frame having a downwardly arching tie uniting the forward ends of said attachment frame, said tie having a forwardly projecting lug adapted to rest on said axle bracket; and means for holding said lug in position on said axle bracket.



1,634,530. DRAIN TRAP. CHARLES W. ANDERSON, Milan, Ohio. Filed Apr. 8, 1926. Serial No. 100,527. 4 Claims. (Cl. 182—24.)

1. In a device of the character described, the combination of a drain fitting, there being a drain opening formed in the lower part of the fitting, a plug for sealing the

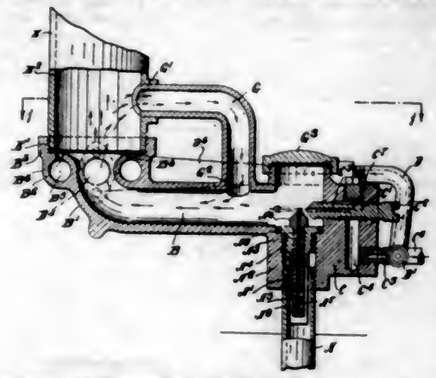


opening, said plug having a resilient member mounted thereon to engage the fitting around said opening, a pair of upright members attached to the plug for pivotally suspending the plug, laterally extending guiding means for keeping said upright members in alignment with the opening of the fitting when the plug is dropped therefrom and lever members including a cam lever for locking said upright members in such position as to cause said plug to seal the opening.

1,634,531. CULTIVATOR BLADE. FRANK ROBERT BERGSTEN, Elk River, Minn. Filed Apr. 26, 1926. Serial No. 104,579. 4 Claims. (Cl. 97—207.)

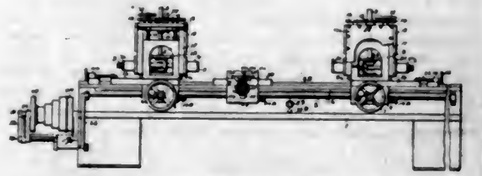
1. A cultivator blade adapted to be secured to a cultivator, said blade consisting of a metal blade having an elongated normally vertical front portion with its upper edge slanting forwardly and downwardly and its lower edge arranged to ride practically on the surface of the ground, the rear half or portion of the blade being deeper and having a sharp cutting edge and a laterally diverging inclined wing with a sharp front edge.

1,634,532. CLAMP. DENIS E. BOWE, Waseca, Minn. Filed Aug. 6, 1923. Serial No. 655,883. 4 Claims. (Cl. 24—251.)



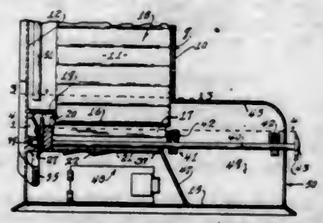
1. A clamp comprising a pair of pivotally connected jaws movable to and from clamping position, a member surrounding both jaws and movable thereon, one of the jaws having marginal portions angularly projecting from the jaw and the outer edges of said portion providing cam surfaces for engagement by said member whereby the jaws may be moved to clamping position.

1,634,533. PROCESS OF COMBUSTION. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1924. Serial No. 684,523. 11 Claims. (Cl. 158—117.5.)



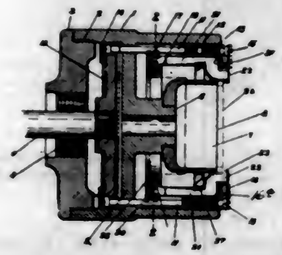
1. The method of burning a hydrocarbon which consists in directing a non-combustible gaseous conveying jet into a mixing zone, delivering a liquid hydrocarbon to said jet, for atomization thereby, at a point adjacent the discharge of said jet, directing into said jet, subsequent

to the mixing of the hydrocarbon therewith, the waste gases of combustion and thereby forming a substantially non-combustible mixture, and thereafter delivering to said



non-combustible mixture sufficient air to support combustion, and burning off the combustible mixture so formed.

1,634,534. MACHINE TOOL. ALDEN R. BREWER, Spokane, Wash. Filed Sept. 15, 1924. Serial No. 737,730. 3 Claims. (Cl. 29—27.)



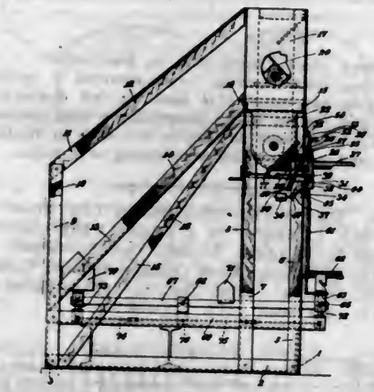
1. In a multiple use machine of the kind described, the combination of a bed, one or more saddles slidable on the bed, swivel supports on said saddles, vertically adjustable heads mounted on said swivel supports, double ended work spindles mounted on said heads, a carriage also mounted on said bed, a cross slide on said carriage, a variable speed driving means on the bed, a power shaft extending lengthwise of the bed, means for rotating the spindles from said shaft, a reversible connection to said cross slide, a feed shaft extending lengthwise of the bed, means connecting it to the driving means, aprons on the saddles and the carriage, variable speed gearing in the aprons, means operated by the variable speed gearings for feeding the saddles and carriages on the bed and an independent connection from the gearing on the carriage to the cross slide for moving said cross slide.

1,634,535. COIN CARRIER FOR MULTIPLE-VENDING MACHINES. WILLIAM C. CUTLER, Glendale, Calif., assignor to Isabella M. Cutler, Glendale, Calif. Filed Oct. 13, 1925. Serial No. 62,255. 5 Claims. (Cl. 194—80.)

1. In a vending machine, a fixed coin chute, a coin carriage movable to any one of a plurality of selective positions; said carriage movable into position to receive a coin from said chute, a casing entirely enclosing said chute and carriage respectively, and selecting means operable externally of the casing to move said carriage into such selective positions.

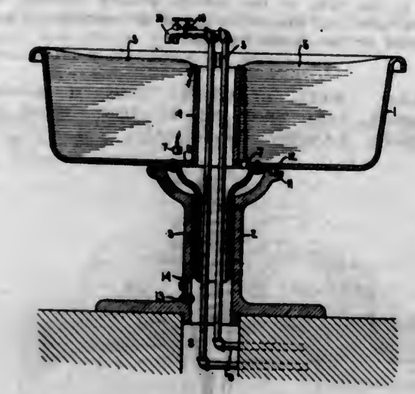
1,634,536. CHUCK. LOUIS A. EDELMANN, St. Louis, Mo., assignor to Unico-Motor Products Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 4, 1922. Serial No. 592,307. 3 Claims. (Cl. 279—107.)

1. A chuck including, in combination, a chambered body, a work-engaging member rigidly supported by and disposed within the body, a follower plate disposed for axial movement within the chamber of the body, a ring-shaped member disposed axially within the chamber of the body forwardly of the follower plate, a plurality of jaws each comprising a shank pivotally mounted at an end in the ring-shaped member and a head laterally projecting inwardly from the shank and having opposite faces forwardly and rearwardly presented relatively to the work-engaging member, the jaws being normally disposed in a yieldingly expanded series about, and with their heads presented forwardly of, the work-engaging member, elongated screw-members disposed longitudinally within the chamber of the body and fixed at an end in the follower plate and a cam ring disposed forwardly of the jaw-heads and attached to said screws, the ring-member being seated upon said screw-members, and said cam-member being adapted, on shiftable movement of the follower plate, for engagement with the jaws at the forwardly presented faces of their heads for radially contacting the jaws to engage the work at the opposite rearwardly presented faces of their heads in co-operation with the work-engaging member.



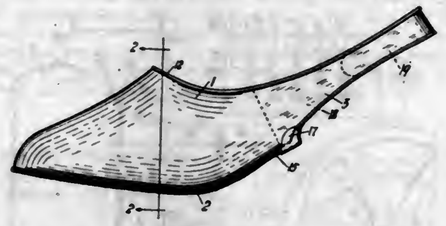
1,634,537. RESILIENT LIFT FOR BOOT AND SHOE HEELS. CHARLES EMANUELE, Cleveland, Ohio, assignor of one-half to Frank J. Delbel, Cleveland Heights, Ohio. Filed Aug. 29, 1923. Serial No. 659,909. 1 Claim. (Cl. 36—35.)

A heel lift of elastic material having a three-sided cavity in its outer side, said cavity being of a depth enough less than the thickness of the lift to leave an integral, comparatively thick wall of the material between the bottom of the cavity and the inner surface of the lift, and an imperforate, open-center triangular insert of relatively nonelastic material adapted to be fitted within said cavity, said insert being considerably less in thickness than the cavity is deep and having a greater area than the normal area of the cavity whereby when the insert is forced into the cavity it will impart a con-



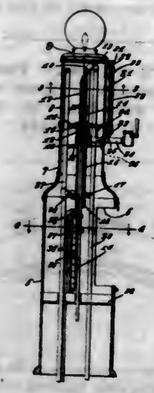
cavo-convex condition to, and in all directions throughout the entire area of, the lift, and attaching means adapted to be driven at optional locations through the insert and the underlying wall of material.

1,634,538. BAG-FILLING MACHINE. NATHAN M. FEGELY, Iola, Kans., assignor, by mesne assignments, to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed May 15, 1925. Serial No. 30,454. 4 Claims. (Cl. 226—48.)



1. In a valve bag filling machine the combination of a discharge throat having a discharge opening, a substantially horizontal pivotally mounted valve bag supporting means for supporting the valve of a valve bag normally in register with said opening and movable vertically relative thereto and adapted to be tipped downwardly about its pivot, closure means for said throat opening movable with said supporting means to thereby close said opening, locking means for holding said bag supporting means in a substantially horizontal position and means to release said locking means.

1,634,539. LAUNDRY APPARATUS. WALTER A. FRANTZ, Cleveland, Ohio. Filed July 24, 1922. Serial No. 577,119. 12 Claims. (Cl. 68—31.)

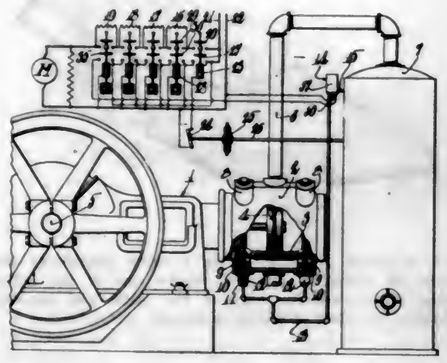


1. A laundry device comprising a hollow pedestal and a unitary tube rotatably supported thereon having a plurality of compartments adapted for the independent reception of liquids, each compartment having an independent discharge outlet which communicates with the interior of said pedestal.

1,634,540. RUBBER FOOTWEAR. HARRY C. HARRISON, Taplow, England, assignor to St. Helens Cable and Rubber Company Limited, Slough, Bucks, England, a Corporation of Great Britain. Filed May 8, 1926. Serial No. 107,686. 8 Claims. (Cl. 36—4.)

3. A rubber overshoe having a vamp comprising two layers of rubber of different colors, one of the layers being rolled over the edge of the other and exposed, whereby the effect of piping is secured.

1,634,541. GASOLINE-DISPENSING STAND. NOBLE HENNINGSEN, Salem, Oreg. Filed Aug. 15, 1922. Serial No. 582,063. 2 Claims. (Cl. 221—100.)

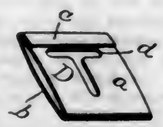


1. In a liquid measuring and dispensing device, a casing, a reservoir mounted on top of the casing, a supply pipe rising through the casing and into the reservoir, an overflow pipe extending downwardly from the reservoir through the casing, a measuring tube adjustably mounted through the top of the casing to project into the reservoir to different heights and carry off predetermined quantities of liquid therefrom, a well in the casing surrounding the lower end of said measuring tube, and a drain connection between the lower end of said well and said overflow pipe whereby said reservoir, measuring tube, well and overflow pipe may be entirely drained of liquid when said drain connection is opened and when said measuring tube is lowered in the well.

1,634,542. COMPRESSOR-CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 28, 1922. Serial No. 609,371. 13 Claims. (Cl. 230—24.)

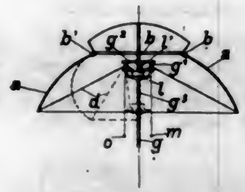
1. In a compressor controlling system, a compressor, electric driving means therefor, fluid pressure operated unloading means for said compressor, controller means

for said driving means, and means controlled by said controller means for controlling said unloading means including a valve moved in one direction by receiver



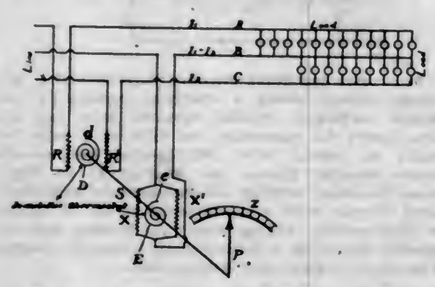
pressure and means for moving said valve in the opposite direction including a plurality of electromagnets each offset from the line of movement of said valves.

1,634,543. FURNACE CASING. CHARLES D. HYATT, Coldwater, Mich., assignor to Homer Furnace Company, Coldwater, Mich. Filed Mar. 13, 1926. Serial No. 94,559. 6 Claims. (Cl. 126—114.)



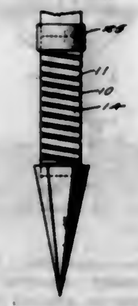
1. A structure of the class described comprising inner and outer walls, corrugated spacing strips secured to the outer wall, and bendable supporting strips for the inner wall secured in opposed pairs on the outer wall to engage the edges of the inner wall.

1,634,544. TAG. HANS A. JOHNSOS, Chicago, Ill. Filed Mar. 24, 1927. Serial No. 177,927. 3 Claims. (Cl. 40—26.)



1. A tag of the character described, adapted to be attached to a garment button, said tag being in the form of a flattened tube, the inner wall or member of the tag having a button-receiving slot and the outer wall or member being adapted to cover a button and display printed or written matter.

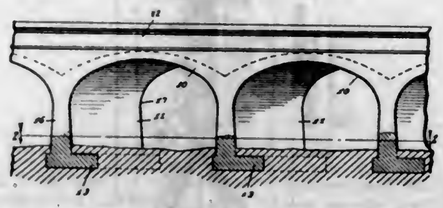
1,634,545. LAMP SHADE. ROBERT LEVY, Berlin, Germany. Filed May 18, 1925, Serial No. 30,964, and in Germany Nov. 12, 1924. 5 Claims. (Cl. 240—108.)



1. A lamp shade, comprising in combination a stationary ring, cloth carrying levers mounted to oscillate on said ring and adapted to normally fall downwardly by their own weight means comprising a ring operating to oscillate said levers and adjust the same in stretched position, and spring members operating said means.

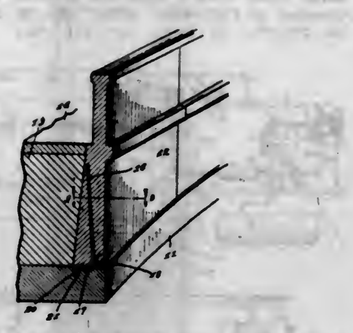
1,634,546. MEANS FOR MEASURING THE FLOW OF ELECTRIC CURRENT IN A THREE-WIRE CIRCUIT. STANLEY L. B. LINES, Toronto, Ontario, Canada, assignor to The Lincoln Meter Company Limited, Toronto, Ontario, Canada. Filed Dec. 5, 1923. Serial No. 678,617. 5 Claims. (Cl. 171—95.)

1. Means for measuring the flow of electric current in a three wire circuit, comprising a mechanically operated indicator, means responsive to the flow of the current passing through the outer line wires arranged to effect the operation of said indicator, and, means responsive to the flow of the current passing through the neutral wire, and adapted to oppose the operation of said indicator by the aforesaid means.



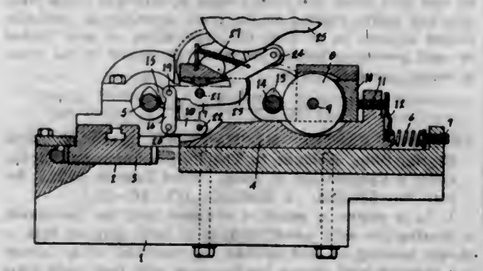
1,634,547. WELL STRAINER. JOHN M. LOSACK, Orchard, Tex. Filed Dec. 31, 1926. Serial No. 158,278. 9 Claims. (Cl. 166—8.)

1. A well strainer comprising a body having an interior passage and a groove in its outer wall, the bottom of the groove being in communication with the passage and a



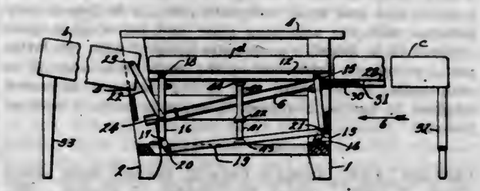
member wholly within the groove contacting the wall thereof at a plurality of points, at least one of the wall contacting portions of the member having grooves placing the bottom of the groove of the body in communication with the exterior of the body.

1,634,548. SKEW ARCH. DANIEL B. LUTEN, Indianapolis, Ind. Filed Aug. 21, 1925. Serial No. 51,547. 2 Claims. (Cl. 72—8.)



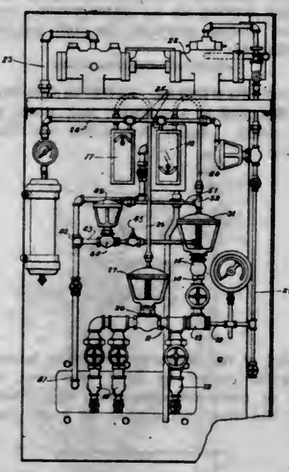
1. A skew bridge, comprising a plurality of skew arches, one or more piers supporting adjacent ends of adjacent arches, said piers being oblique with respect to the roadway, and footings for said piers, said footings being offset from the pier so that they are more nearly perpendicular to the roadway than are the piers themselves.

1,634,549. EXPANSION-JOINT DRAIN. DANIEL B. LUTEN, Indianapolis, Ind. Filed Aug. 21, 1925. Serial No. 51,548. 8 Claims. (Cl. 72—8.)



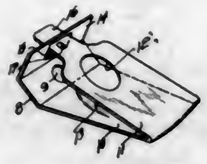
1. A wall having an expansion joint, which expansion joint has within it a groove which slopes downward toward the front face of the wall.

1,634,550. LATHE. HERMAN W. MELLING, Jackson, Mich. Filed Dec. 10, 1926. Serial No. 153,855. 5 Claims. (Cl. 82—19.)



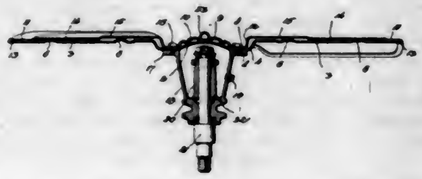
1. In a structure of the class described, the combination of a work carriage, means for rotatably supporting the work on said carriage, a tool carriage reciprocating laterally of said work carriage, a master cam which is a replica in shape of the work to be cut, an abutment roller on said tool carriage coacting with said cam, a tool, a tool holder, a pair of links on which said tool holder is pivotally mounted on said carriage in parallel relation, one of said links being provided with an arm, a cam coacting with said arm whereby said tool holder is oscillated in a plane transverse to the axis of the work and the cutting edge of the tool in relation to the work corresponds with the point of contact of the master cam with the abutment roller, and means for driving the work and the master cam at the same speed.

1,634,551. FURNITURE. FRED E. MOORE, Los Angeles, Calif. Filed Apr. 17, 1926. Serial No. 102,652. 3 Claims. (Cl. 5—41.)



1. Improvements of the character disclosed, comprising a frame, first and second cushion members normally positioned one above the other, a cushion back hinged to said frame, guide means between the said frame and the uppermost cushion member whereby said uppermost cushion member may be extended forwardly relative to the frame member, guides carried by the lower-most cushion member and means receivable in said guides and associated with the back whereby when the back is tipped relative to the frame member, said lowermost cushion member is raised a determined distance relative to the frame.

1,634,552. HUMIDIFIER. AARON S. NICHOLS, New York, N. Y. Filed May 14, 1923. Serial No. 638,944. 6 Claims. (Cl. 34—19.)



2. A deflation signal comprising an attaching plate and a flange rigid therewith having a slot, a V-shaped body integral with the attaching plate and comprising a plate adapted to be flexed, a snap-plate forming part of the V-shaped body and adapted to reciprocate as the other plate is flexed, and a tappet on the snap plate adapted to co-act with a wall of the slot.

1,634,553. TIRE SIGNAL. CAMERON W. OSTROM, Brewster, Wash. Filed Dec. 4, 1926. Serial No. 152,592. 3 Claims. (Cl. 116—34.)

3. A deflation signal comprising a single piece of resilient metal and formed with an attaching plate having a bolt hole therein, an angularly disposed flange having a guide slot and rigid with said plate, a V-shaped body integral with the attaching plate and including a plate adapted to be flexed, a snap plate integral with the latter plate, a reduced extension on the snap plate adapted to reciprocate in the slot, and a lug on said extension adapted to act as a tappet in coaction with a wall of the slot.

1,634,554. FAN. ANTONIO PAJALIC, Detroit, Mich. Filed Dec. 7, 1925. Serial No. 73,654. 5 Claims. (Cl. 170—172.)

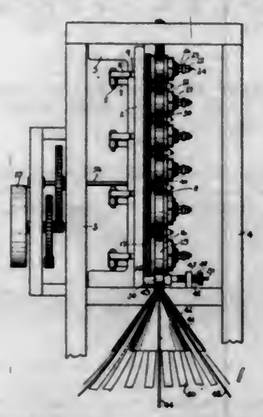
1. A fan comprising two sheets of metal cut and stamped to provide members, which are spaced apart and one of said members embossed to brace the other member and maintain the spaced relation of said members, each member having a hub portion and blades, one of said members serving as an outer cover over the other member, and means securing the hub portions of said members together.

1,634,555. CATAMENIAL SACK AND WOMB SUPPORT. WILLIAM S. PELOUBET, New York, N. Y. Filed Feb. 16, 1925. Serial No. 9,398. 2 Claims. (Cl. 128—285.)

1. A device of the character described having two cups and a disk-like pocket in axial alinement, one of said cups being in communication with the interior of said pocket and the other being shut off from communication therewith.

1,634,556. MACHINE FOR MANUFACTURING METALLIC PACKING. HAMPTON P. RHODES and RICHARD F. KREITER, Houston, Tex.; said Kreiter assignor to said Rhodes. Filed Dec. 26, 1925. Serial No. 77,880. 4 Claims. (Cl. 154—1.)

1. In an apparatus of the character described, an upright supporting plate, a series of vertically disposed forming rollers mounted for rotation thereon, a smaller plate adjacent to said first-named plate, hinges connecting said plates and upon which said smaller plate is adapted to swing, a series of rollers on said smaller



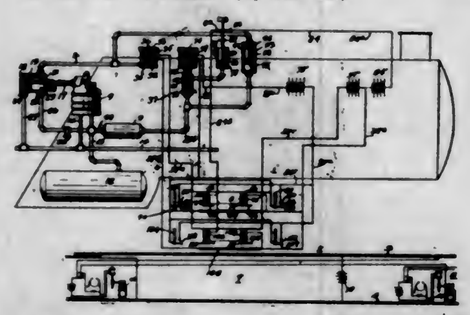


plate cooperating with said forming rollers to grip a cable between them, means to feed flexible packing material to said rollers and means to rotate all said rollers.

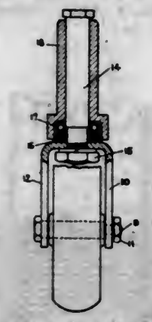
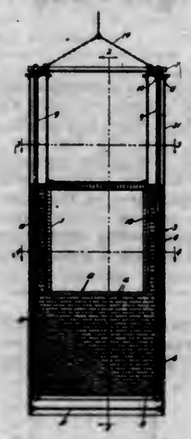


1,634,557. AUTOMATIC TRAIN CONTROL. THOMAS M. RIGGLE, Oakland, Calif., assignor to Riggle Automatic Train Control Company, Oakland, Calif., a Corporation of California. Filed Apr. 29, 1924. Serial No. 709,779. 15 Claims. (Cl. 246—63.)



3. In an automatic control for trains, the combination with a series of insulated track sections and an air brake system carried by the train, of a displaceable track magnet associated with each track section, means operative to displace a track magnet when the associated track section is not in normal condition, means carried on the train operative to effect the application of the air brakes by and only when the train passes a displayed track magnet, and means carried on the train operative by said displaced magnet to prevent the application of said brakes by said preceding means providing the speed of the train is below a certain rate.

1,634,558. CASTER MECHANISM. MAYO E. ROE, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed June 9, 1922. Serial No. 566,925. 3 Claims. (Cl. 16—21.)

1. In a caster, a wheel, a spanner fork for the wheel, a bearing for said wheel secured to said spanner fork, a thrust bearing on said spanner, a removable stem extending through said thrust bearing and said fork, said stem having a shoulder engaging the upper face of the thrust bearing, a nut removably threaded on to the end of said stem projecting through the spanner fork, said nut normally securing said stem to said spanner fork and securing the shoulder on said stem against said thrust bearing, a sleeve surrounding said stem, said sleeve having a shoulder at one end, balls between said sleeve shoulder and said thrust bearing, and an annular bearing intermediate said sleeve shoulder and said ball bearings.

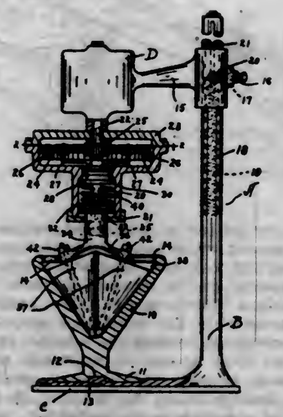
1,634,559. DAMPER CONSTRUCTION. WALTER A. SCHMIDT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 22, 1924. Serial No. 751,648. 8 Claims. (Cl. 110—163.)

1. A damper construction comprising in combination with a flue, fixed housing means extending beyond the side and bottom walls of said flue, a metal frame movably mounted within said housing and wholly outside the cross section of the flue, a damper consisting of refractory material supported upon said frame, and means for moving the frame and the damper supported thereby so as to move the damper into and out of position to close the flue.

1,634,560. DROP-FEEDING DEVICE. ALEXANDER L. SCHRAM, Hillsboro, Ill., assignor, by mesne assignments, to Ball Brothers Company, Muncie, Ind., a Corporation of Indiana. Filed Nov. 17, 1924. Serial No. 750,289. 6 Claims. (Cl. 49—55.)

1. A drop feeding device comprising a trough having a bottom, side walls and a front wall and in direct communication with a glass furnace, a discharge orifice formed in the bottom of said trough and spaced from the front and side walls, a bushing located in said discharge orifice, a crescent-shaped block located in said trough and abutting the front wall, and a covering for said trough.

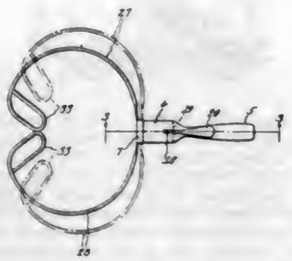
1,634,561. LIGHTING FIXTURE. SAUL SHAPIRO, New York, N. Y., assignor to Artcraft Metal Stamping Corporation, a Corporation of New York. Filed Mar. 3, 1926. Serial No. 91,943. 2 Claims. (Cl. 29—180.)



1. An ornamental, readily bendable metallic bracket member for use in electric light chandeliers and the like, comprising a longitudinally extending web portion and relatively thick longitudinally extending substantially solid beads extending along the edges of the web, the beads being integral with the web and extending substantially an equal amount above and below the surfaces of the web, whereby the strap is symmetrical about a median plane parallel to the web and presents substantially the same appearance on each side, and is bendable with equal facility in either direction, the solidity of the beads preventing their collapse during such bending.

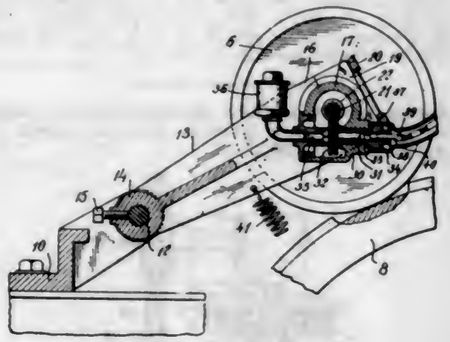
1,634,562. METHOD OF MAKING STRAPS. SAUL SHAPIRO, New York, N. Y., assignor to Artcraft Metal Stamping Corporation, a Corporation of New York. Filed May 20, 1926. Serial No. 110,490. 11 Claims. (Cl. 29—155.5.)

1. The method of making a readily bendable metallic strip, comprising bending up an edge of the strip, then turning it inwardly and compacting it into a substantially solid mass of metal to form a thickened, rounded solid rib extending along an edge of the strip, the strip being bendable without distortion of the rib.



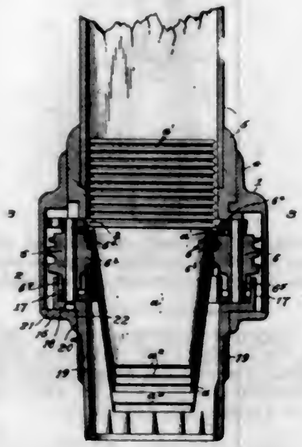
1,634,563. DRUG MIXER. WILLIAM N. SHAW, Fargo, N. Dak. Filed Nov. 5, 1925. Serial No. 66,999. 7 Claims. (Cl. 83—10.)

1. A drug mixer including, a standard, a mortar adapted to be supported by said standard, an electric motor slidably supported on said standard and contacting mixing



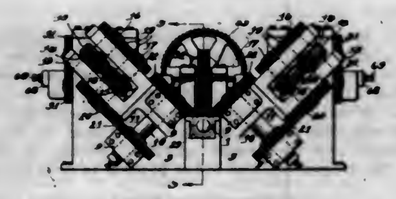
members adapted to be operated and supported by said motor in a manner to be moved into and out of operation on the standard to provide a mixer for drugs and articles of a similar nature.

1,634,564. GAME DEVICE. JOHN STIEBL, Cleveland, Ohio. Filed Oct. 20, 1926. Serial No. 142,880. 1 Claim. (Cl. 119—154.)



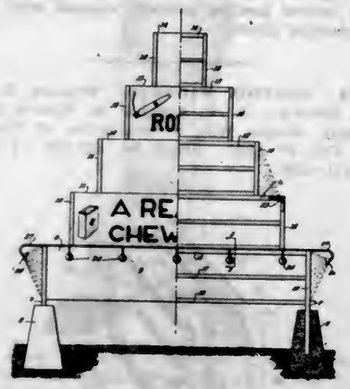
A catching device comprising a handle having a slot at its front end, a bore extending rearwardly from said slot, and a recess opening from said bore through the side of the handle, a pair of crossed hooks pivoted in said slot and projecting from the front end of the handle, a spring pressed rod mounted in the bore in the handle, links in said slot between the rod and the rear ends of the hooks, and a lever mounted on the handle and extending into said recess and connected to the rod to open the hooks.

1,634,565. DRIVE FOR SPEED-RESPONSIVE INSTRUMENTS. ANTHONY F. WALLBILLICH, Newark, N. J., assignor to Distance-Speed Recording Company, a Corporation of Delaware. Filed Aug. 19, 1924. Serial No. 733,013. 1 Claim. (Cl. 74—7.)



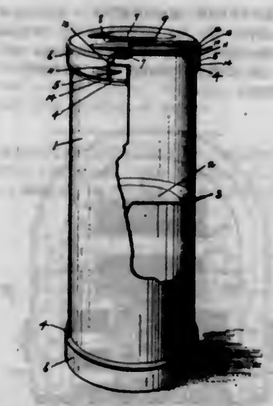
A device for driving an instrument for indicating the speed of a moving vehicle, comprising the combination of a support secured to a fixed part of the vehicle, an arm pivotally mounted on the support, this arm terminating in forked ends, a housing carried by the support, a shaft rotatably mounted in the housing, a wheel carried by the shaft beyond the housing and adapted to lie in contact with the tread of one of the vehicle wheels to be rotated thereby as the vehicle moves, a secondary shaft within the housing driven by the first shaft and connected to the speed-responsive mechanism, and a device for lubricating the secondary shaft secured to the housing and lying in the space between the forked ends of the arm in which the housing is mounted.

1,634,566. CUP DISPENSER. EDWIN G. WESSMAN, Easton, Pa., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1923. Serial No. 629,611. 5 Claims. (Cl. 211—8.)



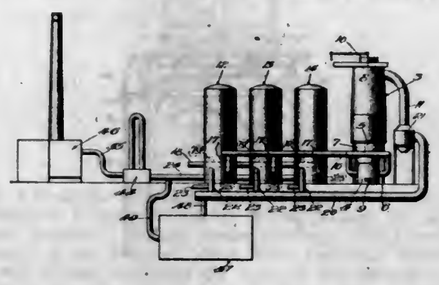
1. In an apparatus for dispensing cups having lateral flanges spaced apart when the cups are nested, a container for a stack of cups, a plurality of rotary worm members disposed about the discharge end of the container and adapted to feed the cups singly from a stack of nested cups within the container, said worm members having initial thread turns of the same pitch spaced to correspond to the spacing of the flanges of the nested cups, and with a succeeding thread turn portion of increased pitch, and operating means for the rotary worm members.

1,634,567. AUTOMATIC SPIKE MACHINE. GOTTLIEB WEBER, Youngstown, Ohio. Filed Dec. 7, 1922. Serial No. 605,464. 19 Claims. (Cl. 10—58.)



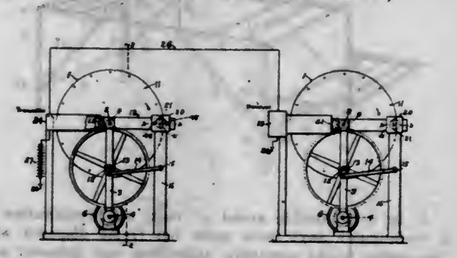
5. In a spike machine, severing mechanism adapted to cut spike blanks from bar stock, gripping and heading mechanism and means for conveying said blanks from said severing mechanism to said gripping mechanism, comprising a slide, a cam mounted on said slide, a carriage movable adjacent to said slide, a transversely movable nipper mounted on said carriage and arranged to be actuated by said cam to engage spike blanks, resilient means arranged to allow movement of said cam when the gripping pressure on a spike blank becomes excessive, rods severally connected to said slide and carriage, and means for actuating said rods to impart reciprocating movement to said slide and carriage.

1,634,568. ADVERTISING SIGN. JOHN E. BOLLMAN, Rockford, Ill. Filed Apr. 19, 1923. Serial No. 633,057. 2 Claims. (Cl. 40—130.)



1. A road sign comprising a base, a series of frame structures superposed one above another on said base, each having a noticeably smaller base than its supporting structure and its vertical walls providing sign boards which collectively comprise a definitely stepped pyramidal display, the steps being wide enough to provide places where boards may be supported to serve as working platforms for workmen to stand on when placing advertising matter on the sign boards, and means for illuminating said sign at night, said means when mounted on the sign itself being preferably disposed on the sign boards beneath the ones to be illuminated and positioned at the rear and adjacent to the top thereof so as to direct the light rays upwardly and inwardly to the sign boards to be illuminated.

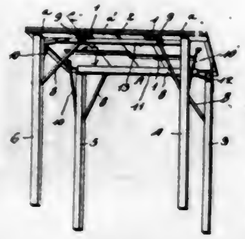
1,634,569. REVERSIBLE ICE-CREAM CAN AND THE LIKE. ALBERT BRAY, Los Angeles, Calif. Filed July 21, 1926. Serial No. 123,833. 1 Claim. (Cl. 220—40.)



An ice cream can of the character referred to including a can body having therein plural compartments, each compartment having an opening surrounded by a flange-like part of the body, a plurality of taper lugs around the outside of said flange-like part, a cover having an outer flange adapted to fit down over said flange-like body part and having on its inner face co-operating lug portions adapted to interlock with the lugs on said body part, a gasket in said cover adapted to fit upon and be wedged down upon the top edge of said body part, said cover having a concaved top with a handle portion across the same, and a depression formed in said handle portion with overhanging edges, forming a card receiving pocket, substantially as shown and described.

1,634,570. COMBUSTION SYSTEM. ARTHUR J. BOYNTON, Wilmette, Ill., assignor, by mesne assignments, to Victor Chemical Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 16, 1924. Serial No. 743,869. 12 Claims. (Cl. 23—264.)

9. Apparatus for the recovery of desired end products from raw materials including a furnace for the reduction of said raw materials together with production of producer gas and fumes therein, a closed combustion chamber, gas and fumes connections from the furnace to said combustion chamber, an air connection to said combustion chamber, a regulator in conjunction with the gas and fumes and air connections and combustion chamber operable according to the differential of pressure between gas and fumes supply and air supply thereto for insuring substantially perfect combustion therein for the purposes specified, suitable apparatus for the recovery of the desired end products, and products of combustion and fumes connections from the combustion chamber thereto, substantially as described.



1,634,571. APPARATUS FOR TELEVISION. RUDOLPH A. DALLUGGE, Los Angeles, Calif. Filed May 29, 1922. Serial No. 564,384. 13 Claims. (Cl. 178—6.)

1. In a television apparatus, a transmitting device comprising an opening defining a field of view, a selector member mounted to rotate on a shaft and provided with a plurality of minute apertures defining a circle concentric with said shaft and adapted to pass adjacent said defining opening and across the field of view defined thereby upon rotation of said selector member, driving means for rotating said selector member so as to cause the apertures thereof to pass successively across said field of view, driving means for producing oscillatory movement of the selector member so that successive apertures are caused to pass across different portions of the field of view, a light receiving means so mounted as to move with the selector member in its oscillatory movement,

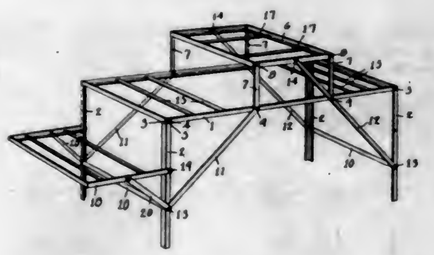


photo-electric means, said light receiving means being adapted to receive light rays transmitted through an aperture of the selector member as it passes across the field of view and to direct such rays upon the photo-electric means, and electrical transmitting means controlled by said photoelectric means in such manner as to transmit electrical impulses corresponding in intensity to the light rays directed upon the photo-electric means.

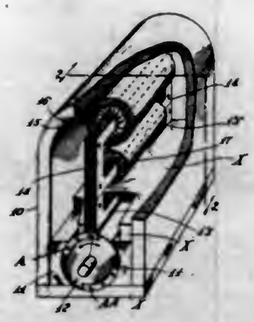
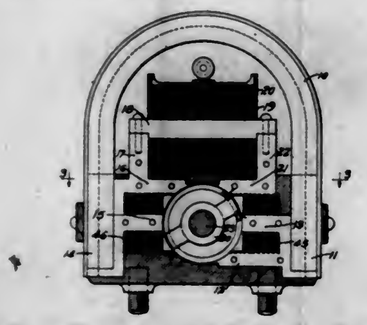
1,634,572. FOLDING TABLE. MANSELL A. DAVIS, Los Angeles, Calif. Filed June 21, 1924. Serial No. 721,499. 4 Claims. (Cl. 45—116.)



1. In a folding table, a top comprising two relatively wide end sections and two relatively narrow intermediate sections hinged together, the intermediate sections adapted to fold between the end sections, leaving a space between the meeting edges of the intermediate sections and the outer side edges of the end sections, and legs hinged to the ends of the end sections and adapted to fold longitudinally thereof in said space.

1,634,573. VENDING RACK OR STAND. CHARLES T. HATCH, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Nov. 3, 1925. Serial No. 66,509. 6 Claims. (Cl. 211—14.)

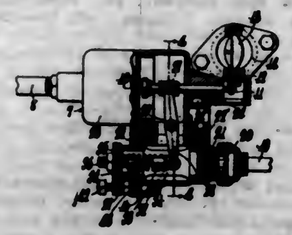


1. In a collapsible stand or rack, the combination of a rectangular angle iron main top frame disposed with the angles facing upwardly, angle iron legs disposed with their angles facing inwardly and having their transversely disposed arms cut away at their upper ends providing projecting pivot ears, said ears being pivoted to the longitudinal members of said top frame, a rectangular angle iron auxiliary top frame disposed with the angles facing upwardly, supporting links therefor pivotally connected to the side members of said auxiliary top frame, bolts detachably connecting said supporting links to the side members of said main top frame braces pivotally connected to the legs and detachably secured to said main top frame by said bolts, one pair of said braces being extended and pivotally secured to the side members of said auxiliary top frame constituting braces therefor, bottom slats disposed on said main top frame on each side of said auxiliary top supporting links, a shelf comprising a U-shaped angle iron frame disposed with its angles facing upwardly, the arms of said shelf frame being detachably connected to one pair of said legs to collapse against the same, and braces for supporting said shelf in erected position pivotally engaged with the leg brace attaching pivots.

1,634,574. IGNITION MAGNETO. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,983. 3 Claims. (Cl. 171—209.)

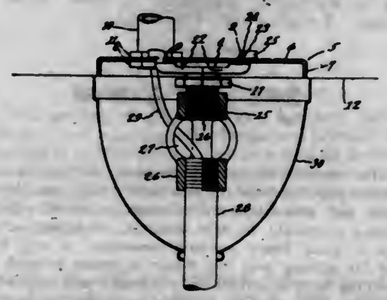
2. An ignition magneto comprising a substantially rectangular core structure provided with parallel coil carrying portions, primary and secondary windings carried by one of said core structure portions, a tertiary winding carried by the other of said core structure portions, an interrupter controlling the circuits respectively of said primary and tertiary windings, substantially L-shaped core structure shoes associated with the ends of said core structure, a permanent magnet, pole pieces therefor, and a rotor comprising inductors adapted to cooperate with said pole pieces and said core structure shoes to polarize and reverse the polarity of said core structure.

1,634,575. IGNITION MAGNETO. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,992. 15 Claims. (Cl. 171—209.)



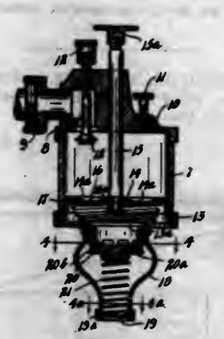
12. In a magneto, a magnet, pole pieces therefor, generating windings on said pole pieces respectively, a branch from one of said pole pieces, an auxiliary pole piece magnetically joined to said branch, said auxiliary pole piece being adjacent to the other one of said pole pieces, and a transformer having a coil wound about said branch.

1,634,576. ANKLE PROTECTOR. GEORGE FRANCIS HOGAN, Chicago, Ill. Filed Nov. 18, 1925. Serial No. 69,831. 14 Claims. (Cl. 36—2.)



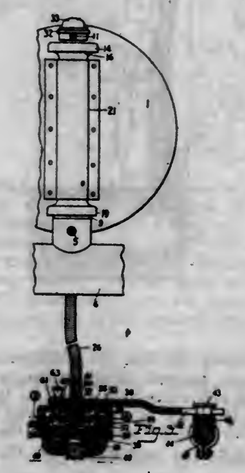
1. An ankle protector comprising a body portion of paper creped to be laterally extensible, a flap to cover the instep of the wearer and clasping means adapted to pass beneath and over the instep to secure the protector in place.

1,634,577. CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 28, 1924. Serial No. 716,508. 10 Claims. (Cl. 230—24.)



1. In a compressor controlling mechanism, a compressor, a driving engine therefor having a controlling valve, speed responsive means for controlling the position of said valve, pressure responsive means for controlling the position of said valve, and manual means including an eccentric for controlling said last mentioned means.

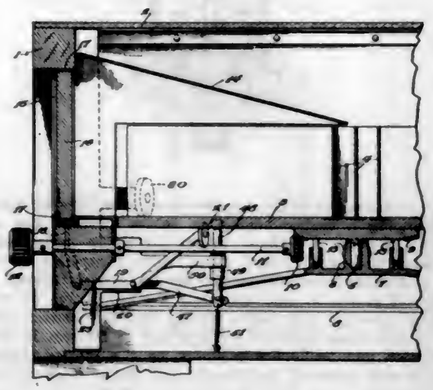
1,634,578. ELECTRICAL-FIXTURE HANGER. JOHN E. HUMMELL, Cleveland, Ohio. Filed Aug. 18, 1926. Serial No. 130,002. 4 Claims. (Cl. 240—85.)



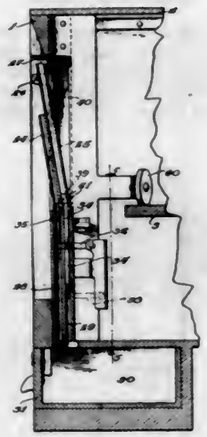
1. A fixture hanger comprising a split stud formed of sections externally threaded to receive a screw threaded fastening member, each section having an offset lug engageable in an opening in a support.

1,634,579. LIQUID-DISPENSING DEVICE. ALBERT D. HUTTON, Minneapolis, Minn. Filed Nov. 12, 1925. Serial No. 68,535. 4 Claims. (Cl. 221—103.)

3. A device for dispensing measured quantities of liquid comprising a casing having an intake passage and an outlet passage, a plunger, means yieldingly urging said plunger in one direction, check valve controlled means in said plunger permitting the liquid to flow through it when it moves in said direction, a sleeve valve in said outlet passage, said valve having inclined seating surfaces and being arranged to be moved to its seat in said direction and to be firmly seated by the suction caused by the movement of the plunger and means connected to said plunger to move it in the other direction and thereby open said sleeve valve.



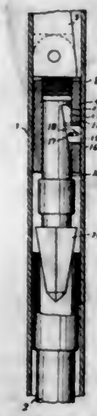
1,634,580. DIRIGIBLE HEADLIGHT. GEORGE SHAFFER KECK, Pasadena, Calif., assignor to The International Controlled Lamp Company, Wilmington, Del., a Corporation of Delaware. Filed July 19, 1924. Serial No. 726,944. 11 Claims. (Cl. 240—62.)



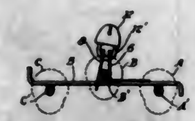
1. An actuating device for a rotatable headlight comprising a lower bearing member, an upper bearing member mounted in fixed spaced relation to said lower bearing member, one of said bearing members having an opening therethrough, means for mounting said bearing members on a supporting structure, a disk-like intermediate member arranged between the first mentioned

bearing members and spaced therefrom to provide spaces to receive anti-friction devices, an axial stud secured to said intermediate bearing member and extending through said opening, means for connecting said stud with said headlight, and an actuating member connected with said stud.

1,634,581. VENDING MACHINE. ROBERT KESSLER, Scranton, Pa. Filed Apr. 29, 1926. Serial No. 105,547. 6 Claims. (Cl. 194—59.)

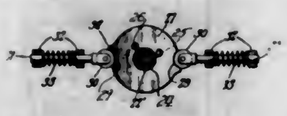


1. In a vending machine, the combination of a casing, a tray movably mounted in the casing, a door mounted in the casing and controlling access to the tray, a bolt mounted in the path of the door, and coin-controlled means whereby opening movement of the door will retract said bolt and positively lock the tray against movement.



1,634,582. WHIPSTOCK. FRANK KINZBACH, Houston, Tex. Filed June 10, 1926. Serial No. 115,016. 4 Claims. (Cl. 255—1.)

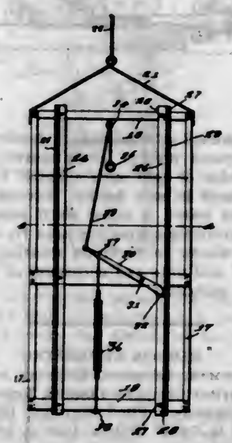
1. A whip stock comprising an elongated body having a taper extending throughout a major portion thereof to provide a wedging face, a hinged member pivoted to the lower end of said body, a tubular sleeve depending from said hinge member, an anchor having a shank which telescopes into said sleeve member, said shank having a downwardly and outwardly sloping bearing face with a



shoulder at the upper end of said face, said sleeve having a slot and a jaw working through said slot and whose inner end bears against said face.

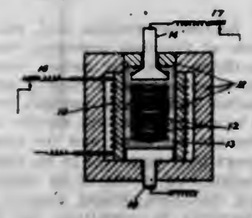
1,634,583. AUTOMOBILE LOCK. GEORGE BUFFINGTON KISSINGER, Aspinwall, Pa., assignor of one-half to William B. Salt, Aspinwall, Pa. Filed Feb. 9, 1922. Serial No. 535,300. 2 Claims. (Cl. 70—126.)

1. A locking device for automobiles having a plurality of foot levers for effecting the control thereof comprising an elongated body adapted to contact with the shanks of a plurality of the control pedals, a transverse extension on said body, a slidable transverse plate on the body, and a locking means for immovably positioning the slidable plate on the body and in spaced relation to the transverse extension by means of which the body may be locked to the shank of one of the pedals.



1,634,584. ACTUATING MEANS FOR MAGNETOS. ARTHUR C. KLECKNER, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed July 2, 1924. Serial No. 723,801. 6 Claims. (Cl. 123—140.)

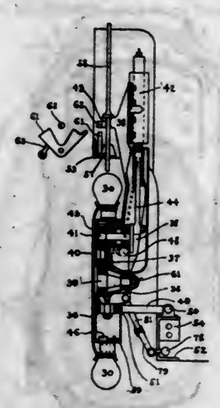
1. The combination with a magneto having an armature rotatably mounted therein and a winding therefor, forward and also backward rotation of which armature generates a current in said winding, of a pair of electrodes, a push finger on said armature, a trip finger, means for moving said trip finger, a spring pressed latch for locking said armature in a normal position, a push finger engaging element movably mounted on said trip finger, a spring disposed between said element and said trip finger adapted to be cocked by movement of said trip finger, said trip finger after said spring is cocked moving said push finger to unlock said armature and permit



said spring to snap said element for rotating said armature forwardly, means for returning said armature to its normal position, and means for utilizing the current generated in said winding on said forward rotation to produce a spark between said electrodes.

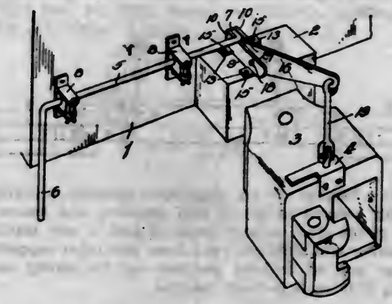
1,634,585. ELEVATOR FOR SILOS. IRVIN K. KREIDER, Lancaster, Pa. Filed May 26, 1926. Serial No. 111,862. 3 Claims. (Cl. 187—6.)

2. In a device of the class described, a plurality of track rails mounted in spaced relation on a stationary structure, a car movable along the rails, means for counterbalancing the car, a stationary brake rail carried by the car, a second brake rail carried by the car and having limited lateral movement, said rails being slidable on the track rails, and a spring controlled and manually controlled lever for forcing the movable rail into close contact with an adjacent track rail.



1,634,586. METHOD OF MANUFACTURING MALLEABLE CAST IRON. MASAKICHI KUBO, Tokyo, Japan. Filed June 12, 1922. Serial No. 567,869. 5 Claims. (Cl. 148—10.)

1. The process of converting the combined carbon of white cast iron into uncombined condition without fusion, consisting in enveloping the same in a suitable medium, in heating the same to a temperature in the critical range, and passing an electrical current therethrough while thus heated, for the purpose of accelerating the desirable chemical change.

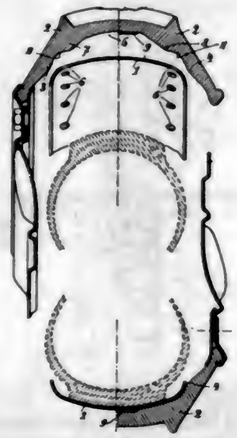


1,634,587. TRACKLESS STREET CAR. WARD LEATHERS, Haworth, N. J. Filed Aug. 3, 1920. Serial No. 401,048. 7 Claims. (Cl. 280—91.)

1. In a trackless street car a pair of tandem wheels supporting each corner of the vehicle, each wheel provided with independent means for turning on a vertical axis, each wheel provided with means for independent movement with respect to the frame of the car, said movement describing an arc in a plane transverse to the vehicle, said arc being maintained by a spacing member

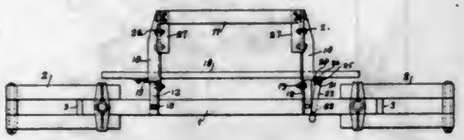
horizontally and longitudinally pivot-journalled to the main frame of the vehicle and supporting at its outer portion the wheel spindle vertically journalled thereto, all said eight wheels steering simultaneously.

1,634,588. LOCK-PIN LIFTING AND HOLDING DEVICE FOR AUTOMATIC CAR COUPLERS. OSSIMA H. LE COMPTE, Oklahoma City, Okla. Filed June 24, 1925. Serial No. 39,365. 10 Claims. (Cl. 213—166.)



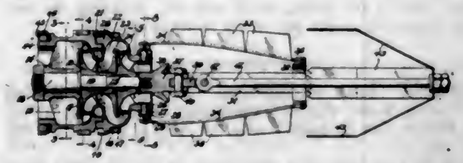
1. In a means for operating automatic car couplers, the combination with a gravity lock pin, of an operating lever rod, a pivotally supported lock pin lifting lever arm, a connection between the lifting lever arm and the lock pin and means carried by the operating lever rod adapted for engagement with the upper flat face of the rear end of the lifting lever arm for elevating the lock pin and holding the pin in its elevated position.

1,634,589. TIRE PROTECTOR. LUCIEN PAUL CELESTIN LOTTE, Paris, France. Filed Aug. 15, 1925, Serial No. 50,463, and in France Aug. 18, 1924. 4 Claims. (Cl. 305—7.)



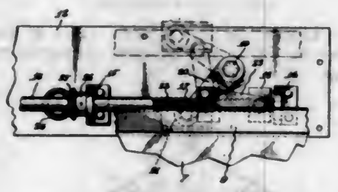
3. In a protector for wheel tires, the combination of an annular outer tire, a wheel within the said tire, this wheel being of a diameter which is smaller than the internal diameter of the said tire, the said tire and the said wheel being entirely independent the one from the other, a metallic ring freely interposed between the said tire and the said wheel, and separating these elements, the said metallic ring having an external diameter which is smaller than the internal diameter of the said tire and an internal diameter which is larger than that of

the said wheel, the said tire being provided upon its surface with inwardly projecting ribs, forming grooves on both sides and adapted to act as guides for the said



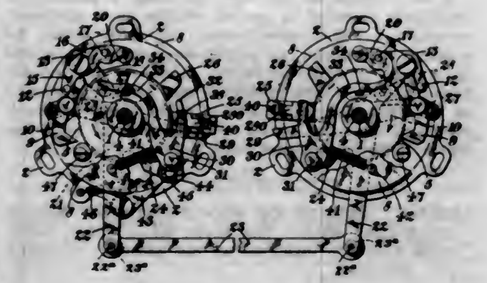
ring, the part of the said tire between the said ribs being concave so as to leave a larger space between the said tire and the said metallic ring.

1,634,590. LUGGAGE CARRIER. JACOB F. MARTIN, Bellevue, Ohio, assignor to The Bellevue Manufacturing Company, Bellevue, Ohio, a Corporation of Ohio. Filed Nov. 15, 1926. Serial No. 148,366. 5 Claims. (Cl. 224—29.)



2. In a luggage carrier, supporting members, a platform pivotally secured to one of said members, and means secured to the other of said members and to said platform for moving said platform away from said other supporting member into an inclined position and for rigidly maintaining it in such inclined position.

1,634,591. HYDRAULIC WATER PIPE CLEANER. DANIEL J. MCGEEHIN, West Hazleton, Pa. Filed Feb. 19, 1926. Serial No. 89,400. 7 Claims. (Cl. 15—104.12.)

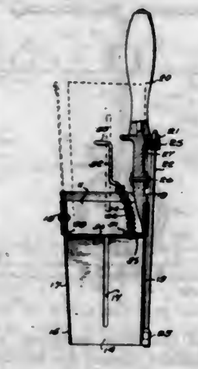


1. In a water pipe cleaner, the combination with a housing, of a hub secured to the housing and disposed centrally thereof, a spindle flexibly connected to the front end of the hub and having means at its forward end for engaging the wall of the pipe and guiding the cleaner in its progress through the pipe, a turbine rotatably mounted on the hub, and means in front of the housing and rotatable with the turbine to clean the inner surface of the pipe.

1,634,592. WINDSHIELD-REGULATING DEVICE. LEONARD A. MULLIGAN, Detroit, Mich., assignor to Joseph N. Smith Co., Detroit, Mich., a Corporation of Michigan. Filed June 24, 1926. Serial No. 118,169. 5 Claims. (Cl. 296—89.)

5. In a windshield construction, a header, a sash slidable therein, spaced pivoted levers operatively connected to the upper edge of said sash adapted for raising and lowering said sash in said header, traveler nuts adapted for moving said levers, a screw shaft supported in said header and operatively supporting said traveler nuts, and means in said header to facilitate rotating said shaft to cause travel of said nuts and movement of said levers for sash adjusting purposes.

1,634,593. RIBBON-REVERSING MECHANISM. ARTHUR PATEMAN, Leicester, England, assignor to Imperial Typewriter Company Limited, Leicester, England, a British Company. Filed May 17, 1926, Serial No. 109,800, and in Great Britain June 2, 1925. 7 Claims. (Cl. 197—160.)



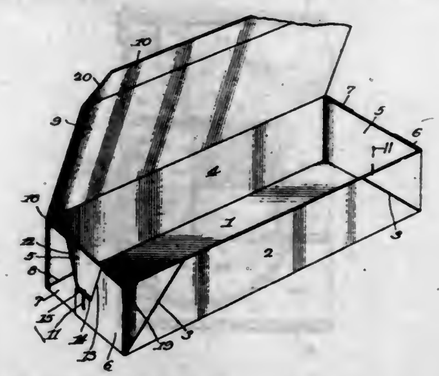
1. Typewriter ink-ribbon winding and automatic reversing mechanism of the class described comprising in combination, ink-ribbon reversing means, two members pivotally mounted to swing about a common axis in proximity to one another, one of said members being operatively connected to the machine type keys so as to oscillate as the latter are depressed, and the other of said members being operatively connected to the ribbon reversing means to operate said means by its swinging movement, a yieldingly controlled member mounted on one of said swinging members to constitute the catch, and capable of movement under its yielding control into the path of the other swinging member to take its operative position in which it locks the two swinging members together whereby in one direction they move in unison, and a ribbon-controlled means for normally holding the catch out of its operative position until reverse is to be effected, and then releasing it.

1,634,594. DISPENSING DEVICE. JOHN H. PIEPER, Delavan, Minn. Filed Oct. 14, 1926. Serial No. 141,633. 8 Claims. (Cl. 107—48.)

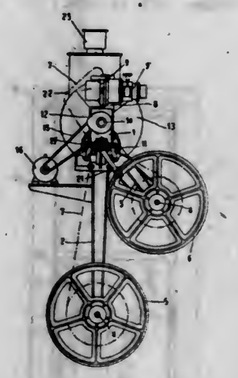
3. A device of the character described comprising supporting means, a body portion carried by said supporting means and including a plurality of permanently flat

walls, all but one of said walls being adapted to slide with respect to said supporting means, said body portion having an open bottom and adapted to be inserted into a body of material, cutting means associated with said

body portion and movable across the bottom thereof to cut through the body of material, and means carried by said supporting means for dislodging material from said body portion.



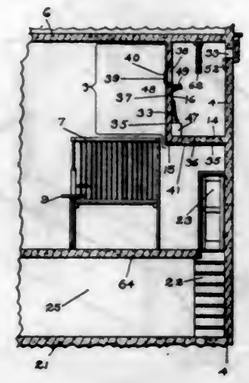
1,634,595. COLLAPSIBLE MAST. HAROLD PRICE, Moncton, New Brunswick, Canada. Filed May 9, 1925. Serial No. 29,105. 2 Claims. (Cl. 189—26.)



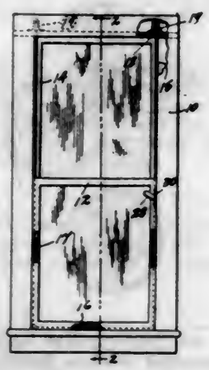
1. A mast or support comprising a plurality of sections, provided with end plates having orifices therein, adapted to engage with one another and pivotal means through said orifices whereby the sections are hingedly connected, means for rigidly retaining the sections when built up, a plurality of truss rods rigidly connected at each end to said plates, intermediate bracket means for spacing said truss rods and means integral with the truss rods for tensioning them.

1,634,596. EGG CARTON. WILLIAM A. SCHURMANN, Chicago, Ill., assignor to W. A. Schurmann & Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 16, 1925. Serial No. 69,255. 8 Claims. (Cl. 229—32.)

1. A foldable box or carton comprising a bottom wall, an uncreased rear wall, a creased front wall, uncreased rectangular inner end walks, outside creased end flaps, uncreased end flaps overlapping the creased flaps, and a cover, said flaps being formed to provide a wide notch or space between them at each end of the box, exposing a substantial portion of the outer surface of each rectangular uncreased end wall, to facilitate the folding of the end wall upon the bottom, said flaps having straight horizontal flush edges forming a straight double thickness bottom for each notch or space, which straight edges are parallel with the top and bottom edges of the ends of the box, and a fastening device inserted through the overlapping portions of said flaps and through said uncreased rectangular end walls.

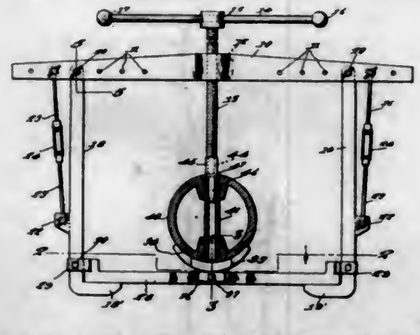


1,634,597. APPARATUS FOR CINEMATOGRAPHIC PROJECTIONS. EMILIO CARRANZA SOLÁ, Flix, Spain. Filed Dec. 24, 1924, Serial No. 757,944, and in Spain Jan. 11, 1924. 1 Claim. (Cl. 88—18.6.)



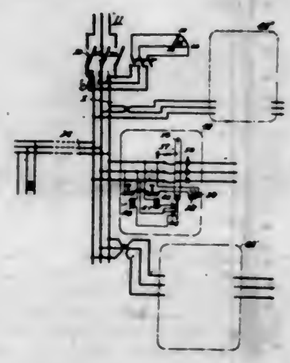
An apparatus for cinematographic projection, comprising a frame, supporting members thereon for supporting the spindles of the film spools, the projecting gate and the objective, an axle mounted on the said frame, a motor for driving the said axle, a shutter mounted on the said axle in an integral manner, a second axle, a device mounted on the first axle for transmitting motion to said second axle of the apparatus, a cam member having constant angular rotation mounted on the first axle and having a profile such that the film is given progressive uniformly accelerated and decelerated movements during each intermittent actuation, a member integrally mounted on the second axle driven by the first axle, a member integrally mounted on the second axle for driving the spool upon which the film is being wound, a sprocket upon the second axle for guiding the film, which sprocket is provided with the corresponding jockey rollers.

1,634,598. INTERIOR FORTRESS. CHARLES H. STROUSE, Indianapolis, Ind. Filed July 9, 1926. Serial No. 121,358. 19 Claims. (Cl. 89—36.)



1. An interior fortress for business institutions, comprising an over-head enclosure extending across the public room of such institution; a means of reaching said fortress from different floors of such institution, and different parts of the main floor; observation means at different points of advantage in said fortress; and port hole means for shooting from different points of advantage in said fortress.

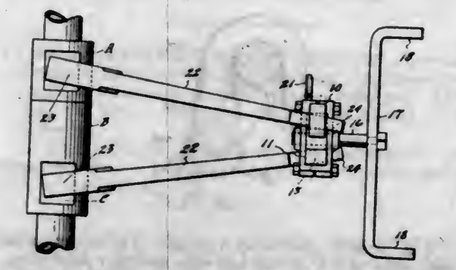
1,634,599. WINDOW-SASH SUPPORT. WILLIAM L. THOMAS, Dallas, Tex. Filed Apr. 2, 1926. Serial No. 99,248. 1 Claim. (Cl. 16—196.)



In a window sash support, the combination with a window frame and upper and lower sashes slidable therein and grooved upon their sides and bottom edges, of an endless coiled spring cable having parallel looped portions removably seated in the side and bottom grooves to embrace each sash, and pulleys at the top of the frame upon which said cable is supported intermediate its looped portions, the cable forming a curved sliding bearing face upon the frame and providing tension throughout its length to seat the upper sash when the lower sash is closed.

1,634,600. DEVICE FOR EXTRACTING BUSHINGS AND THE LIKE. CHARLES D. THOMPSON, Roanoke, Va. Filed Feb. 6, 1926. Serial No. 86,561. 3 Claims. Cl. 29—88.2.)

1. In a device of the class described, a main bar, a screw threaded therethru, means for mounting the work, and a tool to be carried by the lower end of the screw, said tool including a spindle having a lower cutaway portion and having an undercut shoulder adjacent to the cutaway portion, a resiliently mounted finger extending from the lower end of the spindle into the undercut portion, and adjustable means for limiting the movement of the finger.

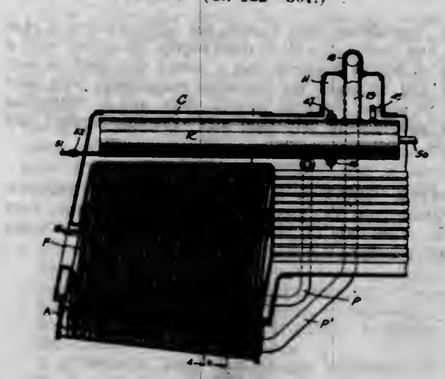


1,634,601. DISTRIBUTION SYSTEM FOR SELECTIVE CONNECTIONS THERETO OF FEEDERS. NOBUFUMI TOGAMI, Saga-Ken, Japan. Filed May 16, 1924. Serial No. 713,833. 7 Claims. (Cl. 175—375.)

1. The combination with a main circuit comprising three conductors, a plurality of feeders, means for each of said feeders for connecting same to said main circuit, means for controlling said connecting means through a pair of said conductors and a plurality of other feeders connected to said circuit, of means for holding the conductors of said main circuit other than said pair at a predetermined potential relation to said pair whereby the proper operation of said controlling means is assured even when said other feeders are unbalanced.

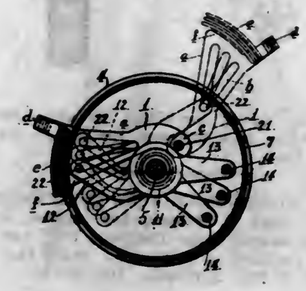
1,634,602. POWER WRENCH. ROBERT A. WILSON, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Jan. 2, 1926. Serial No. 78,806. 13 Claims. (Cl. 81—53.)

1. In a joint breaking wrench, a carriage, a pair of oppositely sliding bars mounted therein and each having wrench connecting means at one end of the carriage, wrench members having jaws and opposite operating ends



movably embraced by the connecting means to travel in opposite directions with the bars, and means for oppositely moving said bars to swing the wrench members.

1,634,603. PROCESS OF MAKING PAPER FROM STRAW AND PRODUCT. CHARLES D. WOOD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1926. Serial No. 80,813. 6 Claims. (Cl. 92—13.)



1. Process of making paper from straw and similar fibrous vegetable materials, which comprises incorporating the alkali soluble components of the fibrous material obtained by digesting the fibrous material with an alkaline reagent comprising a soluble sulfide with a pulp derived from said fibrous material.

1,634,604. STEAM GENERATOR. HARRY S. ANDERSON, Los Angeles, Calif. Filed Apr. 28, 1924. Serial No. 709,572. 6 Claims. (Cl. 122—507.)

1. In combination, a tube, means for supplying a fluid to the tube including a valve, means for receiving the fluid from the tube including a valve, and means responsive to change in pressure of the fluid as received by said means for maintaining the first valve in open position when the pressure of fluid in the tube is at or above a predetermined degree and for closing the first valve when the pressure of fluid in the tube is below the predetermined degree to disconnect the fluid supply means from the tube, the second valve being responsive to fluid pressure to close and disconnect the fluid receiving means from said tube when the pressure of fluid in the tube is below a predetermined degree.

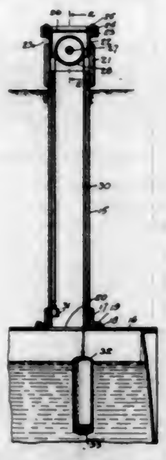
1,634,605. RIBBON-CARRYING ARM FOR MANIFOLDING TYPEWRITERS. HUBERT McL. ARMISTEAD, San Francisco, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed May 26, 1925. Serial No. 32,904. 13 Claims. (Cl. 197—126.)

1. A ribbon-carrying arm for manifolding typewriters comprising a strip, the body of which below one of its ends being widened to one side, and a ribbon-receiving member carried by said end and extending therefrom opposite to and spaced from the widened body of the strip.

1,634,606. WEEDER AND THE LIKE. DAVID W. BARTLEBAUGH, Springfield, Ohio. Filed May 27, 1926. Serial No. 112,147. 4 Claims. (Cl. 55—148.)

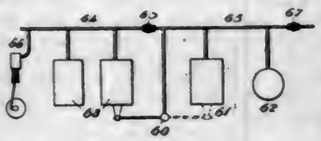
1. A weeder including in combination with a staff, a tapered jaw fixed on an end thereof, a jaw pivoted on the staff opposite and coacting with the fixed jaw, a rod extended longitudinally of the staff, adapted to be manipulated to actuate the movable jaw relative to the fixed jaw to grip an object, and having a portion extended between the jaws operable with the rod to eject said object from the jaws.

1,634,607. BOBBIN FOR BRAIDING MACHINES. CLARENCE P. BERGLEHEIMER, Chicago Heights, Ill. Filed Aug. 22, 1924. Serial No. 733,648. 1 Claim. (Cl. 96—15.)



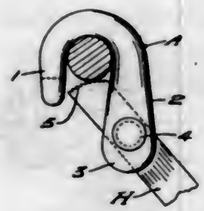
A bobbin for braiding machines, comprising a tube upon which thread is directly wound, a head for the tube com-

prising a removable ratchet feed disc mounted on one end of the tube, and corresponding screw threads on the tube



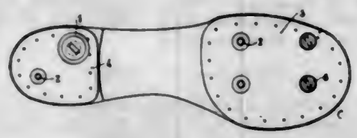
and head for readily assembling the same, said screw threads working in a direction opposite to the ratchet feed of the head.

1,634,608. LIQUID-MEASURING ATTACHMENT FOR TANKS. JOHN E. BOEGEN, Los Angeles, Calif., assignor to Boegen Gauge Company, Inc., Los Angeles, Calif., a Corporation of Nevada. Filed Apr. 6, 1925. Serial No. 21,032. 2 Claims. (Cl. 73—82.)



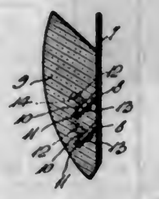
1. In combination, a tank for liquids, a pipe extending upwardly from the tank, a connecting sleeve on the upper end of the pipe, a cap supported on the sleeve and having a transparent closure member, a pulley rotatably mounted in the cap, a calibrated tape trained about the pulley and extending downwardly into the pipe, a weight on one end of the tape, and a weighted float on the opposite end of the tape.

1,634,609. STEAM PLANT. ERNST CONSTAM, Zurich, Switzerland, assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed May 15, 1922, Serial No. 561,240, and in Germany Mar. 29, 1922. Renewed Apr. 30, 1927. 14 Claims. (Cl. 236—26.)



1. In a steam plant equipped with a steam accumulator, in combination, a steam boiler, a fire in said boiler, means to regulate said fire responsive to pressures in said accumulator above an upper limit of pressure and below a lower limit of pressure, said means being inoperative for intermediate pressures.

1,634,610. WRENCH. CHARLES E. DALE, Barnsdall, Okla. Filed Sept. 11, 1926. Serial No. 134,850. 1 Claim. (Cl. 81—98.)

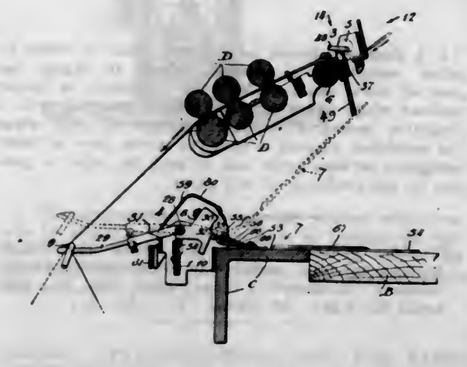


1. A wrench comprising a handle jaw having parallel side edges and a curved end edge provided with teeth, a pivot pin passing transversely through the handle jaw at a point spaced from the curved end edge thereof, a jaw member formed from a single rod having flattened parallel end portions which lie at the opposite sides of the handle jaw and which are pivoted upon the pin, said pivoted jaw having a bill end portion which is disposed approximately parallel with the end portions of the said jaw and spaced therefrom and the opposite side portions of the pivoted jaw being connected together at the extremity of the bill end by a transversely disposed arcuate intermediate portion.

1,634,611. SPORTING SHOE. LOUIS DESCHAMPS, Le Havre, France. Filed Dec. 26, 1924, Serial No. 758,215, and in France Dec. 28, 1923. 1 Claim. (Cl. 36—59.)

In combination with a plate for application to a shoe sole and provided with a downwardly extending bolt, a stud of flexible material and a sleeve embedded in said stud and arranged for threaded engagement with said bolt to secure the stud to said plate, and a reinforcing ring embedded in said stud and extending around said sleeve.

1,634,612. DENTAL FACING. THOMAS E. DIMELOW, Philadelphia, Pa., assignor to John W. McKinnon, York, Pa. Filed Jan. 14, 1926. Serial No. 81,284. 2 Claims. (Cl. 32—9.)



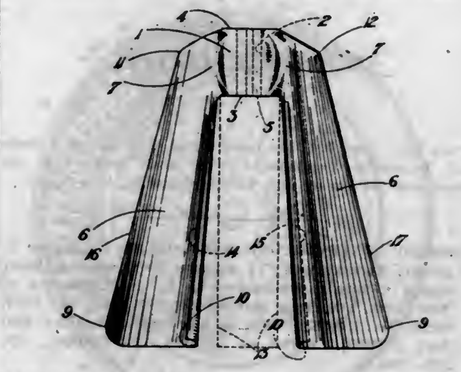
1. An improvement in a dental facing of the type whose lingual side is adapted to contact with a backing; said facing being formed with a bore which extends labio-occlusally from said lingual side and is open at its lingual end only to receive a backing-carried pin; said improvement comprising a relatively long and narrow U-shaped metal strip which is embedded in the facing in a plane at substantially right angles to the axis of said bore, the intermediate portion of said U-shaped strip being disposed

at the side of the bore toward the occlusal end of the facing while the arms of said strip extend from the bore in substantially a labio-gingival direction but also diverge to points near the vertical edges of the facing.

1,634,613. MANUFACTURE OF TEXTILES. CAMILLE DREYFUS, Basel, Switzerland, assignor to Celeanese Corporation of America, a Corporation of Delaware. Filed Dec. 22, 1921. Serial No. 524,276. 5 Claims. (Cl. 139—420.)

1. Textile fabrics comprising yarn individually impregnated with a permanent finish of an organic derivative of cellulose.

1,634,614. STOP-MOTION DEVICE FOR SPINNING FRAMES. JOHN P. GAREY, Elmira Heights, and LOUIS B. HASBROUCK, Elmira, N. Y. Filed Nov. 18, 1925. Serial No. 69,724. 43 Claims. (Cl. 117—33.)



1. A stop-motion device for a spinning frame, comprising a stopping member in advance of the drawing rolls of the frame, a power-driven member, and connecting mechanism for transferring power from the power-driven member to the stopping member, said power-transferring connecting mechanism including as an element thereof a nearly balanced lever mounted on a fixed horizontal pivot and normally held out of the path of the power-driven member by engagement with a roving between the drawing rolls and a spindle of the frame.

1,634,615. FLOTATION SEPARATING PROCESS. EVERETT A. HALL and GEORGE R. SANDERS, Joplin, Mo., assignors to Southwestern Engineering Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 13, 1926. Serial No. 135,292. 4 Claims. (Cl. 200—166.)

1. A flotation separation process including the addition of a small quantity of oxalic acid and collecting, sulfurating and frothing means to a pulp containing carbonaceous tarry material and oil interfering with flotation of the minerals to be separated, aerating and agitating the mixture and separating said mixture by flotation into a froth and a precipitate.

1,634,616. PROPELLER. ALEXANDER HARPER and STEWART ALEXANDER HARPER, Dunedin, Otago, New Zealand. Filed July 18, 1925. Serial No. 44,533. 1 Claim. (Cl. 17—159.)

A propeller of the character described, including a shaft engaging boss, blades extending radially in opposite directions from the boss and also extending rearwardly and arranged in substantial parallelism with the longitudinal axis of the boss, the profile of the blades being wave-like in form and the inner marginal edges of

each of the blades being bent in a wave-like manner in a direction opposite the wave-like main portion of each blade, substantially as and for the purposes set forth.

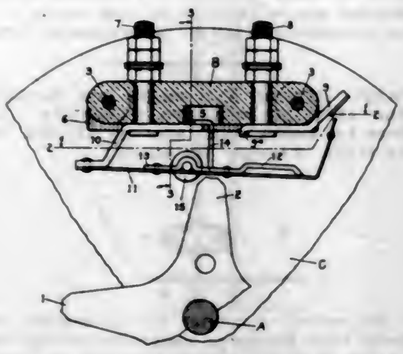
1,634,617. METHOD AND MEANS FOR PRODUCING AND AFFIXING SIGNS TO MATERIALS. FRANK HART, Los Angeles, Calif. Filed Jan. 14, 1926. Serial No. 81,351. 2 Claims. (Cl. 41—33.)

1. The method of applying signs to enameled textile material which consists in super-posing the sign matter on a film of flexible material containing an ingredient of the enamel on said textile material, and applying heat and pressure thereto for fusing the sign to the enamel.

1,634,618. FOUNTAIN PEN. OSCAR B. HJORTH, Janesville, Wis., assignor of one-half to William H. Skillen, Janesville, Wis. Filed Sept. 28, 1925. Serial No. 59,022. 9 Claims. (Cl. 120—47.)

1. In a fountain pen, the combination of a barrel having a chamber at one end for an ink sack, a flexible ink sack disposed in said chamber, a pumping device at the opposite end of said barrel and operable to compress air into said chamber to collapse said ink sack, a check valve opening inwardly towards said ink sack chamber for controlling communication therewith and operable to retain the compressed air within said chamber and means for holding said check valve open to permit the escape of the compressed air therefrom, thereby permitting the sack to expand and receive a supply of ink.

1,634,619. DEVICE FOR FASTENING COVERS. GOLLADAY LAKE, New York, N. Y. Filed Mar. 11, 1926. Serial No. 93,877. 1 Claim. (Cl. 24—87.)



A device for holding a cover on an ironing board comprising an elongated body, fastening members remov-

ably mounted on said body, said fastening members each comprising a single length of wire formed with an eyelet medially of its ends, one end portion of said wire

being bent upon itself to form a loop and having a hook for detachable engagement with said eyelet and the other end portion of said wire terminating in a hook.

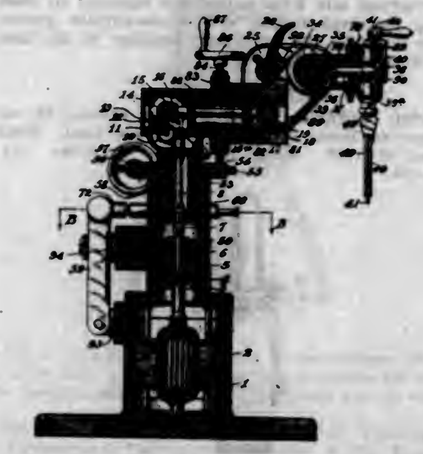
1,634,620. UNIT-CIRCUIT CONTROLLER. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Original application filed Aug. 31, 1917. Serial No. 189,088. Divided and this application filed Sept. 1, 1920. Serial No. 407,508. 11 Claims. (Cl. 200—166.)

9. A unit circuit controller comprising, an insulating block, a contact support fastened to said block, a contact spring fixed to said support, a rigid retainer attached to the spring at substantially its midpoint and having one end portion bent to form a hook to engage said support to limit the movement of said spring away from said block.

1,634,621. DEVICE FOR PICKING COTTON. ISIDORO MARTINEZ, La Pryor, Tex. Filed Feb. 23, 1926. Serial No. 90,033. 4 Claims. (Cl. 2—44.)

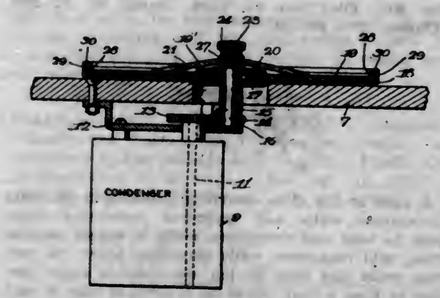
1. In a device of the class described, a coil spring, a lower supporting member fastened to the lower end of said coil spring, an upper supporting member fastened to the upper end of said coil spring, a supporting frame pivotally holding said lower supporting member, a breast plate pivotally holding said upper supporting member, and means for holding said upper end and lower supporting members in angular adjusted positions.

1,634,622. FASTENER FOR FABRICS. HENRY MENGES, Richmond Hill, N. Y. Filed Oct. 21, 1926. Serial No. 143,192. 3 Claims. (Cl. 24—81.)



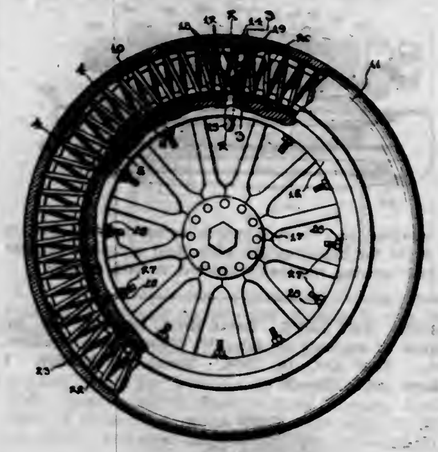
1. A fastener adapted to hold two pieces of fabric together comprising, a member adapted to engage one piece of fabric and provided with a plurality of lateral resilient wings and a separate member provided with a projection having a terminal enlargement, said wings and projection adapted to have the second piece of fabric interposed between them and to hold the same in position by the resiliency of said parts.

1,634,623. POWER HAMMER. HARRY H. MILLER, Youngstown, Ohio, assignor to Miller-Smythe Electric Company, Youngstown, Ohio. Filed Feb. 10, 1925. Serial No. 8,164. 23 Claims. (Cl. 125—33.)



1. In a power hammer, a percussion member, a reciprocating drive mechanism, and bodily movable means for alternately connecting and disconnecting said member and mechanism, said means being out of operative connection with said drive mechanism when said percussion member and mechanism are disconnected.

1,634,624. AUTOMATIC ELECTRIC-ARC WELDING DEVICE AND METHOD OF OPERATING THE SAME. HARRY D. MORTON, New York, N. Y. Filed Jan. 16, 1924. Serial No. 686,537. 40 Claims. (Cl. 219—8.)



1. The improvement in electric arc welding which consists in manually striking the arc, in feeding the electrode to the work during normal operation, and in disconnecting the feeding means from its actuating means upon extinction of the arc.

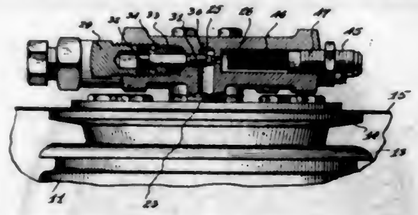
1,634,625. STATION-SELECTOR DIAL FOR RADIO RECEIVING SETS. MARTIN NYSTROM, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed July 25, 1925. Serial No. 46,044. 3 Claims. (Cl. 116—133.)

3. A station selector dial for a radio receiving set comprising a fixed spindle, a revoluble sleeve on the spindle, a dial plate mounted on the sleeve to revolve therewith, a peripheral wall on the dial plate and having a groove the outer surface of said wall being roughened, a dial on said plate, a ring engaging said groove and clamping the edge of the dial against the dial plate, a disk on the sleeve clamping the central portion of the dial against the dial plate, and a pointer rigid with the spindle and projecting over the dial.

1,634,626. TIRE FILLER. GEORGE F. A. OCHS, Newark, N. J. Filed Aug. 14, 1926. Serial No. 129,191. 5 Claims. (Cl. 152—8.)

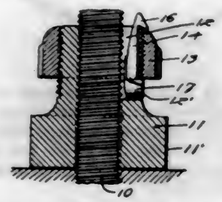
1. In combination with a vehicle wheel and attached tire shoe, a filler consisting of a spiral spring, an anchor plate connected with the spring at one extremity and provided with a stem engaging the wheel, and a plate connected with the other extremity of the spring and having a seat in the anchor plate.

1,634,627. SPARK GAP. HOWARD H. OSBORN, Chicago, Ill., assignor to H. G. Fischer & Company, Chicago, Ill., a Corporation of Illinois. Filed June 10, 1921. Serial No. 476,640. 2 Claims. (Cl. 250—38.)



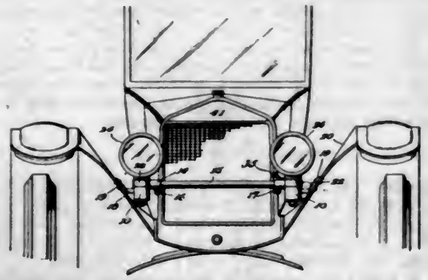
1. An electric spark gap, comprising a series of cells, each composed of spaced disks of current conducting material provided with projections extending into the cell in opposed relationship and a ring of opaque insulating material eccentrically positioned and extending between said disks and enclosing said projections to insure sparking therebetween, means for clamping the disks and rings of the several cells together to form a unitary apparatus, and current conducting means associated with the disks at the opposite ends of the apparatus.

1,634,628. VALVED FITTING FOR REFRIGERATING APPARATUS. JOHN R. REPLOGLE, Detroit, Mich., assignor to Electric Refrigeration Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 31, 1927. Serial No. 164,992. 10 Claims. (Cl. 251—50.)



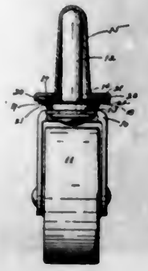
4. A fitting for connecting an evaporator into the refrigerant circuit of a refrigerating system, comprising a valve casing provided with a valve chamber and with inlet and outlet passageways communicating with said valve chamber, a valve structure supported within said chamber and entirely enclosed by said valve casing, said valve structure having a screw threaded engagement with

said valve casing to permit the manual adjustment of said valve, said casing provided with an opening in the wall thereof through which said valve may be inserted



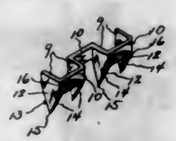
and removed and through which access may be had to said valve for adjusting the same, and a closure member for said opening removably secured to said casing.

1,634,629. NUT LOCK. DAVID RICH, Spooner, Wis., assignor of one-half to John W. Hendrickson, Spooner, Wis. Filed Oct. 19, 1926. Serial No. 142,699. 1 Claim. (Cl. 151—19.)



The combination with a bolt and a nut engaged thereon, the nut having an externally threaded extension, such extension having a longitudinal slot opening through the outer face of the extension and into the bore of the same, of a nut engaged on the extension and having its outer end face inclined toward the nut, and a locking member disposed longitudinally in said slot and having a terminal enlargement and a longitudinal knife edge, said knife edge being adapted to be driven into the bolt threads upon engagement of the second nut externally on said enlargement, and a nose on the locking member for engagement in the internal threads of the second nut whereby to maintain said member out of biting engagement with the bolt while said first nut is being applied or removed.

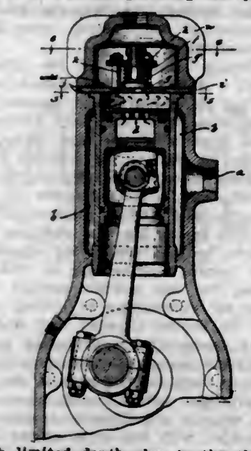
1,634,630. DIRIGIBLE-HEADLIGHT MECHANISM. JOHN S. ROWLEY, JOHN W. RIGGLES, and HILAND E. MCCULLY, Lansing, Mich. Filed Nov. 25, 1925. Serial No. 71,433. 2 Claims. (Cl. 240—61.)



1. In a dirigible headlight mechanism, a bearing formed with a bore, a spindle journaled in the bore of said bearing and provided with a head overlying the upper end of said bearing, said spindle having an axially disposed bore, a headlight, a bracket for the headlight formed with a non-circular opening, a turning handle having one end portion disposed between the lamp bracket and head of said spindle and formed with an opening registering with and conforming to the contour of the opening in the lamp bracket, means for interlocking the turning handle with the head of said spindle to prevent independent turning thereof, and a bolt passed through the bore of said spindle and having a head at its upper end overlying said lamp bracket and adjoining its head having its shank formed with a non-circular portion snugly seated in the non-circular openings of the lamp bracket and turning handle.

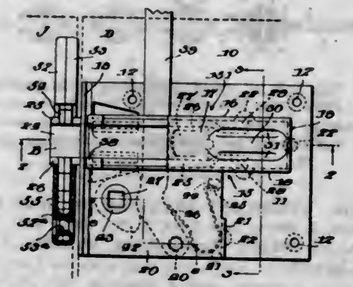
1,634,631. CASTER. EDWARD SCHULTZ, Chicago, Ill., assignor to James B. Ladd, Des Moines, Iowa. Filed June 16, 1925. Serial No. 37,445. 5 Claims. (Cl. 16—18.)

1. The combination of a caster having a stem and a swiveling device comprising a longitudinally split spring sleeve closed at its upper end and adapted to embrace and rest on said stem, the members of said sleeve being formed at their lower ends with outturned flanges, a disk plate of annular form adapted to embrace loosely said sleeve and rest on said flanges, an embossed disk embracing said stem below said disk plate and having a downwardly extending boss in its central portion, means to prevent downward movement of said stem relative to said embossed disk by engagement between said central boss and the flanges of said spring sleeve, and means for securing said embossed disk and disk plate together.



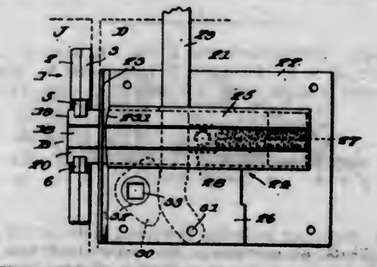
1,634,632. BRAD. ALVIN C. STRANDBERG, Kansas City, Mo., assignor of one-half to Oliver S. Wiard, Kansas City, Mo. Filed May 24, 1926. Serial No. 111,261. 3 Claims. (Cl. 85—11.)

1. A brad of the class described including a plurality of transverse walls and staggered connecting walls adapted to hold said transverse walls in spaced parallel relation, said transverse walls extending below the connecting walls and each having its opposite edges converging to form a spur below the lowermost edge of said connecting walls.



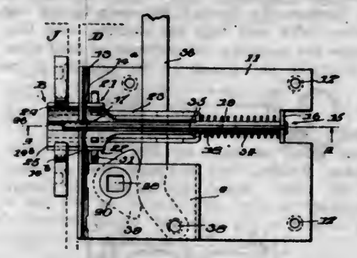
1,634,633. CYLINDER-CAP CONSTRUCTION FOR COMPRESSORS. HARRY E. THOMPSON, Detroit, Mich., assignor to Universal Cooler Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 15, 1926. Serial No. 88,244. 7 Claims. (Cl. 230—27.)

1. In a compressor, the combination of a cylinder, a piston reciprocating in the cylinder, a cylinder cap, and a relatively thin cylinder head secured between the cap and the cylinder end and spaced from the cap, said head provided with a valve port which communicates directly with the space between the head and the cap, a valve mounted on the head for guarding the port, this port



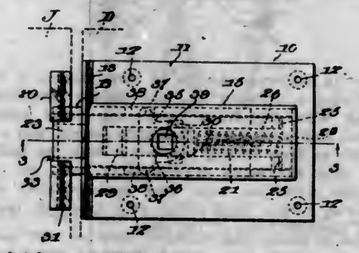
being of such limited depth, due to the thinness of the cylinder head, as to be practically a negligible factor in the clearance space left between the piston and the valve.

1,634,634. LATCH AND KEEPER MEANS. FRANCIS M. VANDERVOORT, Pueblo, Colo., assignor to The Positive Lock Company, Pueblo, Colo., a Corporation of Colorado. Filed July 12, 1923. Serial No. 651,112. 42 Claims. (Cl. 292—178.)



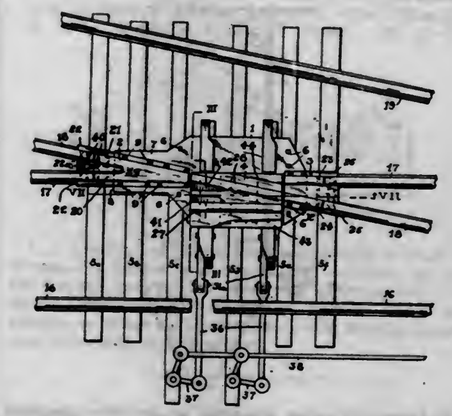
23. In a latch, the combination with a bolt, of means normally projecting said bolt, and means at both ends of said bolt clamping the bolt against all lateral movement when the bolt is projected.

1,634,635. LATCH OR KEEPER MEANS. CHARLES L. CROOKS and FRANCIS M. VANDERVOORT, Pueblo, Colo., assignors to The Positive Lock Company, Pueblo, Colo., a Corporation of Colorado. Filed Aug. 11, 1923. Serial No. 656,907. 22 Claims. (Cl. 292—173.)



1. The combination, with a bolt, of abutment means, and eccentrically mounted latching means engaging said bolt and pressing it in engagement with said abutment means.

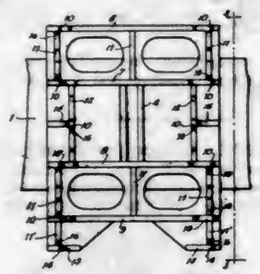
1,634,636. LATCH. FRANCIS M. VANDERVOORT, Pueblo, Colo., assignor to The Positive Lock Company, Pueblo, Colo., a Corporation of Colorado. Filed Aug. 28, 1923. Serial No. 659,779. 34 Claims. (Cl. 292—5.)



1. A latch comprising expansible latching means swingable to latching position and slidable to unlatched position.

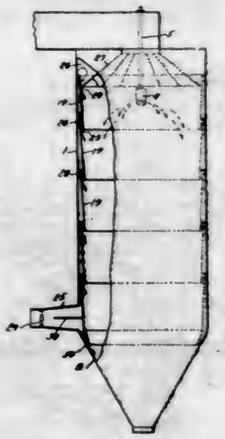
1,634,637. LATCH. FRANCIS M. VANDERVOORT, Pueblo, Colo., assignor to The Positive Lock Company, Pueblo, Colo., a Corporation of Colorado. Filed Sept. 13, 1923. Serial No. 662,466. 33 Claims. (Cl. 292—169.)

1. A latch comprising abutment means, and latching means movable longitudinally and laterally with respect to said abutment means.



1,634,638. RAILWAY FROG. ANTHONY L. VISSAT, Jeannette Borough, Pa. Filed Aug. 11, 1926. Serial No. 128,596. 28 Claims. (Cl. 246—392.)

1. A movable frog for railway tracks comprising a bed plate mounted at the rail crossing, said bed plate being provided with parallel and transversely disposed slots, a movable frog plate mounted on the bed plate and provided with a pair of rail members in angular relation to each other and so disposed that when the frog plate is in one



of its positions one of its rail members completes the interruption of one of the fixed track rails and when the frog plate is in its other position its other rail member completes the interruption in the other fixed track rail, said frog plate being provided with depending lugs protruding downwardly through the slots in the bed plate, connections with said lugs for shifting said frog plate, and means for covering the portions of said slots which would otherwise be exposed by the shifting of said frog plate.

1,634,639. TRACTION SHOE. WILLIAM E. WINE, Toledo, Ohio, assignor to The Tractor Grip Wheel Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 22, 1925. Serial No. 24,942. 3 Claims. (Cl. 305—13.)

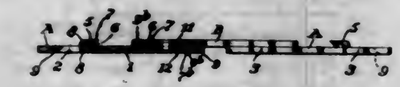
2. As an improved article of manufacture, a friction shoe having a plurality of longitudinally extending ribs provided with projections, transverse webs connecting said ribs, said webs being alternately spaced, and a transverse bar to form driving connection with the teeth of a wheel, said bar being in alinement with the central transverse webs, the webs upon opposite sides of said bar having short longitudinal ribs extended therefrom toward opposite ends of the shoe.

1,634,640. SPRAY PROCESSING APPARATUS. PAUL T. ZIZINIA, Belmar, N. J., assignor to Industrial Spray-Drying Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 20, 1926. Serial No. 136,713. 11 Claims. (Cl. 159—4.)

4. Spray processing apparatus of the class described which comprises a chamber within which the treatment of the material takes place, means for passing a current of heated treating gas through said chamber, means for introducing the said material into the current of treating gas in finely divided condition, and means for directing along the inner walls of the said chamber a separate current of gas of temperature less than that of the incoming heated gas, whereby said walls are cooled and contact of the material being treated with the walls is restricted.

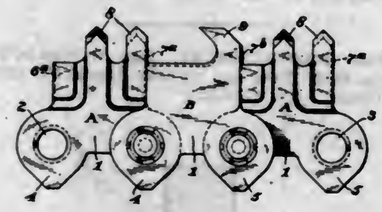
10. Spray drying apparatus of the class described which comprises a drying chamber, means for passing a current of drying gas through said chamber, means for introducing liquid material in finely divided condition into the initial portion of the said current of drying gas, the particles of the sprayed material being carried along during evaporation of the moisture thereof by the current of drying gas in like direction of flow, a discharge opening in said drying chamber permitting the escape of the said drying gas, a converging portion connecting the main body of the drying chamber with the said discharge opening and serving to direct the spent drying gas and the dry powder product to the said opening, means for establishing at various points along the length of the drying chamber and said converging portion moving sheets of gas extending in continuous closed conformation around the inner surfaces of said parts and moving along said surfaces in like direction of flow with the principal current or drying gas and material being treated, whereby objectionable contact of the material being treated with the parts of the apparatus is avoided throughout the entire length of the apparatus.

1,634,641. BEARING FOR LINK CHAINS AND BELTS. SAMUEL J. BENS, New York, N. Y. Filed Feb. 7, 1924, Serial No. 691,247. Renewed Nov. 16, 1926. 4 Claims. (Cl. 74—32.)



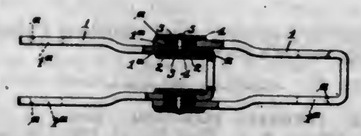
1. A link belt or chain comprising links having overlapping ends, pivot means passing through the overlapped ends, bearing blocks rigidly held in said links, said blocks having a flange at each end thereof overlying the links.

1,634,642. LUBRICANT RETAINER OR DUST COVER. SAMUEL J. BENS, New York, N. Y. Filed Feb. 7, 1924, Serial No. 691,248. Renewed Nov. 16, 1926. 5 Claims. (Cl. 74—32.)



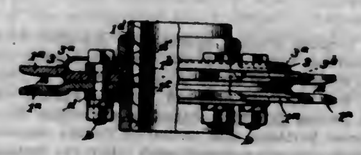
1. A link belt or chain including links having overlapped ends, means passing through the ends of each link to hold the overlapped links together in a pivotal manner, and a lubricant holder on the outside of one of said links covering both pivot means in said link and secured thereto by said pivot means.

1,634,643. INTERLOCKING LINK. SAMUEL J. BENS, New York, N. Y. Filed Feb. 7, 1924, Serial No. 691,249. Renewed Nov. 16, 1926. 5 Claims. (Cl. 143—135.)



3. A chain saw including individual links having overlapping ends, an aperture in the end of each link, each link having an undercut projection thereon extending within the aperture of the overlapping link, and engaging an undercut portion of the aperture wall.

1,634,644. LINK FOR CHAINS OR BELTS. SAMUEL J. BENS, New York, N. Y. Filed Feb. 7, 1924, Serial No. 691,251. Renewed Nov. 16, 1926. 5 Claims. (Cl. 143—135.)



3. A chain or belt including individual links, adjacent links having their ends overlapped, means for securing the overlapped ends together in a pivotal manner, the edges of adjacent links being in contact with each other and overlapping each other in a manner in reverse relation to the overlapped ends.

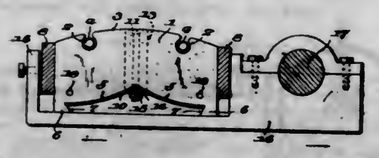
1,634,645. LINK JOINT FOR CHAINS. SAMUEL J. BENS, New York, N. Y., assignor to Chain Saw Corporation, Wilmington, Del., a Corporation of Delaware. Substitute for application Serial No. 463,833, filed Apr. 23, 1921. This application filed Nov. 16, 1926. Serial No. 148,762. 4 Claims. (Cl. 74—32.)

1. In a link belt or chain joint, a pair of overlapping links having aligning openings, a pair of arc-shaped bushings within the openings, a wear receiving bushing between said arc-shaped bushings and side plates connected together and overlapping said bushings and links.

1,634,646. WHEEL OR SPROCKET SHEAVE. SAMUEL J. BENS, New York, N. Y., assignor to Chain Saw Corporation, Wilmington, Del., a Corporation of Delaware. Substitute for application Serial No. 463,834, filed Apr. 23, 1921. This application filed Nov. 16, 1926. Serial No. 148,763. 4 Claims. (Cl. 74—32.)

2. A pulley or sheave for sprocket chains or link belts having an annular channel on one face thereof open towards the axis of the wheel and ports or ducts leading from said channel to chain carrying portion of the wheel.

1,634,647. SPROCKET CHAIN OR LINK BELT. SAMUEL J. BENS, New York, N. Y., assignor to Chain Saw Corporation, Wilmington, Del., a Corporation of Delaware. Substitute for application Serial No. 463,835, filed Apr. 23, 1921. This application filed Nov. 16, 1926. Serial No. 148,764. 4 Claims. (Cl. 74—32.)

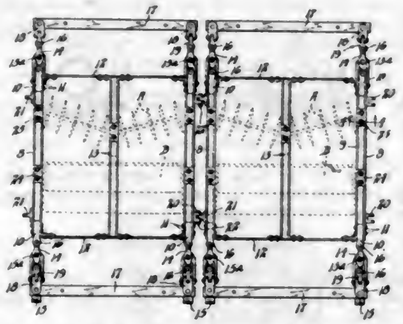


1. A link belt or chain having links provided with laterally extended flanges, and wear plates secured upon the outer faces of said flanges.

1,634,648. INSECT TRAP. ALBERT D. CARDINET, Los Angeles, Calif. Filed Mar. 4, 1926. Serial No. 92,237. 3 Claims. (Cl. 43—107.)

1. An insect trap, including a container, an overhanging cover for said container, and means on said overhanging cover to permit ingress of insects, the container having an overhanging edge co-operating with a corresponding up-turned edge of the cover to provide a substantially irremovable closure and also providing a support for the container.

1,634,649. HEATING AND DRYING DEVICE. FRANK J. COOK, Cleveland, Ohio, assignor of seventy-five per cent to Anne J. Kleuver, Lakewood, Ohio. Filed July 6, 1925. Serial No. 41,632. 7 Claims. (Cl. 34—18.)

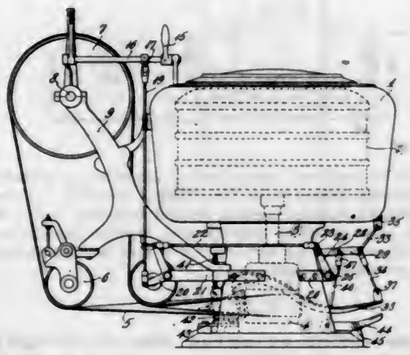


1. A heating and drying device comprising a plurality of supports formed from fire-resisting material, an electric heating element carried by said supports, and a deflector plate arranged beneath said heating element and adapted to direct an air draft over said heating element upon movement of said device.

1,634,650. UNITARY FRAME FOR FARM IMPLEMENTS. ALVIN R. COON, Chester, Mont. Filed Apr. 2, 1926. Serial No. 99,270. 9 Claims. (Cl. 97—233.)

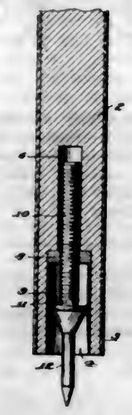
1. A device of the class described having in combination a plurality of wheel supported unitary frames, each having spaced sides, means for hingedly securing said

frames together in tandem arrangement, means for hingedly securing said frames together in side by side arrangement, and means on each of said frames for attaching one or more implements thereto between said sides in a plurality of different lateral positions.



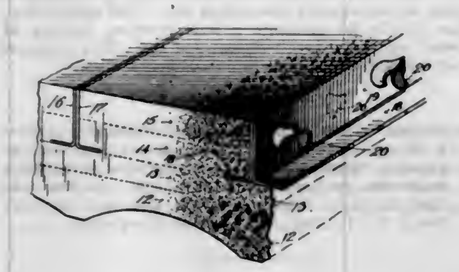
3. A frame of the class described having in combination side members, a plurality of coupling members, one adapted to be hinged adjacent each corner of said frame, and a wheel mounted beneath each coupling member adapted to support said frame.

6. A device of the class described having in combination a plurality of unitary frames, each comprising spaced parallel sides, caster wheels mounted adjacent each corner of said frame, means for removably mounting said caster wheels, means for hingedly attaching two or more of said frames together in side by side arrangement and means for securing two or more of said frames together in tandem arrangement.



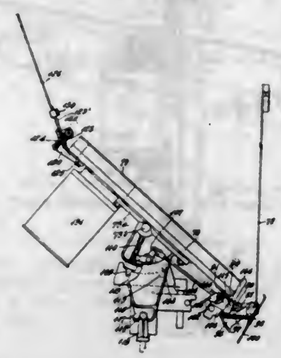
9. A device of the class described having in combination a plurality of unitary frames each comprising spaced vertically slotted sides, a pair of vertically apertured forks at each end of each of said frames and wheeled trucks for said frames each comprising a pair of coupling members having horizontally extending tongues adapted to be hinged to said forks and wheels supporting said coupling members, and swivelled therein.

1,634,651. BRAKE-ACTUATING MECHANISM FOR CENTRIFUGAL MACHINES. WILLIAM COLCLOUGH, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 572,575. 15 Claims. (Cl. 192—10.)



1. A centrifugal extractor, comprising a rotatable basket, a source of power for rotating the basket, means for operatively connecting said basket to and disconnecting the same from said source of power, means for effecting a braking action upon the basket, said two means being so interconnected that actuation of either will effect operation of both, and separate means for operating said braking means independently of said basket and power connecting and disconnecting means.

1,634,652. GOLF ACCESSORY. PAUL A. CZICHOS, Washington, D. C. Filed Apr. 20, 1927. Serial No. 185,211. 20 Claims. (Cl. 273—32.)



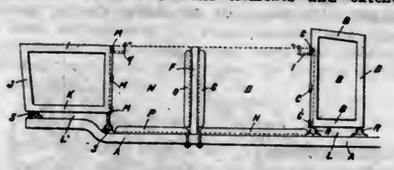
1. A golf tee positioning device, comprising a holder, a height adjuster and a pusher.

1,634,653. TERRAZZO FLOORING. BRUNO O. A. DE PAOLI, Palisade, N. J. Filed Oct. 17, 1921. Serial No. 508,303. 2 Claims. (Cl. 94—18.)

1. In a terrazzo flooring construction provided with a base composition upon which the terrazzo flooring composition is spread metal strips or plates having vertically extending web portions disposed flatwise against each other and having laterally extending anchoring flanges at their lower portions, said anchoring flanges extending in opposite directions away from each other, the vertically extending web portions of said strips having tongues pressed out therefrom, the tongues of one strip being in longitudinal staggered relation with respect to the tongues of the other strip, said strips being placed on said base composition and acting as a depth guide for the terrazzo flooring composition.

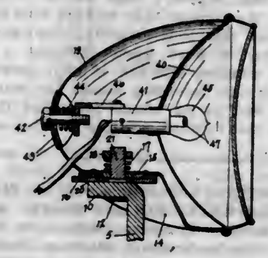
1,634,654. SHIRT-IRONING MACHINE. ALBERT J. DREHER, Cincinnati, and DANA H. BENJAMIN, Cleveland Heights, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Dec. 10, 1921. Serial No. 521,423. 23 Claims. (Cl. 68—9.)

1. In an ironing machine, an ironing bed, and a thin metal form upon which a garment is adapted to be dressed, said form being pivotally mounted upon said bed and adapted for swinging movement about a substantially horizontal axis away from said bed so as to enable the garment to be conveniently dressed upon said form.



1,634,655. WASHOUT PLUG AND METHOD OF MAKING SAME. STANLEY W. ELSTONE, Walkerville, Ontario, Canada, assignor to Huron Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1925. Serial No. 4,109. 8 Claims. (Cl. 220—39.)

8. A closure plug comprising a body threaded for a portion of its length to engage a threaded circular wall and including circular enlargement, an outer extension at one end of the enlargement and a bendable wall projecting from said outer extension, and a gasket fitted to the said enlargement and projecting beyond the same at one end, and having its opposite end clamped to said enlargement by the bendable wall which is deflected inwardly.



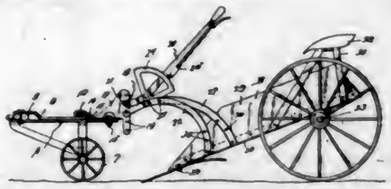
1,634,656. COACH BODY OF AUTOMOBILES. RAYMOND ALBERT FATOUX, Neuilly-sur-Seine, France. Filed Dec. 1, 1925, Serial No. 72,556, and in France Dec. 23, 1924. 2 Claims. (Cl. 296—1.)

1. In an automobile, a coach body consisting of a forward shell element mounted on the chassis by means of ball joints, a rear shell element mounted on the said chassis also by means of ball joints, doors pivotally mounted on one of the shell elements and extending

toward the other element and resilient means for preventing the doors jamming owing to the independent movements of the elements, substantially as described.

1,634,657. ROAD LIGHT LAMP. FAY O. FARWELL, Toledo, Ohio. Filed Jan. 20, 1926. Serial No. 82,422. 3 Claims. (Cl. 240—61.)

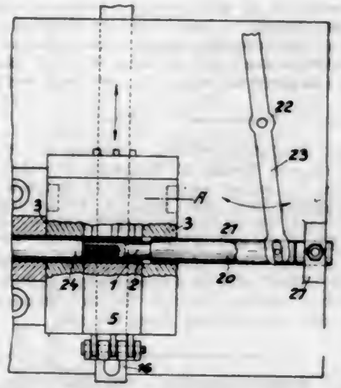
1. In a device of the kind described, a bracket including a journal portion, a bolt forming a stub shaft and rotatably mounted on said journal portion to extend at right angles thereto, a lamp rotatably mounted on said bolt, and a single operating means connected to said lamp and movable longitudinally to swing the lamp about said bolt and rotatively to swing the bolt about the journal portion.



1,634,658. PHOTOPRINTING. EDWARD F. FLAMMER, New York, and HALSEY E. SILLIMAN, Brooklyn, N. Y., assignors, by mesne assignments, to Rainbow Photo-Reproductions, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 2, 1924. Serial No. 741,276. 18 Claims. (Cl. 41—41.5.)

1. The process which consists in exposing a bichromated sensitized colloid film photographically, hardening the light affected portions of the film by treatment with hydroquinone, and printing from the film.

1,634,659. PHOTOPRINTING. EDWARD F. FLAMMER, New York, and HALSEY E. SILLIMAN, Brooklyn, N. Y., assignors to Rainbow Photo-Reproductions, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 11, 1926, Serial No. 80,667, and in Canada Dec. 26, 1925. 8 Claims. (Cl. 41—41.5.)

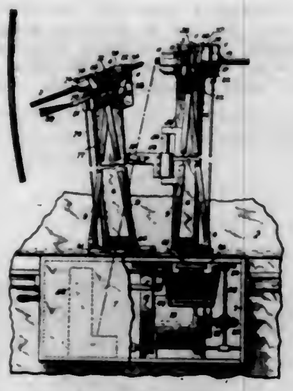


1. The process which consists in providing a colloid film sensitized with a chromic acid salt, exposing the film photographically, washing the film to remove chromic acid salt unaffected by light, subjecting the film to a reagent which acts on the portions of the film which have been unaffected by light to increase the hardness thereof, but which also acts on the light affected portions of the film to increase the hardness thereof to a much greater extent, and without removing the colloid from the first mentioned portions of the film, applying a greasy ink to the film and printing therewith while maintaining moist with water the portions unaffected by the light, the portions which have been affected by light, selectively receiving the ink and depositing it upon the article printed upon.

1,634,660. PEANUT DIGGER. GEORGE D. GRIZZARD, North Emporia, Va. Filed Sept. 7, 1926. Serial No. 133,983. 1 Claim. (Cl. 55—137.)

An agricultural digging device of the class described including in combination, a front wheeled frame, a casting on said frame, a lever pivoted to said casting, a toothed segment pivotally engaged with said lever at an intermediate portion thereof, a detent on said lever engageable with said segment, rods having intermediate portions fixed to the segment, their forward ends straddling the casting, their rear ends extending downwardly and outwardly, a rear wheeled frame including a pair of parallel spaced members attached at their forward ends to said rods, an axle extending across the rear portion of said means, and having wheels journalled thereon, a blade fixed to the forward portions of the means.

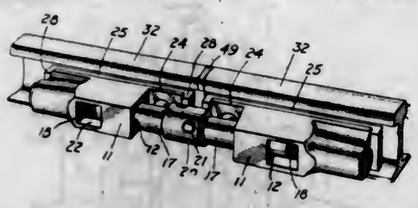
1,634,661. CONTRIVANCE FOR ROLLING ZINC AND OTHER SHEET-METAL HOLLOW WARE. JOHANNES GRONEFELD, Berlin, Germany, assignor to R. Sachs Gesellschaft mit beschränkter Haftung, Berlin, Germany, a German Company. Filed Feb. 24, 1926, Serial No. 90,394, and in Germany Mar. 6, 1925. 13 Claims. (Cl. 113—33.)



1. A machine for producing cylinders from sheet metal strips comprising a base block having a cylindrical bore therein and a guideway for the sheet metal; a mandrel mounted in said bore; a cutting device mounted on the block and having a knife arranged adjacent the guideway for cutting off the blanks to be formed into cylinders; and a plurality of rods slidably mounted in said block and adapted to feed the blanks of sheet metal into the bore and around the mandrel to form the cylinder.

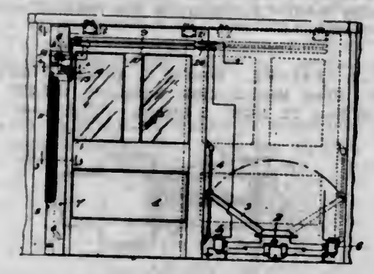
1,634,662. SOUND-REPRODUCING APPARATUS. MORRIS M. GAUSER, East Orange, N. J., assignor, by mesne assignments, to Sonora Phonograph Company, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 388,968. 3 Claims. (Cl. 274—35.)

1. In a sound box, a supporting member, a supported member mounted upon the perimeter of said supporting member, tubular cushioning spacing rings interposed between said members, means for compressing said rings in an axial direction whereby said rings will be expanded in a diametrical direction, recesses in the adjacent peripheral surfaces of said members, permitting expansion of portions of said rings into said recesses whereby said members are locked against relative rotation.



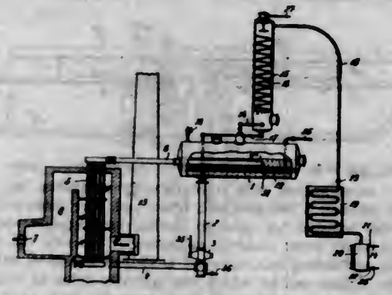
1,634,663. SEARCHLIGHT. THEODORE HALL, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1920. Serial No. 351,099. 9 Claims. (Cl. 176—51.)

1. In a searchlight, the combination with an electrode holder, of a member rotatable thereon, a threaded member concentric to and normally rotatable with said rotatable member, means for intermittently preventing rotation of said threaded member, a feed roller carried by said rotatable member, and means operable by relative rotation of said members for rotating said roller to feed said electrode axially.



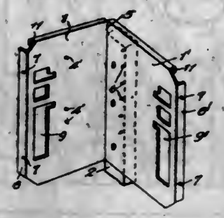
1,634,664. RAIL SPREADER. FORD W. HARRIS, Los Angeles, Calif., assignor to Magnetic Signal Co., Los Angeles, Calif., a Corporation of California. Filed Feb. 23, 1926. Serial No. 89,911. 8 Claims. (Cl. 254—43.)

1. A rail spreader comprising: a pair of blocks having longitudinally elongated openings; bolts adapted to extend through said longitudinally elongated openings for attaching said blocks to adjacent rails, said bolts being adjustable in said longitudinally elongated openings so that said bolts may be aligned with openings in said rails; means for forcing said blocks apart; and adapter



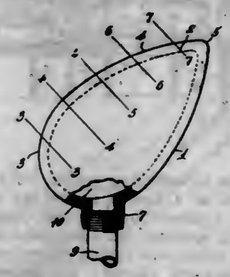
members placed between said blocks and said rails through which thrust is transferred from said blocks to said rails.

1,634,665. CONTROL MECHANISM FOR MOTOR-ACTUATED DOORS. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Apr. 11, 1921. Serial No. 460,577. 4 Claims. (Cl. 200—54.)



1. A circuit controlled apparatus for door operating motors, including circuit terminals carried at the front edge of the door and extending the substantial height thereof and insulated from each other against contact from vibration and arranged to be manually actuated into engagement so as to establish electric contact therebetween when the door, in closing, encounters an obstruction.

1,634,666. CRACKING OF HYDROCARBONS. EUGENE C. HEATHEL and HARRY L. PELZER, Chicago, Ill., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 8, 1924. Serial No 704,926. 15 Claims. (Cl. 196—55.)

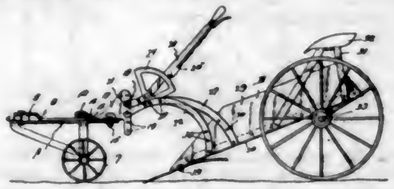


1. The improvement in the cracking of hydrocarbon oils under pressure which comprises heating a charge of the oil in a pressure still to the cracking temperature under pressure, maintaining in said still charge a body of fuller's earth or similar absorbent material supported on a support adapted to permit free passage of oil and extending entirely across the charge of oil in the pressure still, withdrawing oil from beneath said support and circulating it through heating tubes and discharging the oil from said tubes directly into the body of oil above such absorbent material.

1,634,667. DEVICE FOR USE IN APPLYING LOCKS TO DOORS, ETC. GERD HOBBIESIEFKEN, Burlington, Iowa. Filed Mar. 25, 1926. Serial No. 97,349. 4 Claims. (Cl. 33—197.)

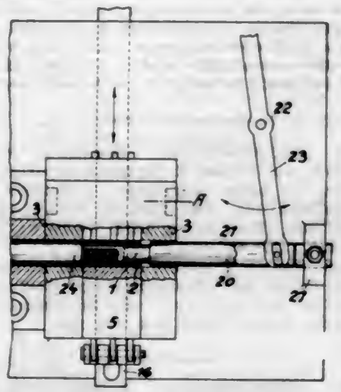
1. Means for facilitating the application of mortise locks to doors consisting of a right angle device of sheet metal, one member of which is provided with point projections to mark the location of the door knob and key hole and the other member of which is provided with point projections to mark the location of the lock, the first named member being also provided with openings to mark the location of the locking bolt and latch bolt of the lock upon the door jamb.

1,634,668. PUFF IRON. HARRY C. HOLDEN, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 30, 1922. Serial No. 585,171. 1 Claim. (Cl. 68—26.)



A puff iron, comprising a substantially ovoid body having a rounded heel end portion and a substantially pointed toe end portion, said body near the heel end portion being provided with means for attaching it to a support with its rounded heel end exposed, said body being so formed that its upper surface when on said support has a relatively sharp ridge extending from the toe end toward the heel end, said pointed toe and ridge being thereby presented upwardly for use in opening or ironing pleats, ruffles, folds or the like.

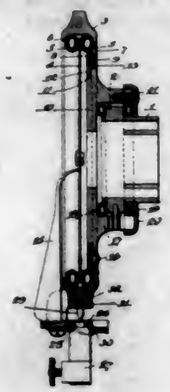
1,634,669. SOUND BOARD FOR PIANOS. GEORGE H. JONES, Oregon, Ill. Filed Sept. 30, 1922. Serial No. 591,619. 3 Claims. (Cl. 84—189.)



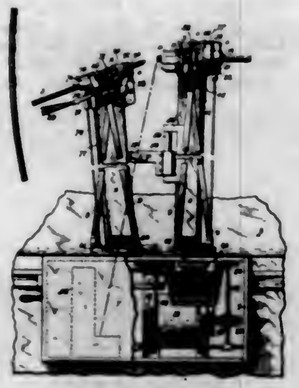
1. The combination with an upright piano having a sound board and a vertical post traversing the back there-

1,634,660. PEANUT DIGGER. GEORGE D. GRIZZARD, North Emporia, Va. Filed Sept. 7, 1926. Serial No. 133,983. 1 Claim. (Cl. 55—137.)

An agricultural digging device of the class described including in combination, a front wheeled frame, a casting on said frame, a lever pivoted to said casting, a toothed segment pivotally engaged with said lever at an intermediate portion thereof, a detent on said lever engageable with said segment, rods having intermediate portions fixed to the segment, their forward ends straddling the casting, their rear ends extending downwardly and outwardly, a rear wheeled frame including a pair of parallel spaced members attached at their forward ends to said rods, an axle extending across the rear portion of said means, and having wheels journalled thereon, a blade fixed to the forward portions of the means.



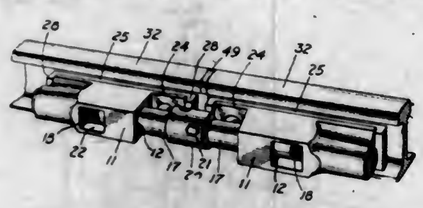
1,634,661. CONTRIVANCE FOR ROLLING ZINC AND OTHER SHEET-METAL HOLLOW WARE. JOHANNES GRONEFELD, Berlin, Germany, assignor to R. Sachs Gesellschaft mit beschränkter Haftung, Berlin, Germany, a German Company. Filed Feb. 24, 1926, Serial No. 90,394, and in Germany Mar. 6, 1925. 13 Claims. (Cl. 113—33.)



1. A machine for producing cylinders from sheet metal strips comprising a base block having a cylindrical bore therein and a guideway for the sheet metal; a mandrel mounted in said bore; a cutting device mounted on the block and having a knife arranged adjacent the guideway for cutting off the blanks to be formed into cylinders; and a plurality of rods slidably mounted in said block and adapted to feed the blanks of sheet metal into the bore and around the mandrel to form the cylinder.

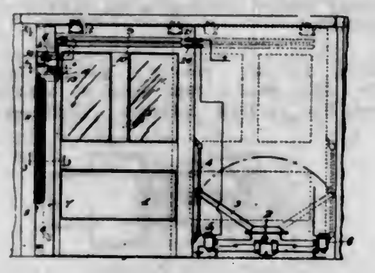
1,634,662. SOUND-REPRODUCING APPARATUS. MORRIS M. GRUBER, East Orange, N. J., assignor, by mesne assignments, to Sonora Phonograph Company, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 388,968. 3 Claims. (Cl. 274—35.)

1. In a sound box, a supporting member, a supported member mounted upon the perimeter of said supporting member, tubular cushioning spacing rings interposed between said members, means for compressing said rings in an axial direction whereby said rings will be expanded in a diametrical direction, recesses in the adjacent peripheral surfaces of said members, permitting expansion of portions of said rings into said recesses whereby said members are locked against relative rotation.



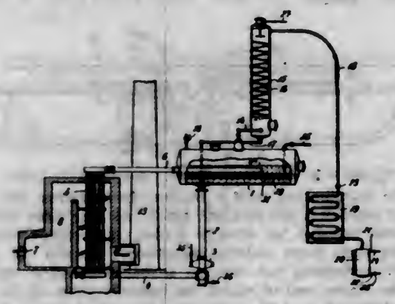
1,634,663. SEARCHLIGHT. THEODORE HALL, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1920. Serial No. 351,099. 9 Claims. (Cl. 176—51.)

1. In a searchlight, the combination with an electrode holder, of a member rotatable thereon, a threaded member concentric to and normally rotatable with said rotatable member, means for intermittently preventing rotation of said threaded member, a feed roller carried by said rotatable member, and means operable by relative rotation of said members for rotating said roller to feed said electrode axially.



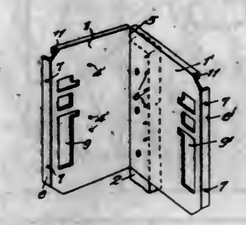
1,634,664. RAIL SPREADER. FORD W. HARRIS, Los Angeles, Calif., assignor to Magnetic Signal Co., Los Angeles, Calif., a Corporation of California. Filed Feb. 23, 1926. Serial No. 89,911. 8 Claims. (Cl. 254—43.)

1. A rail spreader comprising: a pair of blocks having longitudinally elongated openings; bolts adapted to extend through said longitudinally elongated openings for attaching said blocks to adjacent rails, said bolts being adjustable in said longitudinally elongated openings so that said bolts may be aligned with openings in said rails; means for forcing said blocks apart; and adapter



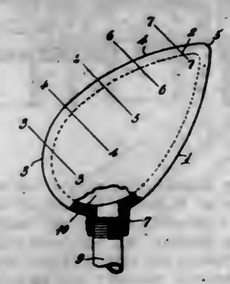
members placed between said blocks and said rails through which thrust is transferred from said blocks to said rails.

1,634,665. CONTROL MECHANISM FOR MOTOR-ACTUATED DOORS. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Apr. 11, 1921. Serial No. 460,577. 4 Claims. (Cl. 200—54.)



1. A circuit controlled apparatus for door operating motors, including circuit terminals carried at the front edge of the door and extending the substantial height thereof and insulated from each other against contact from vibration and arranged to be manually actuated into engagement so as to establish electric contact therebetween when the door, in closing, encounters an obstruction.

1,634,666. CRACKING OF HYDROCARBONS. EUGENE C. HERTHEL and HARRY L. PELZER, Chicago, Ill., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 8, 1924. Serial No. 704,926. 15 Claims. (Cl. 196—55.)

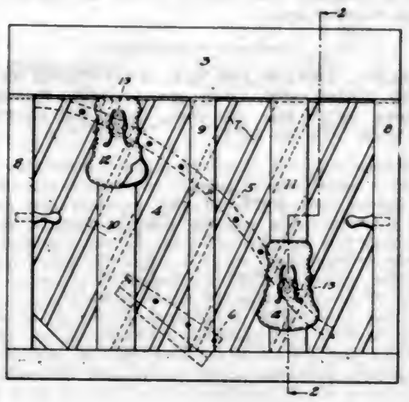


1. The improvement in the cracking of hydrocarbon oils under pressure which comprises heating a charge of the oil in a pressure still to the cracking temperature under pressure, maintaining in said still charge a body of fuller's earth or similar absorbent material supported on a support adapted to permit free passage of oil and extending entirely across the charge of oil in the pressure still, withdrawing oil from beneath said support and circulating it through heating tubes and discharging the oil from said tubes directly into the body of oil above such absorbent material.

1,634,667. DEVICE FOR USE IN APPLYING LOCKS TO DOORS, ETC. GERD HOBBIEBRUNKEN, Burlington, Iowa. Filed Mar. 25, 1926. Serial No. 97,349. 4 Claims. (Cl. 33—197.)

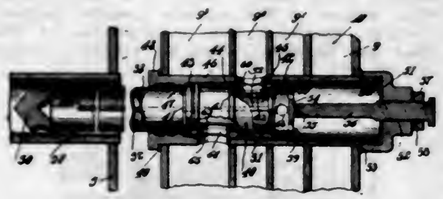
1. Means for facilitating the application of mortise locks to doors consisting of a right angle device of sheet metal, one member of which is provided with point projections to mark the location of the door knob and key hole and the other member of which is provided with point projections to mark the location of the lock, the first named member being also provided with openings to mark the location of the locking bolt and latch bolt of the lock upon the door jamb.

1,634,668. PUFF IRON. HARRY C. HOLDEN, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 30, 1922. Serial No. 585,171. 1 Claim. (Cl. 68—26.)



A puff iron, comprising a substantially ovoid body having a rounded heel end portion and a substantially pointed toe end portion, said body near the heel end portion being provided with means for attaching it to a support with its rounded heel end exposed, said body being so formed that its upper surface when on said support has a relatively sharp ridge extending from the toe end toward the heel end, said pointed toe and ridge being thereby presented upwardly for use in opening or ironing pleats, ruffles, folds or the like.

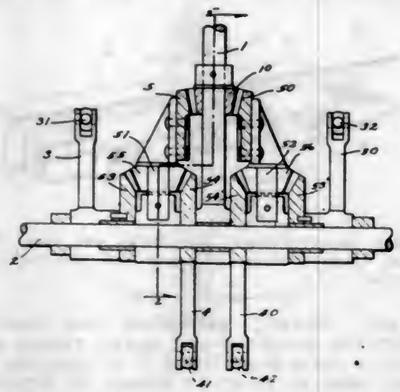
1,634,669. SOUND BOARD FOR PIANOS. GEORGE H. JONES, Oregon, Ill. Filed Sept. 30, 1922. Serial No. 591,619. 3 Claims. (Cl. 84—189.)



1. The combination with an upright piano having a sound board and a vertical post traversing the back there-

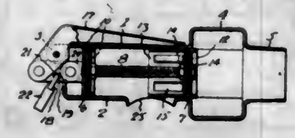
of adjacent the back of the sound board, of a hollow sound body wider than and forming part of said post; and a sound tube secured to and having one end closed

by said sound board, the other end of said tube being secured to and opening into said sound body, substantially as described.



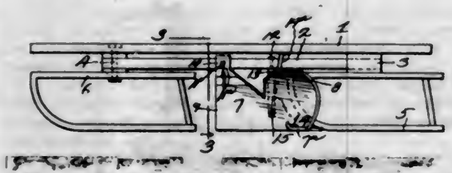
1,634,670. STEAM SUPERHEATING UNIT. TEODORO LARREY, Mexico, Mexico, assignor to himself and Luis Godard, Mexico, Mexico. Filed June 18, 1926. Serial No. 116,896. 3 Claims. (Cl. 122—462.)

1. In a steam superheating system for steam engines, the combination of a header having its interior partitioned to form a plurality of vertical chambers disposed one in front of another; an open-ended tapered sleeve mounted in the header and extending transversely through the several chambers thereof; an open-ended tapered sleeve frictionally engaged in the first-named sleeve and removable through the front end thereof, said sleeves having registering inlet ports which open into one chamber and registering outlet ports which open into another chamber; a tubular superheating unit inserted into and rigidly secured in the rear end of the inner sleeve to be withdrawn with the same through the said front end of the outer sleeve; and releasable fastening means for holding the inner sleeve against withdrawal.



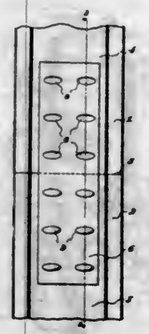
1,634,671. BRAKE EQUALIZER. WILLIAM J. LAURINE, Seattle, Wash. Filed May 20, 1926. Serial No. 110,375. 2 Claims. (Cl. 188—204.)

1. A multiple brake equalizer comprising, in combination with a plurality of members each adapted for operative connection to its respective brake, and with a member movable to initiate the braking effort, differential means connecting the several first members progressively in pairs to the last member, each of said differential means permitting free relative movement of the various



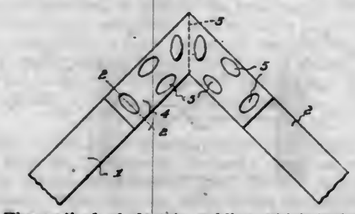
pairs of members within limits, but having limiting means preventing relative movement of the pairs of members therebeyond.

1,634,672. FAUCET. BONNIE L. MALLORY, Cleveland, Ohio. Filed Mar. 2, 1923. Serial No. 622,276. Renewed Nov. 22, 1926. 5 Claims. (Cl. 251—41.)



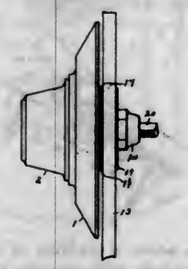
4. A faucet comprising a sheet metal body portion having an attaching portion and a discharge opening, a valve slidably disposed in said body portion, a portion of said body intermediate said discharge opening and attaching portion being enlarged and prismatic in cross section to form a wrench receiving portion, said valve controlling the flow of liquid from said wrench receiving portion to said discharge opening, a link connected to said valve and projecting through said body portion, means for sealing the opening in said body portion through which said link projects, and a lever operatively connected to said link.

1,634,673. SNOWPLOW. LOUIS MARTIN, Muncy, Pa. Filed July 20, 1926. Serial No. 123,676. 1 Claim. (Cl. 37—46.)



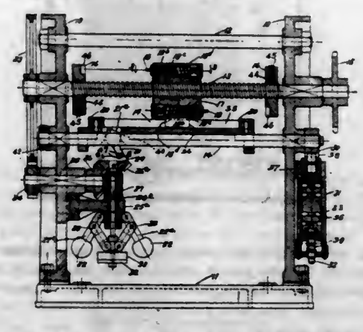
The combination with a rearwardly extending bar disposed beneath a bob-sled and front and rear sleds carried by said bob-sled, of scraper blades, said scraper blades having their front ends in engagement beneath the rearwardly extending bar, opposed U-shaped members carried by the blades and in which the opposite sides of the bar are disposed, a bolt extending through said U-shaped members and the bar, said blades diverging rearwardly and outwardly, a brace connected to the bar rearwardly of the blades, arms carried by said brace and diverging downwardly and outwardly, the outer ends of said arms being anchored to said blades.

1,634,674. METHOD OF CONNECTING METALLIC ELEMENTS. ROYAL MATTICE, Bethlehem, Pa. Filed July 17, 1925. Serial No. 44,340. 4 Claims. (Cl. 219—10.)



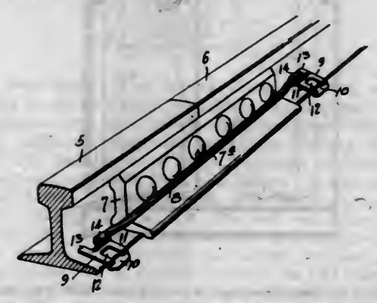
1. The method of connecting metallic members together end to end which comprises electrically welding a plate to said members on each side of the meeting edges thereof in such a manner as to form a plurality of shelves at the points of weld, the longer dimensions of said shelves being disposed opposite the longitudinal direction of said plate.

1,634,675. METHOD OF ELECTRIC WELDING. ROYAL MATTICE, Bethlehem, Pa. Filed Aug. 21, 1925. Serial No. 51,656. 4 Claims. (Cl. 219—10.)



1. The method of electric welding which includes forming in a connecting element an opening, the longitudinal dimension of which is greater than the transverse dimension and then flowing metal into said opening to form a shelf at the place of weld transverse to the line of strain, and having a greater longitudinal dimension than a transverse dimension.

1,634,676. VERNIER DEVICE. THEODORE F. W. MEYER, Elizabeth, N. J., assignor to James R. English, Newark, N. J. Filed Dec. 1, 1922. Serial No. 604,296. 1 Claim. (Cl. 74—7.)

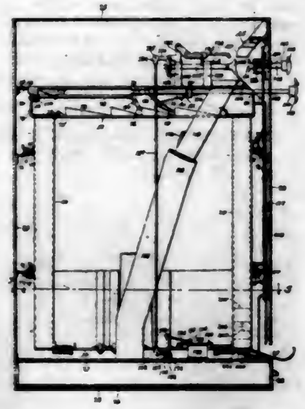


In a vernier device of the class described, the combination of a sleeve shaft having an index disk mounted upon one end thereof and a supporting bracket upon the other end thereof, a driving shaft extending through said sleeve shaft and having a turning knob upon its outer end and a driving pinion at its inner end, clutch members respectively upon said knob and disk whereby said shafts may be manually coupled together to rotate in unison, a gear train carried by said supporting bracket and having a gear in mesh with said pinion, and a frictionally retarded gear in mesh with the last element of said gear train, whereby the free rotation of said knob will communicate a materially slower rotation of said driven shaft.

1,634,677. CONTROLLER. FREDERICK B. MILLER, Scottdale, Pa. Filed July 10, 1923. Serial No. 650,654. 7 Claims. (Cl. 192—140.)

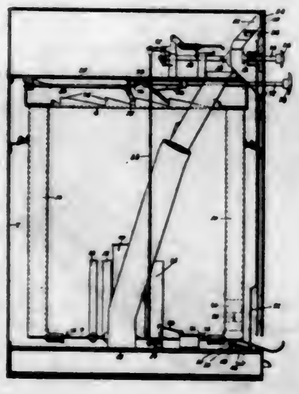
1. A controller comprising a frame, a screw shaft journaled in said frame and adapted to be operated by the source of power to be controlled, a cam shaft journaled in said frame, a traveling nut on said screw shaft, means operable by said nut for operating said cam shaft under normal speed conditions to limit the operation of said source of power, and other means for operating said cam shaft to govern the speed of said source of power.

1,634,678. TERMINAL STRUCTURE FOR RAIL BONDS. KARL J. MOSEBACH, Pittsburgh, Pa. Filed June 23, 1925. Serial No. 39,016. 4 Claims. (Cl. 173—278.)



1. Terminal structure comprising a cable, a clip of sheet metal having a portion adapted to engage one side of the rail base, and a portion struck up therefrom adapted to engage the other side of said rail base, an extension on said last-named portion adapted to be secured to the cable end, and another extension on the last-named portion spaced from the cable end in a direction longitudinally thereof.

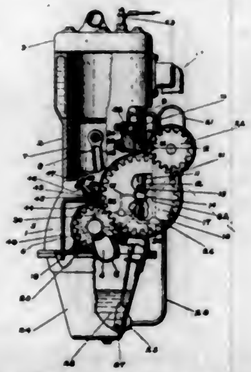
1,634,679. COIN-CONTROLLED VENDING AND CHANGE-MAKING MACHINE. CLIFTON W. NIXON, New York, N. Y. Filed July 27, 1922. Serial No. 577,822. 22 Claims. (Cl. 194—80.)



1. A coin-controlled vending and change-making machine comprising a casing, a magazine inclosed by the cas-

ing and provided with a series of groups of stacks capable of holding merchandise and different denominations of coins, a plurality of coin-controlled mechanisms, and

means operable by each coin-controlled mechanism for effecting the discharge of merchandise and coins from a different predetermined number of stacks of each group.



1,634,680. VENDING MACHINE. CLIFTON W. NIXON, New York, N. Y. Original application filed July 27, 1922, Serial No. 577,822. Divided and this application filed June 5, 1924. Serial No. 718,163. 8 Claims. (Cl. 194—1.)

1. In a vending machine, a casing provided with a coin-deposit slot, a movable magazine provided with a merchandise stack, a weighted-pin arranged in the stock to be projected therefrom when there are no articles in the stack, means for closing the coin-deposit slot including a pivoted lever arranged to receive said weighted-pin, and means for riding said weighted-pin upwardly into position to be received by said pivoted lever.

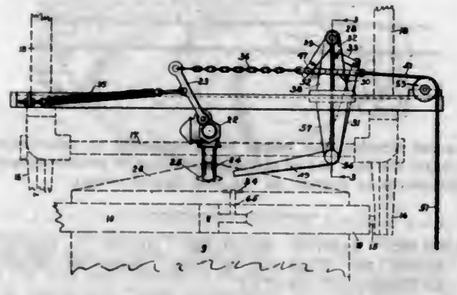
1,634,681. INTERNAL-COMBUSTION ENGINE. FRANK J. OAKES, Indianapolis, Ind. Filed May 21, 1926. Serial No. 110,655. 7 Claims. (Cl. 184—6.)

5. In explosive engines employing timing gears and a substantially oil tight casing to contain same; a means serving to introduce oil into said casing under pressure; an escape valve serving to automatically release such oil as the hydraulic pressure of same reaches a predetermined pressure per square inch, for supplying oil around said gears at a substantially uniform pressure; and a

cesspool means communicated between said introducing means and said casing in which settlings accumulate for clearing the oil.

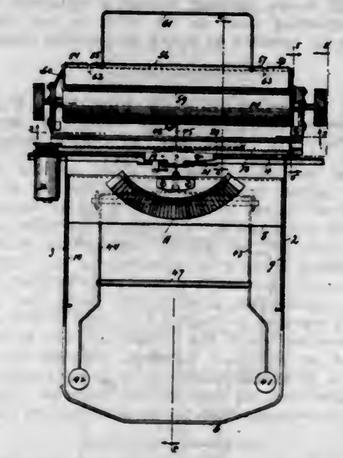
1,634,682. POSITIONING DEVICE FOR KNITTING-MACHINE ELEMENTS. ALBERT E. PAGE, Brooklyn, N. Y., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Dec. 21, 1925. Serial No. 76,585. 6 Claims. (Cl. 66—104.)

1. In a knitting machine, a slotted needle-bed and web-holders, and a positioning bearing for determining the positions of web-holders in respect to the needle-bed, in combination with means for altering the relation position of portions of the positioning bearing in relation to the needle-bed and in the direction of the needle slots in the needle-bed to predetermined extents, and means for fixing the parts together in their altered relation.



1,634,683. TRACTION WHEEL. KARL PROBST, Toledo, Ohio. Filed Aug. 18, 1924. Serial No. 732,621. 10 Claims. (Cl. 305—13.)

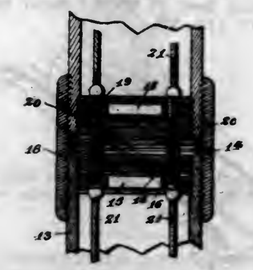
8. In a traction wheel, a plurality of traction elements connected to the wheel, each traction element having a roller, the wheel having a plurality of pairs of parallel surfaces terminating in a cylindrical surface, each roller fitting a pair of the said parallel surfaces, and the cylindrical surface and movable along the plane surfaces, the plane surfaces extending equi-distant inside and outside



of the wheel, the parallel plane surfaces being separated by a distance substantially equal to the diameter of the roller, and the cylindrical surface located at the outside ends of the plane surfaces.

1,634,684. TOGGLE MECHANISM. CARL S. REIGER, St. Louis, Mo., assignor to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed May 15, 1923. Serial No. 639,078. 9 Claims. (Cl. 249—1.)

1. An automatic weighing machine having, in combination, a weighing receptacle, means for movably supporting the receptacle, means for delivering material into the receptacle, a valve for controlling and cutting off the delivery of material, a toggle operating to lock the valve in open position when the toggle is straightened, a spring operating to close the valve when the toggle is broken, and means operating to initiate the breaking of the toggle when the weighing receptacle is depressed a predetermined amount comprising a lever connected to said toggle and tripping means for said lever adapted to contact therewith when said receptacle has been lowered the predetermined amount.



1,634,685. CHILD'S TYPEWRITING MACHINE. LUDWIG REISCHL, Nuremberg, Germany, assignor to Bing Werke (formerly Gebrüder Bing A. G.), Nuremberg, Germany. Filed Mar. 16, 1926, Serial No. 95,003, and in Germany Mar. 21, 1925. 4 Claims. (Cl. 197—73.)

1. In a typewriting machine of the type described, the combination with the frame, a carriage supported thereby and a shaft rotatably journalled in said carriage, of a paper-roller, a holder therefor, a paper-guide cooperating with said paper-roller, the said holder and paper-guide

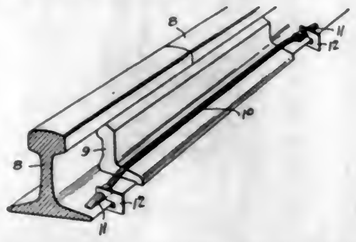
both being mounted on the said shaft, a shift-key and a lever controlled thereby and adapted to engage said holder for rocking the same upon the depression of said shift-key.

1,634,686. WELL-DRILLING TOOL. EDWARD A. ROBINSON, Atlanta, Ga. Filed Dec. 10, 1926. Serial No. 153,883. 8 Claims. (Cl. 255—28.)

8. A device of the character described comprising a plurality of pipe sections adapted to detachably carry a tool at the lower end thereof and an auxiliary connection between said sections and between the tool and said sections comprising a ring threadedly carried within each end of said sections and in the upper end of the tool having a pair of openings arranged at opposite sides thereof and a pair of cable sections arranged within each pipe section, one end of each cable section having a threaded plug insertable in an opening in one of the rings and the opposite end of the cable having a threaded socket insertable in an opening in the opposite ring whereby to form a continuous connection between said cable sections.

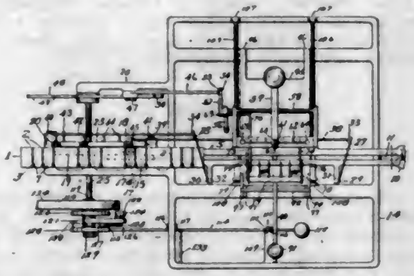
1,634,687. DISPLAY BLOCK FOR MOUNTING ARTIFICIAL TEETH. JOSEPH A. SANDERS, Philadelphia, Pa., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Sept. 2, 1922. Serial No. 585,842. 4 Claims. (Cl. 211—34.)

1. A tooth display block for dental use, consisting of an elongated pre-molded block of pliable wax material having artificial teeth attached thereon, combined with an integral elongated trough-like reinforcing backing structure of thin sheet metal of the same length as the wax block and having a back plate upon which the wax block rests and having integral opposing side flanges extending upward at right angles to the back and embracing the respective sides of the wax block, said backing structure open at its two opposite ends and having portions projecting into the body of the wax whereby the wax block is mechanically held to the backing structure in closed relation.



1,634,688. ANIMAL TRAP. JAMES E. SAPP, Bainbridge, Ga., assignor of one-half to Roland Bower, Bainbridge, Ga. Filed Feb. 8, 1926. Serial No. 86,838. 5 Claims. (Cl. 43—88.)

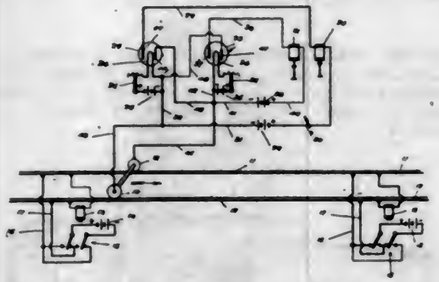
1. An animal trap including a base plate having a passage extending therethrough, jaws lying normally on one



side of said base plate, a spring on the opposite side of said base plate for closing said jaws, the latter being projectable through said passage and connected to said spring.

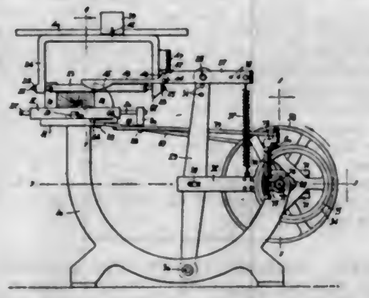
1,634,689. ELECTRICAL TERMINAL. EDUARD SCHENK, Pittsburgh, Pa., assignor to Mosebach Electric & Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 13, 1924. Serial No. 749,640. 2 Claims. (Cl. 173—278.)

1. A conductor terminal comprising a longitudinally recessed member of decreasing depth toward one end thereof and adapted to contain one end of a conductor of smaller diameter than the depth of the deeper portion of the recess, a plate disposed across the conductor and between the walls of the recess at said deeper portion, and means for securing said plate and conductor in position in said recess.



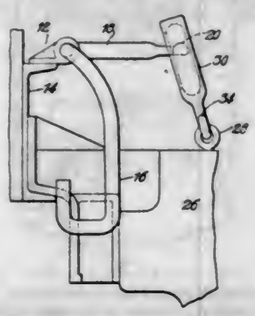
1,634,690. CIGAR-BUNCHING MACHINE. WALTER H. SCHUSSLER, Philadelphia, Pa., assignor to The Schussler Tobacco Machine Co. Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1922. Serial No. 606,578. 3 Claims. (Cl. 131—39.)

3. In a cigar bunching machine, leaf feeding mechanism, cutting mechanism to which the leaves are fed and which cut a leaf at a time into sprigs, weighing mechanism to which the leaves pass from said cutting mechanism in which the leaves are assembled, and from which they are discharged when a predetermined weight of sprigs is contained therein, and means controlled by the discharge operation of said weighing mechanism to stop the machine.



1,634,691. AUTOMATIC TRAIN CONTROL. DANIEL HERBERT SCHWEYER, Easton, Pa. Filed Apr. 26, 1924. Serial No. 709,140. 12 Claims. (Cl. 246—73.)

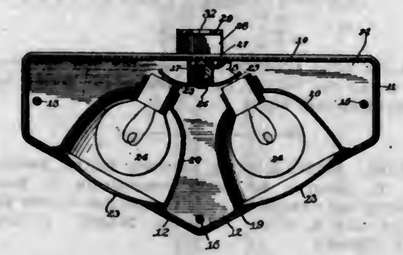
1. The combination with the traffic rails of a track and means for supplying and controlling the flow of electrical current in said rails, of a vehicle equipment including a circuit connected in electrical contact with said rails to receive current therefrom, two electrical valves each having three electrodes two of which are connected in said circuit, a circuit for each of said valves including a source of electrical energy and one of said two electrodes and the third electrode of the corresponding valve for the flow of current in the last named circuit dependent on the flow of current in the first named circuit, and translating means controlled by each of the last



named circuits, the valves being arranged to selectively control the last named circuits according to predetermined differences in current in the first named circuit.

1,634,692. SAWING MACHINE. DANIEL C. SLAGHT, Easton, Pa. Filed Oct. 3, 1925. Serial No. 60,227. 10 Claims. (Cl. 29—73.)

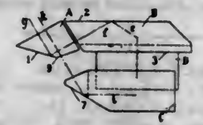
1. In a sawing machine, a rotatable shaft, an eccentric mounted adjustably on the shaft to change the eccentricity thereof, a saw operably connected with said eccentric, and means operably connected with said eccentric for adjusting same on the shaft in any angular position of the eccentric or during the rotation thereof.



1,634,693. COUPLER-RELEASE RIGGING. WILLIAM C. SLEEMAN, Birmingham, and ANDREW J. MONTEE, Pratt City, Ala. Filed Nov. 23, 1926. Serial No. 150,251. 5 Claims. (Cl. 213—170.)

1. In combination with the locking pin of a car coupler, a releasing mechanism including a link having one end which engages the locking pin, and an operating rod

having a crank arm with a ball-like portion formed at the end thereof, said link having an elongated socket formed therein for coaction with said ball-like portion of said link.



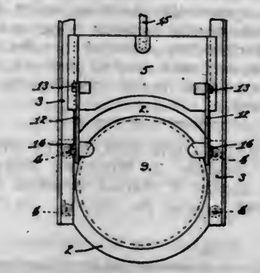
1,634,694. AUXILIARY HEADLIGHT. HARVEY G. SMITH, Salina, Kans. Filed July 21, 1926. Serial No. 124,029. 4 Claims. (Cl. 240—7.1.)

2. A device of the character described including a substantially triangular-shaped casing having a back wall and angularly disposed front walls, a contact supported by the back wall, angularly disposed reflectors secured to said walls, and lamps mounted in said reflectors and engaging the ends of the contact.

4. A device of the character described including a casing having angularly disposed front walls and a back wall, an insulating block fixed to the back wall, a flat spring contact fixed to said block and projecting at its ends at opposite sides of the block, angularly disposed reflectors carried by said front walls, and lamps mounted in said reflectors and having terminals engaging the ends of said contacts, the lamps flexing the contact longitudinally whereby the contact is held under tension for maintaining tight engagement between the contact and said terminals as well as holding the lamps against rattling.

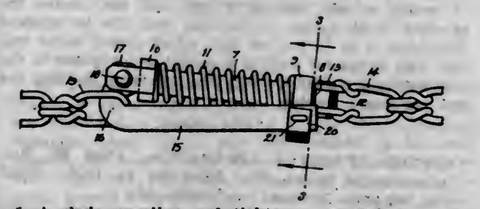
1,634,695. EYEPIECE PRISM COMBINATION FOR USE IN RANGEFINDERS OF THE SELF-CONTAINED BASE TYPE. JOHN MARTIN STRANG, Anniesland, Glasgow, Scotland, assignor to Barr and Stroud, Limited, Anniesland, Glasgow, Scotland. Filed Feb. 7, 1922, Serial No. 534,746, and in Great Britain Feb. 15, 1921. 6 Claims. (Cl. 88—1.)

1. An eyepiece prism combination for use in rangefinders of the self-contained base type having, for the reflection of the beam of light from one of the telescope systems, reflecting surfaces, two of which are parallel to each other, substantially parallel to the plane of triangulation, and perpendicular to a third surface, these parallel surfaces being each contiguous to the said third surface, said third surface being perpendicular to the plane of triangulation and inclined at an angle of 45° to the base of the rangefinder, said three surfaces in the process of reflection operating to divide the beam, to reflect divided parts of the beam differently, in regard to order of reflection, and to cause the parts reflected to unite and reform the beam for the purposes set forth.



1,634,696. PLAYING-CARD HOLDER. VALENTIN CONSTANT TENEAU, Pelham, N. Y. Filed Feb. 23, 1927. Serial No. 170,128. 4 Claims. (Cl. 273—150.)

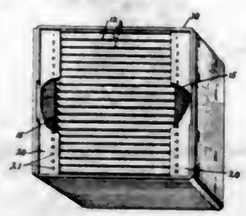
1. In a playing card holder, a pair of plates axially secured together in direct face abutting relation, said plates being provided at corresponding sides with registering reentrant portions, whereby the device is adapted to fit between the thumb and forefinger of the player's hand with the axis of the device adjacent the base of



the thumb, said plates being resilient whereby playing cards may be introdnced between the plates to be gripped thereby.

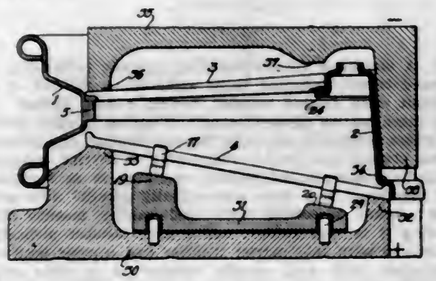
1,634,697. CONVERTIBLE AUTOMATIC FLOODGATE AND CONTROLLABLE HEADGATE. KARL JOHAN THORSEN, Oakland, Calif., assignor to California Corrugated Culvert Company, Oakland, Calif., a Corporation of California. Filed Aug. 11, 1924. Serial No. 731,342. 4 Claims. (Cl. 251—19.)

1. A structure for the described purpose comprising a flanged member adapted to be attached to the end of a conduit, said flanged member having a seat formed at the inner portion thereof; a pair of spaced parallel guide members secured to the said flanged member at opposite sides thereof and rising therefrom; a carrier member extending between and slidably mounted in said guides for movement in a plane substantially parallel with said seat; means associated with said carrier member for moving it in said guides; and a gate member pivotally connected with said carrier member and capable both of movement with said carrier member in a plane substantially parallel to said seat, and of free swinging movement, independent of said sliding movement, to and away from its closed position upon said seat.



1,634,698. CHAIN COUPLING AND TIGHTENER. LEONARD TRAVIS, Sidney, Iowa. Filed Feb. 25, 1927. Serial No. 170,904. 4 Claims. (Cl. 24—239.)

1. A chain coupling and tightener comprising a pair of overlapping bars, said bars having T-heads at their overlapping ends, a coiled spring surrounding said bars



and abutting at its ends against said heads, and a lever having a hook at one end pivoted to the end portion of one of said bars opposite to the head of said bar, said head having a bent back extension forming a hook to receive said lever.

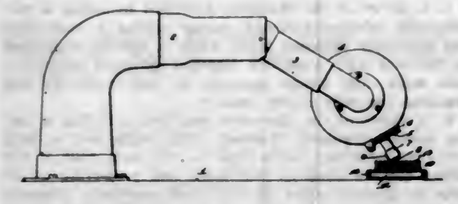
1,634,699. FILING AND SHIPPING RECEPTACLE. HUBERT S. UPJOHN, Los Angeles, Calif. Filed Sept. 26, 1925. Serial No. 58,761. 1 Claim. (Cl. 206—62.)

In a device of the class described, a receptacle, a plurality of partitions in said receptacle, said partitions having aligning apertures therein near each end thereof, an assembling and holding rod inserted in each of said apertures, a plurality of spacing members having apertures therein arranged on said rods and between said partitions to space said partitions apart intermediate their ends, said spacing members being secured to said partitions, a flexible strip arranged upon the outer end of said partitions, and said spacing members, said flexible strip having a portion thereof overlying the top of said spacing members.

1,634,700. METHOD AND APPARATUS FOR MAKING WHEELS. HERBERT H. WILLIAMS, Brooklyn, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Aug. 27, 1926. Serial No. 131,835. 10 Claims. (Cl. 29—174.)

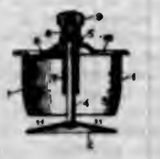
1. In the manufacture of a spoked wheel, the method which consists in assembling a plurality of spokes in proper relative positions and holding them so by means separate from the hub and rim, applying them thus assembled to a hub and rim and welding them to the hub and rim.

8. An apparatus for the manufacture of a spoked wheel, comprising in combination means for welding a first set of spokes at one side to a hub and rim, means for effecting axial motion of the hub and rim in opposite directions so as to put the first set of spokes under tension, and means for welding a second set of spokes to the said hub and rim at the opposite side while holding the first set under tension.



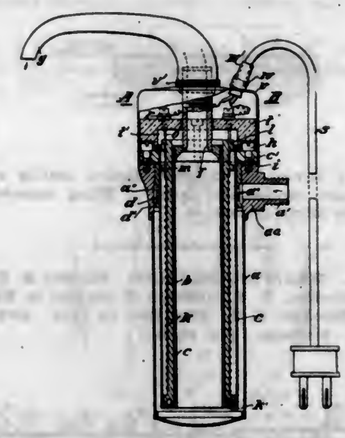
1,634,701. SPRAYING APPARATUS. JOHN W. WILLIAMS, South Miami, Fla. Filed Oct. 14, 1926. Serial No. 141,552. 7 Claims. (Cl. 299—39.)

1. In combination, a platform, a spray pipe, spray nozzles attached to the pipe at intervals, a pair of booms pivotally mounted on the platform to extend outwardly therefrom, means for suspending the spray pipes from the booms, means for simultaneously raising one boom



while the other boom is being lowered and vice versa, and means for raising and lowering the booms independently of each other.

1,634,702. NEEDLE REST. JOSEPH WOLFF, Brooklyn, N. Y., assignor, by mesne assignments, to Sonora Phonograph Company, Inc., a Corporation of New York. Filed May 5, 1919. Serial No. 294,800. 2 Claims. (Cl. 274—9.)

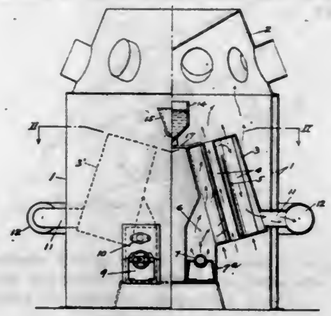


1. In a phonograph reproducer support, a stylus bar, a stylus carried by said stylus bar, said stylus projecting beyond and being of less diameter than said stylus bar, a rest to support said stylus bar and stylus when in inoperative position, said rest comprising a pad having an elastic surface, and a plurality of erect, elastic columnar members projecting above said surface a distance slightly greater than the distance from the end of said stylus bar to the point of said stylus, said members being spaced apart a distance greater than the diameter of the stylus and less than the diameter of the stylus bar, to permit said stylus to pass freely between said members but to cause the tops of a plurality of said members to engage said stylus bar, whereby the weight of the stylus bar is borne by said members while the stylus projects below the tops of and is surrounded by said columnar members.

1,634,703. NEEDLE RECEPTACLE. JOSEPH WOLFF, Brooklyn, N. Y., assignor, by mesne assignments, to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,396. 7 Claims. (Cl. 206—1.)

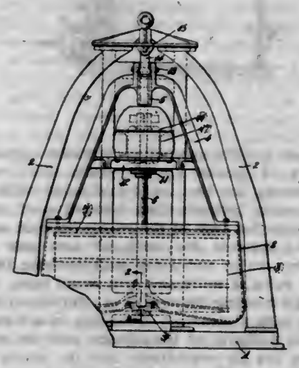
1. A receptacle for phonograph needles or the like, comprising an inverted cup having an orifice of small dimension formed in the upper, or otherwise closed, end thereof, a reciprocating member positioned adjacent the open month of said cup and adapted to be reciprocated alternately to positions in contact with and spaced from the rim thereof, and when in contact with said rim to form a closure for the mouth of said cup, and means extending above the closed end of said cup to reciprocate said closure.

1,634,704. WATER HEATER. HERMANN BRAND, Berlin, Germany. Filed Dec. 20, 1926, Serial No. 156,041, and in Germany Dec. 22, 1925. 4 Claims. (Cl. 219—39.)



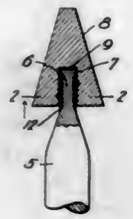
1. A water heater comprising in combination, an outer cylindrical container having an enlarged extension member adapted to connection with a source of water supply, a double-walled hollow cylinder fitted within said outer container and forming therewith an annular water space between opposing walls thereof, said double-walled cylinder being secured upon the extension member of the outer container in a fluid tight connection therewith, a heating element protectively fitted between the walls of said double-walled cylinder in fluid tight segregation from the water space of the heater, means for heating said heating element and means for discharging heated fluid from said container centrally of said double-walled cylinder and heating element.

1,634,705. DRAINER. HAZEL M. BRIDGES, Malden, Mass., assignor to Silex Company, Malden, Mass., a Corporation of Connecticut. Filed Aug. 2, 1926. Serial No. 126,092. 3 Claims. (Cl. 53—3.)



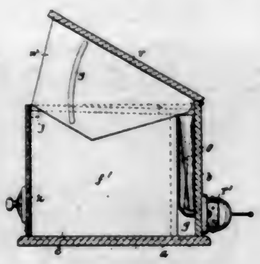
1. The combination with a glass coffee receptacle having a glass funnel depending therefrom of a perforated non-metallic drainer disc, a cloth strainer over said disc and a coiled spring attached to said drainer and depending through said funnel, said spring being normally shorter than the length of said funnel, and adapted, when extended, to be caught on the lower end of said funnel, and hold the drainer in position.

1,634,706. HEATING FURNACE. EDGAR E. CARROLL and FRANCIS B. CULBERTSON, Portland, Oreg. Filed Oct. 25, 1926. Serial No. 144,199. 10 Claims. (Cl. 126—116.)



1. In a furnace, a casing having warm air outlets; a plurality of separate and distinct heating units located within the casing, each unit including a box-like structure extending across the furnace from front to back, a plurality of air passing tubes for passing air through the box-like structure and separately from the products of combustion, a burner chamber communicating with said box-like structure at its lowermost place and constituting a part of said heating unit, a burner in said burner chamber, said box-like structure having vents along the bottom edge of its wall that is opposite said burner chamber, said box-like structure and said burner chamber constituting a combustion and heating chamber; collecting headers connecting with the vents of the respective units for carrying off the products of combustion.

1,634,707. OVERDRIVEN EXTRACTOR. EMIL J. CARROLL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 2, 1921. Serial No. 482,176. 1 Claim. (Cl. 308—142.)



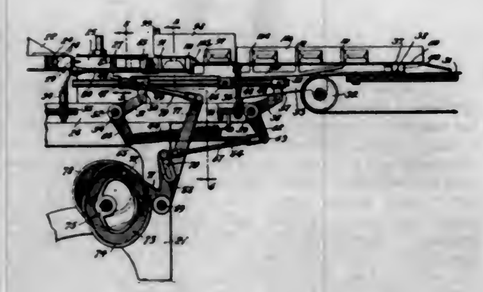
An extractor, comprising curb and basket members arranged to swing together about a joint from which they are suspended, a basket spindle having three separated bearings, upper, lower, and intermediate, in the curb member, the basket being secured to the spindle between the lower and intermediate bearings, and an electric motor having a rotatable part directly connected to said spindle between the upper and intermediate bearings for driving the spindle.

1,634,708. GRINDER. HERMAN E. S. CHAYES, New York, N. Y., assignor, by mesne assignments, to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 7, 1921, Serial No. 505,981. Renewed July 3, 1925. 3 Claims. (Cl. 51—206.)

1. In a rotatable grinder, a metal socket member for the grinder member, said socket member being provided with a hollow lateral projection for anchoring engagement with the grinder member, and a shaft member formed to fit the socket, said shaft being provided with channels and a fusible metal filling for the hollow projections and channels and attaching the socket to the shaft.

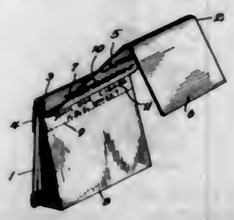
1,634,709. WIRELESS-APPARATUS CABINET STRUCTURE. GEORGE W. CISCO, Hawthorne, N. J. Filed Mar. 3, 1923. Serial No. 622,634. 3 Claims. (Cl. 274—2.)

3. A cabinet for the apparatus described including two spaced pairs of spaced upright walls, rear walls respectively joining the two inner and outer walls of said pairs and forming between them a sound space, means to form the bottom for each of the spaces between said pairs of walls and between the walls of each pair and between the rear walls, and a top wall covering the spaces between the pairs of walls and said sound space and having a passage forming the outlet of said sound space, in combination with a structure consisting of a lid covering said top wall inclusive of its passage and two wings depending from the lid respectively into the spaces between the walls of said pairs of walls, the lid being pivotally movable on a horizontal axis near said passage.



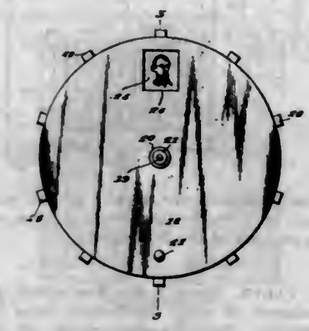
1,634,710. FILLED GUMMED CLOTH AND PROCESS OF MAKING THE SAME. CHARLES H. CROWELL, Brooklyn, N. Y. Filed Feb. 7, 1923. Serial No. 617,531. 8 Claims. (Cl. 91—68.)

8. The filled cloth comprising a body of cloth in substantially its original unshrunk condition and having on one side of the cloth a coating of filling composition entering the pores of the fabric and forming over the surface a substantially continuous layer, the other side of



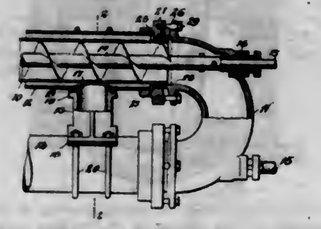
said cloth having an exposed adhesive coating and a united inner incorporated layer of filling material engaging the fabric threads.

1,634,711. WRAPPING MACHINE. MILFORD B. FERGUSON, Brooklyn, N. Y., assignor of one-half to Edward Haas, Brooklyn, N. Y. Filed Dec. 15, 1925. Serial No. 75,498. 8 Claims. (Cl. 93—2.)



1. A machine for wrapping articles comprising, means for receiving a partially wrapped article having the two wider end flaps projecting longitudinally from the article, two stationary members spaced from the ends of the article and adapted to engage the inner surfaces of one pair of flaps, means arranged to move between the ends of the article and the members to fold the flaps against the article, the members serving to exert a drag on the flaps as they are folded against the article, and means for folding the other flaps against the ends of the article.

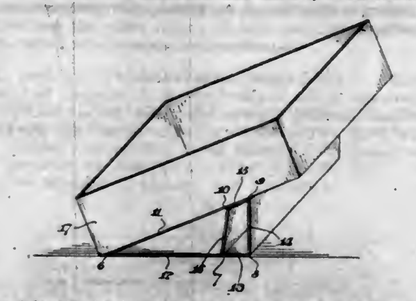
1,634,712. COMBINATION MATCH PACKET AND PAD. WILLIAM FRIEDMAN, New York, N. Y. Filed Apr. 20, 1925. Serial No. 24,479. 3 Claims. (Cl. 206—29.)



1. An article of the class described, comprising a strip of members having individual utility independent of each other, said members being so arranged as to constitute a relatively rigid support, and a pad of paper attached thereto and adapted to lie thereagainst, the leaves of said pad being of such a character as to require an auxiliary support for the purpose of writing thereon, whereby said strip of members may function as the necessary support to permit the pad to be used as a writing pad.

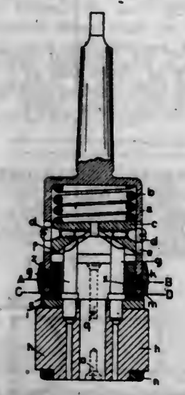
1,634,713. EDUCATIONAL DEVICE. MILDRED A. GAINES, Farmville, Va. Filed June 23, 1926. Serial No. 117,900. 4 Claims. (Cl. 35—9.)

1. An educational device comprising a body having circumferentially spaced pockets therein, cards adapted to be removably positioned within the pockets and having indicia thereon, and a cover movably mounted upon the body and having an opening therein arranged to singly disclose the spaced indicia.



1,634,714. HEAT INTERCHANGER. NICOLAI H. HILLER and EDWARD B. MCCABE, Carbondale, Pa., assignors to Carbondale Machine Company, Carbondale, Pa., a Corporation of Pennsylvania. Filed Feb. 6, 1925. Serial No. 7,220. 10 Claims. (Cl. 257—247.)

1. In combination, a pair of inner tubes, a return bend connecting said tubes together in series with fixed centers, a pair of outer tubes, stuffing boxes at the ends of said outer tubes, encircling said inner tubes, and permitting limited lateral movement of each outer tube in respect to its inner tube, each of said outer tubes having an opening in the side thereof, and a connecting member registering with said openings.



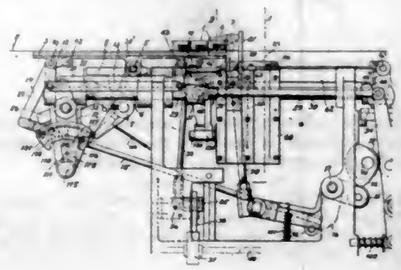
1,634,715. EASEL. HARRY G. HUEBNER, Philadelphia, Pa., assignor to Albert Eichhorn & Son, a Copartnership consisting of the following members: Jesse Eichhorn, Ida Bethel, Lillie Griffith, Charles Griffith, and Harry G. Huebner, Philadelphia, Pa. Filed Oct. 4, 1924. Serial No. 741,682. 1 Claim. (Cl. 211—24.)

An easel, comprising a plurality of extensions each in hinged relationship with an adjacent extension, said extensions adapted to assume a triangular configuration, and also to lie flat with one extension folded upon another, and a transversely extending strut in hinged relationship with one extension and entirely enclosed within

the triangle, having a free end adapted to engage a non-adjacent extension to maintain the triangular configuration when in operative supporting position.

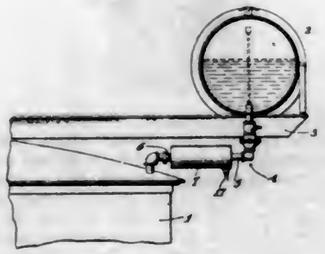
1,634,716. DRILL SOCKET. WILHELM KISMAIER, Esslingen-on-the-Neckar, Germany. Filed Apr. 1, 1926, Serial No. 99,177, and in Germany Jan. 15, 1925. 2 Claims. (Cl. 77—55.)

1. A drill holder comprising in combination a casing, a longitudinally movable disc located within said casing, means connecting said disc to said casing and adapted to restrain a turning movement of said disc, a compression spring located in said casing and operating upon one face of said disc, the other face of said disc having grooves formed therein, said grooves being substantially radial and being also inclined to the longitudinal axis of the casing, radially movable gripping jaws adapted to grip the drill and located in said casing on that side of said disc having said grooves formed therein, and pins connected to said jaws and extending towards said disc, said pins having ends adapted to normally engage said grooves, said pins being movable in unison in all directions with said gripping jaws.



1,634,717. DENTAL IMPRESSION TRAY. GRANT HOBART LIGHT, Lebanon, Pa. Filed Aug. 3, 1925. Serial No. 47,970. 11 Claims. (Cl. 32—6.)

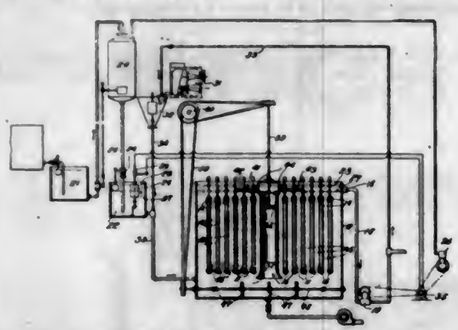
1. A dental device for making impressions of plastic material comprising component parts interconnected for



relative movement, and a common actuator adapted to simultaneously shift the parts to effect both longitudinal and lateral contraction of the device after placement in a patient's mouth.

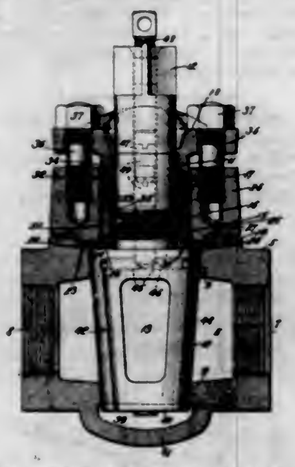
1,634,718. ADJUSTING MECHANISM. FRANCIS X. MALOCSAY, Upper Saddle River, N. J., assignor to International Banding Machine Company, a Corporation of New York. Filed May 21, 1923. Serial No. 640,464. 19 Claims. (Cl. 131—61.)

1. In a device of the character described, means for feeding a plurality of cigars one at a time to feeding position, and means for adjusting said first named means corresponding to various sized cigars.



1,634,719. HEATER FOR TRANSFORMER OIL. DONALD GRATTAN MCARN, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Mar. 23, 1926. Serial No. 96,823. 8 Claims. (Cl. 219—19.)

1. The combination with a transformer casing and an oil expansion tank therefor having a piping connection therewith, of a self-contained heater comprising an electrical winding and a casing entirely enclosing the same, said casing having a longitudinal bore within which a portion of said piping is snugly disposed and adapted to be slid relative thereto.

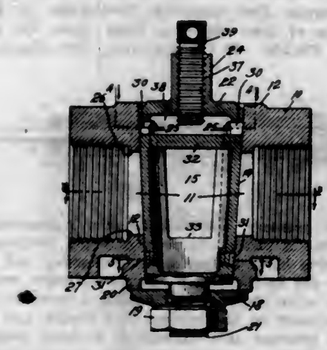


1,634,720. APPARATUS FOR PRECIPITATING AND FILTERING. LOUIS D. MILLS, Redwood City, and THOMAS B. CROWE, Palo Alto, Calif., assignors to The Merrill Company, San Francisco, Calif., a Corporation of California. Filed May 8, 1924. Serial No. 711,923. 4 Claims. (Cl. 210—181.)

1. An apparatus for precipitating and filtering from solution comprising, a tank, means for introducing a solution containing particles of solids in suspension into the tank, a series of vertically arranged filter units in the tank, a vertically arranged conduit in the tank, means for drawing the solution in the tank up through the conduit, and means located above the discharge end of the conduit for preventing the solution drawn up through the

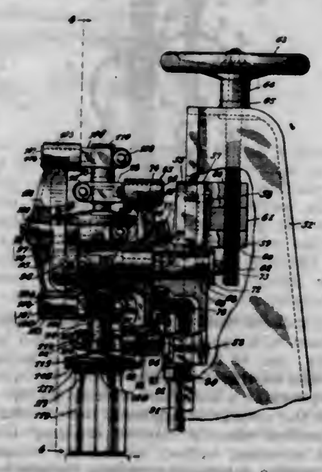
conduit from rupturing the surface of the solution in the tank and for directing the flowing solution outwardly over the upper ends of the filter units.

1,634,721. VALVE. SVEN JOHAN NORDSTROM, Saratoga, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Feb. 1, 1926. Serial No. 85,119. 8 Claims. (Cl. 251—97.)



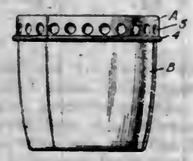
1. A valve comprising, a casing having a passageway therethrough, a plug seated in the casing and having a hole adapted to register with the passageway, one side of the casing being provided with an annular recess above the larger end of the plug, a flexible ring located within the recess, a cover adapted to be secured to the casing and to hold the outer rim of the ring tightly against the casing, an internally threaded collar mounted on the inner edge of the ring and extending outwardly, a stem projecting outwardly from the plug and having a threaded section engaged by the collar, means for adjustably exerting a yielding pressure on the outer end of the collar, and means for lifting the plug from its seat so that a film of lubricant may be spread between the plug and its seat.

1,634,722. VALVE. SVEN JOHAN NORDSTROM, San Francisco, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed June 12, 1926. Serial No. 115,413. 5 Claims. (Cl. 251—93.)



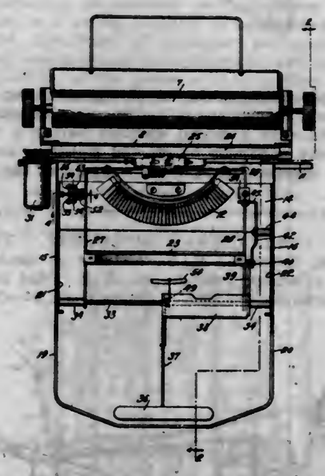
1. A valve comprising, a casing having a longitudinal passageway therethrough and a tapered valve seat formed

transversely of the passageway, a tapered plug seated in the valve seat and having a hole adapted to register with the passageway, means for holding the plug against its seat, the valve seat being provided with four longitudinal grooves spaced substantially 90° apart extending above and below, respectively, the planes passing through the upper and lower sides of the passageway through the valve seat, the bearing surface of the plug being provided at the larger end of the plug with two transverse grooves lying in the plane passing through the upper ends



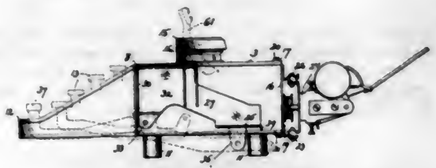
of the longitudinal grooves and at the smaller end of the plug with two transverse grooves lying in the plane passing through the lower ends of the longitudinal grooves, each pair of transverse grooves being substantially 90° in length and arranged parallel with the hole through the plug, the ends of each pair of transverse groovs being spaced substantially 90° apart, a reservoir in the plug for containing lubricant, connections between the reservoir and one pair of transverse grooves, and means for putting the lubricant in the reservoir under pressure to force it into the grooves.

1,634,723. FRICTION-CAP MACHINE. ABRAHAM PODEL, Long Island City, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Sept. 20, 1923. Serial No. 663,860. 9 Claims. (Cl. 226—80.)



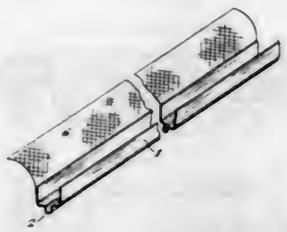
9. A closure applying machine, comprising a pair of rotating members driven from the same source of power, said members having independent axes of rotation, a plurality of closure applying elements, individual stems secured to said closure applying elements and individual pairs of means secured to said stems, one of the means of each pair being pivoted to one of said rotating members and the other means of each pair being pivoted to the other of said rotating members.

1,634,724. SEALING CAP AND PACKAGE. GEORGE RAMSEY, Brooklyn, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Jan. 27, 1921. Serial No. 440,300. 3 Claims. (Cl. 215—38.)



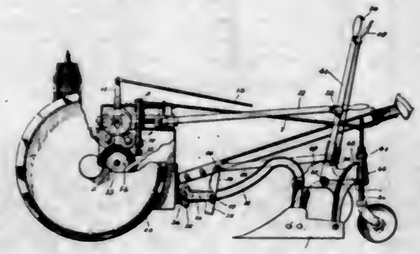
1. A closure cap comprising a cover portion, a cylindrical skirt depending from said cover, a plurality of rounded sealing buttons in said cylindrical skirt, the depth of said buttons being small as compared with the diameter thereof, and said buttons being spaced from each other a distance substantially equal to the diameter of a button, the portion of the skirt between the buttons being cylindrical before application to a vessel and deformed as a result of application.

1,634,725. CHILD'S TYPEWRITING MACHINE. LUDWIG REISCHL, Nuremberg, Germany, assignor to Bing Werke, Nuremberg, Germany. Filed Feb. 19, 1926, Serial No. 89,255, and in Germany Feb. 21, 1925. 8 Claims. (Cl. 197—82.)



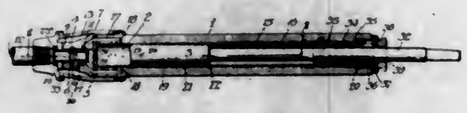
1. In a typewriting machine of the class described, a frame, a paper roller carriage, a rack on the carriage, a pawl for cooperating with the rack, a stud secured transversely in the frame, a U-shaped yoke on which the pawl is mounted, said yoke being pivotally mounted at the ends of its arms on the stud, a space key lever mounted on the stud, and an intermediate lever pivoted in the frame, said intermediate lever having a loose connection with the space key lever and bearing upon the yoke, so as to depress the cross-piece thereof when the space key lever is depressed.

1,634,726. CHILD'S TYPEWRITING MACHINE. LUDWIG REISCHL, Nuremberg, Germany, assignor to Bing Werke, Nuremberg, Germany. Filed May 19, 1926, Serial No. 110,052, and in Germany June 2, 1925. 9 Claims. (Cl. 197—186.)



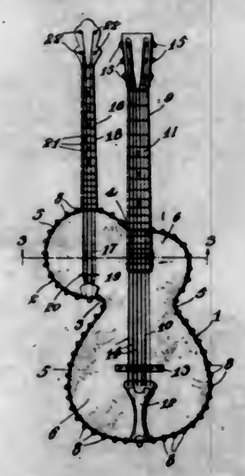
1. In a child's typewriting machine, the combination of a one-piece sheet metal casing substantially U-shaped in cross-section and comprising a recessed top-wall and side-walls, a transverse rear wall adapted to be secured to said top wall and said side walls and a separate one-piece U-shaped sheet-metal supporting frame adapted to be received within said casing and supporting the entire mechanism and keys of the machine.

1,634,727. MEANS FOR DEVELOPING AND TRANSPLANTING PLANTS. WILLIAM ORMISTON ROY, Montreal, Quebec, Canada. Filed Aug. 16, 1924. Serial No. 732,495. 3 Claims. (Cl. 47—37.)



1. A transplanting shield for plants, consisting of an elongated body, impervious to rootlets, open at both ends and provided with a lateral aperture having a flexible covering, fully permeable by air and moisture, normally closing the aperture to hold the contents of the shield therein.

1,634,728. AGRICULTURAL IMPLEMENT. WILLIAM F. SMITH, Brooklyn, N. Y., assignor of one-half to Herman A. Schatz, Poughkeepsie, N. Y. Filed Dec. 17, 1921. Serial No. 523,135. 6 Claims. (Cl. 97—50.)

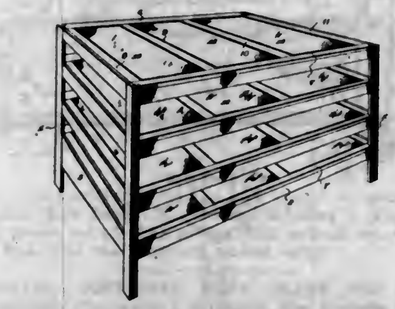


1. In a vehicle, a motor for driving the vehicle, an agricultural implement mounted on a beam, a journaled connection between said vehicle and beam, a manually rotatable lever supported by the beam, means responsive to rotation of said lever for simultaneously raising the ends of said beam connected to the vehicle and said implement, a bar adapted to be detachably connected to the said rotatable lever, and means operated by the motor for reciprocating the bar and thereby rotating the said lever.

1,634,729. FLUID-PRESSURE-OPERATED HAMMER. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 11, 1920. Serial No. 423,264. 15 Claims. (Cl. 121—27.)

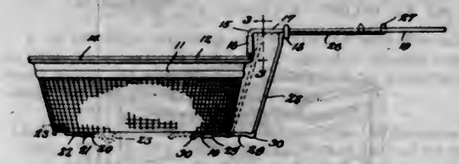
1. A fluid pressure operated hammer comprising a cylinder having a piston chamber, a piston reciprocable therein, a valve block having a valve chamber and closing the rear end of the piston chamber, a valve reciprocable in the valve chamber and having a pressure area constantly exposed to the motive fluid supply and having a larger pressure area exposed to variable pressure, said hammer having a constantly open by-pass between said supply and said larger pressure area, and a passage from said by-pass to the rear end of the piston chamber, said passage being controlled by the piston in its reciprocations.

1,634,730. STRINGED MUSICAL INSTRUMENT. FRANK TRAVAGLINI, Philadelphia, Pa. Filed Mar. 10, 1924. Serial No. 697,977. 3 Claims. (Cl. 84—263.)



3. In a stringed musical instrument an elongated sound body formed with oppositely curving top and bottom enlargements; one of the top enlargements being circular in form and curving topwardly beyond the other of the top enlargements; a sheepskin covering for the elongated body and the circular enlargement thereon and provided with a beaded edge; a member engaging said beaded edge and extending entirely around the elongated body and the circular enlargement thereon; means for holding said member in adjusted position, a banjo neck having an extension passing through the center of the circular extension, parallel to and extending slightly beyond the guitar neck.

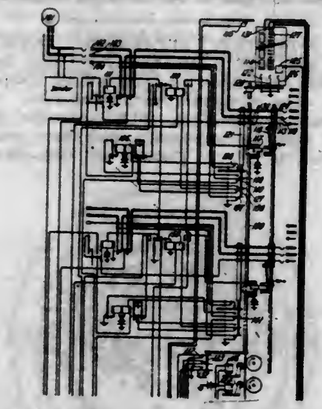
1,634,731. PROCESS OF PRODUCING SAND MOLDS FOR MOLDING STONE PATTERN PLATES. KARL WERNER, Dresden, Germany. Filed Jan. 19, 1925. Serial No. 3,541. 2 Claims. (Cl. 18—47.)



1. The process of producing sand molds for molding stone pattern plates consisting in molding the sand first, impregnating its surface shortly before use by powdering it with pulverized resins and slightly heating it, whereupon the liquid modelling mass is poured in.

1,634,732. SHOW CASE. JOHN WILLIAMS, Washington, D. C. Filed Feb. 23, 1926. Serial No. 90,052. 4 Claims. (Cl. 211—14.)

1. A counter show case of the type that is inaccessible from the front thereof and accessible from the rear, comprising a plurality of fixed forwardly inclined receptacles arranged in spaced relation to each other, a transparent, removable and tiltable cover for each receptacle, said covers being arranged to be tilted from the rear of the case, and means to automatically engage the several covers when they are swung to raised position, whereby ready access to the several receptacles may be had.

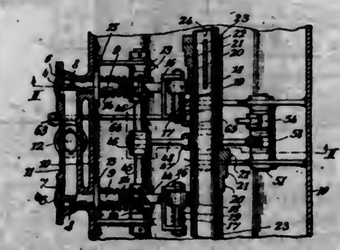


1,634,733. FRYING BASKET. WALTER BRUCE WILLS, Baltimore, Md. Filed Sept. 30, 1925. Serial No. 59,514. 1 Claim. (Cl. 53—7.)

A utensil of the kind described having a plurality of supporting arms pivoted beneath the bottom of utensil eccentrically thereof and arranged to protrude beyond said bottom when swung into one position and to be housed beneath said bottom when swung into a second position, a further supporting arm located beneath the bottom and movable inwardly and outwardly thereof independently of the first arms, and a handle extending from the utensil and supporting the last mentioned arm movably into and out of protruded position.

1,634,734. TELEPHONE-EXCHANGE SYSTEM. WILLIAM G. BLAUVELT, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 7, 1926. Serial No. 107,473. 5 Claims. (Cl. 179—18.)

1. In a telephone exchange system, a selector switch, a register sender, a plurality of groups of trunks having terminals and accessible through said selector switch, means for identifying the sleeve terminals of busy trunks, and means associated with said selector switch for causing the operation of said switch to select a particular group of trunks and to find an idle trunk in said group, said means being held operated continuously during the

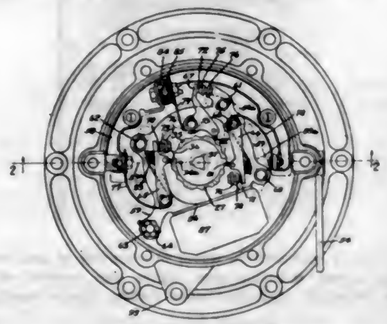


operation of said switch, under the control of said sender during group selection and under the control of the sleeve terminal of busy trunks during trunk hunting.

1,634,735. PROCESS FOR PRODUCTION OF HYDROCYANIC ACID. GEORG BREDIG and EGON ELÖD, Karlsruhe, Germany. Filed Jan. 28, 1924, Serial No. 689,156, and in Germany Dec. 7, 1922. 22 Claims. (Cl. 23—151.)

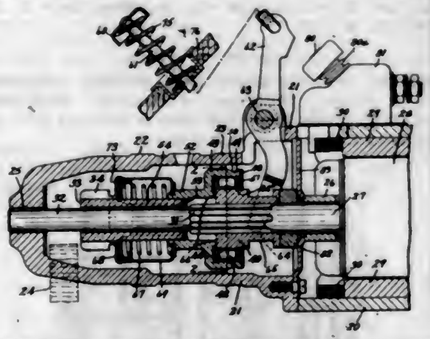
1. Process for the production of hydrocyanic acid by the interaction of ammonia and carbon monoxide in a heated condition in the presence of a catalyst comprising an oxide of an element of rare earth metal group and in the absence of oxygen.

22. Process for the production of hydrocyanic acid by the interaction of ammonia and an excess of carbon monoxide in a heated condition in combination with considerable quantities of hydrogen for protecting the ammonia employed and the hydrocyanic acid formed from decomposition, in the presence of a catalyst comprising a mixture of cerium oxide and aluminium oxide in the proportion of 2 to 1.



1,634,736. VALVE GEAR FOR POWER ENGINES. JACOB BUCHLI, Winterthur, Switzerland. Filed Nov. 23, 1925, Serial No. 70,910, and in Germany Dec. 31, 1924. 6 Claims. (Cl. 121—167.)

1. In a power engine, in combination, a working cylinder, valves to control the admission of the working fluid to said cylinder, a cam shaft provided with cams of different throw to control the operation of said valves, means to cause an axial displacement of said cam shaft, a roller operatively connected to each valve and cooperating with said cams, said operative connection between the valve and its roller permitting of a displacement of said roller in its axial direction to take part in

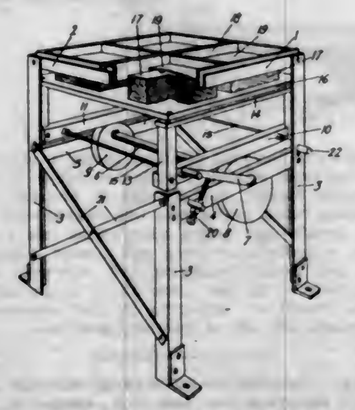


the displacement movements of said cam shaft, when the roller has to cooperate with a cam of a larger throw, and resilient means opposing said displacement movement of said roller to return it into its initial position.

1,634,737. IGNITION APPARATUS. WILLIAM A. CHRYST and JOHN H. HUNT, Dayton, Ohio, assignors, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed Dec. 22, 1917, Serial No. 208,369. Divided and this application filed Sept. 26, 1924. Serial No. 740,102. 11 Claims. (Cl. 200—21.)

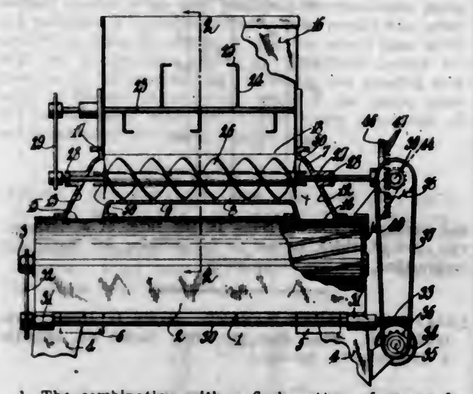
3. An ignition device comprising, in combination, a timer cam; a plurality of circuit interrupters including stationary contacts and cooperating contact arms having cam followers cooperating with the cam; a supporting plate for said interrupters; and means for adjusting the supporting plate relative to the cam for changing concurrently, the relative angular location of one of the interrupters to the cam to a greater degree than the relative angular location of the other interrupter to the cam.

1,634,738. ENGINE-STARTING APPARATUS. WILLIAM A. CHRYST, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 27, 1925. Serial No. 52,928. 3 Claims. (Cl. 74—7.)



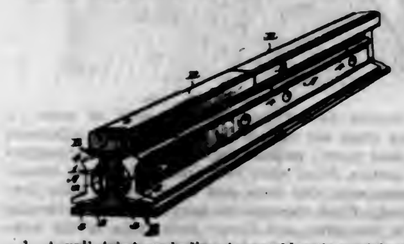
3. Engine starting apparatus comprising, in combination, a motor, a shaft driven by the motor, an overrunning clutch including a shell member, a cam member within the shell and rollers between the clutch members, said cam member being connected with the shaft for rotation with the shaft and sliding movement thereon, an internally splined tubular part connected with the clutch shell and slidable along the shaft, a pinion adapted to mesh with a gear of the engine to be started and having an externally splined hub cooperating with the tubular part of the clutch shell, a spring surrounding the shaft and located between the clutch and pinion for transmitting motion from the clutch to the pinion in one direction, means surrounding spring for transmitting motion from the clutch to the pinion in the opposite direction, a motor switch, and means for closing the switch and moving the clutch and pinion, said spring yielding in case of pinion tooth abutment to permit closing the motor switch.

1,634,739. FENCEPOST. CHASE COLVIN, South Charleston, Ohio. Filed Dec. 24, 1923. Serial No. 682,478. 8 Claims. (Cl. 189—29.)



1. The combination with a fence post comprising a body portion having a flat face, of a face plate engaging the flat face of said body portion and having parts extending across the respective edges of said post and pressed into engagement with the rear face thereof, said body portion having a lateral projection substantially in the plane of said face to limit the vertical movement of said face plate relatively thereto.

1,634,740. APPARATUS FOR MAKING TILE. ALBERT C. DALE, Columbus, Ohio. Filed Apr. 26, 1926. Serial No. 104,567. 5 Claims. (Cl. 25—41.)

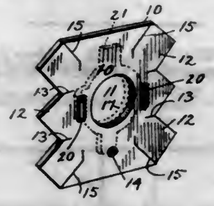


1. Apparatus for making tiles comprising a movable frame, a plate mounted upon the top of said frame, pallet blocks resting upon said plate and secured thereto pallets mounted upon said blocks, means for supporting said frame, means for actuating said supporting means to raise and lower said frame, and means adapted to engage said actuating means to limit the lowermost position of said frame.

1,634,741. FLOCK-CUTTING MACHINE. WILLIAM J. DECOTEAU, Claremont, N. H., assignor to Claremont Waste Manufacturing Company, a Corporation of New Hampshire. Filed May 12, 1925. Serial No. 29,813. 43 Claims. (Cl. 83—6.)

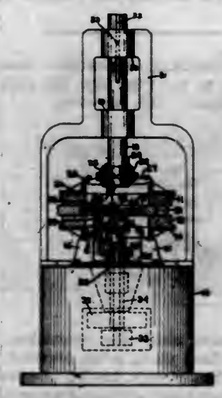
1. The combination with a flock cutter, of means for feeding flock thereto by pressure, including a receptacle and means for effecting substantially uniform conveyance of flock from the receptacle to said cutter.

1,634,742. COMPOSITE WEAR PLATE FOR RAIL JOINTS. CLARKSON A. DISSOW, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Feb. 16, 1927. Serial No. 168,704. 8 Claims. (Cl. 238—244.)



1. A rail joint including in combination with the rails, a joint bar of uniform section throughout, a flanged metal wear plate, and separate filler abrasion plates cooperative with the flanges of said wear plate.

1,634,743. SIGN HOLDER. MATT DYER, Whittenburg, Tex. Filed Feb. 1, 1927. Serial No. 165,184. 1 Claim. (Cl. 40—13.)



A sign holder comprising a rectangular base having a marginal flange projecting to one side thereof, a rectangular frame arranged upon the base within the flange, said frame being hinged to the base along one edge thereof, the opposite edge of the frame and the corresponding marginal flange of the base having coacting latching means, the outer face of the frame having a flexible transparent sheet secured thereto, the latching means including a latch element secured to the frame by securing elements extending through the transparent sheet.

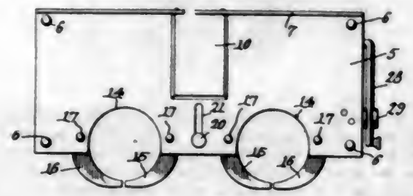
1,634,744. NUT LOCK. ISAAC L. EDWARDS, Aurora, Ill. Filed May 14, 1923. Serial No. 638,966. 4 Claims. (Cl. 151—3.)

1. A nut lock formed of a substantially rectangular plate of bendable material, the plate having on opposite sides a straight line of straight sided angular projections, the sides of the projections converging outward and the two lines of projections being symmetrical and each line forming a zigzag contour, the other two sides of the plate being straight and incisions extending obliquely inward from each extremity of said straight edges.

1,634,745. LAPPING MACHINE AND METHOD OF TRUING THE LAPPING ELEMENTS. WARREN F. FRASER, Westboro, Mass. Filed Oct. 8, 1924. Serial No. 742,477. 6 Claims. (Cl. 51—278.)

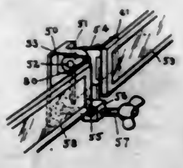
1. The method of truing two opposed lap faces to bring them into parallel planes comprising the steps of relatively moving an abrasive element of wearable material having extensive plane surfaces between and in contact with said lap faces to abrade the same, reversing said element and repeating the abrading operation upon the laps with said element in its reversed position.

1,634,746. REVERSIBLE TOWEL RACK. GEORGE E. HARRIS, Swissvale, Pa. Filed Sept. 29, 1923. Serial No. 665,689. 4 Claims. (Cl. 45—32.)



1. A reversible towel rack comprising an attaching base, flanges protruding from said base, lugs extending from said base and disposed above and below said flanges.

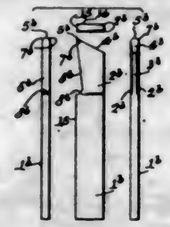
and a supporting member carrying a plurality of horizontally spaced article carrying arms including a pawl pivotally secured to the flanges of said base, the said pawl



being adapted to engage either of said lugs to hold said supporting member in a substantially horizontal plane in either of the reversed positions of said base.

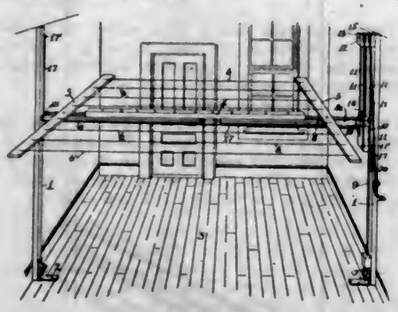
1,634,747. BOTTLE HOLDER. JESSE L. FRIESNER, Lima, Ohio. Filed Aug. 16, 1926. Serial No. 129,551. 3 Claims. (Cl. 232—41.)

1. The combination with a structure having a bottle receiving recess and opposed jaws pivotally mounted at opposite sides of the recess, each jaw having an outer arm and an inner arm, the corresponding arms of the jaws converging, of a bolt slidable into engagement with one of the jaws, a tumbler adapted to rest upon the bolt, said tumbler being movable by gravity into position back of the bolt when the bolt is brought to jaw engaging position, and means for shifting the tumbler to release the bolt.



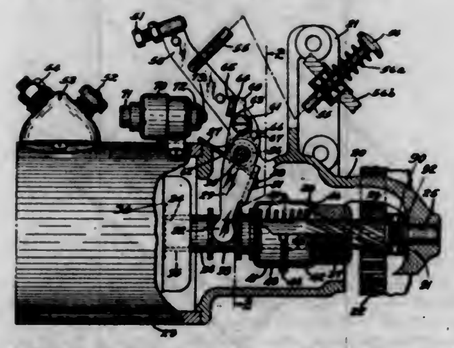
1,634,748. AUTOMOBILE MIRROR. ERIC ISCHINGER, East Rochester, N. Y. Filed Apr. 22, 1921. Serial No. 463,557. 5 Claims. (Cl. 45—97.)

1. In a compound hinge for automobile mirrors, the combination of a base plate, a lug provided on said base plate, a pair of hinges each having one leaf pivoted on said lug, a trunnion block supported by said hinges, a rotating screw stud mounted to turn in said base and threaded thru said trunnion block to connect the free end of said hinges to said base plate, said trunnion block being adapted to move toward and away from said base plate on the rotation of said screw stud.



1,634,749. RIPPING HEAD. AKLAS J. JOHNSON, JOSEPH BOILEAU, and ELMER A. FINDELL, Missoula, Mont. Filed July 13, 1926. Serial No. 122,153. 1 Claim. (Cl. 144—241.)

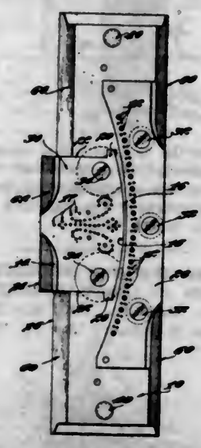
In a device of the class described, a tool the opposite edge surfaces of which are parallel, the tool being provided in its sides with recesses defining a thinned bit, the end surface of the bit being disposed at an acute angle to form a point at the extremity of one of said edge surfaces of the bit, the corners of the point being bevelled laterally in opposite directions at said edge surface, the



end surface of the bit being in the form of a hexagon, two sides of which, formed by the recesses, are materially longer than the remaining sides.

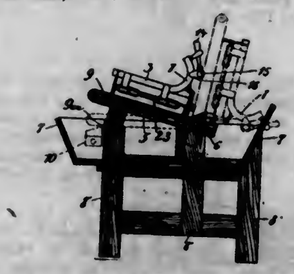
1,634,750. CLOTHES HANGER. DAVID D. JONES, Oakland, Calif. Filed Jan. 19, 1927. Serial No. 162,019. 2 Claims. (Cl. 68—34.)

1. A clothes hanger comprising a pair of posts; a supporting cross bar carried by and vertically adjustable between said posts; parallel spaced side bars rectangular in cross section fitted upon said cross bar; wires extending between said side bars and having their ends bent and pivotally fitted through the bars from one horizontal surface to the other and thence bent again in the same direction as the approach of said wires to the bars.



1,634,751. ENGINE-STARTING APPARATUS. FREDERICK C. KROEGER, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 6, 1924. Serial No. 711,393. 5 Claims. (Cl. 290—38.)

1. Engine starting apparatus comprising, in combination, an electric motor; means for connecting the motor with a gear of the engine to be started including a gear

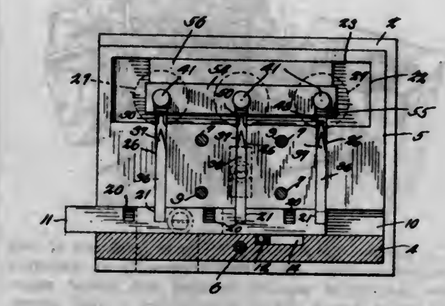


movable into mesh with said engine gear and including devices whereby the motor gear is automatically demeshed from the engine gear when the engine starts; a motor switch; a pedal-operated member for operating the motor switch; means for transmitting motion from said pedal member to the motor gear including disconnectible parts and including a spring which yields to permit the pedal member to close the switch in case the motor gear teeth abut the engine gear teeth; and electrical means responsive to self-operation of the engine for causing said parts to become disconnected, whereby the motor gear will be demeshed when the engine starts regardless of manipulation of the pedal member.

1,634,752. COMBINATION DIE FOR USE IN PERFORATING MACHINES. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to The Peerless Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 17, 1924. Serial No. 686,815. 10 Claims. (Cl. 164—93.)

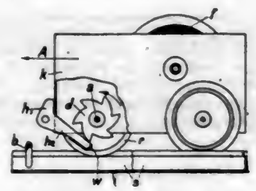
1. A combination die comprising a body-portion provided with perforating tubes and an open lateral recess and a center-piece having perforating tubes and removably mounted within said recess, said center-piece being provided on its reverse face with lugs projecting over onto the reverse face of said body-portion for supporting said center-piece within said recess when said die is in a position with its reverse face uppermost.

1,634,753. MOLDING MACHINE. MARTIN MENZEL, Ruhland, Germany. Filed Jan. 28, 1926, Serial No. 84,351, and in Germany Jan. 24, 1925. 2 Claims. (Cl. 25—43.)



1. Molding machine for manufacturing partly curved concrete sections comprising a frame, a mold having a straight and a curved portion, and means for so adjusting said mold with regard to said frame that in one of its positions said straight portion is substantially vertical and said curved portion is below said straight portion and in another position said straight portion is substantially horizontal and said curved portion is above it.

1,634,754. GUN BARREL. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company. Filed Oct. 25, 1926, Serial No. 144,067, and in France Jan. 14, 1926. 9 Claims. (Cl. 89—16.)

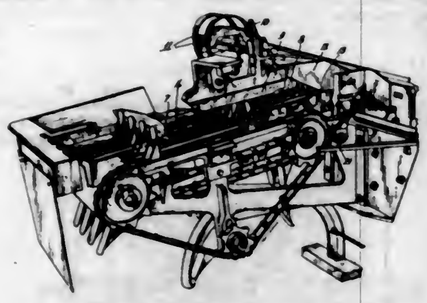


1. A gun comprising a rifled firing tube and a jacket, the rear end of said tube extending into said jacket and having the outer diameter of the rear portion thereof less than the inner diameter of the jacket, and screw-threaded means for removably securing said firing tube to said jacket, the threads of said means being formed in a direction opposite to the rifling of the tube and being provided adjacent the front end of the jacket whereby said firing tube is readily removable from the jacket which assists in withstanding the transverse stresses set up in the rear portion of said tube during firing of the gun.

1,634,755. LOCK. EDWARD G. PRYOR, Pueblo, Colo. Filed Sept. 20, 1926. Serial No. 136,564. 4 Claims. (Cl. 70—53.)

1. In a device of the class described, a frame, a locking bolt mounted for straight-line reciprocation on the frame, a bolt holder provided intermediate its ends with a recess, the bolt holder having straight-line movement on the frame, in a direction at right angles to the line of reciprocation of the bolt, into and out of engagement at one end, with the bolt, a tumbler journaled on the frame and cooperating with the other end of the bolt holder to maintain the bolt holder in engagement with the bolt, the tumbler having an opening receiving said other end of the bolt holder to permit the first-specified end of the bolt holder to be disengaged from the bolt when the bolt holder is moved in one direction, and a shifting member mounted to move on the frame, the shifting member being movable in the recess of the bolt holder to move the bolt holder in said direction.

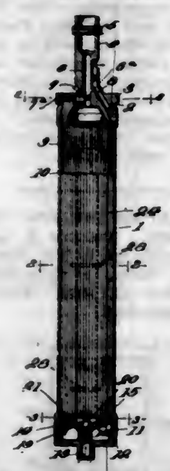
1,634,756. TOY. EMIL SCHLIEDERER, Nuremberg, Germany, assignor to the Firm: Bingwerke, vorm. Gebr. Bing Aktiengesellschaft. Filed Nov. 22, 1926, Serial No. 150,060, and in Germany Dec. 7, 1925. 4 Claims. (Cl. 188—111.)



1. Toy comprising a track, a pair of wheels adapted to travel on said track, a ratchet wheel associated with said wheels, a pawl adapted to cooperate with said ratchet wheel in arresting said pair of wheels and means associated with said track for bringing said pawl in engagement with said ratchet wheel.

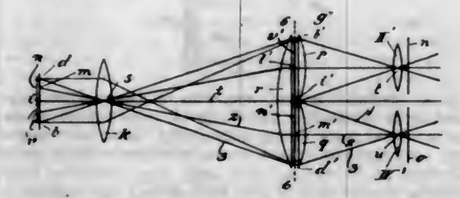
2,634,757. PROCESS OF TREATING TUSSAH SILK. WILHELM HELMUT SCHWEITZER, Heidelberg, Germany. Filed June 10, 1924. Serial No. 719,133. 4 Claims. (Cl. 8—2.)

1. The process of treating tussah silk fibres, artificial silk or other vegetable fibres, which consists in subjecting the fibres to chloride of lime in quantity substantially exceeding that in use for bleaching purposes.



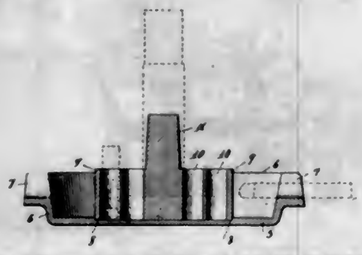
1,634,758. CORN-HUSKING MACHINE. MILLAR W. SELLS, Buffalo, N. Y., assignor to Peerless Husker Company, Buffalo, N. Y. Filed Nov. 3, 1925. Serial No. 66,661. 13 Claims. (Cl. 130—5.)

1. A machine for removing the husks from ears of corn in successive stages comprising a plurality of conveying means moving in parallel relation and spaced apart, fluted rotary means located between two of said conveying means and deriving rotary movements from contact with said conveying means, said rotary means adapted to engage each ear of corn in passing and move it laterally for alignment, gaging means against which said ears are moved into alignment, severing means located in the path of said aligned ears for removing a portion of the husks therefrom, other conveying means for receiving said ears and moving them in an axial direction with rotary means for effecting the final removal of the husks from said ears.



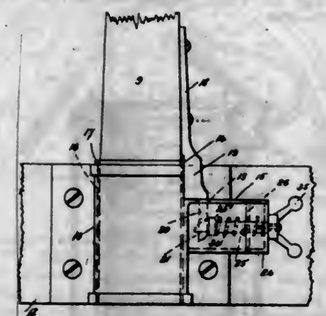
1,634,759. CENTRIFUGAL MILK SEPARATOR. PHILIP M. SHARPLES, West Chester, Pa., assignor to The Sharples Separator Company, West Chester, Pa., a Corporation of Pennsylvania. Filed July 30, 1924. Serial No. 729,136. 12 Claims. (Cl. 233—29.)

1. A centrifugal cream separator including a rotated bowl having a skimmed milk outlet and a cream outlet, a liner for said bowl comprising a plurality of relatively thin plates forming milk separating channels therebetween, and means for delivering the whole milk to the bowl in a restricted area toward the axis of rotation



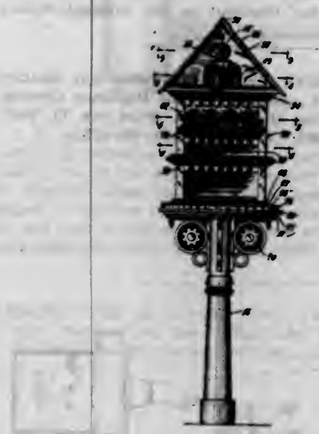
from and adjacent the skimmed milk zone, whereby the cream content separated from the whole milk may flow in a continuous direction approaching the central axis of the bowl, and whereby the skimmed milk may be separated from the whole milk.

1,634,760. APPARATUS FOR PROJECTING MULTI-COLOR IMAGES IN CINEMATOGRAPHY. WALTER THORNER, Berlin, Germany. Filed May 14, 1924, Serial No. 713,341, and in Germany May 24, 1923. 4 Claims. (Cl. 88—16.4.)



1. A system of the class described, comprising means for producing enlarged images of the successive film sections containing cooperating color records, and separate means one for each of the images of the color records for projecting said enlarged images of the color records.

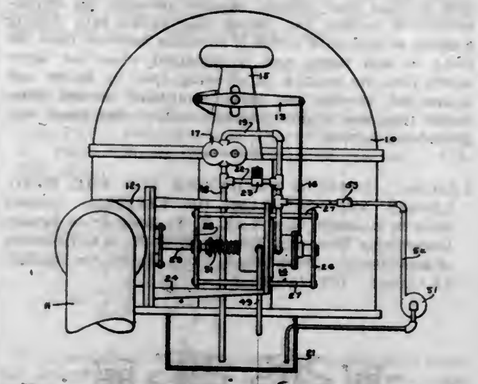
1,634,761. ASH RECEIVER. JAMES Y. TICE, Bloomfield, N. J. Filed May 15, 1926. Serial No. 109,206. 1 Claim. (Cl. 131—51.)



The ash-receiver described comprising a tray having a shallow recess in the upper face of its bottom, a vertically disposed cylindrical member fitted in said recess with an annular space therearound, said cylindrical member having a plurality of holes extended entirely therethrough, each adapted to receive a cigarette end.

1,634,762. STAKEHOLDER. CELSO TREVANI, Hopedale, Mass. Filed Sept. 2, 1926. Serial No. 133,164. 4 Claims. (Cl. 296—43.)

3. In a stake holder, a stake socket, a stake slidable in the socket, a locking arm having its upper part rigidly secured to the stake and provided with a lower end portion which projects below the top of the socket and has a locking lug at its bottom which is offset from the side of the socket, and a retractible spring-actuated locking bolt supported by the socket and engaging with the locking lug.



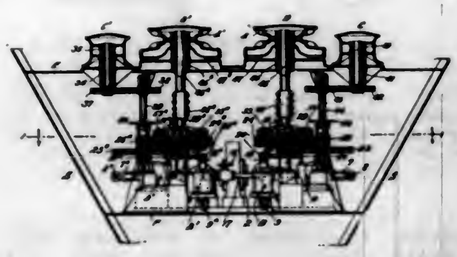
1,634,763. BIRD HOUSE. PETER TROSKI, Arista, W. Va. Filed Nov. 26, 1926. Serial No. 150,641. 1 Claim. (Cl. 119—23.)

A bird house comprising a pole, brackets on said pole, discs on said pole and brackets, a rectangular frame on said discs, a V-shaped roof on said frame, floors in said frame, compartments on said floors, said compartments being enterable through openings in said frame, and feed boxes in each of said compartments.

1,634,764. VALVE-OPERATING MECHANISM. JOSEPH BANCROFT WILSON, Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 23, 1925. Serial No. 77,417. 8 Claims. (Cl. 137—158.)

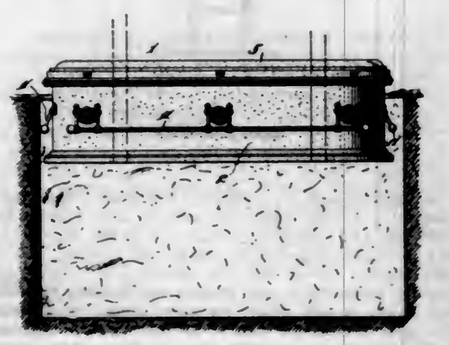
1. The combination with a prime mover having a valve to be operated, of means responsive to the speed of the prime mover, and a fluid pressure operated relay for transmitting movements of the means responsive to speed to the valve, comprising an operating cylinder, a reciprocable piston therein, a stem for the piston having ports

therein for the admission and exhaust of fluid under pressure thereto, a valve surrounding the stem and having fluid admission and exhaust ports cooperating with the ports of the piston stem, and operating means connecting the speed responsive means and the valve.



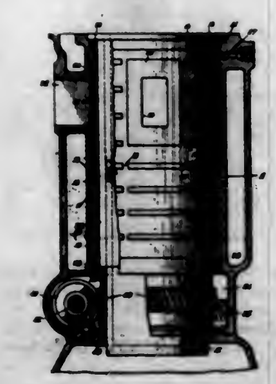
1,634,765. ADVERTISING AND AMUSEMENT APPARATUS. HIRSH W. YANKELEWITZ, Newark, N. J. Filed June 26, 1926. Serial No. 118,664. 16 Claims. (Cl. 40—30.)

1. Apparatus of the character described, comprising a support, a dummy figure mounted on said support and including two sections pivotally connected at one end and normally disposed in side-by-side relation, one of said sections having the end opposite said pivotal connection connected to said support and forming the arms and hands of said figure, the other section constituting the trunk or body and feet of the figure and said pivotal connection corresponding to the shoulders of the figure, so that the figure normally appears to stand in upright position on its feet, whereby pivotal movement of the second-mentioned section into endwise relation to the first-mentioned section causes the figure to appear to stand on its hands upon said support, a device to be



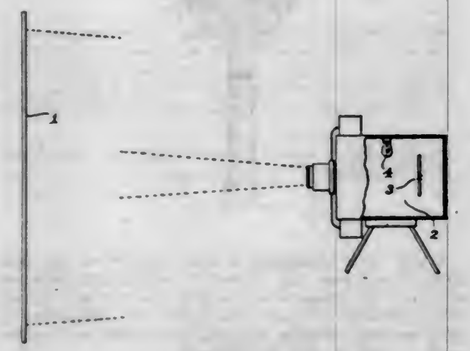
displayed mounted upon the second-mentioned section and movable into and out of display position on the side thereof corresponding to the back of the figure, and an operative connection between said device and the other of said sections whereby relative pivotal movement of said sections into endwise relation reverses the second-mentioned section and moves said device into display position so that said device is normally invisible from the front of said figure and is displayed when the figure moves into the position of standing upon its hands, and means for moving the second-mentioned section alternately from one of said positions to the other about said pivotal connection.

1,634,766. DRIVING MECHANISM FOR THE WINDLASSES AND CAPSTANS OF VESSELS. GEORGE EUGENE BARRETT, New York, N. Y., assignor to Lenher Engineering Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 8, 1927. Serial No. 166,623. 14 Claims. (Cl. 74—7.)



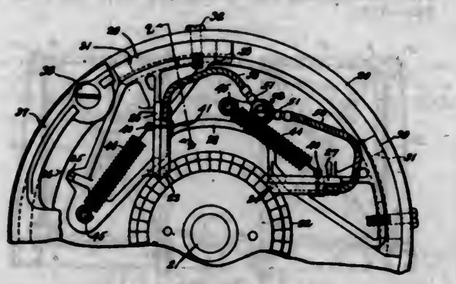
1. In a mechanism of the character described, the combination with driving means and driven means, of transmission mechanism connecting them, and consisting essentially of a pair of parallel shafts, a gear wheel loose on one shaft, means for locking it thereto, a pinion loose on the other shaft, means for locking it thereto, said pinion engaging said gear, and a train of gears on said shafts between the said pinion and the driving means, all arranged so that either or both shafts may be actuated.

1,634,767. BURIAL CASKET OR COFFIN. NICHOLAS N. BARRON, Newark, N. J. Filed Sept. 10, 1925. Serial No. 55,473. 3 Claims. (Cl. 27—3.)



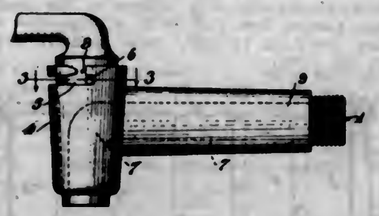
1. A coffin or casket comprising a body and a lid, each consisting of an outer shell of mineral substance and an inner shell of fibrous material arranged to provide a space between them, and a moisture-proof material filling said space, consisting of a mixture of tar, wax, asbestos and shellac.

1,634,768. ENGINE LUBRICATION. CLARENCE E. BONNER, New York, N. Y., assignor to Bonner-Charter Corporation, Dover, Del., a Corporation of Delaware. Filed May 15, 1925. Serial No. 30,417. 14 Claims. (Cl. 123—190.)



1. Machine construction comprising a fixed member, a liner fitted in said member, a movable member inside said liner, said liner being formed of porous material, and means for supplying lubricant to the external surface of said liner.

1,634,769. FRAMING DEVICE. AUSTIN DAY BRIXEY, New York, N. Y., assignor to The Replitura Corporation, a Corporation of New York. Filed Oct. 11, 1919. Serial No. 330,097. 3 Claims. (Cl. 88—17.)



3. A moving picture projecting apparatus including a projecting light and an auxiliary framing light within said apparatus and of less intensity than said projecting light for illuminating the projector window so as to render the pictures on the film easily discernible for facilitating the framing operation.

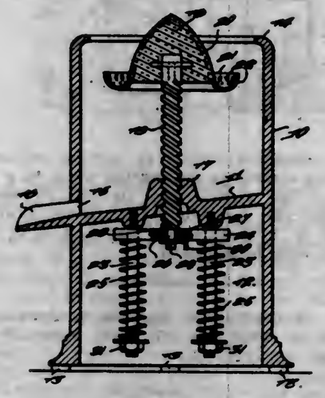
1,634,770. DYNAMO. JOHN G. CAMPBELL, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 14, 1925. Serial No. 62,488. 4 Claims. (Cl. 171—323.)

4. A dynamo brush-rigging comprising, in combination, a brush for engaging the dynamo commutator, a rigid brush pad substantially coextensive with one side only of the brush and provided with an opening, and a single coiled spring connected with the brush through said opening and inclined from the pad toward the commutator.

1,634,771. FAUCET OR VALVE. ROY A. CARD, Washington, D. C. Filed Aug. 2, 1926. Serial No. 126,535. 3 Claims. (Cl. 251—95.)

1. In a rotary valve, a casing, a tapered plug therein having a projection thereon, said casing being provided with a slot in the wall thereof to receive said projection to normally retain the plug in the casing and limit the degree of rotation of the plug, said slot opening through an end wall of the casing to permit removal of the plug only when the valve is in partly open position.

1,634,772. PEN OR PENCIL CLIP. CLARENCE C. CHRISMAN, Martinsburg, Mo. Filed Aug. 10, 1926. Serial No. 128,348. 10 Claims. (Cl. 24—11.)

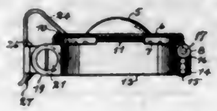


1. A pen or pencil clip comprising a substantially semi-circular body formed of metal having a certain degree of resiliency, the end portions of which body constitute inwardly curved ears that are adapted to receive a pen or pencil and a double spring, one part of which is formed integral with and depends from the intermediate portion of the semi-circular body and the other part of which extends upwardly in front of the depending portion of said double spring and the upper portion of which upwardly extending part terminates between the pen or pencil engaging ears.

1,634,773. PULLEY. WILLIAM A. COVENTRY, Lancaster, Pa., assignor to Grey Iron Casting Company, Mount Joy, Pa., a Corporation of Pennsylvania. Filed May 8, 1924. Serial No. 711,787. 2 Claims. (Cl. 254—197.)

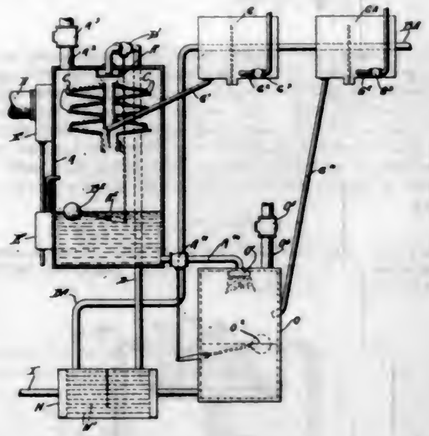
1. A pulley device comprising a cast metal guide member provided with a body receiving recess and with openings adapted to act as rope guides; a one piece cast metal body member; and a stud integral with said body member and passing into said guide member, the stud having its end enlarged to secure the two members together and the base of said body member interfitting with said recesses to oppose rotation of the guide member about the stud.

1,634,774. FRUIT-JUICE EXTRACTOR. FRED ENSSLE, Roselle, N. J. Filed Aug. 10, 1925. Serial No. 49,329. 14 Claims. (Cl. 146—3.)



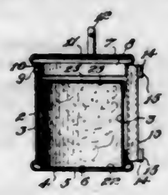
1. In a device of the class described, a receptacle having a bottom provided with a threaded opening surrounded by a guard flange upstanding from said bottom and also having a lateral discharge extending from said bottom, a threaded member operative through the threaded opening, and an extractor element attached to the threaded memoer.

1,634,775. CLOSURE CAP FOR GAS TANKS AND RADIATORS. LOUIS E. FOGEL, Brooklyn, N. Y. Filed Mar. 10, 1925. Serial No. 14,365. 2 Claims. (Cl. 220—24.)



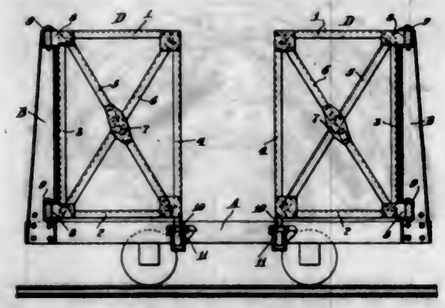
1. A closure cap for tanks and the like comprising a cap member having a hinging member projecting therefrom, a supporting member for said closure member, said supporting member being formed of two parts hinged together, a thimble in one said part and a screw extend-

ing through the other said part and into said thimble, for retaining said parts in adjustable relation and a latch for said cap, said latch comprising a plate having



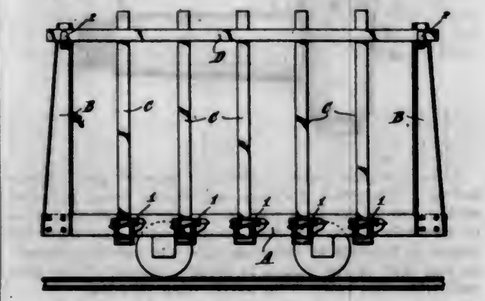
inwardly projecting portions rotatable upon said thimble and a hooked portion adapted to engage upon said cap when said cap is closed.

1,634,776. DEAERATING WATER. GEORGE H. GIBSON, Montclair, N. J., assignor to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1920. Serial No. 411,232. 12 Claims. (Cl. 183—2.5.)



1. The continuous method of treating air-containing water which consists in heating the water to a temperature above 212° F. to liberate air from the water and then cooling the water to a temperature substantially below 212° F. by transferring heat from it to the air-containing water being heated.

1,634,777. RECEPTACLE. SAMUEL B. GIRDLER, Montclair, N. J. Filed Jan. 27, 1925. Serial No. 5,009. 9 Claims. (Cl. 206—16.)



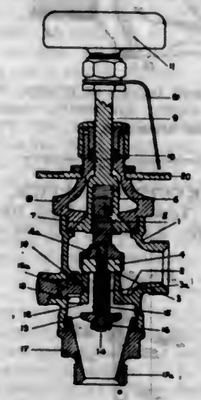
1. A used safety razor blade receiver comprising a permanent outer casing having a slotted cover, an inner removable and discardable receptacle of inferior material having closed ends, the upper end of said inner receptacle having a slot for alignment with the slotted cover of said outer casing, and means to prevent accidental displacement of said inner receptacle from operative assembled relation to said outer casing.

1,634,778. VEHICLE FOR THE TRANSPORTATION OF SUGAR CANE AND THE LIKE. LOUIS D. GREGG, Hackensack, N. J., assignor to The Gregg Company, Limited, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1925. Serial No. 1,646. 5 Claims. (Cl. 105—378.)

1. A vehicle of the character described which comprises an underframe and two spaced walls and which on its discharge side is provided with a door hinged to a wall to swing about a vertical axis, said discharge side having no fixed connection between the walls above the underframe.

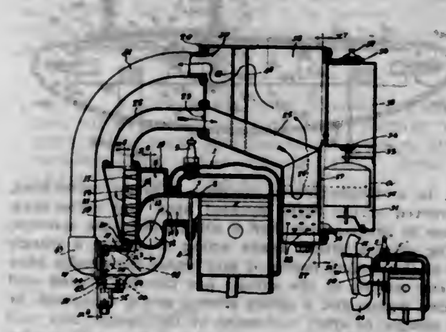
1,634,779. CANE CAR AND THE LIKE. LOUIS D. GREGG, Hackensack, N. J., assignor to The Gregg Company, Limited, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1925. Serial No. 1,647. 5 Claims. (Cl. 105—378.)

1. In an open-top vehicle of the character described, the combination with an underframe and two spaced walls of a discharge side closure which comprises a bar and means for releasably securing the bar in horizontal position to the walls above the underframe, the said bar being movable when released to clear the side of the vehicle.



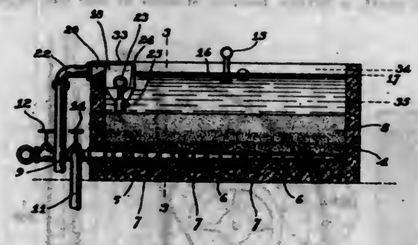
1,634,780. AIR-COOLED PNEUMATIC HAMMER. CHARLES H. HANSELER, Philadelphia, Pa. Filed Oct. 23, 1920. Serial No. 419,018. 5 Claims. (Cl. 121—31.)

1. In a pneumatic hammer, a cylinder having a piston chamber, a piston in said chamber, means to control motive fluid to effect the reciprocations of said piston,



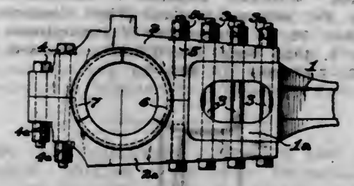
said cylinder being provided with a plurality of longitudinally extending exhaust grooves distributed around its circumference to form a series of heat radiating surfaces, and separate means surrounding the cylinder to cover the major portions of said grooves.

1,634,781. VALVE. J EVERETT HALL, Erie, Pa., assignor to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Jan. 10, 1925. Serial No. 1,564. 6 Claims. (Cl. 277—53.)



1. In a valve the combination of a valve body having a valve passage with oppositely faced seats; a main valve seating surface closing on one seat and closing the valve passage; an auxiliary valve head seating on the opposite seat as the main valve is opened and means permitting a limited flow around the auxiliary valve when seated.

1,634,782. CARBURETING APPARATUS. WALTER G. HEMENWAY, Los Angeles, Calif. Filed Mar. 24, 1920. Serial No. 368,355. Renewed Dec. 15, 1926. 6 Claims. (Cl. 123—25.)

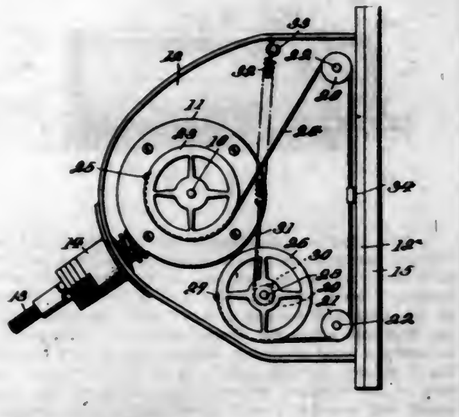


1. In a carbureting apparatus, operating at various degrees of engine suction, a mixing chamber, means to discharge fuel into the mixing chamber, a tank adapted to hold a liquid body, a tube in the tank having ports at different levels below the surface of the liquid to supply air to the tank in accordance with the degree of vacuum produced in the tank outside of the tube, a manifold having an exhaust chamber and having air passages adjacent the exhaust chamber, means connecting said air passages with the tube, and a tube connecting the tank above the liquid level with the mixing chamber.

1,634,783. WATER FILTER. CHURCHILL HUNGERFORD, Wenonah, N. J. Filed Nov. 12, 1921. Serial No. 514,535. 13 Claims. (Cl. 210—136.)

1. In a filter and in combination, a tank, a sand bed therein, means to feed wash water to the tank and the sand bed below the normal level of the latter, and walls forming a wash water passage leading from the interior of the tank and having a water inlet opening within the tank and above the normal sand level, said passage including a sand collecting chamber and a part connecting it to said opening and being of less area than the area of the chamber, whereby the velocity of the wash water will be reduced as it passes through the chamber.

1,634,784. LOCOMOTIVE MAIN ROD. JULIUS KINDERVATER, Richmond, Va. Filed Apr. 19, 1926. Serial No. 103,103. 2 Claims. (Cl. 287—93.)



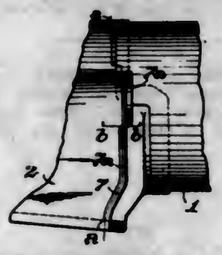
1. In a locomotive main connecting rod, the combination of a body; an enlarged head at one end thereof; a pair of straps, each having a recess intermediate its length, and a recess at its rear end, the intermediate recesses being of a form to provide a crank pin cavity, when the straps are assembled, and the rear recesses being of a form to provide a cavity for the head of the body, the straps having faces intermediate the crank pin and head cavities, adapted to abut when the straps are assembled, and faces forward of the crank pin cavity, adapted to abut when the straps are assembled; bolts passing vertically through the straps and head for securing the straps to the head; and a bolt passing vertically through the straps forward of the crank pin cavity.

1,634,785. MOVEMENT-CONVERTING DEVICE FOR METERS. LLOYD ALAN LAFLIN, Lake Forest, Ill., assignor to Elgin National Watch Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 11, 1926. Serial No. 147,792. 3 Claims. (Cl. 116—129.)

3. In a measuring and indicating instrument having a small horizontal dimension of its parts to permit contiguous mounting of a number of instruments on a board of restricted width, a meter with an oscillated indicating shaft, said meter being of larger diameter and lesser thickness than such dimension, a casing having a front wall with a straight slot therein, said wall being in a plane parallel to the axis of said shaft a rectilinear scale on said front wall adjacent said slot, an index movable along said slot to cooperate with said scale, and

means actuated by said shaft to move said index by equal linear distances for equal angular movements of said shaft, said actuated means including a drum secured to said shaft, a flexible member secured by one end to said

drum, and a take-up device connected to the other end of the flexible member to maintain the same under tension, the total width of said scale and slot being substantially that of the thickness of said meter.



1,634,786. WHEEL. HERBERT V. LUDWICK, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 1, 1922, Serial No. 578,896. Renewed Mar. 8, 1927. 7 Claims. (Cl. 301—9.)

1. In a wheel the combination of a hub having a radial flange and a tapered driving shoulder of non-circular cross section at the base of said flange, a disc having a central opening therein and an integral annular rib surrounding said opening, said disc having a driving seat at the inner edge of said rib fitting said shoulder, and releasable means for maintaining the disc on the hub in contact with the flange and with said seat and shoulder in driving engagement.

1,634,787. STEAM BOILER. JOHN R. MAGARVEY, Schenectady, N. Y. Filed Aug. 27, 1926. Serial No. 131,875. 1 Claim. (Cl. 122—512.)

In a tubular steam boiler, the combination of a plurality of fire tubes; a front tube sheet, connected to the forward ends of said tubes; a rear tube sheet, connected to the rear ends of said tubes, and having a flange turned inwardly, that is, on the water side thereof, from its top to the commencing point of its connection to

the boiler shell, and turned in reverse direction for the remainder of its depth; and rivets, connecting said tube sheets to the boiler structure.

1,634,788. HAIR-CUTTING DEVICE. NORMAN MCGLASHAN, New York, N. Y. Filed Mar. 6, 1924. Serial No. 697,242. 5 Claims. (Cl. 30—12.)

1. A hair cutting device comprising a comb having a longitudinal slot at one end thereof, a cutting blade loosely mounted in said slot, and a spring actuated means engaging said blade for removably securing it against movement in the slot.

1,634,789. SHINGLE-PLANING MACHINE. CHARLES J. MELBY, Everett, Wash. Filed June 9, 1926. Serial No. 114,616. 3 Claims. (Cl. 144—127.)

1. In a shingle-planing machine, a rotary cutter-head, a grooved planer knife mounted upon said cutter-head, means to progressively feed a shingle upon the machine, spring pressed lifting means acting to elevate a shingle out of the cutting region of said planer knife until after an end portion of the shingle has traveled beyond said cutting region, and a spring pressed means engageable by the shingle to effect movement of the shingle into said cutting region for grooving the shingle from said portion to the other end of the shingle.

1,634,790. ART OF MOTHPROOFING. MICHAEL G. MINAEFF and ALBERT PARSONS SACHS, New York, N. Y., assignors, by mesne assignments, to The Larvex Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 21, 1924. Serial No. 721,529. 18 Claims. (Cl. 167—6.)

1. A substantially neutral moth proofing composition containing a soluble silico fluoride.

1,634,791. MOTHPROOFING COMPOSITION. MICHAEL G. MINAEFF, New York, N. Y., assignor, by mesne assignments, to The Larvex Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 21, 1924. Serial No. 721,562. 17 Claims. (Cl. 167—6.)

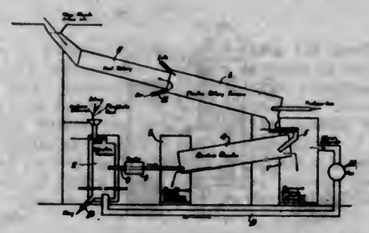
17. A moth proofing composition embodying a chemical capable of rendering woolens immune from the attacks of moth larvæ and in solution therewith an acid in a quantity less than .1%.

1,634,792. MOTHPROOFING COMPOSITION. MICHAEL G. MINAEFF, New York, N. Y., assignor, by mesne assignments, to The Larvex Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 24, 1924. Serial No. 722,064. 6 Claims. (Cl. 167—6.)

1. A moth proofing composition containing sodium oleate, gelatine, and a soluble fluoride.

1,634,793. ART OF MOTHPROOFING. MICHAEL G. MINAEFF, Brooklyn, N. Y., assignor, by mesne assignments, to The Larvex Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 17, 1925. Serial No. 44,362. 8 Claims. (Cl. 167—6.)

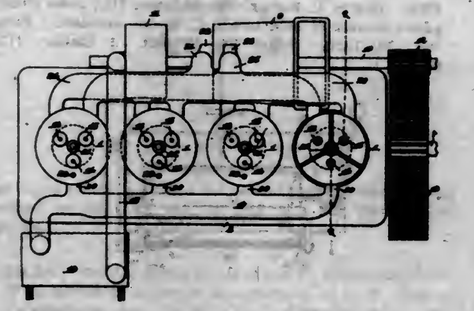
1. A moth proofing composition containing a sulphonated derivative of a fatty acid capable of enhancing the wetting power of said composition.



1,634,794. MOTHPROOFED ARTICLE. MICHAEL G. MINAEFF, Brooklyn, and ALBERT PARSONS SACHS, New York, N. Y., assignors, by mesne assignments, to The Larvex Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 17, 1925. Serial No. 44,363. 8 Claims. (Cl. 167—6.)

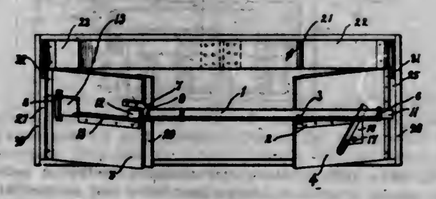
1. As a new article of manufacture, animal fibers impregnated with a moth repellent composition resulting from a mixture of compounds of fluorine, silicon and aluminum.

1,634,795. PROCESS OF PRODUCING PHOSPHORUS NITRIDE AND CERTAIN READILY-VOLATILE HALIDES. CLAUDE G. MINER, Berkeley, Calif. Filed July 25, 1925. Serial No. 46,114. 8 Claims. (Cl. 23—191.)



1. The process of producing phosphorus nitride and a halide which comprises causing a phosphorus halide to react with a nitride of a metallic element at a temperature between 183° C. and 560° C. to produce phosphorus nitride and a halide, and separating the halide from the phosphorus nitride.

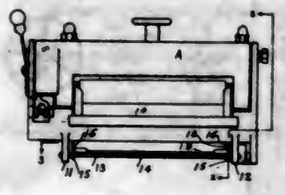
1,634,796. PROCESS OF CONTINUOUSLY PRODUCING PHOSPHORUS NITRIDE AND CERTAIN HALIDES FROM RAW MATERIALS. CLAUDE G. MINER, Berkeley, Calif. Filed July 25, 1925. Serial No. 46,115. 8 Claims. (Cl. 23—191.)



1. The process of producing phosphorus nitride which comprises forming volatile phosphorus chloride and contacting the volatile chloride as formed with a nitride of a metallic element at a temperature between 183° C. and 560° C.

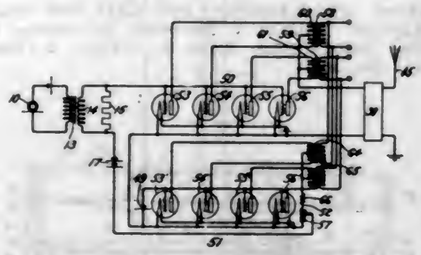
1,634,797. POWER PLANT. EARLE R. NEWTON, New York, N. Y., assignor to Curtis Gas Engine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 18, 1920. Serial No. 359,569. 7 Claims. (Cl. 60—13.)

1. A compound power unit comprising a four cycle internal combustion engine of the type characterized by the cylinders of said engine being charged with precompressed air to a pressure substantially above normal atmospheric pressure, and a secondary expansion apparatus operating on the exhaust gas from said engine, means for so charging said cylinders, means for releasing exhaust gas from said cylinders at or near the end of the expansion strokes and at a pressure substantially above atmospheric pressure, means for driving out with precompressed air the gas remaining after the exhaust strokes at an approximately constant pressure substantially above atmospheric pressure, and means for utilizing the gas from said engine in said secondary apparatus by expansion to substantially atmospheric pressure.



1,634,798. GRAIN-DUMPING END GATE FOR GRAIN WAGONS. WILLIAM A. ORENDORFF, Bloomington, Ill. Filed June 28, 1926. Serial No. 119,121. 2 Claims. (Cl. 296—50.)

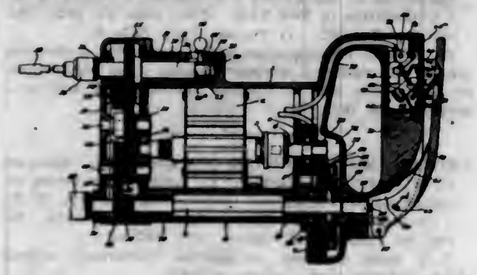
1. In a grain dumping end gate of the character described having a frame member with upright hinge pins and a pair of closure members, a lock member comprising in cooperative combination, a sliding latch, a bracket supported on one of said closure members for the pivotal support of said latch nearer one end than the other, a bracket support for said latch on the other of said closure members; a limiting bracket for providing a predetermined open limit for said closure members; said latch member comprising an angle bar having an upright and a horizontal face, said horizontal face turned up at each end; a pivotally mounted lock member for said latch positioned at one end thereof and secured to said pivot mounting bracket, an engaging bracket member for slidably engaging the end of said latch member



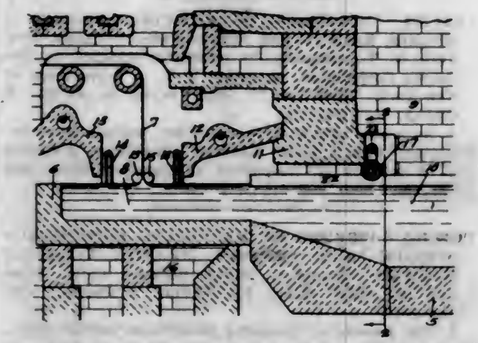
opposite said lock member; whereby said closure members may be securely held together to prevent loss of grain in wagons and when opened held into a predetermined open limit.

1,634,799. ADJUSTABLE DRAIN BOARD FOR WRINGERS. EDWIN C. ROCKE, Bloomington, Ill.; John Rocke administrator of said Edwin C. Rocke, deceased. Filed Oct. 30, 1922. Serial No. 598,039. 1 Claim. (Cl. 68—32.)

In a device of the class described, the combination with a wringer mechanism, of a drain board mounted therebelow in the frame portion of the wringer mechanism, a rod member supporting said drain board in a slidable manner, bearings for said rod, a positioning lug on one of the bearings adapted to engage apertures in the drain board, and spring means anchored on said rod member and adapted to urge the drain board toward the lug member in a tensioned manner.



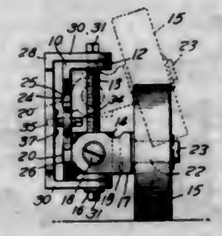
1,634,800. RECTIFYING AND MODULATING SYSTEM. JOHN C. SCHELLENG, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1923. Serial No. 682,182. 5 Claims. (Cl. 179—171.)



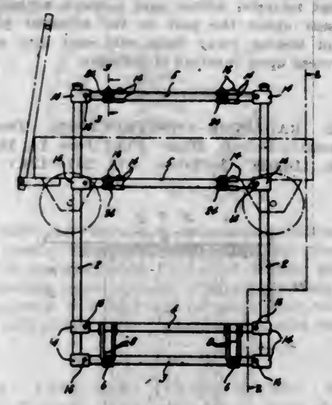
1. In a radiant energy transmission system, a source of signals, a space discharge modulator and an oscillator arranged to supply energy to an antenna, said oscillator and said modulator being controlled by said source of signals and being supplied with energy from a three-phase source of current, and said modulator and oscillator having means connected thereto for impressing ripple potentials upon the grids of said modulator to suppress ripple variations in the current flowing between said modulator and oscillator.

1,634,801. PORTABLE HAND TOOL. FRANKLIN SCHNEIDER, Cleveland, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Continuation of application filed May 9, 1923, Serial No. 637,795. This application filed Oct. 15, 1923. Serial No. 668,628. 3 Claims. (Cl. 192—0.02.)

1. In a motor hand tool, a motor, a tool spindle, driving connections between said motor and said tool spindle and including a clutch having interlocking parts, a controller for said motor, and hand operated means for operating said clutch and said controller, said means being so arranged as to couple the clutch prior to the actuation of the controller to start the motor.

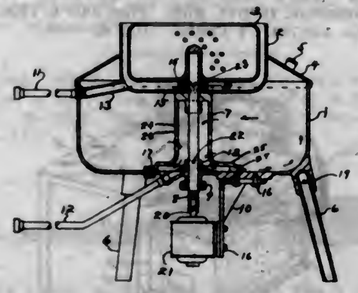


1,634,802. DRAWING SHEET GLASS. JAMES B. SMALL and FRANK J. KINCAID, Charleston, W. Va., assignors to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 9, 1924. Serial No. 711,975. 4 Claims. (Cl. 49—17.)



1. In the method of drawing sheet glass, wherein molten glass is continuously flowed from a tank furnace into a shallow receptacle, and drawn away therefrom in sheet form, the process of removing heat from the glass as it flows into the receptacle by placing a heat-absorbing body closely adjacent the surface of this glass.

1,634,803. PARKING DEVICE. CHARLES SPIRO, New York, N. Y. Filed Jan. 13, 1927. Serial No. 160,886. 20 Claims. (Cl. 280—44.)

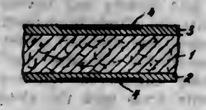


1. A parking device including a support, a rotatable screw retained thereon against axial movement, a traveling block held against rotation upon said screw, a journal extended from the block at an angle to the axis of the screw, and a traction wheel directly mounted upon said journal.

1,634,804. DISPLAY RACK. WILLIAM H. STANSFIELD, Auburn, N. Y. Filed Mar. 11, 1924. Serial No. 698,350. 4 Claims. (Cl. 211—20.)

1. A display rack structure comprising two bars of similar polygonal cross-section, a clamp mounted on one of the bars for clamping the same to the second bar, said clamp comprising opposed clamping members, each having lateral flanges for engaging the sides of the first bar, jaws carried by said clamping members for embracing the first bar, and a bolt extending through the clamping members and first bar for holding the clamping members to the first bar and for relatively actuating the clamping members to clamp and unclamp the bars.

1,634,805. WASHING MACHINE. CHARLES F. STAPLES, Detroit, Mich. Filed Apr. 21, 1924. Serial No. 707,914. 3 Claims. (Cl. 68—37.)



3. In a washing machine, a washing tub having an open top, a compartment having a surrounding wall provided with openings therethrough and extending upwardly from the bottom of the washing tub, a rinsing tub supported within the open top of the washing tub, a shaft extending through said compartment, a pump mounted on said shaft and located in said compartment a perforated basket within said rinsing tub and mounted on the upper end of said shaft, and means for rotating said shaft.

1,634,806. MILK-BOTTLE COVER. ANDREW STRAND, Minneapolis, Minn. Filed Aug. 24, 1925. Serial No. 51,958. 2 Claims. (Cl. 215—38.)

1. A closure for a milk bottle including, an arm depending from and supported by a cover member, a spring means formed integrally with said arm and projecting from the same to form a snap lock for holding the cover to the neck of a bottle and ticket holding means formed on the free end of said arm for the purpose specified.

1,634,807. WALL BOARD. HOWARD F. WEISS, Madison, Wis., assignor, by mesne assignments, to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed Oct. 2, 1925. Serial No. 60,029. 5 Claims. (Cl. 154—45.9.)

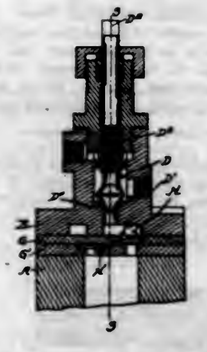
1. A wall board faced with a liner having a cleavage plane, the layers of the liner being more readily separable in some portions of said cleavage plane than in other portions and being adapted to be separated in said readily separable portions to secure it to a support.

1,634,808. WALL CONSTRUCTION. HOWARD F. WEISS, Madison, Wis., assignor, by mesne assignments, to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Original application filed Oct. 2, 1925, Serial No. 60,029. Divided and this application filed Apr. 28, 1926. Serial No. 105,162. 12 Claims. (Cl. 72—16.)

1. A wall comprising studding, lined boards nailed thereto with their edges adjacent one another, the lining on one side of said boards adjacent the edge being of decreased thickness to form a recess, and an inset of lining material arranged in said recess flush with the wall surface and covering the joints and nails.

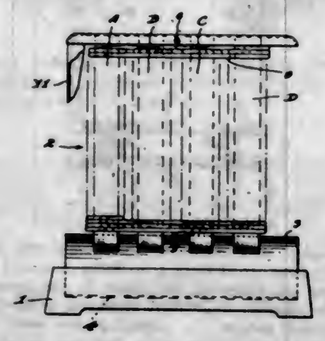
1,634,809. WALL BOARD. HOWARD F. WEISS, Madison, Wis., assignor, by mesne assignments, to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed Apr. 28, 1926. Serial No. 105,163. 12 Claims. (Cl. 154—45.9.)

1. A wall board consisting essentially of a core, liners arranged on each surface of said core, and a nailing strip arranged beneath and in contact with one of said liners,



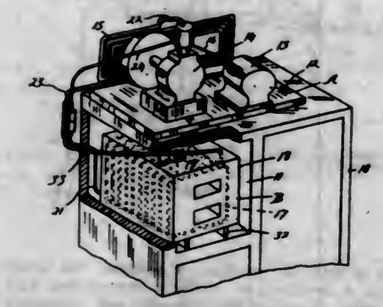
said nailing strip and said liner being separable whereby the nailing strip may be exposed and a nail driven through it and said wall board and then concealed by said liner.

1,634,810. RENEWABLE FUSE PLUG. HARRY J. WHEELER, Kansas City, Mo. Filed June 14, 1926. Serial No. 115,830. 1 Claim. (Cl. 200—129.)



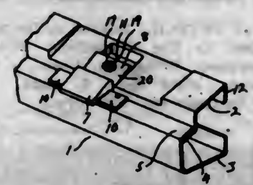
A renewable fuse plug, consisting of an insulator body having twin non-metallic sockets provided with inner annular shoulders and with diametrically opposite guiding slots opening at their upper ends in the shoulders and having portions of the slots cut back to form housings, the floors of said sockets having recessed gaps therein provided with vertical faces, terminals extending into the housings in said sockets and having angularly disposed yielding portions normally extending inwardly of the sockets, non-metallic individual socket engaging members having diametrically opposite ribs on their sides adapted to slidably engage the guiding slots in said sockets and slidably press back the yielding portions of said terminals into the housings in the sockets and cap portions adapted to close the upper ends of the sockets and the guiding slots therein, the lower ends of said socket engaging members having recessed gaps therein provided with vertical walls and located between the ribs thereon and fuse engaging grooves in the ends of the ribs communicating with said gaps in the members, said grooves being limited to receive single fuse elements and non-metallic washers mounted on said members to hold the fuse elements in place, and fusible elements loosely carried by said socket engaging members and having their end portions formed up on the outer sides of the ribs thereon and adapted to slidably contact the yielding portions of said terminals when the socket engaging members are pushed to place in the sockets.

1,634,811. PUMP. THOMAS C. WHITEHEAD, Detroit, Mich. Filed July 23, 1923. Serial No. 653,232. 6 Claims. (Cl. 230—34.)



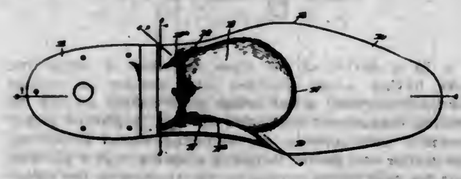
1. In a pump, the combination with a block having a plurality of cylinders therein, of a head, a pair of duplicate reversely arranged plates clamped between said head and blocks, each plate having a series of segmental recesses opposite each cylinder and on one side of the common central plane of said cylinders, and a series of ports registering with said cylinders on the opposite side of said common central plane, the ports of one plate also registering with the recesses of the other plate, and strips of resilient material within said recesses normally lying flat to seat about the port in the adjacent plate but capable of bowing away from said seat into said segmental recess upon reversal of pressure.

1,634,812. RADIATOR CONSTRUCTION. THOMAS C. WHITEHEAD, Detroit, Mich. Filed June 14, 1926. Serial No. 116,028. 5 Claims. (Cl. 257—124.)



2. A radiator having a plurality of laterally spaced upright coils, the convolutions of each coil being tangentially connected to the convolutions of each adjacent coil, the uppermost convolution of one of the intermediate coils having a lateral extension forming an inlet passage and the lowermost convolution of one of the intermediate coils having a lateral extension forming an outlet passage.

1,634,813. REFRIGERATING APPARATUS. THOMAS C. WHITEHEAD, Detroit, Mich. Filed July 6, 1926. Serial No. 120,714. 4 Claims. (Cl. 62—116.)



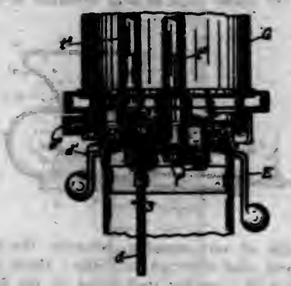
1. A refrigerating apparatus formed of two separate units one of which consists of a base and a motor, compressor and condenser mounted on said base, the other unit including an expansion coil, said second unit being mounted within a refrigerator box, conduits connected to said condenser and compressor, corresponding conduits connected to said expansion coil and a valved coupling element comprising heads connected to the ends of each set of conduits, said heads being provided with passages extending longitudinally thereof and connecting with the aforesaid conduits, valves carried by said heads for closing said passages and means for securing the said heads together.

1,634,814. ADJUSTABLE STRIKER PLATE. CLIFFORD J. WILLIAMS, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 15, 1924. Serial No. 756,141. 12 Claims. (Cl. 292—340.)

1. A device of the class described including a supporting member, a striker plate adjustable transversely thereof, a lug projecting from said striker plate, and means movable longitudinally of said supporting member and engageable with said lug for controlling the adjustment of said striker plate transversely of said supporting member.

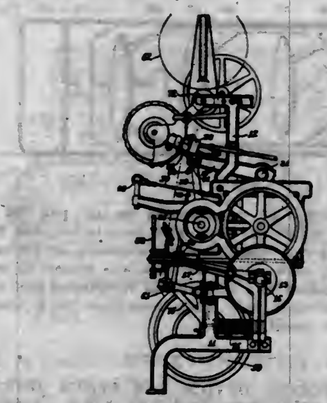
1,634,815. LAST FOR MAKING SHOES. SETON J. ALLEN, Vineland, N. J., assignor to Mary Schonwald Allen, Vineland, N. J. Filed Dec. 16, 1926. Serial No. 155,318. 6 Claims. (Cl. 12—136.)

1. A shoe last, having a longitudinally extending, transversely curved and twisted depressed surface in the arch portion of its bottom face, extending from the heel portion to the ball of the toe portion, the forward and intermediate portions of said depressed arch portion surface being concavely curved and tapering toward the heel portion, the portion of said arch portion adjacent said heel portion being slightly convexly curved.



1,634,816. SHOE. SETON J. ALLEN, Vineland, N. J., assignor to Mary Schonwald Allen, Vineland, N. J. Filed Dec. 20, 1926. Serial No. 155,843. 2 Claims. (Cl. 36—71.)

1. In a shoe, an inner sole provided with a convexly elevated and twisted section arranged therein to fit the metatarsal and longitudinal arches of the foot, a yielding patch filler attached to the lower side of said inner sole, disposed in and substantially conforming to said convexly elevated twisted section, throughout substantially the entire area thereof, reinforcing said convexly elevated twisted section, and holding said section in formed shape, and a resilient shank, secured to said patch and inner sole, supporting said patch and inner sole in formed shape.

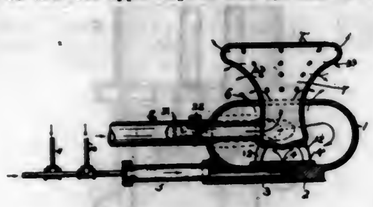


1,634,817. SAFETY MECHANISM FOR DISPENSING APPARATUS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Apr. 19, 1924. Serial No. 707,704. 6 Claims. (Cl. 221—100.)

1. In combination with a dispensing apparatus having a storage tank below, a dispensing container above, a fill pipe connecting said tank and said container, a foot valve for said fill pipe, a suction pump in said fill pipe line, means independent of said fill pipe line for draining

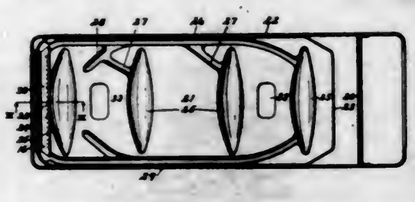
the contents of said container back to said tank; and a valved fluid by-pass between said means and the suction side of said pump.

1,634,818. LOOM. WILLIAM H. BAKER, Montreal, Quebec, Canada, assignor to F. Wilson Fairman, Montreal, Canada. Original application filed Dec. 17, 1921, Serial No. 523,140. Divided and this application filed Oct. 21, 1925. Serial No. 63,889. 5 Claims. (Cl. 139—115.)



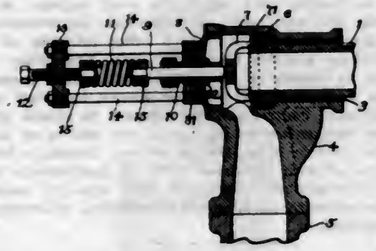
1. In a loom, the combination with a moving lay, protector-mechanism including shuttle-controlled engaging elements at both sides of the loom moving with the lay, and a warp-guide with which the warp engages on its way from the warp-beam, of individual control-members which are located opposite each other laterally of the loom without positive connection with each other, and actuated by means of said shuttle-controlled engaging elements and movement-resisting means combined with the individual control-members adapted to absorb yieldingly the momentum of the lay in the beating-up movement and thereby bring the lay to rest yieldingly before completion of such movement, with the individually movable control-members correlated with opposite ends of the warp-guide to produce warp-slackening movement of the warp-guide.

1,634,819. OIL BURNER. SOLOMON W. BATES, Portland, Me.; Frank E. Haines executor of said Solomon W. Bates, deceased. Filed July 31, 1924. Serial No. 729,228. 1 Claim. (Cl. 158—28.)



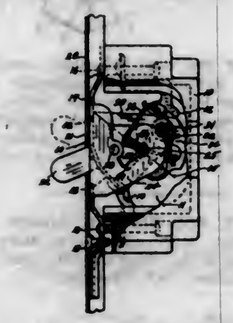
A burner comprising, in combination, a mixing chamber having separate inlets for fuel and for primary air sufficient to support combustion and having a flame discharge

opening at its top; and a hollow flame spreader mounted centrally on the bottom of said chamber having connection with an air supply and extending upward through said flame discharge opening with its walls diverging outward so that the upper edge of said spreader is laterally



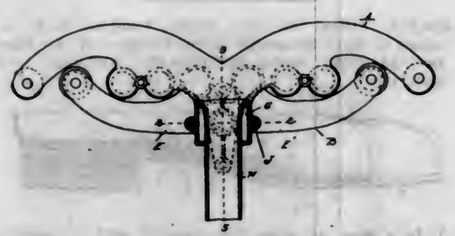
beyond the edge of said opening, whereby the flame is gradually spread and directed laterally; there being a closed top on said spreader and holes in its diverging walls above said flame opening for escape of heated air from the interior of said spreader into this diverging flame.

1,634,820. LUBRICATING SYSTEM. EDWARD H. BELDEN, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 21, 1921. Serial No. 463,185. 15 Claims. (Cl. 184—13.)



1. As an article of manufacture, an oil pan for a multi-cylinder engine provided with receptacles, one for each connecting rod, and also with a groove or channel extending along each side of the pan, the groove on one side being connected to a plurality of receptacles and the groove on the other side being connected to a lesser number of said receptacles.

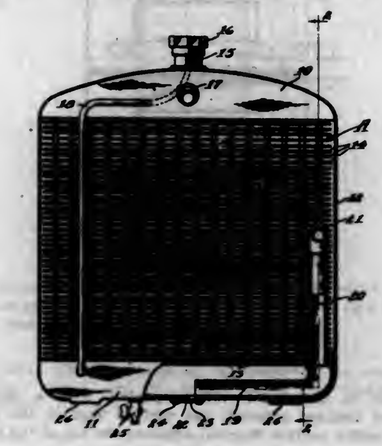
1,634,821. PACKING DEVICE FOR STEAM JOINTS OF DRIER CYLINDERS AND THE LIKE. ARTHUR BIRCH, Arlington, Mass. Filed Oct. 9, 1924. Serial No. 742,600. 4 Claims. (Cl. 285—184.)



1. The combination with a rotary cylinder having a hollow journal, a chambered bearing within which said journal rotates, said parts providing for flow of fluid through said journal between the bearing-chamber and the interior of the cylinder, packing around said journal within which the latter rotates, and a compression-spider for said packing, of spring-pressure devices located visibly externally of the said bearing, operatively combined with said spider, and including a screw by which the tension of the spring is adjusted as required.

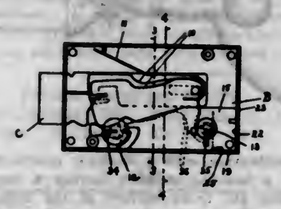
1,634,822. SNAP SWITCH. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 5, 1922. Serial No. 586,158. 12 Claims. (Cl. 200—67.)

1. In a device of the class described, a supporting yoke having wings provided with notches, a contact carrier comprising a flat bridge piece having an edge in rocking engagement with said notches, a pivoted rocker provided with recesses, an operating means connecting the carrier and rocker including a spring, and a pin support for said spring carried in the recesses in the rocker and held therein by said spring.



1,634,823. MANIFOLD FOR MULTICYLINDER INTERNAL-COMBUSTION ENGINES. ALANSON P. BRUSH, Detroit, Mich. Filed June 11, 1920. Serial No. 388,189. 5 Claims. (Cl. 123—122.)

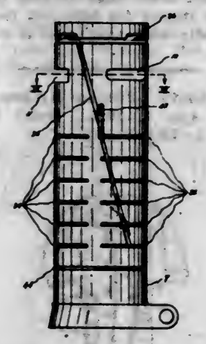
1. In a multi-cylinder engine, the combination with an intake conduit having a plurality of symmetrically arranged branches, of a venturi in advance of said branches for symmetrizing the stream before sub-dividing the same, and a heated chamber communicating with said conduit in alignment with said venturi for receiving and trapping any portion of the liquid fuel thrown out of the stream by its inertia and for vaporizing and returning the same.



1,634,824. RADIATOR. SUMNER BOYD CHILSON, Minneapolis, Minn. Filed Oct. 22, 1924. Serial No. 745,112. 8 Claims. (Cl. 257—125.)

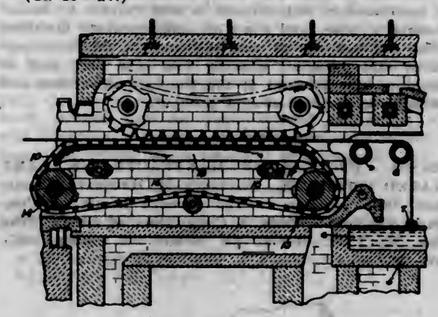
1. In a radiator, a core including ducts for the passage of water therethrough and fins associated with said ducts for cooling the same, a tank at the top of the core feeding into said ducts, a tank at the bottom of the core into which said ducts empty, an egress conduit embodied in the lower tank structure, said conduit opening midway between the ends of said tank at the bottom thereof and extending along said bottom to one end of the tank and within the same and thence upward to the

top of the tank, and a pipe rising through the core from said conduit to a point substantially medially of the top and bottom of said core, said pipe having a fitting turned rearwardly through the core and accessible at the back thereof, the fins of the core providing cooling elements for said pipe and fitting.



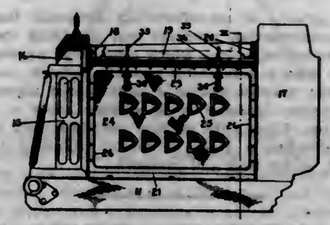
1,634,825. LOCK. CLAUS DIETRICH, St. Paul, Minn. Filed May 8, 1925. Serial No. 28,613. 9 Claims. (Cl. 70—69.)

1. A lock including a pair of key plugs, lever tumblers operable by keys adapted to fit into said plugs, one of said plugs forming means for receiving a pass bank key and the other of said plugs being operated by the key of an individual and safety plate means associated with said plugs in a manner to be operated in unison to release the key plug for the individual and a key for operating the same by releasing the safety means from said plug by the bank pass key.



1,634,826. LUBRICATION OF SLEEVE-VALVE ENGINES. WALTER S. FIERCE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 30, 1926. Serial No. 145,301. 17 Claims. (Cl. 123—75.)

1. In an internal combustion engine of the reciprocating sleeve valve type, means forming a passageway for lubricant upward from the engine crank case longitudinally of the sleeves, means forming a passageway for lubricant downward toward the crank case longitudinally of the sleeves, said upward and downward passageways



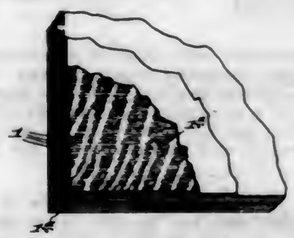
being isolated from each other throughout their length, and means whereby lubricant is caused to circulate within said passageways.

1,634,827. DRAW-TABLE RAIL. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 13, 1924. Serial No. 743,215. 2 Claims. (Cl. 49—17.)

1. In combination with a drawing and flattening table for sheet glass, comprising a pair of rotary cylindrical drums and a flexible link belt adapted to travel around the drums, of a plurality of rails arranged between the drums, each of said rails having a curved end formed on a radius identical with the radius of the said drums.

1,634,828. MOTOR VEHICLE. WILLIAM R. GORDON, Toledo, Ohio. Filed Oct. 25, 1920. Serial No. 419,406. 5 Claims. (Cl. 180—69.)

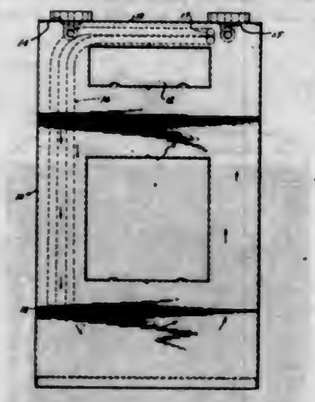
1. In a motor vehicle, a substantially vertical hood panel normally anchored along one edge, means for releasably securing the opposite edge thereof comprising a



spring tending to exert pressure on said hood panel away from its anchored edge, a cam for putting said spring under tension and an inclined plate secured to the vehicle adjacent the lower edge of said panel and positioned outwardly thereof for deflecting the lower edge of said panel inwardly when said panel is lowered from its normal position.

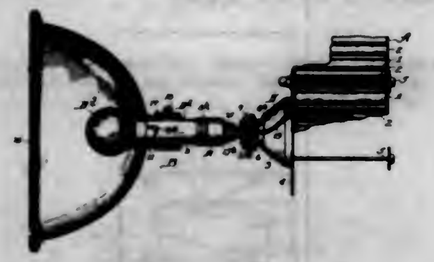
1,634,829. GARMENT. PHILLIP HALPERIN, Los Angeles, Calif. Filed Aug. 1, 1925. Serial No. 47,510. 3 Claims. (Cl. 2—79.)

1. In a garment, in combination, a rear part, a channel stitched to said rear part, a removable part-elastic belt positioned in and stitched to said channel by means of coarse stitches, and a set of complementary fasteners on the end portions of said belt and on the front portion of said garment, whereby said rear part may be secured to said garment at the front or unfastened and lowered over the rear of said garment.



1,634,830. PROCESS OF MANUFACTURING LAMINATED PRODUCTS. CLARENCE M. HARGRAVE, Cincinnati, Ohio, assignor to The Formica Insulation Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 17, 1926. Serial No. 88,855. 5 Claims. (Cl. 41—26.)

1. The process of manufacturing composite laminated phenolic condensation products and providing the same with a decorative surface which comprises: impregnating the fabric with a potentially reactive phenolic condensation product varnish having a light-colored pigment embodied therein, applying to a surface sheet a desired design in ink, dipping the surface sheet in a clear varnish, and consolidating a stack of sheets, including the surface sheet, under heat and pressure.

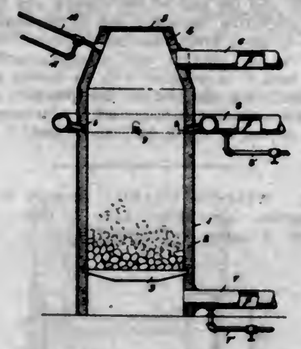


1,634,831. REFRIGERATING APPARATUS. FRED J. HEIDEMAN, Detroit, Mich. Filed Sept. 21, 1925. Serial No. 57,790. 5 Claims. (Cl. 62—95.)

1. In a refrigerating apparatus, a brine tank formed with a separate top wall, a walled opening formed in said tank and extending therethrough from side to side, and an expansion coil comprising a series of substantially L-shape loops insertable in said tank through the top

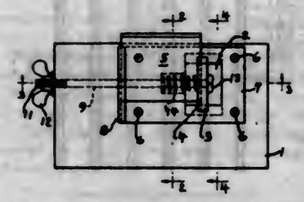
thereof to clear said walled opening, with a portion thereof disposed adjacent one vertical wall of the tank and another portion disposed adjacent the top of the tank.

1,634,832. ELECTRIC LAMP. WOLFGANG HERMANN, Chicago, Ill., assignor to Metal Specialties Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1924. Serial No. 743,062. 2 Claims. (Cl. 240—8.11.)



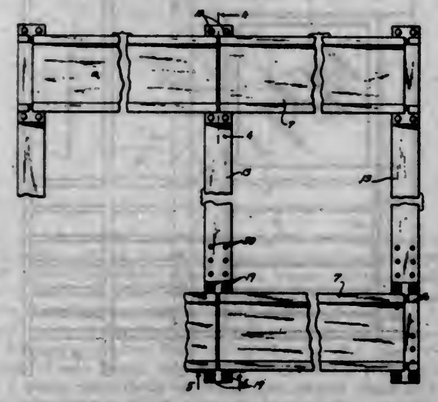
2. The combination with a radiator provided with air passages, of a bracket member having a base portion bearing against the front surface of the radiator, bolts extending through the air passages of the radiator and securing said bracket to the radiator, a nipple equipped with a tubular stem and ball, a socket member carried by said bracket and provided with a part-spherical inner surface, a nut threaded on said socket member and provided with a part-spherical surface, said ball being clamped between said socket member and nut and the tubular stem of said nipple extending through said nut, an electric connector comprising a metallic shell having screw connection with said nipple, a lamp bulb mounted in said connector, and a reflector mounted on and secured to said metallic shell.

1,634,833. ART OF OPERATING WATER-GAS GENERATORS. FRANK A. HOWARD, Westfield, N. J., assignor to Standard Development Company, a Corporation of Delaware. Filed Apr. 1, 1920. Serial No. 370,510. 4 Claims. (Cl. 48—200.)



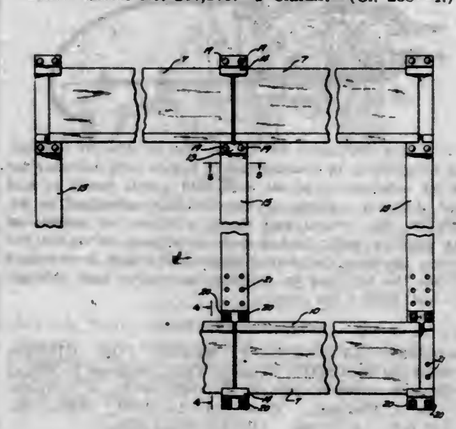
2. The improvement in the art of operating a water gas generator which consists in dividing the fuel in such

generator into two superimposed zones, air blasting the lower zone separately, independently controlling the temperature of the upper zone, producing water gas in



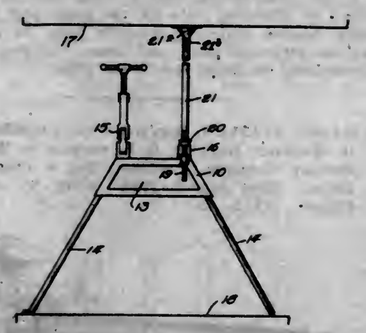
the lower zone, then introducing oil into the upper zone, and separately removing the vapors formed in said upper zone therefrom.

1,634,834. CLAMP. CARL G. E. JOHNSON, Los Angeles, Calif. Filed Jan. 25, 1926. Serial No. 83,498. 3 Claims. (Cl. 81—32.)



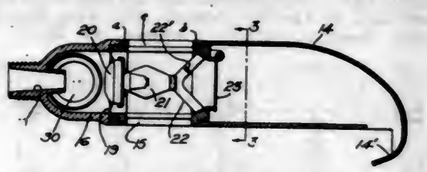
1. In a clamp for scraper blades, in combination, a base, a plate of substantial length and width positioned on said base, one end of said plate being upturned to form a stationary jaw, a movable jaw extending upwardly through said opening and positioned within said base and adapted for movement relative to said fixed jaw, and a resiliently mounted adjustable means associated with said base and said movable jaw whereby a scraper blade may be adjustably held between said jaw.

1,634,835. TRACK CONSTRUCTION. BENJAMIN H. LAMPERT, Oshkosh, Wis. Filed Jan. 17, 1927. Serial No. 161,633. 9 Claims. (Cl. 238—10.)



1. In a track construction, the combination of a plurality of angled track sections for wheel vehicles, angled connectors interlocking with adjacent ends of said track sections to prevent longitudinal displacement thereof, and means for preventing lateral displacement of said track sections.

1,634,836. SECTIONAL-TRACK CONSTRUCTION. BENJAMIN H. LAMPERT, Oshkosh, Wis. Filed Feb. 10, 1927. Serial No. 167,175. 5 Claims. (Cl. 238—4.)

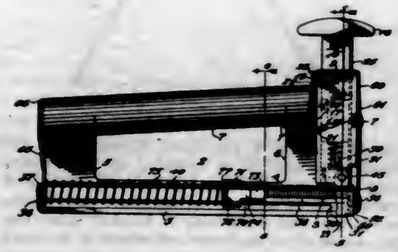


1. In a track construction, the combination of a plurality of track sections, each having a base portion and an inner side flange, means for connecting adjacent ends of said track sections together to prevent longitudinal displacement thereof comprising an angle lug engageable with the outer side of the base portions of adjoining track sections and an angle bracket engageable with said flanges of adjoining track sections, and means for preventing lateral displacement of said track sections.

1,634,837. VISE STAND. OTTAR S. LEE, Chicago, Ill., assignor to Nye Tool & Machine Works, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1927. Serial No. 159,601. 2 Claims. (Cl. 81—41.)

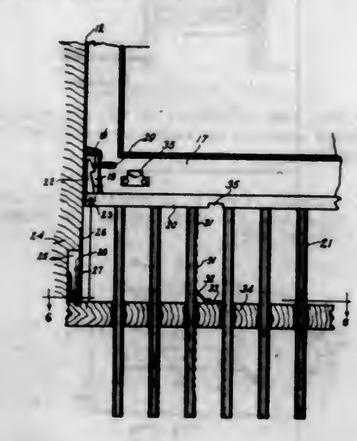
1. In combination, a vise-stand having a vise thereon for clamping a pipe to be operated on, and means cooperating with said stand and a fixed structure above it for resisting force applied to the stand and tending to tilt the latter, and comprising a bracket presenting an angular recess at its underside at which it fits over the edge portion of the top of the stand and engages the upper and side surfaces of said top, and stop means interposed between, and engaging said bracket and said fixed structure.

1,634,838. FIRE-PROTECTIVE DEVICE. ALBERT J. LOEPSINGER, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Oct. 4, 1924. Serial No. 741,753. 17 Claims. (Cl. 169—39.)



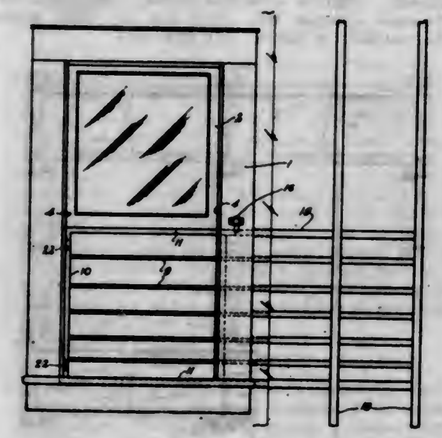
1. A fire protective device for the exterior of a building comprising, in combination, a nozzle with deflector for its jet, adapted to be set with said nozzle inside of and said deflector outside of the building, arranged to return the jet toward and spread it over the outside of the building wall; and a heat responsive valve for the nozzle, the heat responsive element of which is arranged within the building in position to receive heat through the wall from a fire outside.

1,634,839. ATTACHMENT MEANS FOR HINGES. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 13, 1924. Serial No. 743,441. 13 Claims. (Cl. 16—137.)



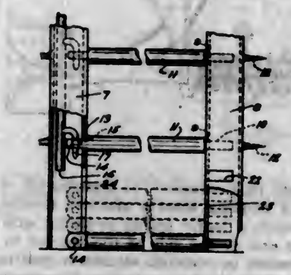
1. The combination with a hinge part, of a hollow pillar, an attaching plate for the hinge part within the pillar, tongues projecting inwardly from the pillar holding the attaching plate, and means engaging the plate for securing the hinge part to the pillar.

1,634,840. STAPLING MACHINE OR TACKER. ARTHUR H. MAYNARD, Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Me., a Corporation of Maine. Filed Aug. 7, 1925. Serial No. 48,771. 20 Claims. (Cl. 1—49.)



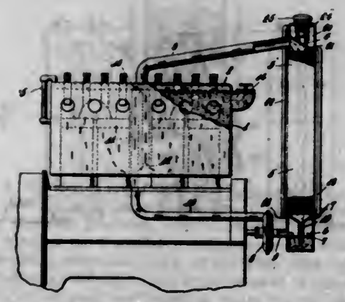
10. In a device of the type specified, the combination of a frame provided with a handle and a vertical housing spaced away from the end of the handle to provide an opening therebetween, a plunger slidable in said housing and formed with a slot on its side, a latch extending loosely through the opening between the end of the handle and the side of the housing and formed with a detent projecting through a slot in the housing to hold the latch in place while adapting its projection to engage the slot in the plunger, and a spring acting on the latch to hold it in position with its detent normally in engagement with the slot in the plunger, said spring adapted for compression to permit the latch to be readily attached to and detached from the frame.

1,634,841. WINDOW GUARD. ARTHUR T. MCWANE, Birmingham, Ala. Filed June 8, 1923. Serial No. 644,260. 8 Claims. (Cl. 20—71.)



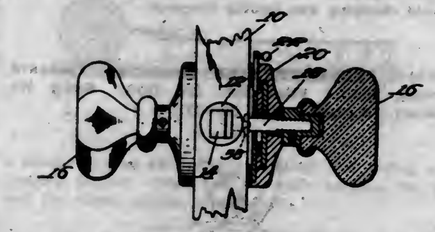
1. A sash guard having means operable to interlock it with a sash, and readily accessible means to provide for unlocking the guard from the sash which is operable only when the sash is in its closed position.

1,634,842. WINDOW GUARD. ARTHUR T. MCWANE, Birmingham, Ala. Filed June 8, 1923. Serial No. 644,261. 3 Claims. (Cl. 20—71.)



1. In combination with a sash frame having guides for its upper and lower slidable sashes, of a guard comprising a rigid frame with a vertical bar at one side and horizontal bars attached thereto at one end and left free at the other end, and tubular guides mounted to open through a sash guide at one side and adapted to receive said bars, there being a countersunk recess in the sash guide to seat said vertical bar flush with said sash guide.

1,634,843. WINDOW GUARD. ARTHUR T. MCWANE, Birmingham, Ala. Filed July 6, 1926. Serial No. 120,598. 2 Claims. (Cl. 20—71.)

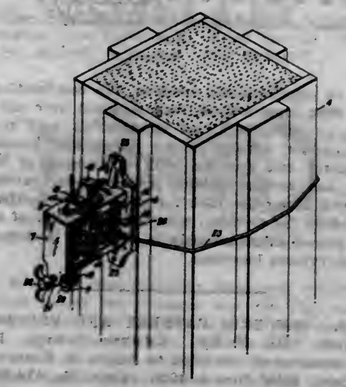


1. A window guard comprising a plurality of bars and mounting elements for said bars disposed in the plane of the parting strip between the window sashes, said elements comprising sockets to receive the ends of the bars, and a locking device housed in one of said elements and movable into position to lock or release all of said bars simultaneously, said bar mounting elements being provided at their bases with rack means to hold the dismounted guard bars.

1,634,844. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WELLINGTON W. MUIR, Lockport, N. Y. Filed Feb. 15, 1922. Serial No. 536,824. 7 Claims. (Cl. 123—174.)

1. In an internal combustion engine, the combination of a jacket; filling means for providing said jacket with such a restricted vapor space that a vapor will be passed out of said jacket at low engine temperatures, a mixed vapor and liquid at higher engine temperatures, and a liquid alone at the highest engine temperatures; means to circulate a cooling fluid out of the top and into the bottom of said jacket, said means comprising a condenser and a pump respectively extending and located below said jacket; a second filling means for said jacket disposed above said restricted space; and valveless means located in said steam space adapted to prevent the liquid from leaving said jacket when the engine stops.

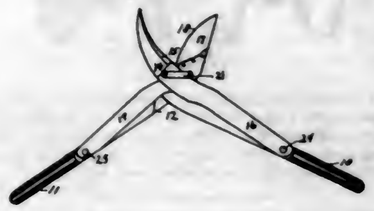
1,634,845. LOCK SPINDLE. FRANZ NETSCHERT, Glendale, Calif., assignor to Technical Glass Company, Inc., Los Angeles, Calif., a Corporation of California. Filed July 22, 1926. Serial No. 124,116. 4 Claims. (Cl. 292—359.)



1. A lock spindle, including separable parts, and means for normally retaining said parts in position as a single operating unit, said means including a pin extending from one of the parts into the body of the other, and a helical spring surrounding said pin.

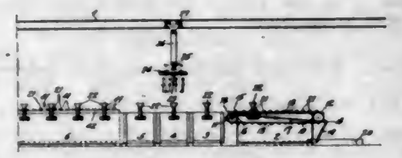
1,634,846. TOY AEROPLANE VEHICLE. IRA G. NICKS, Denver, Colo., assignor to The Joy Toy Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 20, 1926. Serial No. 96,269. 1 Claim. (Cl. 155—22.)

A toy vehicle, wheeled supports, a seat secured to the supports, the seat having its sides cut out to receive the legs of the occupant, forward extending side walls on the seat, a table member secured on the side walls in advance of said cut outs and a transverse handle bar secured at the rear edge of and lying in approximately the plane of said table.



1,634,847. WIRE TIE CLAMP. DOMINIC D. PASQUALLE, Benning, D. C. Filed Mar. 22, 1926. Serial No. 96,643. 6 Claims. (Cl. 24—19.)

1. A wire tie clamp including an integral base and frame, three intermeshing clamping and feeding elements rotatably mounted in said frame, a loop element engaged

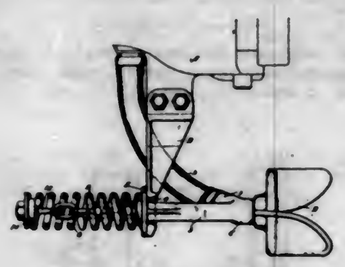


with said clamping and feeding elements whereby rotation of the latter will enlarge or reduce the loop, certain of said clamping and feeding elements being adjustable relative to the other clamping and feeding element, means for effecting such adjustment, and means for rotating the said clamping and feeding elements.

1,634,848. PRUNING SHEARS. NICHOLAS C. PERRAKIS, Fresno, Calif. Filed Dec. 20, 1926. Serial No. 156,031. 6 Claims. (Cl. 30—11.)

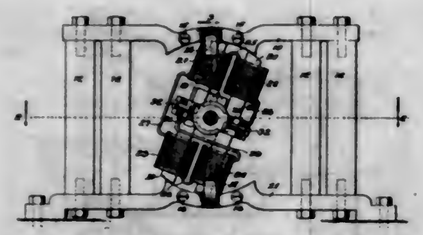
1. A pruning shears consisting of a concave holding blade and a convex cutting blade each of which is rigidly attached to a lever, said levers being connected together by a link pivotally attached to said lever intermediate of the ends and adjacent to the blades, said blades being assembled so that the cutting blade can pass the holding blade adjacent to a side face of the holding blade; and two handles pivoted together at one end, one of said links connecting the levers being pivoted to the handles at the common point where the handles are pivoted together, said levers being pivoted near the ends opposite to the blades, to the handles intermediate the ends of said handles.

1,634,849. ELECTROPLATING MACHINE. EVERTON B. POWELL, Newark, N. J., assignor to The Hanson & Van Winkle Company, Newark, N. J., a Corporation of New Jersey. Filed July 16, 1926. Serial No. 122,900. 7 Claims. (Cl. 204—5.)



1. In an electroplating machine, the combination of a tank, a fixed longitudinal track mounted over the same, a truck on said track, an elevator on said truck, a cathode carrier adapted to be raised and lowered by said elevator and provided with a plurality of cathode hangers, and vertical guiding means on the carrier and at intervals along the tank for guiding the carrier as it is lowered by the elevator, whereby a plurality of articles may be placed simultaneously in the tank in definite positions in various locations.

1,634,850. ELECTRIC BATTERY AND PROCESS OF MAKING THE SAME. EMMETT POWERS, Denver, Colo., assignor of one-third to Austin R. Kracaw, Denver, Colo. Filed June 8, 1926. Serial No. 114,571. 13 Claims. (Cl. 136—158.)

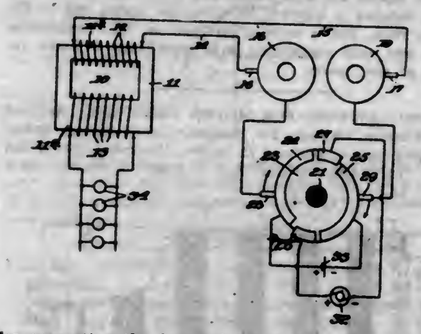


1. In a battery, an electrolyte comprising a mixture of silic and phosphoric acids.

1,634,851. AUTOMATIC TRAIN-PIPE CONNECTER. JOSEPH ROBINSON, New York, N. Y. Filed Oct. 18, 1921, Serial No. 508,582. Renewed Dec. 13, 1926. 6 Claims. (Cl. 285—58.)

1. In a train pipe connecter, in combination, a supporting bracket, a coupling member mounted thereon for universal movement, a buffer spring co-acting with the coupling member and at one side of the bracket to normally hold said member in coupling alignment position on the bracket and permit yielding and other movements thereof, and tying means to connect the bracket and spring together, consisting of a flexible tie member engaging the spring at one end and passing through the bracket to the side opposite the spring, and a removable bearing element connecting said tie member to the bracket, located on the last mentioned side of the bracket, and forming a bearing for the tie member stationary relatively to the bracket, the coupling member comprising spaced sides between which the bearing element is accessible from lateral directions to facilitate application and removal thereof.

1,634,852. ELECTRIC MOTOR. HENRY K. SANDELL, Chicago, Ill. Filed Mar. 27, 1924. Serial No. 702,298. 3 Claims. (Cl. 172—36.)



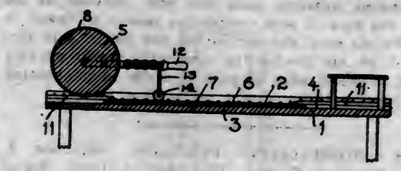
1. In an electric motor, an armature, field members located about said armature, said field members having opposed pole pieces, windings on said armature, relative high voltage means for supplying current to the armature windings as they pass the pole pieces, and means for continuing the armature current comprising a lower voltage supply.

1,634,853. TRANSFORMING SYSTEM. HENRY K. SANDELL, Chicago, Ill. Filed Mar. 27, 1924. Serial No. 702,299. 2 Claims. (Cl. 175—364.)

1. A transforming system comprising a magnetic core of O-shape, one side being of larger cross sectional area than the other, primary and secondary windings thereon, the primary being on the side of smaller cross section,

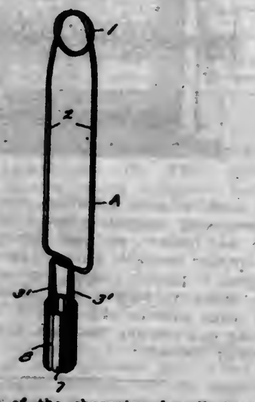
a source of high voltage direct current, means for intermittently passing said current through said primary winding in alternately reversed directions, and means

for connecting the free ends of the primary winding to permit a current to flow after the energizing current has been cut off.



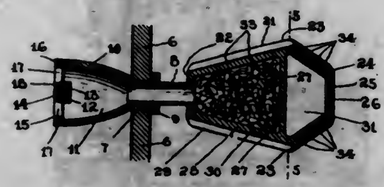
1,634,854. ELECTRIC ELEVATOR. THOMAS F. SCOLLARD, Warsaw, Ind. Filed July 2, 1924. Serial No. 723,782. 1 Claim. (Cl. 187—19.)

In a device of the character described, an elevator shaft having rack bars arranged at its corners, a vertically movable platform, shafts mounted under the platform, pinions on the shafts adjacent to the ends thereof and meshing with the teeth of the rack bars, pinions on the shafts intermediate the ends thereof, a shaft having worms at its ends and meshing with the last mentioned pinions, and means on the platform for imparting rotary motion to the last mentioned shaft to raise and lower the platform.



1,634,855. PRINTING APPARATUS. OSCAR SIVERTZEN, Trondhjem, Norway. Filed Jan. 19, 1924, Serial No. 687,386, and in Norway Feb. 3, 1923. Renewed Apr. 30, 1927. 1 Claim. (Cl. 101—212.)

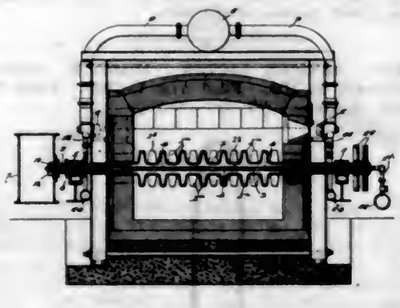
In combination a table an elastic support thereon adapted to receive a plate of glass, a stepped rail at each longitudinal side of the table and having a raised portion extending above the surface of the glass plate, and having a roller supporting surface substantially flush with the surface of the glass plate, pegs arranged at spaced apart intervals in the rails at the glass plate surface level, a roller supported upon the rails and held between the rises of the raised portion thereof, depressions in the periphery of the roller corresponding to said pegs,



a handle pivoted axially of said roller and having a depending support resting on the rails between the pegs and the raised portion of the rails.

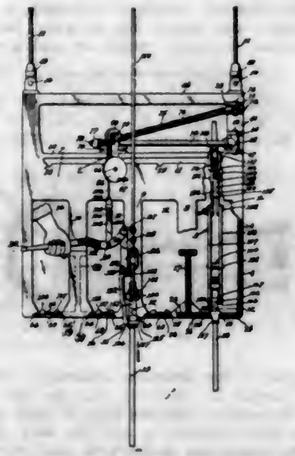
1,634,856. ARTICLE LIFTER. FRANK W. SKROCH, Jamestown, N. Dak. Filed Aug. 7, 1925. Serial No. 48,858. 1 Claim. (Cl. 294—99.)

An article holder of the character described comprising a handle constituting a spring at one end terminating in diverging arms, said arms being bent inwardly of their forward ends to set up overlapping right angled portions and having their forward terminals bent to extend forwardly in substantially parallel relation, said forwardly extending terminals being flattened, a pair of substantially semi-cylindrical members arranged in edge opposed relation, and means for securing the flattened terminals across the outer surface of said members.



1,634,857. COMBUSTION APPARATUS. ROBERT J. SOVERSION, New York, N. Y. Filed Nov. 13, 1925. Serial No. 68,788. 2 Claims. (Cl. 110—175.)

1. A device of the character described, comprising a combustion means for furnaces and the like, including a member mounted in the fire door of such furnace, an air valve, a pipe mounted in said fire door arranged to connect said combustion means with said air valve, said combustion means being of hollow unitary structure in double frusto pyramidal form having their bases joined and a baffle extending across the hollow space at said juncture and having formed therewith and extending

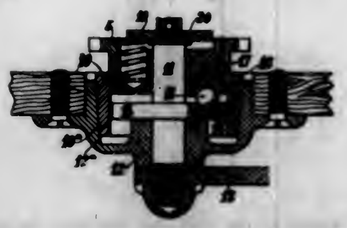


longitudinally thereof a plurality of super-heating fins, a plurality of apertures cut in the walls of said combustion means on one of said frusto pyramidal ends of said combustion means adjacent said fins and disposed at an angle to the axis of said combustion means arranged to project the air over and within the fire box of said furnace, and an air pre-heating conductive baffle packing composed of coiled wire adapted to assist in pre-heating the air passing through said combustion means.

1,634,858. NORMALIZING FURNACE. WILLIAM J. STOOP, Wheeling, W. Va. Filed Dec. 5, 1925. Serial No. 73,496. 8 Claims. (Cl. 263—6.)

1. In combination in a furnace, means for heating the same, means for supporting and moving metallic sheets through said furnace, said last named means comprising hollow circular rotatable discs, staggered in position and overlapping to provide closely disposed contacting points for the sheets to support and move the same in one normal plane substantially without sagging, means for supporting and rotating the discs, and means for cooling the interior thereof.

1,634,859. ROD RACK. ROBERT M. TIBBETTS, Long Beach, Calif., assignor, by direct and mesne assignments, of seventy-two and one-half per cent to Willard L. Burrough and twenty-seven and one-half per cent to David G. Lorraine, Los Angeles, Calif. Filed May 5, 1924. Serial No. 711,165. 18 Claims. (Cl. 255—1.)



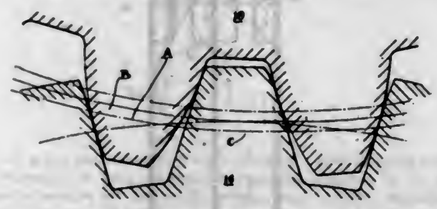
14. A rod rack construction comprising a storage rack, an engaging member having a squared recess open at one side, a supporting arm for said member extending upwardly therefrom so that said member is adapted to be shifted laterally for receiving the squared portion of the coupling of a sucker rod in said recess with the collar of said coupling resting upon the wall of the recess, suspension means for said supporting arm whereby the engaging member is adapted to carry the sucker rod to the storage rack, and a connection between said suspension means and said supporting arm permitting relative rotation of said parts.

1,634,860. AWNING FOR MOTOR VEHICLES. ARTHUR H. WATSON, Chicago, Ill., assignor, by direct and mesne assignments, to Richard C. Potter, Riverside, Ill. Filed Nov. 12, 1925. Serial No. 68,526. 1 Claim. (Cl. 156—15.)

The combination with a vehicle having window sashes, of fastener members secured to the sashes, an awning strip, end plates fixed to the outer ends of the strip forming end closures for the awnings, plate engaging members carried by the sashes for securing the plates to opposite side portions of the sash, and complementary fastener members carried by the awning strip for engaging with the first named fastener members.

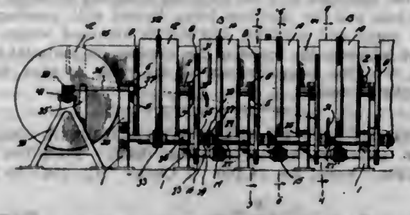
1,634,861. OPERATING APPARATUS FOR VERTICALLY-SLIDING PANELS. CHARLES TORRES WEYMANN, Paris, France. Filed Oct. 1, 1923, Serial No. 666,045, and in France May 4, 1923. 4 Claims. (Cl. 192—8.)

1. In a window raising and lowering device, the combination of a frame, an axle supported by the frame, a crank for rotating said axle, a plate movable with said axle and having semi-spherical cups therein, a wheel mounted loosely on said axle and having an annular friction member, said wheel having semi-spherical cups corresponding to those of the plate, balls interposed between the plate and wheel and resting in said cups, a friction member fixed to the frame and engaging the wheel for preventing accidental rotation of the wheel, and springs for forcing the friction members together.



1,634,862. CORNER PIECE FOR BUILDINGS. SAM YODER, Blackwell, Okla. Filed June 8, 1925. Serial No. 35,625. 1 Claim. (Cl. 72—121.)

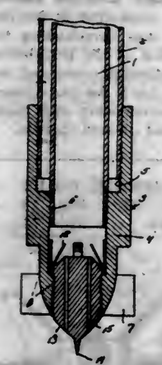
A device of the class described including a pair of wall end receiving members, each member comprising a pair of right angularly disposed legs, one leg being larger than the other of each member, the long leg of one member being substantially alined with the short leg of the other member, the short legs of the members being right angularly disposed to each other and the long legs of the members being right angularly disposed to each other, and



a member including a body portion having its ends bent over upon itself and integrally merging into the terminals of the short legs for connecting said first mentioned members together.

1,634,863. REDUCTION GEARING. ROBERT C. ALLEN, Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed May 10, 1921. Serial No. 468,294. 5 Claims. (Cl. 51—278.)

1. A process of grinding gears which consists in loading a gear to be ground, driving the gear by a plurality of pinions acting successively and independently and having relatively different diameters, and supplying an abrasive to the contacting portions, the distance between the centers of the gear and the several driving pinions being constant.

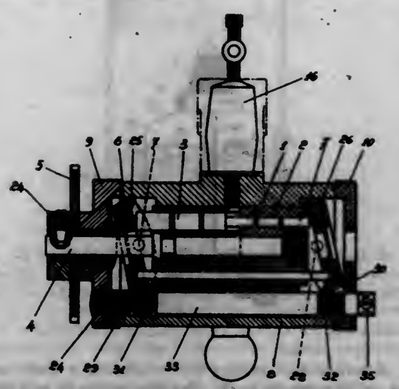


1,634,864. SPRING MOTOR. ASA M. BABCOCK, Lorain, Ohio. Filed June 4, 1926. Serial No. 113,731. 4 Claims. (Cl. 185—40.)

1. A spring motor, comprising a support, a plurality of shafts mounted in said support for independent rotation in one direction only, a plurality of driving drums mounted on said shafts for independent rotation, a driven shaft rotatable in said support and having driving connection with said driving drums, and means operable to independently rotate the first mentioned shafts to wind the springs in said drums in a predetermined manner.

1,634,865. CORE DRILL. WALTER C. BARNES, Taft, Calif. Filed June 23, 1926. Serial No. 118,026. 1 Claim. (Cl. 255—72.)

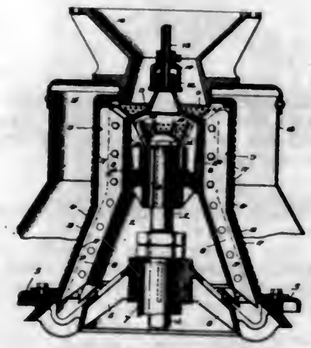
In a core drill, an inner barrel, a casing surrounding the same, a core bit secured on the lower end thereof, said bit being provided with the usual laterally extending blade and core attacher spring, a removable solid plug threaded in the bit to provide a closure for the lower end of the inner barrel, the upper end of the plug being beveled, the lower end of the plug extending beyond the bottom of the bit and being shaped to a continuation of the lower exterior portion of the bit, a ground engaging element formed on the lower end of the plug for prevent-



ing the rotation thereof in order to facilitate the removal of the core bit from the plug, said plug being provided with longitudinally extending passages to permit a fluid to enter the inner barrel.

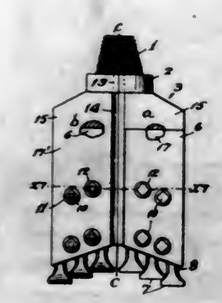
1,634,866. INTERNAL-COMBUSTION ENGINE WITH CYLINDERS ARRANGED IN TWO OPPOSITE LINES. JEAN JOSEPH MARIE BERTRAND and LOUIS JOSEPH HENRI SOLANET, Paris, France. Filed Apr. 20, 1922, Serial No. 555,734, and in France May 13, 1921. 5 Claims. (Cl. 123—56.)

2. An internal combustion engine comprising a plurality of groups of four cylinders and having the $4p$ cylinders of the engine arranged in two opposite lines with their axes parallel, in which the cranks of each group of four cylinders lie in a single plane and the p crank shafts of the various groups of four cylinders are identical, placed end to end and displaced equally relatively to one another.



1,634,867. PUMP. ROMUALDO BORLETTI, Milan, Italy. Filed Aug. 20, 1924, Serial No. 733,202, and in Italy Jan. 30, 1924. 2 Claims. (Cl. 103—38.)

1. A pump of the character described including a casing, a rotor rotatably mounted therein and provided with cylinders, pistons arranged in the cylinders and

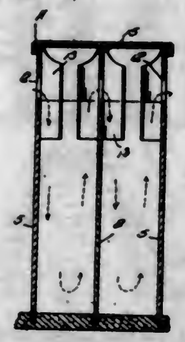


projecting beyond the edge of the rotor, apertured rings arranged at an inclination of the respective ends of the casing and contacting with the projecting ends of the pistons, a bar also slidably mounted through the rotor and of a length longer than the combined length of the pistons and loosely connected at its ends with the apertures in the rings, caps surrounding the rings and each provided on a portion of the peripheries with teeth, and a screwed spindle adjustably engaged with the casing and also provided with teeth for engagement with the teeth on the caps to simultaneously shift both of the rings and caps upon adjustment of said spindle.

1,634,868. CENTRIFUGAL DRIER. GUY H. ELMORE, Swarthmore, Pa. Filed Feb. 18, 1922. Serial No. 537,627. 6 Claims. (Cl. 210—76.)

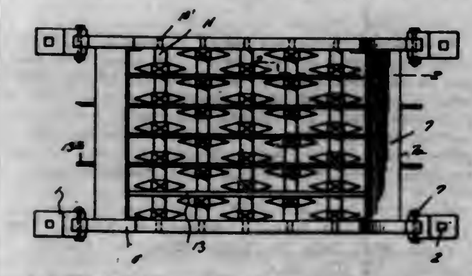
1. A screen shell or basket for centrifugal driers, consisting of a circular casting provided with a plurality of rows or tiers of pockets or recesses in its inner surface spaced apart end to end, and a series of circumferential grooves in its outer surface of a depth to open into said pockets, the pockets and grooves being arranged in planes perpendicular to the axis of rotation of the shell or basket; whereby there is formed a perfectly balanced integral shell.

1,634,869. ROTARY WELL-DRILLING BIT. GEORGE GARTLING, Los Angeles, Calif. Filed Mar. 28, 1922. Serial No. 547,410. 7 Claims. (Cl. 255—61.)



1. A rotary well drilling bit comprising a body having gains on its forward faces; clamping pieces in said gains; cutters having shanks between the clamping pieces and floor of the gains; and means to secure the cutter shanks between the clamping pieces and the floor of the gains.

1,634,870. PROCESS FOR THE PRODUCTION OF AMMONIUM CHLORIDE AND ALKALI-METAL SULPHATE. OTTO GRANGROSS, Grunewald, near Berlin, Germany, assignor to the Firm Continentale Aktiengesellschaft für Chemie, Berlin, Germany. Filed May 22, 1925, Serial No. 32,215, and in Germany June 11, 1924. 6 Claims. (Cl. 23—100.)



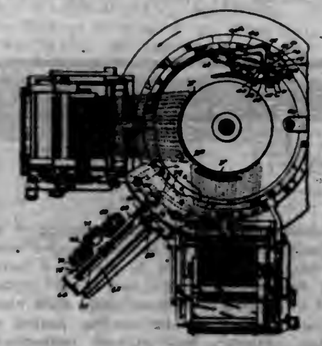
1. A dry process for the production of ammonium chloride and alkali metal sulphate consisting in heating a mechanical mixture of ammonium sulphate and alkali-metal chloride in the presence of gases, said gases being generated during said heating of said mixtures by adding an alkali-metal compound thereto which when heated will split off such gases.

1,634,871. SEPTIC TANK. ANDREW LEE HEPLER, Mathews, Va. Filed Sept. 1, 1926. Serial No. 133,004. 3 Claims. (Cl. 210—6.)

1. In a septic tank of the class described, a pair of complementary half sections, laterally extending flanges formed on the vertical side edges of the sections, a vertical partition wall arranged between the sections, the edges of the partition being disposed between the inner opposed faces of the laterally extending flanges, securing means extending through the lateral flanges and the edges of the vertical partition wall, vertical tubes arranged over the lateral flanges of the sections and the edge portions of the partition wall for receiving a sealing material, said sections and the partition being formed with openings in the upper end portions, and shields arranged within the tank adjacent the openings for causing the material flowing into the compartments of the tank to pass downwardly therein.

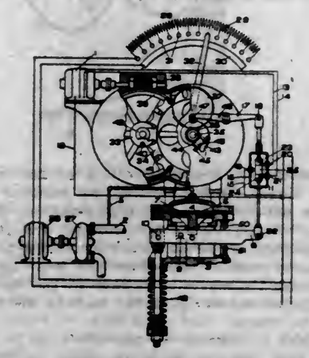
1,634,872. CATTLE GUARD FOR RAILWAYS. JOSEPH F. HOLLENBACK, Canyon Creek, Mont. Filed Dec. 29, 1925. Serial No. 78,180. 1 Claim. (Cl. 256—16.)

A cattle guard comprising anchor members adapted to be affixed on sleepers or ties, a pair of side bars engaged with the anchor members, said side bars having beveled ends, transverse end members interposed between and fixed to the side bars and having inclined portions, longitudinal spaced plates disposed between the side bars and



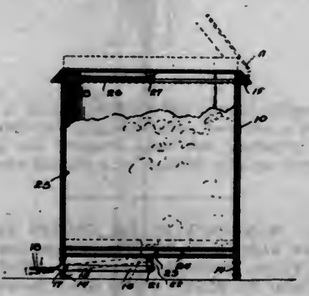
interposed between and fixed to the end members, some of said plates being depended below the side bars and other plates to rest on sleepers and ties and constitute auxiliary supports, and means calculated to discourage cattle from traversing the guard disposed between the sides and the longitudinal plates.

1,634,873. SCALP-PATTING DEVICE. THOMAS F. HOMAN, Cincinnati, Ohio. Filed Dec. 2, 1924. Serial No. 753,460. 1 Claim. (Cl. 128—64.)



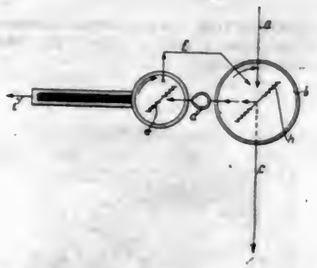
A scalp patting device consisting of a sheath of flexible, yielding and fluid impervious material adapted to fit the scalp portion of the head snugly, said sheath consisting of an outer and inner covering and separated by a series of stud walls integrally formed upon the outside surface of the inner covering, spacing apart and forming circuitous passages throughout the sheath, arched flexible diaphragms integral with the outside surface of the inner covering and arising upwardly from the bases of the stud walls to the underside of the outside covering, said arched flexible diaphragms being normally away from the scalp and adapted to be forced downwardly and in contact with the scalp to produce a patting action and back again when the passages are subjected to fluid pressure and pulsating action, an inlet and outlet for the introduction and expulsion of fluids communicating with the passages at the opposite extremes of the sheath.

1,634,874. KNITTING MACHINE. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Original application filed Aug. 6, 1924, Serial No. 730,462. Divided and this application filed Mar. 18, 1926. Serial No. 95,611. 4 Claims. (Cl. 66—140.)



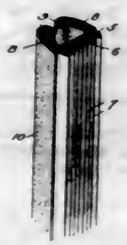
1. In combination in a circular knitting machine, a pair of yarn fingers mounted to move radially of the machine, a cam on the fixed base with pattern means for moving said cam into the path of movement of either one finger or the other, a detent for each finger for holding it in yarn feeding position, cam means for operating the detents to release the fingers, and means for returning the fingers to non-feeding position when released by said detent, substantially as described.

1,634,875. REGULATOR. JAMES LEWIS KIMBALL, Salem, Mass. Filed June 1, 1925. Serial No. 34,039. 12 Claims. (Cl. 103—25.)



1. In a regulator, a controlling device, a motor and means connecting the motor with the controlling device to effect the operation of the controlling device at predetermined points in the operation of the motor, said motor having an effective period of operation in which it operates the controlling device, and a non-effective period of operation, in which the motor is disengaged from the controlling device, means to effect the starting and stopping of motor during the non-effective period of operation of the controlling device.

1,634,876. RECEPTACLE. LEWIS A. MARCUS, New York, N. Y. Filed May 5, 1925. Serial No. 28,151. 2 Claims. (Cl. 220—36.)

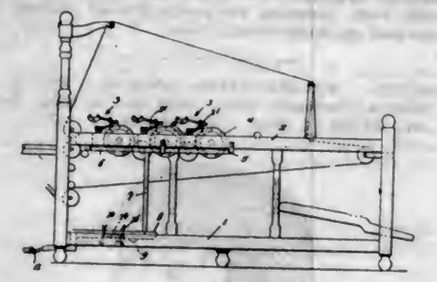


1. In an apparatus of the character described, in combination, inner and outer receptacles, one of which is movable relatively to the other, a single closure for said receptacles, means for raising the inner receptacle whereby it cooperates with the under surface of the closure to automatically raise the same, said means comprising a foot lever, a member carried by one end of said lever engaging the under side of the inner receptacle, and a reinforcing member extending across the under side of the outer receptacle for supporting the inner receptacle, and thru which said first named member is disposed.

1,634,877. MANUFACTURE OF WHITING. PHILIP M. MCHUGH, Pelham Manor, N. Y., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 13, 1924, Serial No. 698,843, and in Germany Mar. 14, 1923. 8 Claims. (Cl. 209—2.)

1. A method for the classification of fine solids suspended in liquid which comprises the removal of a portion of the undersize hydraulically; removing the remaining solids which comprise the oversize and the residue of the undersize, subjecting such remainder to a classifying step for separating said residue from the oversize, and returning the separated residue to the hydraulic removal step independently of the feed to the classifying step.

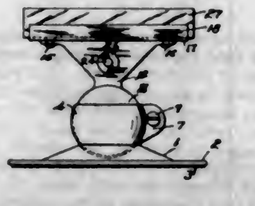
1,634,878. RUNWAY FOR WINDOWS. CARLOS J. MCKINNEY, Detroit, Mich., assignor to The Republic Rubber Company, Youngstown, Ohio, a Corporation of Ohio. Filed Aug. 13, 1926. Serial No. 128,992. 3 Claims. (Cl. 296—44.5.)



1. A flexible runway for windows having a base provided with a series of serrations upon its under surface, and also projecting side walls arranged and adapted to contact with opposite surfaces of a slidable window pane.

1,634,879. MANUFACTURE OF PECTIN PRODUCTS. DINSHAW RATTONJI NANJI, Birmingham, and FREDERIC JAMES PATON, Smethwick, England. Filed Jan. 15, 1926, Serial No. 81,593, and in Great Britain Dec. 28, 1925. 9 Claims. (Cl. 99—11.)

9. A process of extracting or removing pectin from materials containing pectinous substances by treatment of the materials with dilute solutions of salts capable of rendering soluble substantially the whole of the pectinous content.

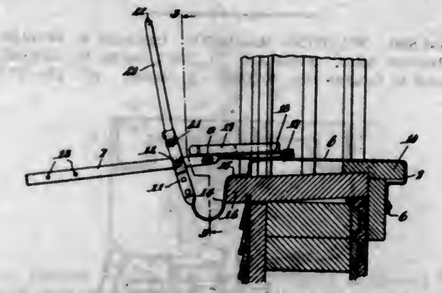


1,634,880. RULING MACHINE. FELIX MEERNSKY, Leavenworth, Kans. Filed Jan. 5, 1926. Serial No. 79,354. 3 Claims. (Cl. 33—39.)

1. As a new manufacture, an attachment for an automatic ruling machine adapted for simultaneously raising a plurality of pen equipped striker beams, comprising a rock shaft, means for mounting the rock shaft on said ruling machine, an operating lever, an operating connection between the lever and said rock shaft, and a

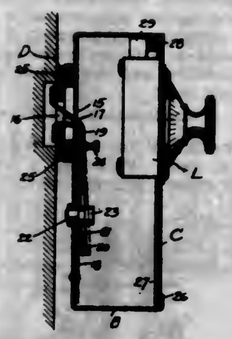
plurality of separate devices associated with the rock shaft and adapted for cooperation with said striker beams.

1,634,881. RAZOR-HONE HOLDER. FRANK J. MIRGON, San Francisco, Calif. Filed Jan. 26, 1925. Serial No. 4,804. 1 Claim. (Cl. 51—211.)



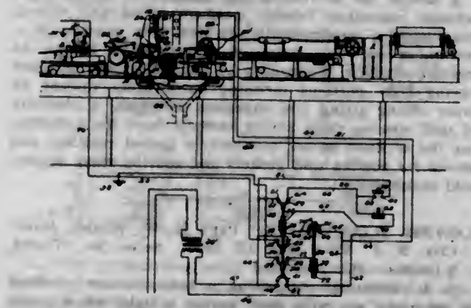
A razor hone holder comprising hone holding means mounted on a spherical member, a base having a raised central portion, a depression in said central portion adapted to receive said spherical member, a split partly spherical shell, ears on the free ends of said shell, said ears having a bolt and wingnut, and tabs on the bottom portion of said shell adapted to engage slots in said raised portion of the base.

1,634,882. DRIER. RICHARD REED MORRILL, Palo Alto, Calif., assignor, by mesne assignments, to Oliver Oil-Gas Burner and Machine Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 29, 1922. Serial No. 603,959. 14 Claims. (Cl. 34—39.)



1. A heating system for driers consisting of a drying chamber, material supporting means arranged therein and spaced from the top thereof to provide a mixing and tempering chamber in the upper end of said drying chamber, a hot air chamber communicating with one end of said drying chamber for introducing heated air into said mixing chamber, and exhaust connections communicating with the lower portion of said drying chamber for conveying from the lower portion of said drying chamber the chilled air.

1,634,883. WINDOW SEAT. JOHN D. ORLOWSKI, Chicago, Ill. Filed Apr. 10, 1926. Serial No. 101,037. 7 Claims. (Cl. 304—24.)



1. A device of the class described comprising a main frame provided at its inner end with hook elements to engage the inner ledge of a window sill; a seat frame pivotally mounted on said main frame and arranged to rest on the outer ledge of said window sill; and a seat on said seat frame, substantially as described.

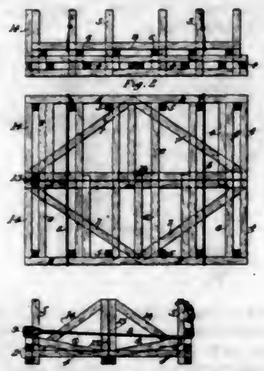
1,634,884. SAFETY DEPOSIT RECEPTACLE. EDWARD S. PERR, Los Angeles, Calif. Filed May 19, 1926. Serial No. 110,198. 10 Claims. (Cl. 109—1.)

1. In combination, a slotted wall bracket, a receptacle having a slot in the rear wall thereof, attaching means extended through the slot of the receptacle and engaging within the slot of the bracket for securing the receptacle to the bracket, a portion of said means being applied from the interior of the receptacle, a closure for the receptacle, and locking means for the closure.

1,634,885. PAPER-MAKING MACHINE. FRANK A. PESCHL, Jackson Heights, N. Y. Filed Mar. 22, 1926. Serial No. 96,405. 48 Claims. (Cl. 92—38.)

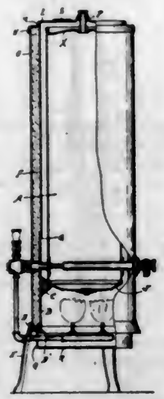
1. In a paper making machine, the combination of means for feeding the paper web, means for causing the break of said web, and means controlled by an abnormal condition of the paper web, for actuating said breaking means.

1,634,886. DOOR STOP. CLAUDE C. READ, Detroit, Mich. Filed Sept. 8, 1922. Serial No. 586,856. 1 Claim. (Cl. 292—338.)



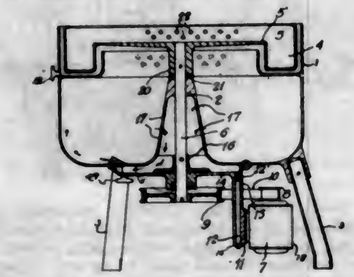
A door stop of the class described comprising a channel shaped supporting member deeper at one end than at the other, and having the edges of the end walls angularly turned to provide outwardly projecting aligning flanges at opposite sides for attachment to a supporting surface; a knuckle formed on the lower edge of the base of said supporting member centrally thereof; a stop member comprising a straight main body portion; knuckles formed on said main body portion at opposite sides thereof for embracing the knuckle on said supporting member; a pintle projected through said knuckles for hingedly mounting said main body portion on said supporting member; a tongue projecting outwardly from said main body portion between said knuckles and curved, intermediate its ends, for permitting engagement of the same with said supporting member when moved to a predetermined position relatively thereto, said tongue projecting into the deeper end of said channel between the base of said supporting member and the supporting surface.

1,634,887. GOLF CLUB. CHARLES RIGBY, Cincinnati, Ohio. Filed Apr. 18, 1927. Serial No. 184,784. 7 Claims. (Cl. 273—80.)



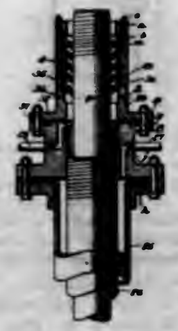
1. A golf club comprising a handle-section and a head-section, one of said sections provided with a taper bore and the other of said sections provided with a tapered shank forming a wedge connection between said sections, a sleeve rotatable about the proximate ends of said sections, means to hold said sleeve to one of said sections in both directions lengthwise of said sleeve during rotation of said sleeve, and a bayonet slot and pin connection between said sleeve and the other of said sections.

1,634,888. AUTOMATICALLY-DISCHARGING RAFT. GEORGE W. ROBERTS, Vancouver, British Columbia, Canada. Filed Aug. 30, 1926, Serial No. 132,533, and in Canada June 30, 1926. 3 Claims. (Cl. 9—15.)



1. A rectangular framework of spars, said framework being separable along its longitudinal centre line into two approximately similar portions, each of said portions having transverse members sloping downwardly from the outside wall to the longitudinal centre, the said outer wall consisting of intersecting vertical and horizontal members, cables at suitable intervals adapted to unite the two said separable portions, said cables secured to top horizontal member of said outer wall of one separable portion; said cables being passed below the corresponding top horizontal member of the other said separable portion, and means adapted to releasably secure the ends of said cable to the said vertical members.

1,634,889. WATER HEATER. FRANK W. SHUELL, Detroit, Mich., assignor to Everhot Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 4, 1924. Serial No. 690,613. 1 Claim. (Cl. 122—19.)

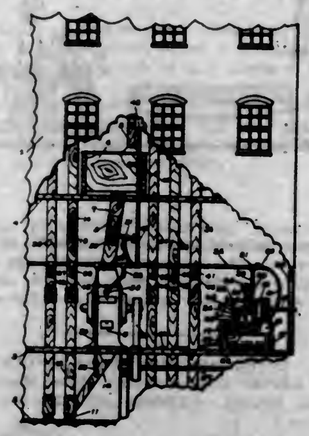


In a water heater, the combination with a vertically arranged cylindrical tank, of a casing formed of cast metal having inwardly extending lugs for engaging and supporting said tank, said lugs being fashioned to guide said tank into concentric relation with said casing, a sheet metal jacket extending upward from said casing and surrounding said tank, an outlet conduit from said tank arranged at the center of the upper end thereof, and a metal cap apertured for the passage of said outlet and engaging the upper end of said jacket to hold the same in concentric relation to the tank.

1,634,890. WASHING MACHINE. CHARLES F. STAPLES, Detroit, Mich. Filed Aug. 21, 1923, Serial No. 658,645, and in Canada Oct. 9, 1922. 3 Claims. (Cl. 68—37.)

1. In a washing machine, the combination of a washing container having a perforated compartment extending upwardly from the bottom thereof, said container having an annular liquid container compartment in the upper portion thereof, a perforated container positioned in said annular compartment, independent outlets for said container and said annular compartment, a shaft extending through said perforated compartment, a liquid agitating means positioned in said perforated compartment, said perforated container and said liquid agitating means mounted on said shaft.

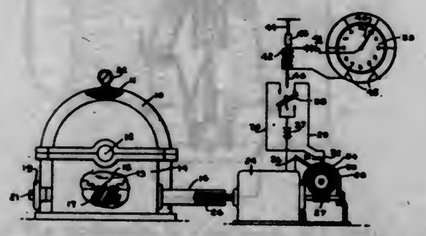
1,634,891. PACKING DEVICE. WILLIAM A. TROUT, Long Beach, Calif. Filed Nov. 9, 1922. Serial No. 599,748. 1 Claim. (Cl. 166—10.)



A device for preventing the passage of oil and gas between concentric tubular members of oil well strings comprising a longitudinally divided body portion of a section of an outer string of said members having an interior shoulder, a plurality of annular gasket members having body portions inclining downwardly toward an inner tubing string and engaging therewith, a plurality of split spacing rings having inclined faces for maintaining the inclined gasket members in spaced relation, and means for holding said gaskets and spacing rings against said shoulder.

1,634,892. CLOTHESPIN. PAUL H. W. WENDT, Jersey City, N. J. Filed Mar. 17, 1927. Serial No. 175,993. 3 Claims. (Cl. 24—139.)

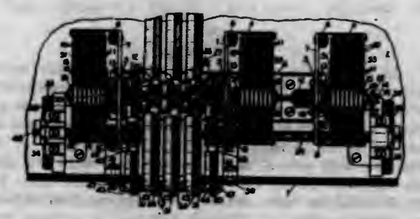
1. A clothes-pin comprising a body member provided at its upper end with jaws having a bight which yields to clamp a clothesline, with a forwardly curved lower portion to receive the goods to be suspended, and a clamping member pivotally connected at one end to one of said jaws and provided with a vertical elongated opening adapted to pass over the said curved portion of the body member and clamp the clothes against both sides thereof.



1,634,893. PURIFYING MECHANISM AND METHOD. ALMOND E. WILSON, Indianapolis, Ind. Filed July 22, 1926. Serial No. 124,283. 5 Claims. (Cl. 83—28.)

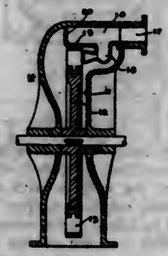
1. The method of treating grain as it is being converted into grist, consisting in injecting an insecticide into columns of the grist as it passes to and from and through a grist mill, for preventing insects, vermin and the like subsequently attacking and destroying the grist.

1,634,894. TURBINE-COOLING MEANS. ROBERT C. ALLEN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 23, 1925. Serial No. 77,419. 10 Claims. (Cl. 253—39.)



1. The combination with an idle turbine having a heated rotor, of means other than motive fluid for turning the rotor, and means determined by the rate of cooling of the mass of the rotor for periodically stopping and starting the turning means.

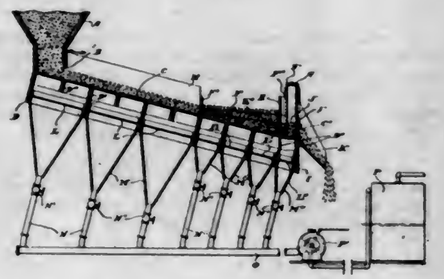
1,634,895. RESILIENT SUPPORT FOR VEHICLE BODIES. WILLIAM N. AMORY, New York, N. Y., assignor to Arch-Cushion Corporation, a Corporation of New York. Filed Aug. 5, 1921, Serial No. 490,081. Renewed Mar. 23, 1927. 5 Claims. (Cl. 267—65.)



1. In combination with a vehicle, a number of hollow arched rubber cushions interposed between the axles or running gear and body in a manner to support the weight of the body, the material arch in each cushion being adequate to support its own proportion of the total weight without material assistance from air pressure.

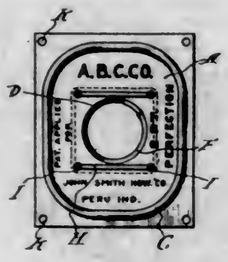
1,634,896. RADIO APPARATUS. LLOYD B. COGSWELL, West Springfield, Mass. Filed Mar. 25, 1926. Serial No. 97,249. 2 Claims. (Cl. 175—41.5.)

1. In radio apparatus, three condensers, including the same number of sets of rotor plates and shafts therefor, two of said shafts having juxtaposed terminals, bearings for said shafts, a rod secured to one of said shafts and passing through the axial center of another of said shafts into the axial center of the third shaft, and digital actuating means mounted on said juxtaposed terminals and the part of said rod which is between said terminals.



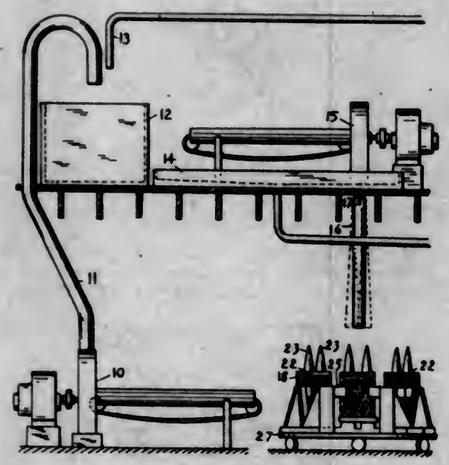
1,634,897. TURBINE. DAVID C. DAVIS, Chester, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 11, 1924. Serial No. 749,300. 7 Claims. (Cl. 253—39.)

1. In a turbine, a rotor, a row of blades mounted on the rotor and adapted to be loosened upon the attainment of an excessive speed, means for admitting motive fluid



to the turbine and directing it against the rotor, and means made effective by a loosened blade for rendering the incoming motive fluid ineffective for driving the rotor but permitting said motive fluid to pass through the turbine.

1,634,898. MINERAL SEPARATOR. GEORGE R. DELAMATER, Harrisburg, Pa. Filed Oct. 24, 1922. Serial No. 596,576. 6 Claims. (Cl. 209—476.)

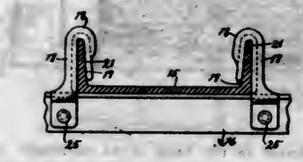


1. In a mineral separator, an inclined screen having sides providing a channel that has a lower contracting section of increasing depth, a gate extending across said section at the lower end thereof with its lower edge disposed so as to permit the movement thereunder of materials on said screen, and a second gate with its upper edge disposed above the lower edge of said gate first named so as to form therewith a mineral seal between said gates.

1,634,899. WIRE REEL. JOHN E. FREDRICK, Kokomo, Ind. Filed July 20, 1925. Serial No. 44,710. 3 Claims. (Cl. 242—123.)

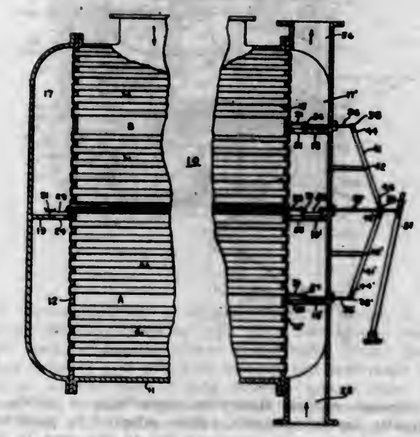
1. In a reel, the combination of a pair of head plates of rectangular formation composed of sheet metal and each provided near its margin with a continuous bead extending in parallel relation to the sides and rounded across the corners to afford plain corner portions of relatively increased area outside of the bead, each corner portion having formed near the peak of its corner an aperture adapted to receive a binding wire, said corner portions being bendable outside of the bead to embrace the bundle carried by the reel, and spaced connecting rods secured at their ends to the respective head plates at points inside of the bead, substantially as described.

1,634,900. MOLD FOR BUILDING BLOCKS AND PROCESS OF MOLDING. RICHARD B. FULLER, Lawrence, N. Y., assignor to Stockade Building System, Inc., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 758,991. 3 Claims. (Cl. 18—48.)



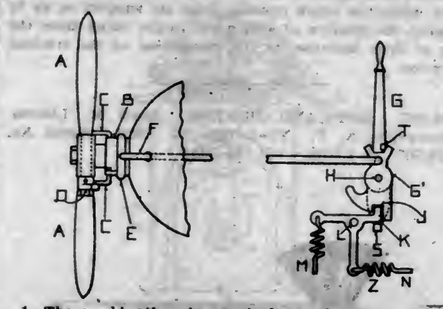
1. An open-top mold with perforated walls in combination with a core extending upward through the mold and terminating in a streamline point above the top of the mold, and means for blowing material into the mold.

1,634,901. INTERNAL-COMBUSTION ENGINE. WILLIAM J. GANNET, Cleveland, Ohio. Filed May 25, 1922. Serial No. 563,641. 4 Claims. (Cl. 123—65.)



1. In an internal combustion engine of the class described, the combination with the engine cylinder having an inlet port positioned laterally thereof, of a reciprocatory piston having a plurality of charge-pocket compartments traveling in said cylinder and adapted to clear the port at the extremity of its out-stroke, an oscillating valve member normally closing said port and angularly cut away to afford a variable clearance therewith, and automatic means connected with said piston for variably opening said valve, substantially as set forth.

1,634,902. BRAKE-BEAM SAFETY HANGER. JULIUS H. GIMPEL, Decatur, Ill. Filed June 26, 1925. Serial No. 39,640. 3 Claims. (Cl. 188—210.)

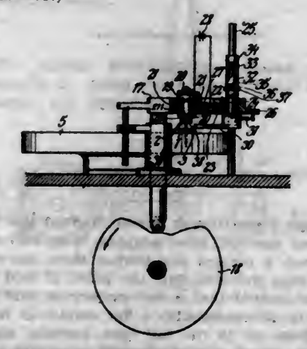


1. A safety support for brake mechanism, comprising a plurality of hook members having a T-shaped channel in the lower portion of each of said members, a rigid bar having a T-shaped upper portion slidably mounted in said channel for forming an interlocking connection between said hook members and said bar, and means extending transversely through said bar and members for securing said bar to said members.

1,634,903. SURFACE CONDENSER. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1925. Serial No. 46,989. 12 Claims. (Cl. 257—240.)

1. The combination in a condenser, of a casing, a plurality of groups of cooling tubes therein, each group being composed of a plurality of sub-groups, means for connecting the sub-groups of a group either in series or in parallel with respect to the flow of cooling fluid and means for connecting the groups in series in either case.

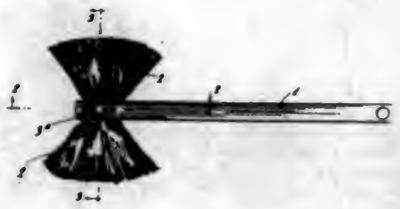
1,634,904. AIRPLANE STOP. CHARLES FRANCIS JENKINS, Washington, D. C. Filed May 21, 1927. Serial No. 193,258. 5 Claims. (Cl. 244—2.)



1. The combination, in an airplane, of a motor therein, a supporting landing gear therefor, a propeller driven by said motor, reversing gear for said propeller, and means for preventing the use of said propeller-reversing gear except when said supporting gear contacts with the ground.

1,634,905. FUSE PLUG AND SOCKET. CHARLES BROOKE JONES, above Cynwyd, Pa. Filed Mar. 29, 1921. Serial No. 456,599. 13 Claims. (Cl. 200—129.)

1. In a fuse plug and socket, the combination of a base having, a bore and grooves in communication with the bore, the base being recessed about the bore, contacts within the base at a greater distance from the center than the bore and passing through the base, binding posts on the upper side of the base engaging said contacts, a plug having a diameter corresponding to the bore, contacts carried by the plug adapted to fit within the grooves and engage with the first named contacts and a stop limiting the insertion of the plug to bring the contacts in line for engagement.

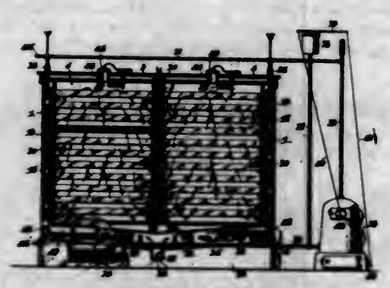


1,634,906. METHOD AND APPARATUS FOR MAKING LANTERN WHEELS FOR CLOCKS AND OTHER PURPOSES. HERBERT KIENZLE, Schwenningen-on-the-Neckar, Germany. Filed Oct. 3, 1922, Serial No. 592,048, and in Germany Oct. 11, 1921. 18 Claims. (Cl. 29—88.)

1. The method of applying pins to a pinless lantern-wheel blank, which consists in mechanically supporting

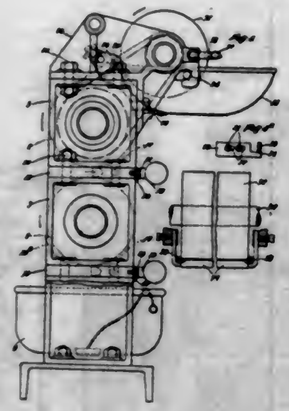
the pinless blank, inserting a group of pin-forming wires simultaneously into a corresponding group of pin-receiving holes of such blank, and then riveting the ends of such wires while the blank remains upon its support so as to preserve the relation of said wires to the blank from the time of their insertion to the completion of the riveting operation.

1,634,907. MOP AND DUSTER. JOHN M. LESTER, Bronxville, N. Y. Filed June 17, 1926. Serial No. 116,507. 1 Claim. (Cl. 15—147.)



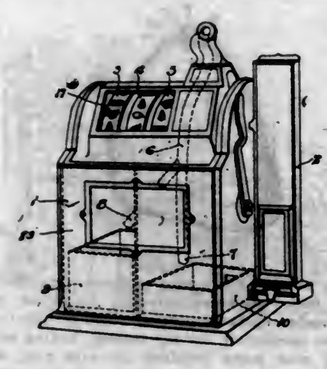
A device of the class described comprising a handle, a bunch of strands located on one side of the handle extending in a direction transversely across the same, and securing means comprising a staple extending across the outer portion and against the sides of the strands gripping the mid-portion of the strands tightly against the handle between their ends on one side of the handle and keeping the strands from displacement endwise and laterally of the handle, the ends of the staple extending crosswise through the handle and being clenched on its side opposite the strands.

1,634,908. WRENCH. ERNEST E. LYNCH and HOMER A. MEAD, Turlock, Calif., assignors to Masterench Corporation, a Corporation of California. Filed Mar. 3, 1924. Serial No. 696,548. 1 Claim. (Cl. 81—99.)



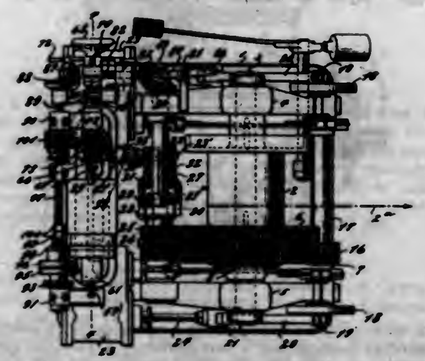
In a wrench comprising a handle, a fixed jaw on said handle having two flat faces adapted to fit two sides of a hexagon nut, a pivoted jaw having three flat surfaces adapted to fit a hexagon nut, the pivot of said pivoted jaw being so located that a flat surface on said pivoted jaw will be in alinement with a flat surface of fixed jaw when said jaws are in the full open position, said fixed jaw having a curved surface adapted to engage one side of a hexagon nut while said pivoted jaw is in engagement with two sides thereof.

1,634,909. INCUBATOR. JOHN F. MACKAY, Lancaster, Pa. Filed Mar. 1, 1924. Serial No. 696,123. 26 Claims. (Cl. 119—42.)



1. An incubator in the form of an enclosure comprising an incubating compartment with hollow walls each affording up and down air circulation therethrough, and coil banks extending across the incubator bottom and vertically within the hollow walls effective to flow fluid heating medium in a reverse direction to that of the entering air whereby a circulatory atmosphere of even temperature is ensured.

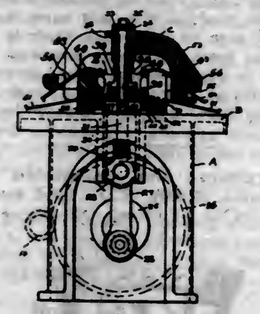
1,634,910. COOLING APPARATUS FOR CREAM AND OTHER VISCOUS LIQUIDS. PRYCE MATTHEWS, West Kensington, London, and ANDRÉ BRACHER, Berrow, Burnham-on-Sea, England. Filed Dec. 24, 1926, Serial No. 156,958, and in Great Britain Aug. 18, 1925. 5 Claims. (Cl. 99—2.)



1. Cream cooling apparatus comprising a series of internally cooled rotatable rollers adapted to positively transfer the cream from one roller to the next in the series by the said rollers revolving in the same direction to one another in contiguous relationship and a scraper adapted to remove the cream from the last roller in the series and to transfer it to a collecting receptacle, the cooling means for said rollers causing the circulation of a cooling medium successively from one roller to the other, the cooling medium entering the last roller and leaving the first roller in the series, so that the cream is gradually cooled as it passes over the series of rollers.

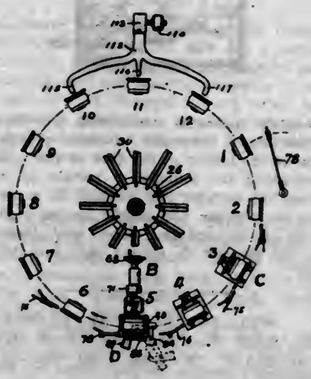
1,634,911. VENDING MACHINE. MONROE L. MELETIO, St. Louis, Mo. Filed Jan. 6, 1926. Serial No. 79,583. 4 Claims. (Cl. 194—1.)

2. A vending machine of the profit-sharing type having a profit-sharing delivery chute and an interchangeable front, said front being constructed to enclose said profit-sharing chute within said vending machine when applied thereto.



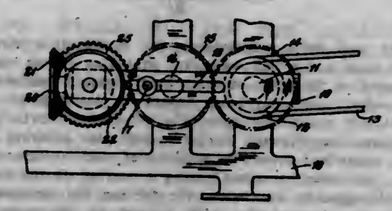
1,634,912. ENGINE. THOMAS SPENCER MILLER, South Orange, N. J. Filed July 5, 1923. Serial No. 649,680. 8 Claims. (Cl. 254—172.)

1. In combination, a winding drum, a motor, a rotatable member driven by said motor and located beside said drum, a yielding power transmitting device interposed between said rotatable member and said drum and located at the side of said member remote from the drum, and means responsive to relative movements of said drum and said member for controlling power supply to said motor.



1,634,913. METHOD AND APPARATUS FOR BENDING SPOKES. THOMAS F. RAINSFORD, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a Corporation of Michigan. Filed Mar. 16, 1925. Serial No. 15,982. 11 Claims. (Cl. 153—48.)

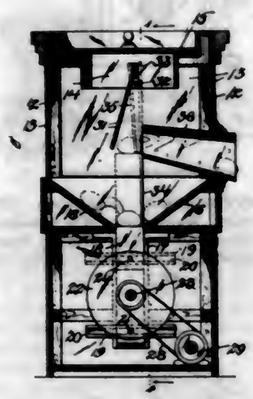
1. A spoke-bending machine for wheel spokes, comprising a support for said wheel, a bending element, a fulcrum adapted for contact with a spoke intermediate the point of connection of the spoke with the hub of the



wheel and the outer end of the spoke, and means for relatively moving the bending element and wheel for bending a spoke about the said fulcrum.

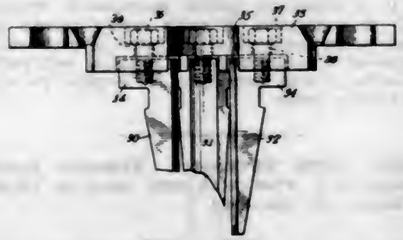
1,634,914. CENTRIFUGAL CASTING APPARATUS. LUDWIG REICHOLD, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed June 20, 1924. Serial No. 721,200. 38 Claims. (Cl. 22—64.)

11. In a centrifugal casting apparatus, a revolving turret and a plurality of molds carried thereby and adapted in the movement of the turret to be presented in succession to a casting station, means at such station for rotating a mold, and means for coupling the mold to its rotating means.



1,634,915. LOOM MOVEMENT. FRIEDRICH ROLAND, Paterson, N. J. Filed Oct. 6, 1926. Serial No. 139,863. 3 Claims. (Cl. 139—190.)

1. A batten operating device for looms comprising a plurality of intermeshing gears journaled on shafts arranged in the frame of the loom, a means for transmit-

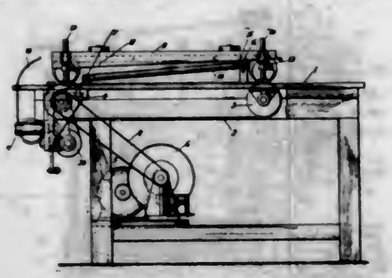


ting the power from a source of power to one of said gears, one of said gears having a bevel face, a slotted member having a stub shaft at one end, a bevel gear on said stub shaft meshing with said bevel face, a crank shaft, a bevel gear on said crank shaft in mesh with said last named bevel gear, and a means on one of said gears adapted to engage the slot of said member to delay the batten motion at the inner end of its path for allowing the spools more time for passing through the warp.

1,634,916. MACHINE FOR DISPENSING ARTICLES. SAMUEL SAMBOR, Newark, N. J. Filed Sept. 11, 1926. Serial No. 134,763. 1 Claim. (Cl. 211—8.)

A dispensing apparatus comprising a holder with an inclined bottom, a vertically movable plunger forming the bottom of the holder at the foot of the incline, means for reciprocating the plunger, a paddle pivoted to the holder above the plunger and adapted to be swept across the top of the plunger, the paddle having a pivoted connection and an inclined face above said connection, and a rod on the plunger to engage said face to move the paddle.

1,634,917. WELL-DRILLING APPARATUS. WALDO SHELDON, South Norwalk, Conn. Filed Mar. 4, 1926. Serial No. 92,126. 19 Claims. (Cl. 255—23.)

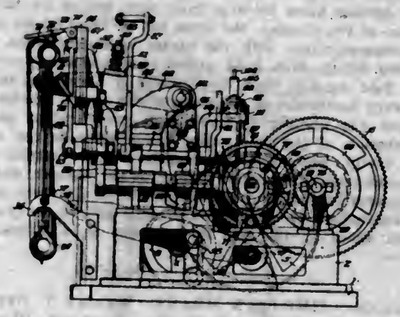


1. In well drilling apparatus, the combination with a rotary table and a tapered socket partaking of the rotary movement of the table, of a sectional clamp overstanding said socket and comprising separable clamp plates independently engageable about the sides of the drill pipe extending down through the table, drill pipe gripping segments dependent from the sections of said overstanding clamp, said clamp sections having a bearing on the heads of said segments and means for forcing the sections of the clamps downwardly with respect to the table to thereby force the pipe gripping segments downwardly in the socket and into gripping engagement with the drill pipe.

1,634,918. LATCH DEVICE FOR HAND BAGS. SAMUEL STEINMAN, Brooklyn, N. Y. Filed Nov. 3, 1925. Serial No. 66,486. 1 Claim. (Cl. 292—194.)

In a bag of the type having a frame comprising front and rear frame members pivotally connected to each other, separated upstanding front posts provided on said front frame member at the top thereof, having separated upstanding rear posts provided on said rear member, said rear posts being substantially aligned with said front posts, and a latch member located intermediate said rear posts and pivotally connected thereto, said latch member having a tongue adapted to enter between the front posts and also having a head adapted to engage the front faces of said front posts, said front faces of said front posts being planar and the engaging surfaces of said head being correspondingly shaped.

1,634,919. MACHINE FOR WRAPPING TIRE TAPE OR THE LIKE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 26, 1924. Serial No. 688,690. 4 Claims. (Cl. 93—5.)

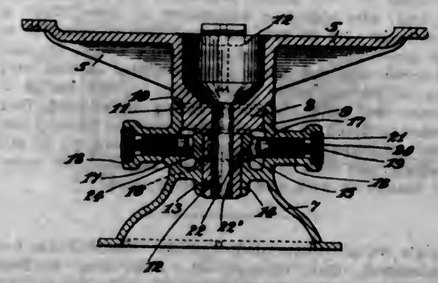


1. In a machine for applying a wrapper to cylindrical objects, in combination, a belt conveyor, a yieldable pressure bar provided with guiding flanges, said bar being mounted above said conveyor and spaced therefrom to guide and roll the object, a pair of inclined folding rollers at the sides of the conveyor belt for acting upon the edges of the wrapper to fold it progressively from the periphery to the center of the object, a chute for receiving the object from the conveyor, and yieldable pressure rollers arranged transversely of the chute to compress the folds of the wrapper onto the side faces of the object.

1,634,920. TIRE-STRIPPING MACHINE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 19, 1921. Serial No. 523,420. 10 Claims. (Cl. 18—2.)

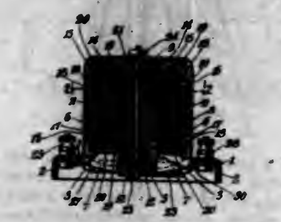
6. In a machine of the character described, a plurality of arms movable radially of the core, means on said arms to engage the bead of a tire, pivots for said arms about which they oscillate circumferentially of the tire,

means to move the arms simultaneously radially of the tire and a rotating power shaft, a second shaft, driving connections between the power shaft and the second shaft,



means connected with the second shaft to move the arm about the core, and means to interrupt the connection between the two said shafts.

1,634,921. FRAME FOR PHOTOGRAPHS, DISPLAY CARDS, AND THE LIKE. JOSEPH KALLMAN STRAUS, Jamaica, N. Y., assignor to The Ullman Manufacturing Company, Long Island City, N. Y., a Corporation of West Virginia. Filed Dec. 21, 1926. Serial No. 156,078. 4 Claims. (Cl. 40—152.)



1. A device of the character described comprising a frame piece provided with a projecting flange and further provided with a slot, a covering carried by said frame piece and provided with a portion bent partially around said flange, and a binding strip secured to said covering and to said frame piece, said binding strip being provided with a portion extending into said slot.

1,634,922. REVOLVING CHAIR. RAYMOND F. STUBBLEBINE, Philadelphia, and JOSEPH V. DOLAN, Ardmore, Pa., assignors to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 18, 1924. Serial No. 707,845. 4 Claims. (Cl. 155—96.)

1. In a chair of the character described, in combination, two chair elements, one rotatably supporting the other, a gear-like member on one of said elements, and a spring-pressed latch on the other element, said latch engaging endwise between the teeth of said gear-like member, whereby relative rotative movement between the said elements is yieldingly restrained, said latch having a convex outer extremity, and said gear-like member having complementary shaped surfaces between its teeth to receive said latch extremity, whereby, when said latch extremity is seated between the teeth of said gear-like member, separation between the said two elements is prevented in a direction perpendicular to the plane of rotation of the chair.

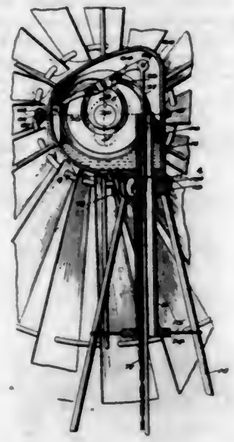
1,634,923. TRANSFORMER. LOUIS H. THULLEN, Upper Montclair, N. J., assignor, by mesne assignments, to J. C. Thullen, Leetonia, Ohio. Filed July 15, 1924. Serial No. 726,067. 25 Claims. (Cl. 175—356.)

1. A transformer having a substantially closed magnetic circuit comprising a central core and a surrounding magnetic structure, and energizing turns about said core and surrounded by said surrounding magnetic structure, a substantial part of said magnetic circuit being made up of a mixture of iron dust and a binder in which mixture the volume of the binder is from about 2% to about 10% of the volume of iron dust.

1,634,924. ACCELERATOR FOR THE VULCANIZATION OF RUBBER. GEORGE STAFFORD WHITBY, Montreal, Quebec, Canada, assignor to The Roessler & Hasslacher Chemical Co., New York, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 84,152. 23 Claims. (Cl. 18—53.)

3. A process of treating rubber or similar material which comprises incorporating with the rubber a vulcanizing agent, an amine, and an organic compound comprising the group

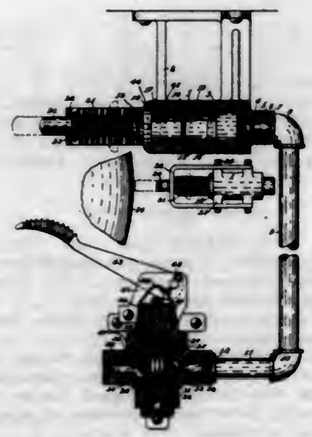
and vulcanizing the rubber.



23. The method of vulcanizing rubber without the addition of sulfur, which comprises subjecting the rubber to vulcanization with an organic polysulfide of the general formula $(-CS)_2S_x$ (where x is a number greater than 2) as the vulcanizing agent.

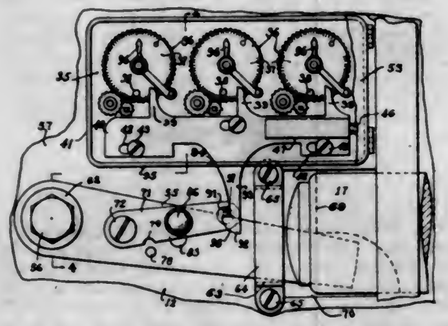
1,634,925. ACCELERATOR FOR THE VULCANIZATION OF RUBBER. GEORGE STAFFORD WHITBY, Montreal, Quebec, Canada, assignor to The Roessler & Hasslacher Chemical Co., New York, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 84,154. 35 Claims. (Cl. 18—53.)

2. A process of treating rubber or similar material which comprises incorporating with the rubber compound a vulcanizing agent and a substituted thiuram polysulphide containing more than four atoms of sulphur per molecule, and vulcanizing.



20. A vulcanized rubber derived from rubber or similar material in which is incorporated a vulcanizing agent and a substituted thiuram polysulphide containing more than four atoms of sulphur per molecule.

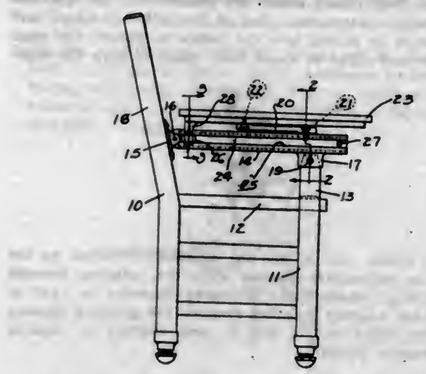
1,634,926. WINDMILL. JOHN H. WILSON, Mitchell, Nebr., assignor, by mesne assignments, to James T. Whitehead, Mitchell, Nebr. Filed Mar. 17, 1924, Serial No. 699,916. Renewed Apr. 27, 1927. 5 Claims. (Cl. 74—14.)



1. In a device of the character described, a housing having a horizontally disposed bearing extending from one side thereof, a horizontal shaft rotatably mounted in said bearing, an actuating member fixed to the outer end of said shaft, a cam fixed to the inner end of the shaft and operating in the housing, said cam having a double groove in its exposed face, a lever having one end fulcrumed on the housing for vertical swinging movement about a horizontal axis, the other end of the lever being adapted for connection with a pump rod, and a follower operating in the grooves of the cam and pivotally connected to the lever intermediate its ends.

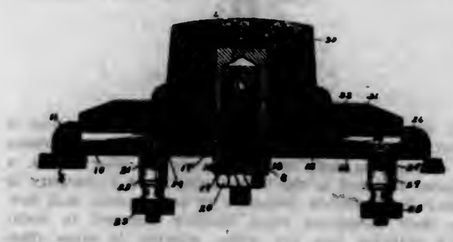
1,634,927. PERCUSSIVE DEVICE. ALBERTO I. WOODRING, Waterloo, Iowa, assignor to National Safety Devices Company, Waterloo, Iowa. Filed Feb. 13, 1926. Serial No. 88,143. 2 Claims. (Cl. 121—2.)

1. In a device of the character described, a cylinder having an open and a closed end, the latter having a relatively small inlet port in controlled communication with a source of fluid under pressure, a cup-shaped plunger fitted within and to reciprocate in said cylinder and having an outer striker stem, a compression spring anchored to resiliently engage the outer end of said plunger, said plunger having a medial groove around it and having holes leading from said groove to the interior of the plunger, the open end of the plunger being in communication with the cavity of the cylinder, said groove filling with fluid under compression to exhaust the fluid quickly when the groove is uncovered in the outward movement of the plunger, the spring reacting to return the plunger to close said groove upon partial exhaustion of the fluid under compression in the cylinder cavity, whereby the spring is kept in partial compression during the reciprocations of the plunger, and the reciprocations of the plunger are limited in their length to approximately the width of said groove to produce rapid blows by the said striker stem upon a resonant device.



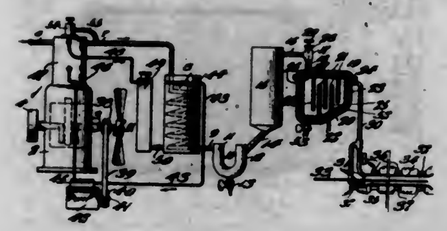
1,634,928. TIME-LOCK MEANS. WILLIAM T. BENHAM, Norwood, and JOHN E. DWYER, Cincinnati, Ohio, assignors to The Hall's Safe Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 16, 1924. Serial No. 713,769. 5 Claims. (Cl. 70—26.)

1. In time lock means of the character described, the combination of a safe-door, a time-clock means comprising a casing mounted on said safe-door, latching means controlled by the latter, bolt-works for locking said safe-door, said safe-door comprising an inner plate as an integral part of said safe-door and independent of said time-clock casing, and obstructing means for said bolt-works, said obstructing means mounted on said inner plate of said safe-door independent of said casing in manner that said time-clock casing is relieved from stresses produced on said obstructing means by said bolt-works and said stresses are communicated directly to said safe-door, and said latching means arranged for operative connection with said obstructing means.



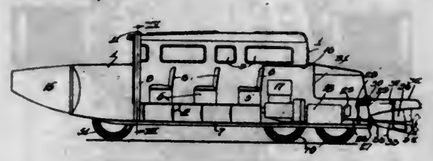
1,634,929. SWINGING TABLE. ADOLF BLITZ and ALBERT S. KUX, Chicago, Ill. Filed Aug. 8, 1925. Serial No. 49,062. 11 Claims. (Cl. 155—128.)

1. In combination a supporting member having a longitudinal groove therein, an arm pivotally supported at one end by the member and adjacent one end of the member, a table connected with the arm for movement on an upright pivot, a roller movable in the said groove,



and a support for the table, the last said support depending from the table and to which support the roller is connected.

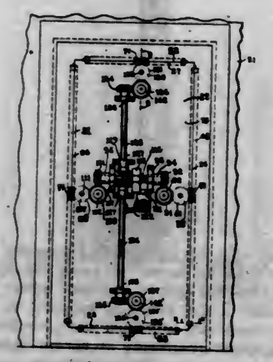
1,634,930. VARIABLE CONDENSER. CARL P. BROCKWAY, Toledo, Ohio, assignor to The Arcturus Radio Co., Harrison, N. J., a Corporation of Delaware. Filed Nov. 22, 1923. Serial No. 676,224. 8 Claims. (Cl. 175—41.5.)



1. In a condenser, a pair of resilient bowed plates, said plates being bowed in the same direction but in different degrees; means to cause said plates to approach a relative uniformity of curvature and to thereafter move closer together whereby the capacity of said plates is gradually varied.

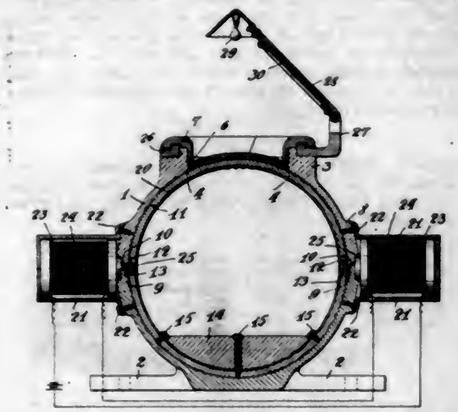
1,634,931. AIR-DRYING SYSTEM. HARRY C. COLE, Philadelphia, Pa. Filed Mar. 5, 1926. Serial No. 92,402. 2 Claims. (Cl. 62—135.)

1. An apparatus for drying air comprising an air compressor, a condenser, a pump, a radiator, a suction pipe leading from said condenser to said pump, a discharge pipe leading from the pump to the water jacket of the compressor, a discharge pipe leading from the water jacket of the compressor to said radiator, a connection from said radiator to the lower portion of said condenser, a discharge pipe for the compressed air leading from said compressor through said condenser, a trap into which the air passes after leaving the condenser, a storage tank at a higher level than said trap, and having a pipe leading from the bottom thereof to said trap, whereby any water of condensation gravitates into said trap, an insulated expansion chamber provided with baffles, and a pipe leading from said storage chamber to said expansion chamber, and provided with a valve.



1,634,932. AUTO MARINE VEHICLE. ALBERT E. COOK, Evanston, Ill., assignor to Charles B. Cook, Chicago, Ill. Filed Aug. 17, 1925. Serial No. 50,732. 16 Claims. (Cl. 115—1.)

1. An auto marine vehicle comprising a body, pontoons movably mounted thereon, means for adjusting the pontoons, retaining means for holding the pontoons in their adjusted positions, driving means within said body, a reversible bow section for increasing the length of the vehicle, a housing pivoted to the rear end of the body to increase the length of the vehicle, and propeller means in said housing adapted to be connected to receive a drive from said driving means.



2. A land and water vehicle of the class described comprising a body, a reversible bow section at the front end of said body and a pivoted propeller section connected with the rear end of the body.

1,634,933. LOCKING MECHANISM FOR SAFES. HARRY M. DALTON, Cincinnati, Ohio, assignor to The Hall's Safe Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 3, 1924. Serial No. 710,930. 21 Claims. (Cl. 109—3.)

1. In locking mechanism for a safe, the combination with a door and a wall of a door-opening, of a pluripart rotatable locking-bar having an axis of rotation extending lengthwise of a joint between said door and said wall, said locking-bar extending substantially throughout the length of said joint, the parts of said bar having a parting plan between them extending lengthwise of said joint, means for rotating said bar for locating said plane coincident with said joint for unlocked relation of said door or crosswise of said joint for locked relation of said door, and means for maintaining said locking-bar in said last-named relation.

1,634,934. INCLINOMETER. JOHN S. DONALDSON, New York, N. Y. Filed Oct. 30, 1919. Serial No. 334,415. 30 Claims. (Cl. 33—206.)

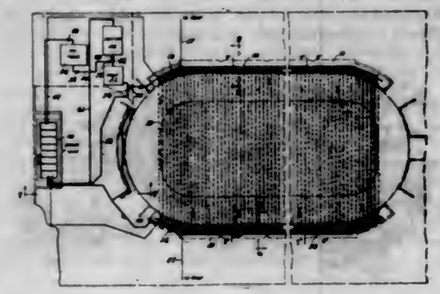
1. An inclinometer, comprising the combination of an eccentrically weighted member, a support for said member in which it is free to turn in all directions, magnetic elements attached to said eccentrically weighted member and said support respectively to prevent said member turning relative to the support about the normally vertical axis of the support, and means for measuring the displacement of the support relative to the member.

1,634,935. LIFT FOR SUCKER RODS, PIPES, AND THE LIKE. WALTER W. DONNELLY, Fort Worth, Tex. Filed Dec. 1, 1924. Serial No. 753,381. 2 Claims. (Cl. 294—104.)

1. A fishing tool having a casing provided with a passage for the heads of sucker rods and for the passage of pipes and a crescent-shaped shoulder off-set in one side of said passage, a lift pivotally mounted in one side of said casing above said shoulder and provided with arms for catching under the welds of sucker rods and under the collars of pipes for lifting purposes, and shoulders depending from said lift on both sides of the pivotal connection and flat on the bottom edges and resting on said crescent-shaped shoulder to support said lift on said shoulder.

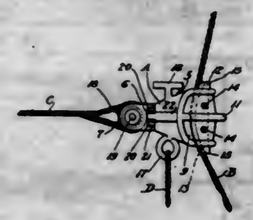
1,634,936. MEANS FOR SECURING NAME PLATES AND THE LIKE. ALBERT HENRY EDDY, Pawtucket, R. I., assignor to A. L. Newman Company, Cranston, R. I., a Corporation of Rhode Island. Filed May 27, 1925. Serial No. 33,224. 5 Claims. (Cl. 40—20.)

1. Means for receiving a name-plate, emblem, or other article to a radiator shell or other structure having a circular orifice, comprising a disk-like element attached to the plate in spaced relation thereto and formed with at least four radial arms, the diameter of the disk-element being greater than that of the orifice to adapt said element to be forced into the orifice to distort the arms into arcuate shape to cause their edges to grip the walls



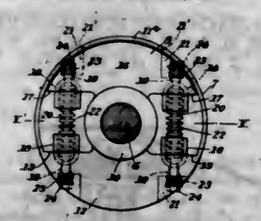
of the orifice, and a disk-like member connected to the plate in concentric relation with the gripping element and having substantially the same diameter as that of the orifice whereby it serves to guide the gripping element into the orifice and to hold it from canting or twisting with respect thereto.

1,634,937. ATTACHING MEANS FOR NAME PLATES AND OTHER ARTICLES. ALBERT H. EDDY, Pawtucket, R. I., assignor to A. L. Newman Company, Cranston, R. I., a Corporation of Rhode Island. Filed Feb. 3, 1926. Serial No. 85,720. 5 Claims. (Cl. 40—20.)



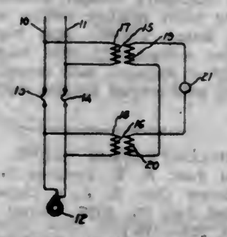
1. Means for attaching a name-plate or other device to another object or structure having an orifice, comprising in combination with the name-plate or other device, a member fastened to the back thereof, and a plurality of radial dogs rockably connected to said member and having their peripheral edges radially disposed to resist their entrance into the orifice whereby to cause them to be canted back in inclined relation to frictionally grip the interior of the orifice.

1,634,938. ICE-SKATING RINK. GEORGE C. FUNK, Brookline, Mass. Filed Oct. 16, 1926. Serial No. 141,946. 22 Claims. (Cl. 62—170.)



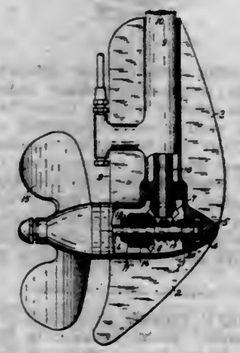
1. A skating floor comprising in combination with a supporting structure, a layer of thermal insulating material on said supporting structure, a waterproof layer on said insulating layer, a layer of dry sand on said water-proofing layer, a wearing floor having a floating support on said sand layer, pipes for the circulation of heat transferring medium embedded in said floating floor structure and means for circulating a heat transferring medium through said pipes, including connections yieldable to permit of the floating action of the floor.

1,634,939. SPUDDING SHOE. CHARLES E. GALLMAN and FRANK HAIRE, Tulsa, Okla., assignors to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 15, 1921. Serial No. 500,826. 4 Claims. (Cl. 255—33.)



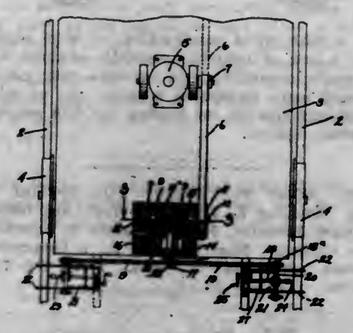
1. A spudding shoe comprising an integral body having a relatively wide thin hook-shaped portion at one end and means at the other end thereof to which a jerk line may be attached, an integral strengthening rib extending around the hooked portion of the body, and a rope engaging surface inside said hook portion and supported throughout its length by the hook portion.

1,634,940. FLEXIBLE SHAFT COUPLING. EDGAR E. GREVE, Bellevue, Pa. Filed May 18, 1922. Serial No. 561,849. 6 Claims. (Cl. 64—96.)



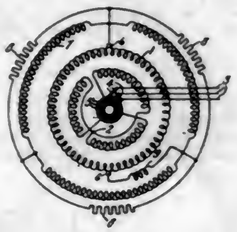
1. A shaft coupling comprising a pair of opposed members having cooperating parts forming a spherical joint therebetween, each having a single offset segment-shaped projection thereon, yieldable means interposed between the faces of the segmental projections of the two members, and a movable member passed through the said projections for connecting the opposed members.

1,634,941. SIGNALING SYSTEM. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Nov. 22, 1924. Serial No. 751,713. 4 Claims. (Cl. 177—311.)



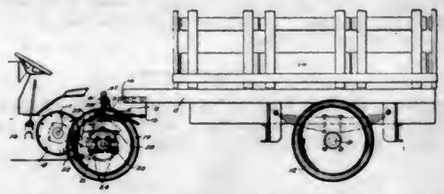
1. A signaling system comprising in combination with alternating current electrical supply mains or the like, protective means for opening the circuit through said supply mains upon the occurrence of abnormal conditions therein, a pair of transformers connected to said supply mains on opposite sides of said protective means respectively, whereby one of said transformers is de-energized upon the operation of said protective means, connections whereby the output circuits of said transformers are connected in opposition, a signaling device operated by one of said transformers when the other is deenergized.

1,634,942. OUTBOARD-MOTOR DRIVE. HERBERT J. HILLBORN, Milwaukee, Wis., assignor to Evinrude Motor Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 18, 1926. Serial No. 136,220. 7 Claims. (Cl. 115—17.)



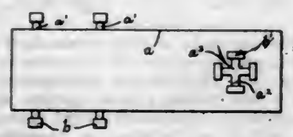
1. The combination with the submersible gear housing of an outboard motor, and a propeller drive therethrough including a power shaft and a propeller shaft with interconnecting gearing, of a slip clutch incorporated in said drive within said housing.

1,634,943. MEANS FOR OPERATING TRACK DRILLS. ERNEST J. HONL, Sleepy Eye, Minn. Filed June 25, 1924. Serial No. 722,419. 1 Claim. (Cl. 77—8.)



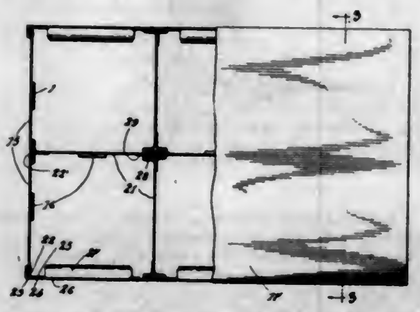
The combination with a main drive shaft having a sprocket wheel on one end, means for mounting the shaft on a railroad car approximately equidistant from the track rails, a drill normally hand operable and having a frame adapted to be positioned on the ground adjacent either rail, said frame including an upward extension, means for clamping the drill frame to an adjacent rail, a supplemental shaft horizontally journaled in the upper part of the upward extension of the drill frame and having sprocket wheels on its opposite ends, and a sprocket chain for connecting the sprocket wheel on the main drive shaft with either of the sprocket wheels on the supplemental shaft.

1,634,944. ALTERNATING-CURRENT MOTOR. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 23, 1924. Serial No. 708,552. 3 Claims. (Cl. 172—274.)



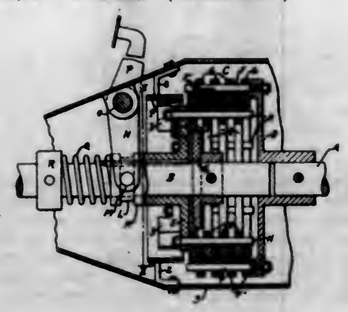
1. An alternating current motor comprising two relatively movable polyphase windings inductively associated with each other to produce torque for accelerating said motor; an exciting circuit including a commutator winding inductively and immovably associated with one of said polyphase windings for supplying the excitation of said motor; means permanently associated with said circuit for limiting its current during acceleration of said motor, and means permanently connected across the different phases of the other of said polyphase windings for improving the starting characteristics of said motor.

1,634,945. FIFTH-WHEEL CONSTRUCTION. IRVING H. JUDD, Detroit, Mich., assignor to Whitehead and Kales, Inc., River Rouge, Mich., a Corporation of Michigan. Filed May 4, 1925. Serial No. 27,963. 21 Claims. (Cl. 280—33.1.)



1. In a fifth wheel construction, a main supporting member, a pair of relatively rotatable sections, a king-pin pivotally connecting said sections, and means engaging said main supporting member, one of said sections and said king-pin for holding the fifth wheel parts in assembled relation.

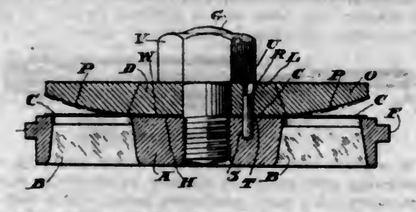
1,634,946. BODY SUSPENSION FOR MOTOR VEHICLES. WILLIAM B. JUPP, New York, and GEORGE O. HANSHEW, Brooklyn, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 27, 1924. Serial No. 716,081. 9 Claims. (Cl. 296—35.)



1. In combination with the chassis frame and body of a motor vehicle, arms carried on opposite sides near one end of the body, block supporting means carried upon opposite sides of the frame and having means to receive the ends of the arms, blocks of yielding nonmetallic material carried by the supporting means and engaging the ends of the arms, respectively, arms adjacent the median line of the vehicle and radiating from a single point of support on the body near the other end thereof to provide, in effect a single support, block supporting means carried with the chassis frame and having means to receive the ends of said last mentioned arms, and blocks of yielding non-metallic material contained within said last mentioned means and engaging the ends of the arms.

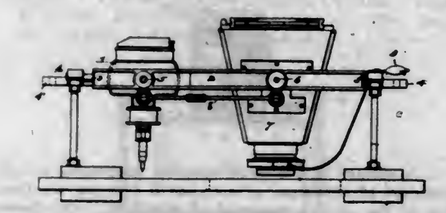
1,634,947. SHEET-METAL SEAM. JOSEPH A. LACHAINE, Lowell, Mass. Filed June 19, 1926. Serial No. 117,061. 4 Claims. (Cl. 189—36.)

1. A sheet metal seam comprising a flat thin plate, hook-shaped portions formed integrally with said plate, oppositely disposed hook-shaped members secured to said plate, and interlocking means slidingly engageable with said hook-shaped element to hold the same firmly together.



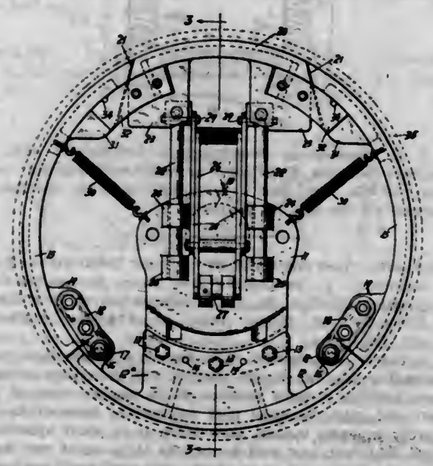
1,634,948. ATTACHMENT FOR CLUTCHES. SAMUEL B. LAMBERT, St. Louis, Mo. Filed Nov. 9, 1925. Serial No. 67,817. 2 Claims. (Cl. 192—147.)

1. In combination with a clutch having a portion capable of free rotation when said clutch is disengaged, a pivoted friction device supported by and rotatable with said freely rotatable portion, a stationary element, said pivoted friction device being thrown outwardly by centrifugal force when said clutch is disengaged and into contact with said stationary element whereby the speed of rotation of said freely rotating portion of the clutch is retarded, and means whereby said friction device is withdrawn from contact with said stationary element when the clutch is engaged, said means comprising an arm with which said pivoted friction device is caused to contact.



1,634,949. AIR-COMPRESSOR VALVE. JOHN LE VALLEY, Painted Post, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 23, 1925. Serial No. 45,449. 6 Claims. (Cl. 251—119.)

1. A valve assembly including a valve seat having radially extending ports, a valve having a central solid portion with radially extending fingers adapted to cooperate with said ports, and a stop plate for said valve having radially extending fingers adapted to clamp the valve over an area extending outwardly beyond the bases of

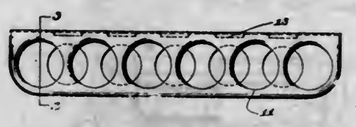


the valve fingers rigidly to the valve seat and curved on the lower faces to permit raising of the valve fingers and to limit bending thereof.

1,634,950. STABILIZER. ARSENE N. LUCIAN, Philadelphia, Pa. Filed Mar. 1, 1923. Serial No. 622,198. 5 Claims. (Cl. 74—78.)

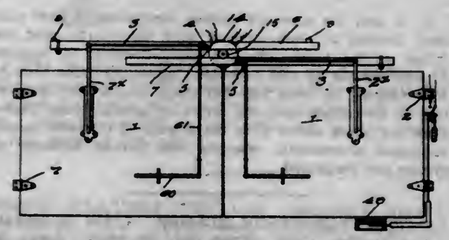
1. A stabilizer comprising a gyroscope, an instrument carrier directly controlled by said gyroscope, an instrument seated on said carrier, and a plurality of vertical posts for supporting said instrument from beneath so that it may be lifted off the carrier without disturbing the gyroscope.

1,634,951. COLLAPSIBLE DRUM. FREEMAN D. MASON, Akron, Ohio, assignor to The Bridgewater Machine Company, Akron, Ohio, a Corporation of Ohio. Filed July 7, 1926. Serial No. 120,991. 7 Claims. (Cl. 154—9.)



1. A collapsible drum construction for use in building tires by the flat band method, said construction including a chuck, a drum section removably secured on the chuck, drum sections hinged on the opposite ends of the first section, and a key section movably mounted on the chuck for operation between the free ends of the hinged sections, means on the chuck for moving the key section radially inwardly, and yielding means normally urging the free ends of the hinged sections inwardly, said hinged sections having cam surfaces thereon for riding on said key section.

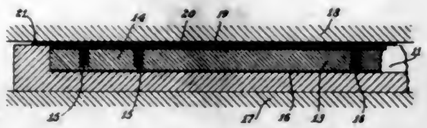
1,634,952. SURFACING-MACHINE SPINDLE ATTACHMENT. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 7, 1924. Serial No. 730,775. 4 Claims. (Cl. 51—119.)



4. In a device of the character described a spindle having an elongated slot near its end, a tubular slide on the end of the spindle, a second tubular slide on the first, a pin extending thru the two slides into the elongated slot, a spring between the end of the spindle and the end of the second slide adapted to press the parts away from each other, a rotatable plate in the end of the second slide eccentrically pivoted with respect to the axis of the spindle and a bearing pin on the plate intermediate its center and edge.

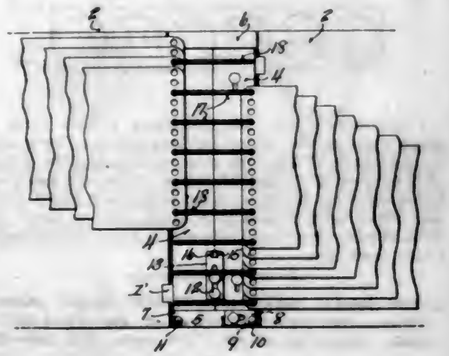
1,634,953. CARTRIDGE RACK. MILO MCCUNE and CHARLES L. PAULUS, Dayton, Ohio. Filed June 9, 1923. Serial No. 644,439. 3 Claims. (Cl. 211—14.)

1. An ammunition rack comprising a back plate, an upper plate at the top of the back plate, a lower plate at the bottom of the back plate, a bottom plate, a front plate between the lower and bottom plates, and side plates interconnecting the back, upper and lower plates, all of said plates being formed of a single sheet of metal, and holes in said upper and lower plates for mounting ammunition cartridges.



1,634,954. GARAGE-DOOR-ACTUATING MEANS. THOMAS MCINERNEY, Williamsport, Pa. Filed Nov. 5, 1925. Serial No. 67,069. 2 Claims. (Cl. 268—33.)

1. Door opening and closing means comprising rack bars connected with and adapted to transmit motion to doors, one of the said rack bars being provided with protuberances, an electric motor for actuating said bars, a



source of electric energy, jack switches arranged in a normally open circuit with the motor and source of energy and having members arranged to directly cooperate with the protuberances of said rack bar, and means for closing the circuit; the connections between the rack bars and the doors each made of an upright fixed to and spaced from the door, and a link interposed between and loosely connected to a rack bar and the upper portion of said upright.

1,634,955. METHOD OF MAKING PATTERNED RUBBER SHEETING. TOD J. MELL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1924. Serial No. 751,873. 10 Claims. (Cl. 18—61.)

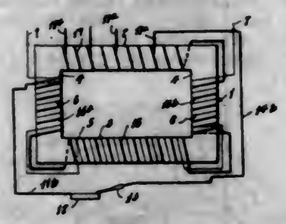
1. The method of making patterned rubber sheeting which comprises forming a matrix of soft-rubber composition, filling the interstices of said matrix with a different soft-rubber composition by flowing it thereinto by pressure, and slicing the resulting structure into a plurality of sheets by cutting it throughout an extended plane passing through the two compositions, the said compositions being subjected to vulcanization before the slicing operation.

1,634,956. UNIT FOR HOLDING THE LEAVES IN VISIBLE-RECORD SYSTEMS. HENRY C. MILLER, Milwaukee, Wis.; First Wisconsin Trust Company, Milwaukee, Wis., executor of said Henry C. Miller, deceased. Filed Mar. 29, 1926. Serial No. 98,399. 5 Claims. (Cl. 129—9.)

1. A unit for a record system comprising a base plate, bars carried at each side of said base plate, said bars lying in the same plane, a double series of impaling prongs carried by and extending upwardly from each bar and adapted to form together rings continuous from one bar to the other bar, one series of prongs being shorter than the other series with the prongs of different lengths arranged alternately, whereby the breaks between the prongs are staggered.

1,634,957. ELECTRODE HOLDER. LOUIS E. MULLER, Los Angeles, Calif. Filed Oct. 26, 1925. Serial No. 64,842. 9 Claims. (Cl. 219—8.)

1. In an electrode holder of the general character described: a longitudinally extending conductive organization; a laterally apertured insulating grip member surrounding a portion thereof; and means, near one end of said grip member, for supporting the same in spaced relationship to said conductive organization,—said conductive organization comprising a central element formed

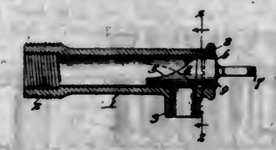


of a resilient metal and provided, within said grip, with ventilating apertures, and disposed substantially parallel with wires, of a more conductive metal, whose ends are secured thereto.

1,634,958. CLOSURE FOR LIQUID-HOLDING TANKS, VATS, AND STILLS. ALBERT H. NOYES, Chicago, Ill., assignor to Hills-McCanna Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 15, 1924. Serial No. 692,944. 4 Claims. (Cl. 220—39.)

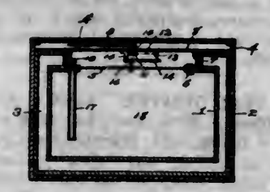
1. A closure of the class specified comprising a body composed of aluminum bronze, and a shoe on the inner face of the closure composed of aluminum, said closure being provided with screw threads which are applied to both the body and shoe.

1,634,959. TRANSFORMER FOR ELECTRIC-ARC CUTTING, REPAIRING, AND WELDING APPARATUS. FREDERICK C. OWEN, Fayetteville, N. C. Filed Nov. 19, 1925. Serial No. 70,085. 4 Claims. (Cl. 171—119.)



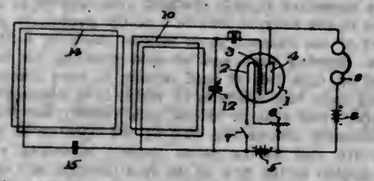
1. A transformer comprising a rectangular core, a primary winding distributed around three adjacent legs only of the core, and a secondary winding distributed around all the legs of the core.

1,634,960. BIB OR FAUCET. HENRY D. RAHLING, East Aurora, N. Y., assignor to Steel Drum Accessories Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 17, 1924. Serial No. 714,020. 1 Claim. (Cl. 251—97.)



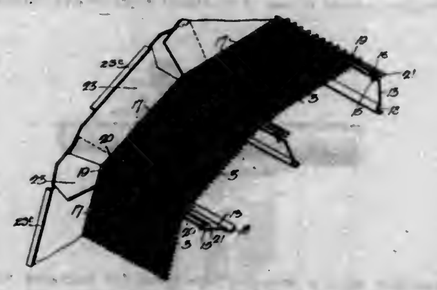
A faucet comprising a body having a longitudinal bore extending the full length thereof, the rear part of said bore forming a main passage which has an inlet at its rear end, and the front part having the form of an inwardly tapering conical seat which is in axial alinement with said rear part and having its large outer end flush with the front end of the body, and said body having a lateral outlet port extending through said seat; an inwardly tapering conical rotary plug insertable into said seat from the front end of said body and provided at its outer end with means for turning the same, and having

its periphery constructed to form a solid wall and a clearance on diametrically opposite sides thereof whereby the solid wall of the plug in one rotary position of the same will close said outlet port and the clearance of the plug in another position of the same will uncover said port; and means for preventing complete withdrawal of



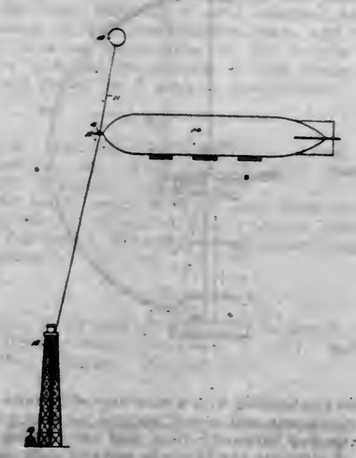
said plug but causing the same to be tightened when turned into a position for closing said outlet port and loosened when the plug is turned into a position for uncovering said outlet, said means comprising a helical groove in the periphery of the plug, and an internal projection in the body engaging with said groove.

1,634,961. PRESSURE-RESPONSIVE DEVICE. DACHE M. REEVES, Belleville, Ill. Filed Mar. 12, 1923. Serial No. 624,678. 1 Claim. (Cl. 264—1.)



In an instrument for measuring the rate of variance in atmospheric pressure, an outer casing, a shell in the casing having an open end, a diaphragm extending across the open end of said shell forming together with the inner wall of said shell an air chamber of maximum size relative to the instrument as a whole, an air inlet in said casing for admitting air to the outer face of said diaphragm, a capillary air leak into said air chamber, an indicating arm and means between said arm and said diaphragm for transmitting the motion of said diaphragm to said arm.

1,634,962. RADIO RECEIVING SYSTEM. RUDOLPH SACHTLEBER, Brooklyn, N. Y. Filed Sept. 22, 1924. Serial No. 738,967. 1 Claim. (Cl. 250—27.)

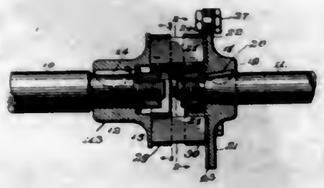


Radio receiving apparatus comprising in combination an electron tube having grid, filament and plate electrodes, an input circuit including said grid and filament electrodes, an output including said plate and filament electrodes, and a pair of radiofrequency energy collecting loops superimposed upon each other and connected directly across said input and output circuits, one of said loops having a conductor of greater length than the conductor forming the other of said loops, said conductors being positioned immediately adjacent each other throughout the length of said shorter conductor and arranged to regeneratively amplify incoming signaling energy below the point of oscillation, said conductors having adjacent ends thereof connected electrostatically.

1,634,963. SCREEN CONVEYER. WALTER M. SCHWARTZ, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1924. Serial No. 749,221. 11 Claims. (Cl. 198—194.)

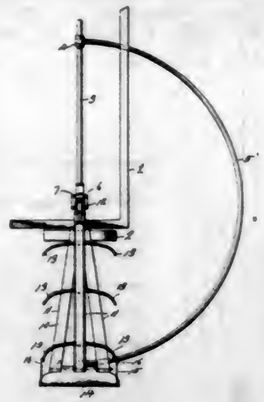
5. The combination in a screen conveyer, of two side chains consisting of links pivotally connected; a girt extending from one link to the other at one side of the pivot line of the links of the chain; screen sections, one end of each screen section being attached to the girt and extending beyond the girt, and the other end of the section extending short of the girt but to the pivot line of the links; and transverse pivot pins connecting the screen sections on the pivot line of the links.

1,634,964. MOORING DIRIGIBLE AIRCRAFT. JOSEPH A. STEINMETZ, Philadelphia, Pa. Filed Dec. 29, 1925. Serial No. 78,107. 4 Claims. (Cl. 244—2.)



1. The method of mooring aircraft which consists in lifting a mooring line by a captive aircraft to an elevation at which a dirigible may be safely navigated, and clutching a dirigible aircraft to said cable by devices carried by said dirigible aircraft.

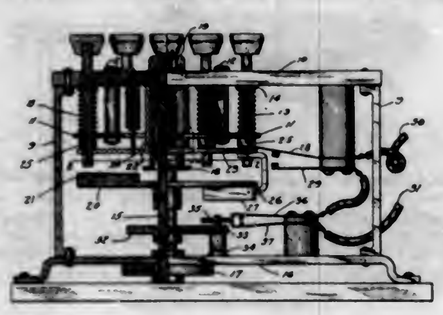
1,634,965. FLEXIBLE COUPLING. CHARLES F. TAYLOR, Montclair, N. J. Filed Aug. 7, 1923. Serial No. 656,195. 1 Claim. (Cl. 64—26.)



In combination, in a means for coupling two shaft members, a pair of disk-like coupling members having hub portions provided with a plurality of recesses formed therein, flexible coupling means mounted in said recesses

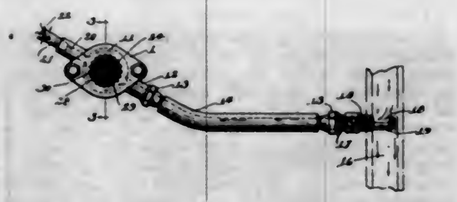
and forming the sole coupling means between said disk like members, and a loosely mounted metallic band concentrically surrounding said flexible coupling means to limit motion thereof radially with respect to said shaft, one of said disk-like coupling members having a plurality of apertures disposed adjacent its periphery, a disk like member secured to one of said shaft members and similarly

provided with a series of apertures for engaging with the apertured disk of said coupling member, said apertured disk members having an unequal number of apertures to provide a vernier adjustment of the initial stress on said flexible members, means for securing said disk like members in adjusted position, and means for securing the other of said coupling members to the other of said shaft members.



1,634,966. SHOCKER ATTACHMENT. CALVIN W. TYSON, Prairie Depot, Ohio. Filed Dec. 30, 1925. Serial No. 78,368. 2 Claims. (Cl. 56—79.)

1. The combination with a corn harvester frame corner, a wheel adjacent said corner, an axle for said wheel, an arm extending outwardly from said axle outside of the wheel, of a tiltable and arcuately movable stalk cradle, an arcuate track connected to the axle extension and arching the corner of the frame, one end of said cradle being movable on said track, a support extending to a position above the wheel, the other end of said cradle being pivotally and detachably connected to said support and movable to a position over the wheel.

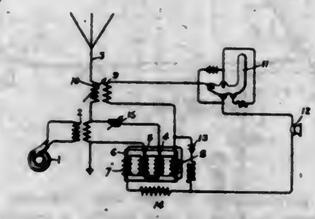


1,634,967. TRANSMITTER. RAYMOND E. VAUGHAN, Piqua, and WARREN S. D. LELAND, Dayton, Ohio. Filed Sept. 23, 1922. Serial No. 590,068. 2 Claims. (Cl. 177—380.)

1. In a transmitter, in combination, electrical connections adapted to be connected to an external circuit, a circuit breaker, for said connections, a rotatable member operably connected to said circuit breaker, a spring for rotating said member, a stop on said member, a plurality of keys adapted when pressed to be moved into the path of said stop at different points along said path,

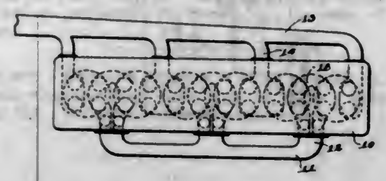
means for normally preventing rotation of said member, two contacts in said electrical connections interconnected with said rotation preventing means for closing said contacts when any of said keys is pressed, for the purpose described.

1,634,968. FUEL HEATER. LOWELL C. WEINBERG, Seattle, Wash. Filed Dec. 15, 1924. Serial No. 756,050. 1 Claim. (Cl. 123—122.)



In a device for vaporizing fuel for internal combustion engines, in combination, a cored aluminum casting having a cylindrical opening therethrough, a chamber in said casting surrounding and co-axial with said opening, a pipe connected to said chamber and adapted to be connected to the exhaust manifold of the engine, to conduct a part of the exhaust gases to said chamber, a flat wire screen covering each end of said opening, an asbestos gasket on each side of said casting to heat insulate the casting from fuel conduits to which it is connected, and a copper strip bent to extend substantially one-fourth of the distance around the wall of the opening in contact therewith and having parts thereof extending radially and parallel to the flow of the fuel through said opening.

1,634,969. ESTER-RESIN COMPOSITION AND METHOD OF PREPARATION. JAMES G. E. WRIGHT, Alplaus, N. Y., and WILLARD J. BARTLETT, East Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed June 13, 1924. Serial No. 719,825. 7 Claims. (Cl. 260—8.)

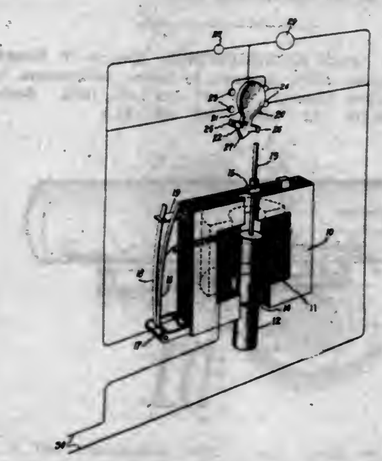


1. The method of treating a resin comprising a compound of glycerine and a polybasic acid in the fusible stage which consists in dispersing said resin in an inert fluid medium and heating the resulting dispersion to a sufficiently high temperature to partially condense said resin and then separating the resin from said medium.

1,634,970. METHOD OF AND MEANS FOR CONTROLLING ALTERNATING CURRENTS. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Nov. 20, 1914, Serial No. 873,110, Patent No. 1,522,221. Divided and this application filed May 24, 1924. Serial No. 715,723. 6 Claims. (Cl. 179—171.)

3. The method of producing a pulsating current which consists in applying to a variable resistance device from a circuit external to that in which the resistance is connected an electromotive force which varies as an inverse function of the variations in said resistance.

1,634,971. VALVE-PORT ARRANGEMENT FOR INTERNAL-COMBUSTION ENGINES. GLENN D. ANGLE, Detroit, Mich., and HAROLD E. MOREHOUSE, Dayton, Ohio. Filed Oct. 31, 1924. Serial No. 747,009. 6 Claims. (Cl. 123—52.)

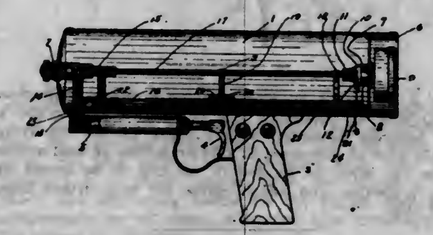


6. In an engine containing a plurality of pairs of power cylinders, a main intake manifold, passages leading from said manifold for each cylinder, each passage joining with the next adjacent passage to form a continuous circuit therewith.

1,634,972. LOCK BUTT FOR ASPHALT SHINGLES. NEWELL R. BARTLETT, Springfield, Mass. Filed Mar. 11, 1926. Serial No. 93,886. 4 Claims. (Cl. 108—7.)

3. A shingle element formed with intersecting slits at an angle to the adjacent sides of the shingle and extending past their intersecting point, whereby the material of the shingle may be bent backward parallel with the adjacent sides to form locking tongues, as described.

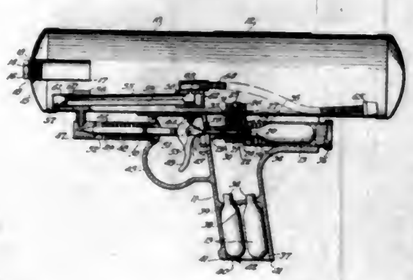
1,634,973. CONTROLLING DEVICE AND SYSTEM EMPLOYING THE SAME. HAROLD W. BROWN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 17, 1924. Serial No. 756,608. 12 Claims. (Cl. 200—88.)



1. The combination with relatively movable members adapted to be moved into a plurality of co-operating relations, of an electromagnet having a movable magnetic member mechanically arranged for imparting relative movements to said members to bring the same into each of said relations, and a thermal responsive element for controlling the relative movements of said members to bring the same into one of said relations upon the energization of said electromagnet when said thermal element is at one temperature and into another of said relations upon the energization of said electro-magnet when said element is at a higher temperature.

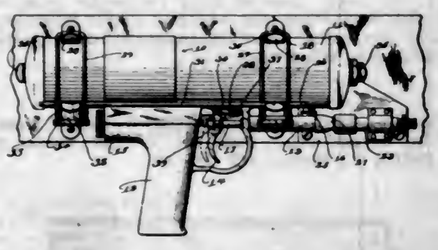
1,634,974. FACIAL COMPOSITION. MAURO BUCCI, Philadelphia, Pa. Filed Aug. 21, 1925. Serial No. 51,622. 2 Claims. (Cl. 167—9.)

1. The herein described facial composition consisting of apple juice, virgin clay, denatured alcohol, lemon juice, honey and cream, triturated to emulsified composition substantially as set forth.



1,634,975. FIRE EXTINGUISHER. GEORGE W. BURKE, Jr., Dayton, Ohio. Filed Oct. 7, 1922. Serial No. 593,034. 1 Claim. (Cl. 299—95.)

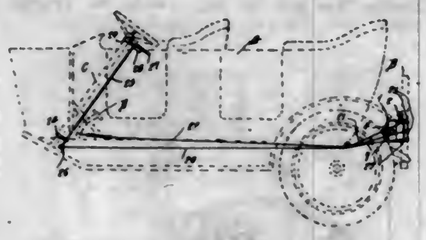
In a fire extinguisher, a cylindrical fluid container, a discharge opening near one end thereof, a cylindrical tight fitting end piece open at the rear end for closing the rear end of the container, and having a pressure gauge enclosed therein flush with the rear end thereof, a pipe extending inwardly from the discharge opening,



a swivel valve comprising a tube and valve closures therefor, means for mounting said tube on the pipe and end closure, a laterally extending pistol grip extending from a side of the container near the center thereof and a finger operated valve adjacent thereto for controlling the discharge of fire extinguisher fluid.

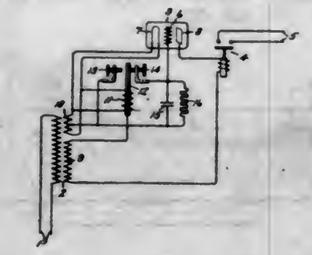
1,634,976. FIRE EXTINGUISHER. GEORGE W. BURKE, Jr., Dayton, Ohio, assignor, by mesne assignments, to Battle-Fyre Company. Filed Jan. 25, 1924. Serial No. 688,480. 12 Claims. (Cl. 169—31.)

1. In a pistol type fire extinguisher, a barrel-like container for extinguishing fluid under pressure, a controlled outlet at the forward end of said container, a feed pipe extending longitudinally within said container and communicating with said outlet at its front end and having its rear end spaced farther from the wall of the container than the front end, said pipe having a front intake and a rear intake port, interconnected valves controlling said intake ports, and a universally movable intake tube for the rear intake port of said feed pipe.



1,634,977. FIRE-EXTINGUISHING APPARATUS FOR AIRCRAFT. GEORGE W. BURKE, Jr., Dayton, Ohio. Filed July 12, 1924. Serial No. 725,595. 8 Claims. (Cl. 169—31.)

1. A holder for an article having a lateral projection, comprising an open-sided clip to embrace the article, a bar hingedly connected with a prong of the clip lying in the path of movement of said projection on said article when the latter is rotated in the clip to be moved by said projection and afford egress for said article from said clip.

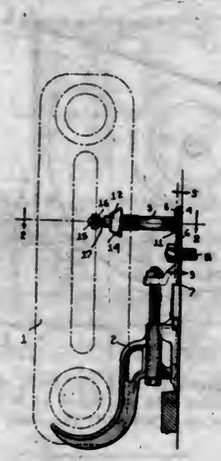


1,634,978. TRAFFIC SIGNAL FOR MOTOR VEHICLES. NEWTON M. BUTTS, Sr., Xenia, Ohio. Filed Feb. 6, 1926. Serial No. 86,512. 2 Claims. (Cl. 116—45.)

1. A traffic signal for vehicles comprising a lamp casing, a light diffusing panel in said casing, a signal casing surrounding said panel each of said panels having cut out direction indications therein, and extending outwardly of said lamp casing, shafts journaled in the side walls of the signal casing, each of said shafts carrying a direction indicating panel, means to normally hold said direction indicating panels in inoperative positions sub-

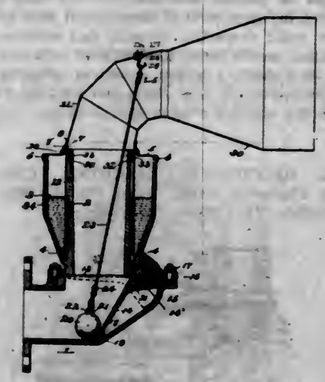
stantially perpendicular to the light diffusing panel, a pulley secured to each of said shafts, a flexible member secured to each pulley, and means engaging said flexible members to actuate the shafts and move the direction indicating panels into positions substantially parallel to the light diffusing panel.

1,634,979. CONTROL APPARATUS. EMMETT F. CARTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 10, 1925. Serial No. 68,243. 6 Claims. (Cl. 175—320.)



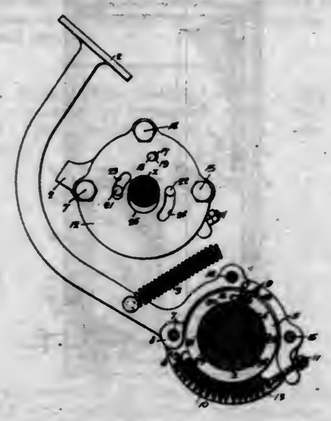
1. The combination of an electrical valve comprising a grip for controlling the transmission of current between its cathode and anode, current supply means comprising circuits for transmitting heating current to said cathode and for transmitting current between said cathode and anode, a time delay device connected between said grid and cathode, and means operable in response to energization of said supply means successively to connect said cathode to said anode through said device for storing energy in said device and to connect said cathode to said anode independently of said device through a circuit wherein the current increases at a rate dependent on the rate at which energy is dissipated from said device.

1,634,980. MANUFACTURE AND PRODUCTION OF THREADS, FILAMENTS, STRIPS, OR FILMS FROM CELLULOSE ESTERS. LOUIS CLÉMENT and CLÉRY RIVIÈRE, Pantin, France, assignors of one-half to Courtaulds Limited, London, England. Filed Nov. 17, 1924. Serial No. 750,474, and in Great Britain Jan. 5, 1924. 5 Claims. (Cl. 18—54.)



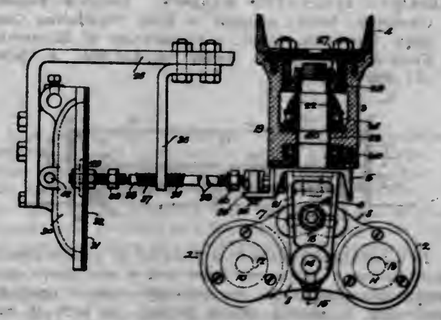
1. The manufacture of cellulosic products which comprises introducing a solution containing only cellulose ester and a solvent miscible with oil, into a setting bath comprising a saponifiable oil as the active setting agent.

1,634,981. RADIATOR HANGER. CHARLES HARRY COBB, San Francisco, Calif. Filed Aug. 18, 1925. Serial No. 50,973. 1 Claim. (Cl. 248—17.)



A radiator hanger comprising a lateral support consisting of a distance post provided at its outer end with radiator section engaging means, a base member having a pocket defined by a depending lip, the base member having a transversely elongated opening directly below said lip, and a flange bounding the side and bottom edges of said opening, the distance post being insertible through said opening and having a tongue engaging behind said lip, and a transverse rib bearing on the edge of said flange.

1,634,982. HANGAR FLOOR VALVE. MATT Q. CORBETT, Carnegie, Pa. Filed Apr. 11, 1923. Serial No. 631,331. 7 Claims. (Cl. 284—4.)

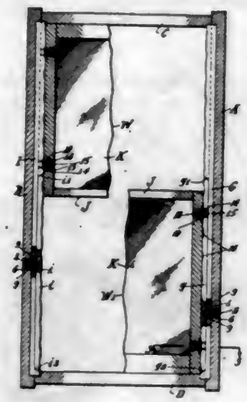


1. In combination, a lower and upper casing and a valve therebetween, said upper casing being provided with a water seal, a cap mounted on said water seal, an elbow adapted to engage said upper casing and said water seal and having a flange to engage said cap on said upper casing, said valve being normally closed when said elbow is disconnected from said upper casing.

1,634,983. CLUTCH-CONTROL DEVICE. WALTER COTTRELL, Philadelphia, Pa. Filed May 12, 1925. Serial No. 29,780. 9 Claims. (Cl. 192—99.)

1. The combination with a rock shaft, of resilient means opposing rotation of the shaft in one direction, a lever journaled on the shaft and having an operative connection with the shaft whereby the shaft may be rotated in opposition to said resilient means, and mechanism automatically operative in the normal movement of said lever to rotate the shaft to momentarily release the shaft from the lever following a predetermined movement of the shaft.

1,634,984. SHEET STRAIGHTENER. CHARLES A. DICKHAUT, Saugerties, N. Y. Filed Dec. 29, 1925. Serial No. 78,182. 26 Claims. (Cl. 271—2.6.)

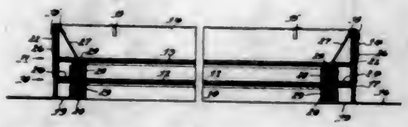


1. In a sheet straightener, the combination of two connected parallel rotatable rollers extending transversely of the direction of sheet movement and so arranged that the travelling sheet passes over one and under the other, the said rollers being arranged with their axes normally in a plane parallel with the planes of the sheet, and supporting means for the rollers permitting adjustment thereof about a pivotal axis transverse of the planes of the sheet.

1,634,985. WINDOW. HARRY DONATH, Philadelphia, Pa. Filed Mar. 2, 1926. Serial No. 91,664. 15 Claims. (Cl. 20—45.)

1. The combination with the parallel spaced jambs defining a window opening, of a runner mounted for recip-

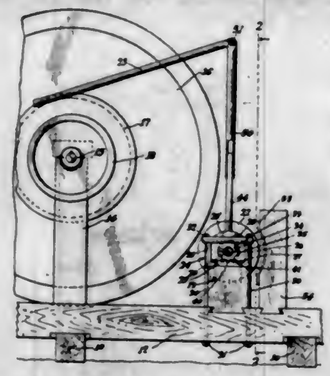
rocatory movement on one of said jambs and comprising a rib, a window in said opening slidable on said rib,



means for balancing said runner and window, and means for tilting said window and rib to an angular position with respect to said jamb.

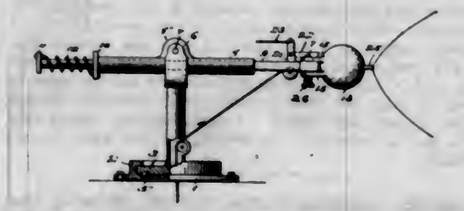
1,634,986. PROCESS OF TREATING CELLULOSE ACETATE. EDWARD S. FARROW, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 12, 1925. Serial No. 62,214. 3 Claims. (Cl. 260—102.)

1. In the process of making acetone-soluble cellulose acetate the step of treating chloroform-soluble cellulose acetate, while in solution in acetic acid with a mixture of phosphoric acid and water.



1,634,987. INSULATED WINDOW. LOUIS J. FEDDER, Owatonna, Minn., assignor to King Ventilating Company, Owatonna, Minn., a Corporation of Minnesota. Filed June 15, 1923. Serial No. 645,584. 1 Claim. (Cl. 108—16.)

In a rectangular window, a plurality of similar frames, each having a continuous inner and a continuous outer gutter extending around the four sides thereof, upwardly projecting U shaped flanges formed on each of said frames and arranged to nest one within another to mount successive panes one above another, the gutters of the upper panes being disposed to rest upon the lower panes, insulating material arranged in the inner gutters to support the panes, the outer gutters being arranged to carry off water from beneath the outer edges of the panes and means for securing the several frames one upon another and for holding the top pane in the uppermost frame.

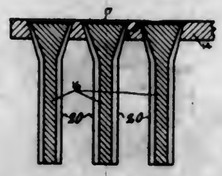


1,634,988. SAND REEL. CHARLES F. FERNALD, Los Angeles, Calif., assignor of one-half to James W. Swartzlander, Los Angeles, Calif. Filed Feb. 6, 1925. Serial No. 7,300. 1 Claim. (Cl. 308—59.)

A bearing for sand reel shafts comprising a bearing in which the shaft is rotatable, gear teeth formed upon one member of said bearing, a box having teeth provided thereon upon which said gear teeth may rest and mesh, a cap for said box for maintaining the teeth upon said

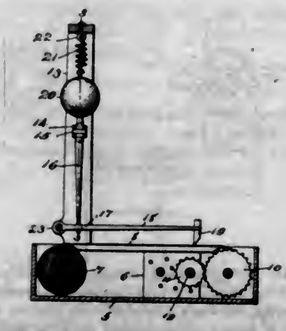
bearing in engagement with the teeth on said box, and means for rotating said bearing so as to cause it to move within said box and thus shift the shaft.

1,634,989. MOORING MAST. IRA F. FRAVEL, Washington, D. C. Filed Nov. 15, 1924. Serial No. 750,143. 4 Claims. (Cl. 244—2.)



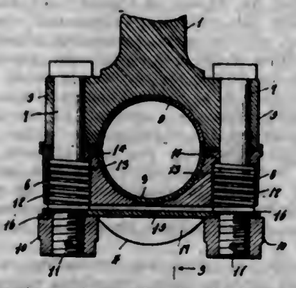
1. A rigid airship mooring mast comprising an upright capable of rotary movement within a base plate, a horizontally extending tube having a point intermediate the ends thereof attached to said upright in such a manner as to allow of pivotal movement of the tube upwardly and downwardly in a vertical plane about said upright as a pivot, a shaft extending through and slidable in said tube, resilient means interposed between adjacent ends of said tube and shaft, a hollow spherical coupling member pivotally connected to said shaft and adapted to receive and retain the coupling stud of said airship.

1,634,990. CALCULATING MACHINE. CARL M. F. FRIDEN, Piedmont, Calif. Filed Oct. 8, 1924. Serial No. 742,353. 15 Claims. (Cl. 235—82.)



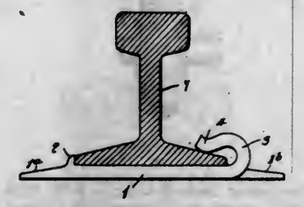
1. In a calculating machine, a rotatable calculating mechanism, a device for rotating said mechanism, means for introducing values into said mechanism, means for locking the parts of the calculating mechanism in adjusted position and means including two rotary elements having relative rotational lag for holding said locking means in engagement with said parts during the application of a rotational force to said rotating device.

1,634,991. FURNACE GRATE. JOSEPH HENRY FRYER, Toronto, Ontario, Canada. Filed Apr. 29, 1926. Serial No. 105,416. 3 Claims. (Cl. 126—152.)



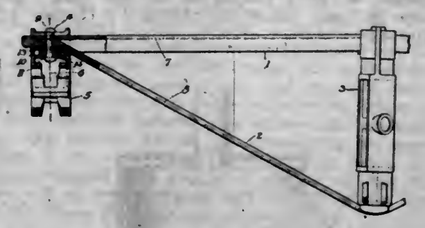
1. In a furnace grate, a bed plate having a plurality of spaced holes, and a solid metal insert removably suspended in each of said holes sized to extend below said plate and having a plurality of spaced vertically-arranged ribs in the periphery thereof forming air preheating passages to the fire-box of said furnace.

1,634,992. RECORDING ACCELEROMETER. GRANDISON GARDNER, Dayton, Ohio. Filed Mar. 29, 1923. Serial No. 628,664. 4 Claims. (Cl. 234—1.)



4. A recording accelerometer including a movable record strip, a frame, a stylus arm on said frame and capable of movement relative thereto, a lever pivotally carried by said frame having a weight on the upper end thereof and a connection with the stylus arm at the lower end thereof, and spring means connected to said weight and said frame for resiliently retaining said lever in one position.

1,634,993. SELF-ADJUSTING CONNECTING-ROD BEARING. MERLIN D. GREENIG, La Harpe, Ill. Filed Oct. 26, 1926. Serial No. 144,293. 1 Claim. (Cl. 308—67.)

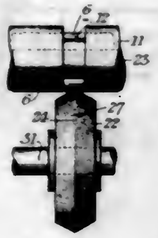


A connecting rod provided in the lower end thereof with a recess, bolts carried by the connecting rod at opposite sides of the recess, a bearing cap applied to said end of the connecting rod and provided in its upper side with a recess registering with said first named recess, the bearing cap being provided in its lower side with a recess, lugs carried by the bearing cap and apertured for the reception of the bolts, the lower portions of the lugs being counterbored, a bar mounted upon the bolts and extending through the lower recess of the bearing cap, and springs mounted upon the bolts and resting at their lower ends on the bar, the springs extending into the counterbored portions of the lugs and contacting with the bottom walls of said portions.

1,634,994. COMBINED RAIL ANCHOR AND TIE PLATE. WILLIAM P. HESTERLY, Lufkin, Tex. Filed Sept. 24, 1925. Serial No. 58,398. 1 Claim. (Cl. 238—304.)

A tie plate having a rib located inwardly beyond one side edge thereof, relatively spaced resilient jaws located at the corners and inwardly beyond the other side edge thereof, that portion of the tie plate located outwardly beyond the rib being greater in length than that portion located outwardly beyond the jaws, and said jaws being located at the ends of said latter portion and having upwardly curved inner terminals.

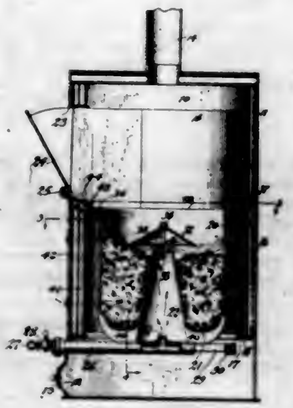
1,634,995. BRAKE BEAM. CHARLES F. HUNTOON, Chicago, Ill. Filed Oct. 9, 1924. Serial No. 742,585. 4 Claims. (Cl. 188—228.)



1. A brake beam comprising tension and compression members directly connected together at their ends, a brake head at the end of the beam having an opening into which said members extend, a filler block arranged at one side of said members and inserted in said opening between said members and the head, and means for locking said filler block and brake head to said members.

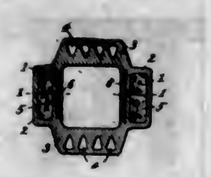
1,634,996. BAND PRESS FOR SHOE-SOLE PRESSES. CULLEN L. HUNTOON, Los Angeles, Calif. Filed Nov. 22, 1926. Serial No. 149,927. 8 Claims. (Cl. 12—38.)

1. A band press comprising a shank, a work mounting device attached to the shank, a web connected to the shank having a series of openings therethrough, and elastic bands in said openings, said bands being stretchable over the work mounting device.



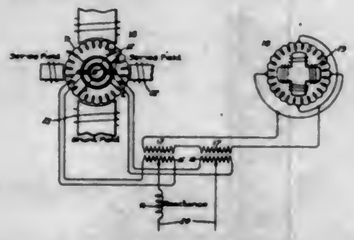
1,634,997. METHOD AND APPARATUS FOR MAKING PAPER STRIPS WITH THINNED EDGES. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,794. 14 Claims. (Cl. 164—61.)

1. The method of making a paper strip with a thinned edge including grinding an unsupported portion of a paper strip, the grinding being continued until the paper is severed.



9. In a machine of the class described, a support for guiding paper past a station, said support having grooves longitudinal of the path of the paper, means for drawing a strip of paper under tension over said grooved support, and abrading means positioned to groove and sever the paper as it is held taut over the grooves.

1,634,998. INCINERATOR. EDWARD KENER, Jr., Buffalo, N. Y., assignor to Buffalo Co-Operative Stove Co., Buffalo, N. Y., a Corporation of New York. Filed July 18, 1924. Serial No. 726,730. 7 Claims. (Cl. 110—18.)

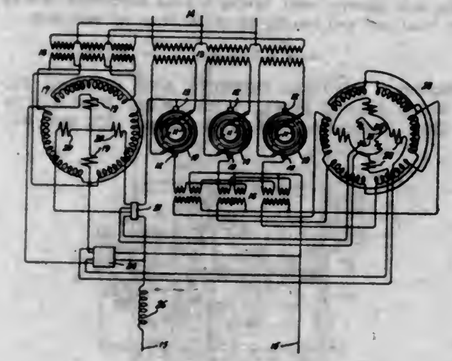


1. A refuse incinerator comprising a combustion chamber, an imperforate pot having a closed bottom and sides and an open top and pivotally mounted within said chamber so as to be capable of moving into a normal upright position in which the same receives and holds the material to be destroyed or inclined so that its top opens laterally for discharging the contents of the pot, and a burner arranged below the pot, said chamber being provided in the upper part of its enclosure with an inlet door which permits of introducing material into the pot and a discharge door in the lower part of said enclosure for permitting removal of the residue from said pot.

1,634,999. INGOT MOLD. REINHOLD CARL KRAUSE, Youngstown, Ohio. Filed Mar. 24, 1926. Serial No. 96,984. 9 Claims. (Cl. 22—139.)

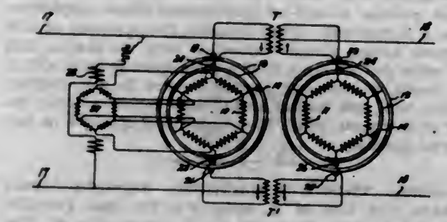
1. An ingot mold having two of its opposite sides insulated against heat absorption and radiation, and the other two opposite sides provided with extended and increased heat absorbing and radiating means and surfaces.

1,635,000. CONTINUOUS-CURRENT GENERATOR. THOMAS C. LENNOX, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 20, 1925. Serial No. 51,491. 1 Claim. (Cl. 171—252.)



Apparatus for producing direct currents comprising a polyphase alternating current generator, mechanical rectifiers connected between the different phases of said generator and a direct current line, said rectifiers being arranged to completely open the circuit between their direct and alternating contacts at the point of reversal of the wave being rectified, an auxiliary alternating current generator driving in synchronism with said polyphase generator and rectifiers arranged and connected to oppose the voltage between rectifiers, said generator having shunt and series fields in quadrature supplied from the direct current line.

1,635,001. SYNCHRONOUS RECTIFIER. THOMAS C. LENNOX, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 20, 1925. Serial No. 51,492. 3 Claims. (Cl. 171—123.)

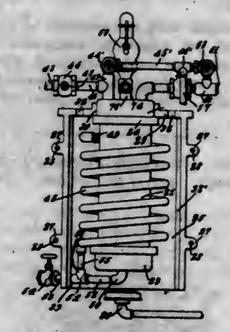


1. Apparatus for converting alternating current to direct current, or vice versa, comprising polyphase mechanical rectifiers of the open circuit type, together with an alternator for driving the rectifiers in phase with the alternating voltage to be rectified and an alternator having a frequency which is a multiple of the rectifying frequency connected for opposing the voltage between rectifiers while permitting the flow of load currents through the rectifiers, said alternators each having two sets of field windings in quadrature, one for supplying normal excitation and the other for overcoming the reactive voltage of the rectifier circuits due to load currents.

2. Apparatus for converting alternating current to direct current, or vice versa, comprising polyphase mechanical rectifying contactors each of which is arranged to be open circuited at the instant when the alternating voltage connected thereto reverses, means for driving said rectifiers in phase with such alternating voltage, an alternating current generator of double the frequency of rectification connected to oppose the voltage between rectifiers and preventing the flow of short circuit currents between rectifiers while permitting the flow of load currents through the rectifiers, said generator having two sets of field coils in quadrature, one for supply-

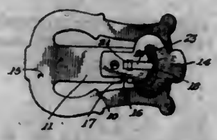
ing normal excitation and the other for supplying an excitation which is proportional to the load current through said rectifying apparatus.

1,635,002. CONTINUOUS-CURRENT TRANSFORMER. THOMAS C. LENNOX, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 20, 1925. Serial No. 51,494. 5 Claims. Cl. 171—123.)



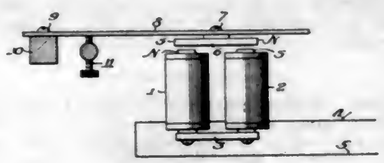
1. Apparatus for converting direct current of one voltage to direct current of a different voltage comprising a main polyphase transforming apparatus having mechanical rectifying devices associated with its primary and secondary windings such that the circuit between the cooperating rectifying contacts are completely opened at the point of reversal of the alternating current wave, a brush transformer having its primary winding connected between the primary rectifying contacts of the same polarity and its secondary winding connected between the secondary rectifying contacts of the same polarity, said brush transformer having the same ratio of transformation as the main transformer, whereby the voltage of commutation of the primary is balanced against the voltage of commutation of the secondary.

2. Apparatus for converting direct current of one voltage to direct current of another voltage comprising a main polyphase transforming apparatus arranged to be connected between direct current circuits by means of mechanical rectifying devices respectively associated with the primary and secondary windings of said main transformer, an auxiliary brush transformer having its primary winding connected across the primary rectifying contacts of one polarity, and its secondary connected across the secondary rectifying contacts of the same polarity, said brush transformer having the same ratio of transformation as the main transformer and terminals at neutral points of said brush transformer windings for connection to direct current lines of corresponding polarity.



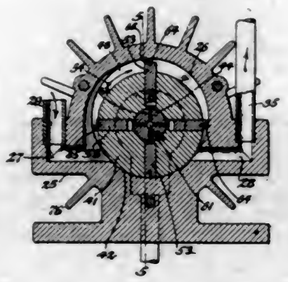
3. Apparatus as claimed in claim 2, characterized by the provision of an auxiliary synchronous alternator driven in synchronism with the rectifiers for producing the exciting current for said transformers.

1,635,003. WATER HEATER. CLAUDE LE ROY LEWIS, Omaha, Nebr., assignor of one-third to G. W. Street and one-third to John Walker, Omaha, Nebr. Filed Nov. 9, 1925. Serial No. 67,860. 9 Claims. (Cl. 122—245.)



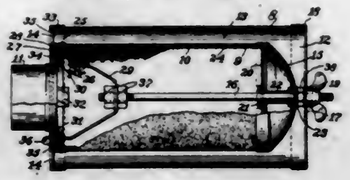
1. In a water heater for the purpose set forth, a water tank adapted to be arranged over a heating element and having a peripheral support in proximity to its upper end, a water heating coil surrounding the tank and having its upper end opening into the tank below and in proximity to said support, said coil having its lower end depending below the tank and opening into the bottom of the latter centrally thereof, and a suspended jacket enclosing and spaced from said coil, said jacket having an open lower end positioned below the bottom of the tank, and said jacket having an inwardly extending upper end abutting against and surrounding the upper portion of the tank below the top of the latter, and further engaging said peripheral support whereby the jacket will be suspended from said support and the tank extended above the upper end of the jacket.

1,635,004. REED TRIMMER. WALTER MAJESKI, Hoboken, N. J. Filed Feb. 28, 1925. Serial No. 12,805. 6 Claims. (Cl. 144—146.)



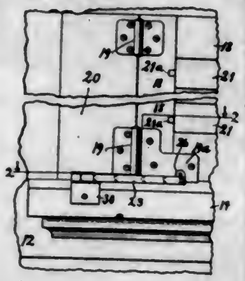
1. A clipper for trimming the ends of reeds, comprising a body portion having a cutting edge, a member movable transversely relative thereto and provided with a coacting cutting edge, said member provided with a finger piece secured to the side thereof opposite the body portion and providing an offset continuation of said member, said finger piece provided with a slot, a lever provided with an inturned end extending through the slot and spaced in advance of the cutting edge on said member to form a stop for the end of the reed to be clipped, a strap for rockably mounting the lever in position on the finger piece to permit said stop to be removed from its position in advance of the cutting edges when the member is advanced towards the body portion.

1,635,005. SLOW MAGNET. NILS E. NORSTROM, Chicago, Ill. Filed Dec. 16, 1926. Serial No. 155,152. 1 Claim. (Cl. 175—336.)



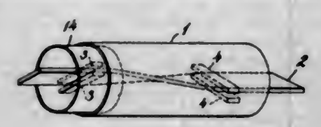
A magnet provided with connections to a source of alternating current, an armature composed of hardened steel, and an armature lever arranged to support the armature so that both ends thereof approach and recede simultaneously with respect to the poles of the magnet.

1,635,006. PUMP. WILLIAM OLIVER, Lockport, N. Y. Filed Oct. 7, 1925. Serial No. 61,099. 3 Claims. (Cl. 230—152.)



1. In a refrigerating apparatus, a compressor pump provided with a cylinder having an inlet and an outlet, a rotor arranged within said cylinder and provided with a plurality of radial pockets, and a plurality of piston blades one slidable radially in each of said pockets and each having its outer end engaging the bore of said cylinder and having its outer front corner removed to form a liquid film receiving pocket between the outer front part of the respective blade and the bore of said cylinder.

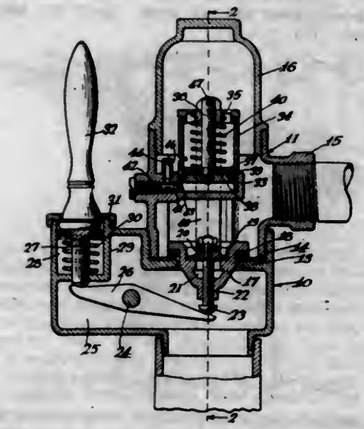
1,635,007. AIR CLEANER FOR AUTOMOBILES AND THE LIKE. FREDERICK STRATTNER OREM, Baltimore, Md. Filed Feb. 6, 1926. Serial No. 86,532. 3 Claims. (Cl. 183—73.)



1. An air cleaner for automobile engines comprising an outer imperforate casing open to the atmosphere at its opposite ends, an air filtering unit within said casing with a space between it and said casing and surrounding the filtering unit, said space providing a conduit for a current of air passed through the open ended casing, whereby said current of air will contact with the filtering unit longitudinally thereof to clear it of dust particles, said filtering unit having a head completely closing its front end and having an outlet from its rear end.

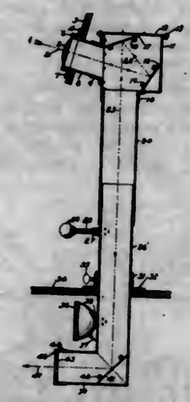
1,635,008. SHUTTER OPENING AND CLOSING DEVICE. JOHN C. PORTZ, St. Paul, Minn. Filed Apr. 28, 1926. Serial No. 105,148. 2 Claims. (Cl. 268—93.)

1. The combination with a house wall and a window frame therein and window sashes in the frame and a shutter hinged to fold toward the outside of the wall when opened, of a shutter opening and closing device comprising an actuating rod slidable through an aperture in the wall below the window sill and having its outer portion formed of knee-jointed links adapted to form a horizontally curved segment, the outer end of said segment having pivotal connection with the shutter and the other end having a handle piece operable from within the house, a channeled bracket secured in the aperture in the wall and having anti-friction rollers guiding the rod at the point where it changes from straight to segmental position.



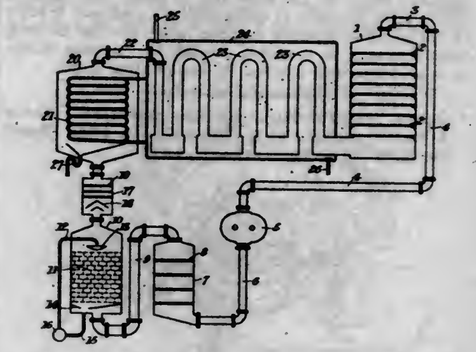
1,635,009. TWISTING MACHINE. SYLVANUS ALBERT REED, New York, N. Y., assignor to The Reed Propeller Co., Inc., New York, N. Y., a Corporation of New York. Filed June 9, 1925, Serial No. 35,947, and in France Oct. 15, 1924. 9 Claims. (Cl. 153—78.)

1. In a machine for twisting metal plates and other objects, holding means for engaging the work at spaced points, and tubular connections between said holding means constructed and arranged so that torque stress is transmitted from one to the other of said holding means and thence to the work.



1,635,010. FLUSH VALVE. ELIAS B. ROSE, Los Angeles, Calif. Filed Mar. 4, 1926. Serial No. 92,262. 4 Claims. (Cl. 137—93.)

1. A flush valve comprising a body formed of upper and lower sections, the lower section having an outlet and a valve seat therein, a closure adapted to seat thereon, means for unseating the closure associated with the lower section, the upper section having a lateral inlet and being adjustable upon the lower section, whereby the position of the inlet with respect to said means may be varied, and a dashpot mounted in the upper section,

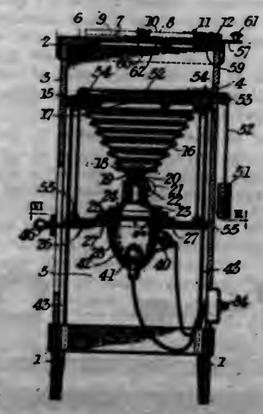


the piston of which is connected by means of a swiveled connection to the valve closure so as to be operable thereby.

1,635,011. VEHICLE PERISCOPE. LUTHER SADLER, Los Angeles, Calif. Filed Oct. 15, 1925. Serial No. 62,541. 2 Claims. (Cl. 88—1.)

1. In a vehicle having a floor and a dash, an eyepiece tube mounted horizontally in said dash, an eyepiece mounted in said tube and disposed on one side of said dash, a mirror chamber communicating with said tube and disposed on the other side of said dash, a plurality of mirrors in said mirror chamber, a vertical tube communicating with said mirror chamber and extending below said floor, said vertical tube being provided with a telescopic joint, a mirror in the lower end of said vertical tube, a horizontal objective tube communicating with said vertical tube at the lower end thereof, an objective disposed in said objective tube, a spot light mounted on said objective tube, and a handle for directing said objective and said spot light.

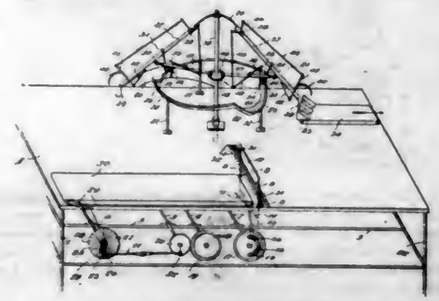
1,635,012. PROCESS OF DRYING ALKALI CELLULOSE. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,295. 2 Claims. (Cl. 34—24.)



1. The process of drying alkali cellulose for making haze-free cellulose ether containing an excess of water, which comprises the steps of lowering the water vapor in air containing carbon dioxide, removing said carbon dioxide and then passing said air into contact with said alkali cellulose.

1,635,013. PROCESS FOR REDUCING THE VISCOSITY CHARACTERISTICS OF CELLULOSE ETHERS. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 16, 1925. Serial No. 75,889. 2 Claims. (Cl. 260—152.)

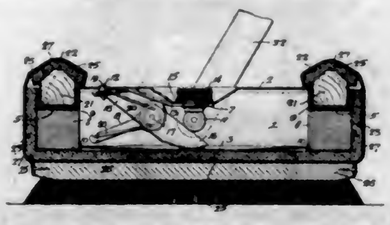
1. The process of reducing the viscosity characteristics of cellulose ether, which comprises bringing said ether into solid colloidized form with a greater acidity than pH5, and heating said ether while in said form at a temperature between 50° C. and its decomposition temperature until its viscosity characteristics are lowered.



1,635,014. PHOTOGRAPHIC-PRINTING MACHINE. GEORGE A. SMITH, Baltimore, Md., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 2, 1924. Serial No. 753,510. 13 Claims. (Cl. 88—24.)

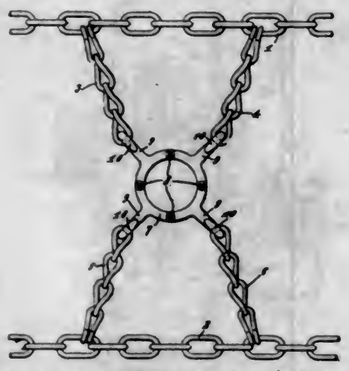
1. In a printing machine, the combination with a panel adapted to support a negative and a sheet of sensitised material, of a source of light spaced from the panel and an objective between the light source and the panel, and

means for controlling the light rays projected by the panel including a masking device, a slideway carried by the printer for the masking device, a plurality of stops at fixed predetermined positions along the slideway, a plurality of contacts on the masking device adapted to engage the stops on the slide and to locate the masking device in a plurality of predetermined positions relative to the objective whereby printing light rays and masking light rays may be projected through the masking device in a predetermined relation by the printing panel.



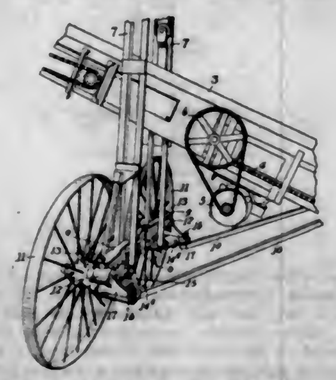
1,635,015. CONFECTION-COATING MACHINE. LOUIS A. SMITH, Auburn, N. Y. Filed Feb. 10, 1925. Serial No. 8,264. 6 Claims. (Cl. 91—4.)

1. A machine of the class described comprising a conveyor to support an edible body, means for intermittently driving said conveyor to advance the body, a transverse cutter at the end of said conveyor and means for operating said cutter after each advancement of the block to cut a slice from the latter, a second and transverse conveyor for receiving the slices and delivering them at a predetermined point, and means movable by said point for receiving the slices from said second conveyor, dipping them in a coating fluid held in a pan and discharging the coated slices.



6. A machine of the class described comprising a rotary upright shaft, an inclined arm pivoted at its upper end to said shaft and carrying relatively movable jaws at its lower end, a second arm pivoted to the shaft and having a roller upon which the first named arm rests, said second named arm also having a transverse roller, an annular stationary track upon which the second roller rests, said track having cam means for effecting lowering and raising of the second arm at one point and similar movements thereof at another point, a vertically movable jaw-controlling member mounted on said second arm, connecting means between said controlling member and at least one of the aforesaid jaws, and a stationary track in the downward path of said controlling member adjacent the aforesaid other point for operating said member to open the jaws.

1,635,016. FLOOR POLISHER. ALOIS F. STEIERT and OSCAR W. LINKE, Philadelphia, Pa. Filed June 2, 1925. Serial No. 34,317. 12 Claims. (Cl. 91—39.)

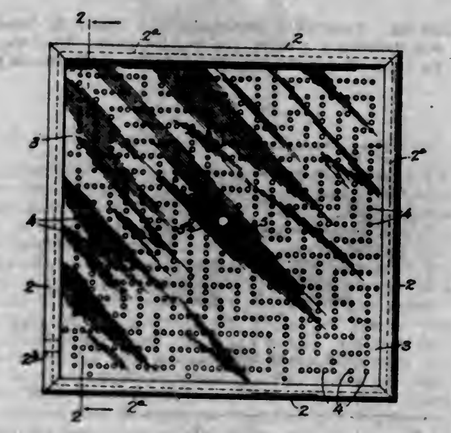


7. A polishing device comprising a casing adapted to hold a polishing medium and having discharge means for said medium, surface-treating elements detachably secured to one side of said casing, and a surface-treating element secured on the other side of said casing solely by means of said detachable elements.

1,635,017. ANTISKID DEVICE. APSALON A. SUNDS, Ute, Iowa. Filed Apr. 21, 1926. Serial No. 103,538. 1 Claim. (Cl. 152—14.)

An anti-skid device comprising a body portion in the form of an annulus of cylindrical cross section, a series of spaced, tapered calks formed integral with and disposed at right angles to the outer face of said annulus, and a series of radially disposed coupling members formed integral with the outer side edge of said annulus and of cylindrical cross section, each of said coupling members having the outer portion thereof inturned upon itself to provide a bill spaced from and arranged exteriorly of the outer side edge of said annulus, said coupling members providing means for connecting said body portion with a series of tread chain elements to position the body portion centrally of the tread of a tire, said coupling members alternately disposed with respect to said calks and arranged in pairs, the coupling members of each pair being oppositely disposed with respect to each other and extending in the same plane.

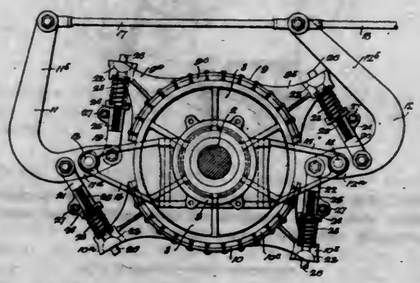
1,635,018. TRUCK. HENRY B. WALKER, Marion, Ohio, assignor to The Fairfield Engineering Company, Marion, Ohio, a Corporation of Ohio. Filed Apr. 21, 1926. Serial No. 103,465. 1 Claim. (Cl. 280—80.)



The combination with a truck bolster, of a channel iron having its web vertically disposed, and one flange of materially greater width than the other flange, a spindle disposed between the flanges and pivotally connected thereto, an axle connected to the spindle, a radially extending projection on the spindle, and means for detachably connecting said projection to said wider flange at a plurality of arcuately spaced points.

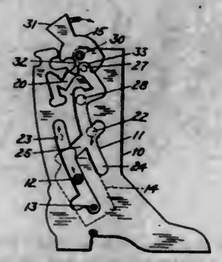
1,635,019. GANG DISK PLOW. STOKELY D. WALTON, Imperial, Calif. Filed Dec. 10, 1925. Serial No. 74,495. 1 Claim. (Cl. 97—53.)

In a disk plow, a support, external sleeve-like hangers vertically disposed and adjustably secured at intervals to the support, ground working elements, standards for said elements and rotatable in the hangers, adjustable means on the standards to sustain the same in selected vertical adjustment, arms on the standards and each having a fork, a bracket on the support beyond the standards, a link pivoted in the forks and having a spring at one end connected to the bracket, and means at the end of the link opposite the spring for moving said link against the resistance of said spring to turn the standards.



1,635,020. GAME APPARATUS. CLYDE H. WILKINS, Lyndon, Ill. Filed May 1, 1926. Serial No. 106,040. 3 Claims. (Cl. 273—109.)

1. A game apparatus, comprising a casing having an opening in its side, a transparent closure for the casing having an opening therein; and a plurality of studs in said casing arranged in rows at angles to each other, the studs in each row being normally spaced relatively close together, and some of the studs being omitted to permit access from one row to another; whereby at least one continuous open passage will be provided from the opening in the closure to the opening in the side of the casing.

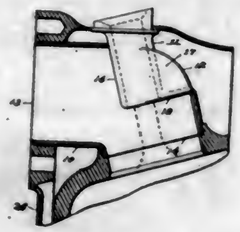


1,635,021. BRAKE. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 3, 1925. Serial No. 41,288. 2 Claims. (Cl. 188—75.)

1. The combination in a brake mechanism of a rotatable brake drum, two operating levers respectively mounted for movement about two fixed axes at opposite sides of the axis of the drum, means for moving the two levers in unison, two brake shoes adapted to engage the drum at opposite sides thereof and midway between the two pivotal axes, a pair of links having ball-and-socket connections with the respective ends of one shoe and also having pivotal connections with the respective operating levers at the same sides of the pivotal axes thereof, and a second pair of links having ball-and-socket con-

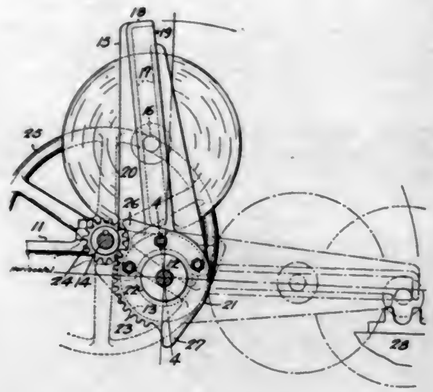
nections with the respective ends of the other shoe and also having pivotal connections and the respective operating levers at the same sides of the pivotal axes thereof and opposite to the points of connection of the first said links, each of the said links comprising male and female members threaded together with a ball element formed on the male member and with the said male member provided with a projection beyond the ball element whereby the said member may be turned.

1,635,022. PUZZLE. JOHN S. ALLEN, Worcester, Mass. Filed Jan. 25, 1927. Serial No. 163,532. 2 Claims. (Cl. 273—153.)



1. A puzzle comprising a plate having a tortuous passage provided with a constricted portion, a rider having pins of different sizes, one of which will and another which will not pass through the constricted portion, and a swinging gate having a recess arranged to cooperate with an enlarged portion of the passage which is so constructed that a pin of the rider may engage therein and be swung to a position outside of the gate, said parts being so arranged that the smaller pin must pass into the constricted portion of the passage before the other pin can be carried outwardly by the gate.

1,635,023. ENGINE-CYLINDER VALVE PORT AND STEM-GUIDE STRUCTURE. GLENN D. ANGLE, Dayton, Ohio. Filed Dec. 30, 1920. Serial No. 434,132. 4 Claims. (Cl. 123—17.)



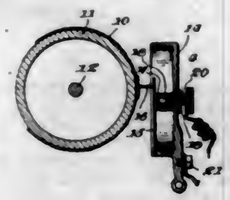
1. An engine cylinder valve port and stem guide structure, comprising a tubular main body having a radius bend and a reception orifice in the outer wall of such bend, a valve stem guide formed separately from said

main body and having a water receiving and cooling pocket cast integral therewith, said guide being inserted through said orifice and permanently attached to said

main body in such a manner that the water pocket is wholly within the confines of said radius bend and in conformity with the contour thereof.

1,635,024. CLOTH-ROLL MOUNTING FOR LOOMS. WILLIAM H. BAKER, Montreal, Quebec, Canada. Filed Jan. 15, 1923. Serial No. 612,809. 10 Claims. (Cl. 139—308.)

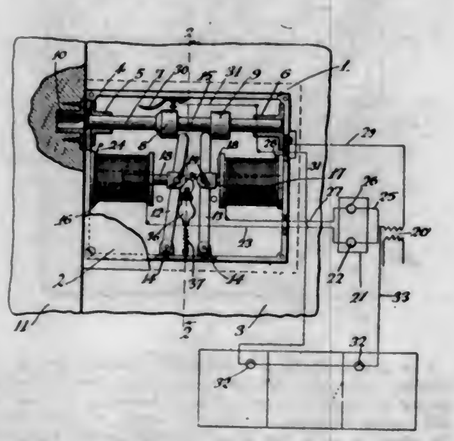
1. In a loom, a frame, a sand roll rotatably mounted on said frame, a cloth roll core and guides for the ends of said core pivotally supported to swing about the axis of the sand roll with the periphery of the cloth roll continuously in contact with that of the sand roll.



1,635,025. QUENCHING FLUID. GUY M. BALL, Dayton, Ohio. Filed July 25, 1924. Serial No. 728,185. Renewed Dec. 9, 1926. 5 Claims. (Cl. 148—18.)

4. A quenching solution for hardening ferrous metals, consisting of the following ingredients in the approximate ratio named: sodium chloride, 2 lbs.; potassium cyanide, ¼ lb.; borax, 1 lb.; water, 1 gal.

1,635,026. CELLULOSE ACETATE AND PROCESS OF MAKING THE SAME. RICHARD BAYBUTT and EDWARD S. FARROW, Jr., Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 20, 1926. Serial No. 123,791. 9 Claims. (Cl. 260—102.)



1. In the process of manufacturing acetone-soluble cellulose acetate, hydrolyzing chloroform-soluble cellulose acetate powder, the sizes of the particles of which are at most of the order of 1/300th of an inch, said particles containing penetrant material, said hydrolysis being carried out in an aqueous solution of an acid until said powder becomes soluble in acetone.

1,635,027. METHOD AND MEANS OF TRANSMITTING PICTURES. EDOUARD BELIN, Paris, France. Filed Feb. 9, 1925. Serial No. 8,022. 2 Claims. (Cl. 178—7.)

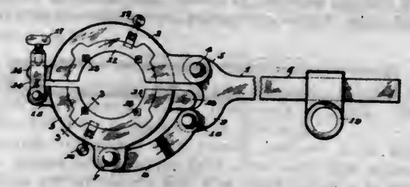
1. Means for modulating a current with non-oscillatory variations comprising a variable resistance of the carbon button microphone type having a stationary button and a pressure button in engagement therewith carried by an aperiodic support responsive to the modulations to be impressed.

1,635,028. ELECTRIC DOOR LOCK. HARRY B. BURR and MEDFORD A. GRIEVE, Los Angeles, Calif. Filed May 10, 1926. Serial No. 108,035. 3 Claims. (Cl. 70—50.)

1. An electric door lock comprising in combination a housing having a slidable bolt, a pair of spaced shoulders on the bolt, a pair of levers pivotally mounted in the housing, having their free ends adapted to engage the said shoulders, electro-magnetic devices operatively connected to each of the levers, a circuit for each device having a separate switch, one of said devices actuating its lever to slide the bolt to lock a door or the like, and the other to retract the bolt, each of said devices causing a movement by means of the shoulders on the bolt of the other lever.

1,635,029. FILM CUT-OUT. HENRY E. BUTLER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 27, 1926. Serial No. 157,215. 3 Claims. (Cl. 200—118.)

1. A film cutout comprising metal plates united by an adhesive and provided with an insulating film between them, the adhesive and film, being separate from each other.

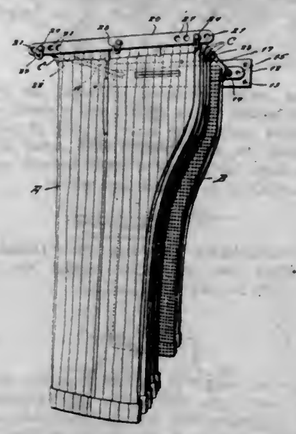


1,635,030. FOLDABLE EASEL MOUNT. JAMES A. CAMERON, Chicago, Ill., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 19, 1924. Serial No. 757,051. 1 Claim. (Cl. 40—150.)

A foldable easel mount for pictures comprising a picture-receiving panel having a front wall and a rear wall, said panel being provided with two side wings adapted to be swung into folded position against the rear face of the panel and to be swung into easel-supporting position at an acute angle to the rear face of said panel, the material at the joints between the panel and wings being flexed to normally spring the wings toward and adjacent said rear face of the panel and toward and adjacent the hereinafter mentioned shouldered tongue, said rear wall being provided with a shouldered tongue of springy material adapted to swing against the rear face of the panel into folded position, and to swing about a fixed upper horizontal fold to bring its shoulders into engagement with the free edges of said wings and retain them in easel-supporting position, the spring of the material at said fold tending to move said tongue downward toward its said folded position and forcibly retain said shoulders against said edges of the wings, said tongues and said wings having smooth inclined cam edges, whereby said easel mount may be changed from folded to easel position by merely swinging up said tongue beyond its easel position and releasing it, said smooth inclined cam edges sliding over each other to cam the wings apart until the parts reach easel position, said tongues having shoulders to limit said sliding when the easel position is reached.

1,635,031. GO-AROUND TONGS FOR DRILLING MACHINES. JOHN W. CHAMPION, Corsicana, Tex. Filed Sept. 29, 1925. Serial No. 59,311. 4 Claims. (Cl. 81—66.)

1. A pipe wrench including a pair of independent substantially semicircular jaws, an arm to which one of said jaws is directly pivoted, a link pivotally connected to the other jaw and to the arm, means for detachably connecting the ends of said jaws remote from said arm, and



cooperating means on said arm and one of said jaws to cause the jaws to grip a pipe as the arm is moved laterally.

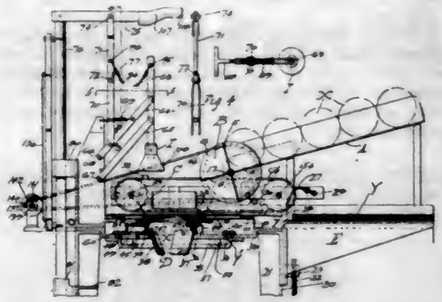
1,635,032. BRAILLE MATRIX. NANCY D'WOLF CLARK, Glen Head, and ALMA B. ARMSTRONG, New York, N. Y., assignors to The American National Red Cross, a Corporation. Original application filed Dec. 24, 1925. Serial No. 77,616. Divided and this application filed Apr. 15, 1926. Serial No. 102,334. 1 Claim. (Cl. 101—28.)

A Braille matrix for embossing paper, comprising an embossed sheet of oiled bond paper provided on its rear face with a layer of glue and dental plaster filling the embossings to thereby reinforce them and a coating of shellac covering and protecting the exposed face of the reinforcing layer.

1,635,033. TROUSERS HANGER. MONROE S. CLAWSON, Montclair, N. J. Filed May 23, 1925. Serial No. 32,428. 10 Claims. (Cl. 211—17.)

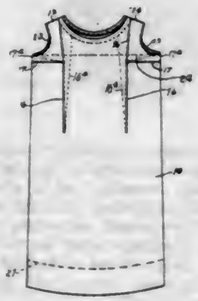
1. A garment hanger comprising a relatively stationary member including a plurality of spaced horizontally extending supporting elements, and a second member including horizontal supporting elements telescopically engaged with the first named supporting elements, all of said supporting elements being adapted for insertion through the belt straps at the front and rear of trousers for effecting suspension thereof and maintaining them taut at the waists thereof.

1,635,034. LEVEL. LEWIS E. CORYELL, Portland, Oreg. Filed Sept. 22, 1926. Serial No. 136,935. 1 Claim. (Cl. 33—209.)



A level having, in combination, a longitudinal split frame having a groove formed between the parts thereof, said groove having the side portions of each end thereof

partially closed; a transparent closed tube member, the ends of which are closed to said partially closed frame ends, said transparent tube member having a colored liquid therein sufficient to extend approximately midway in the ends of said rectanguler frame when horizontally

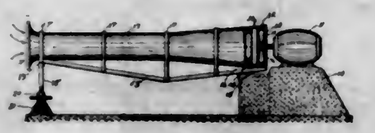


placed in a vertical plane; and means for pivotally mounting said level on a fixed support, said means consisting of a base having a V slot formed in the bottom thereof for engaging the under side of a nail-head, said base having upwardly and inwardly turned sides adapted to slidably engage the lower edge of said straight edge.

1,635,035. MACHINE FOR WRAPPING FRUIT AND OTHER ARTICLES. RAYMOND A. DICKINSON, Appleton, N. Y. Filed Feb. 20, 1926. Serial No. 89,787. 43 Claims. (Cl. 93—5.)

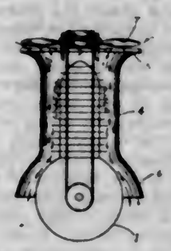
28. In an article wrapping machine, the combination of a rotary holder for an article and a sheet of material to be wrapped around the same, a pair of reciprocatory plates adapted to move toward each other to twist together the edge portions of a sheet around said article, and a cam adapted to actuate said plates.

1,635,036. GARMENT. MARTHA FERN DODGE, Winfield, Kans. Filed Mar. 30, 1925. Serial No. 19,425. 5 Claims. (Cl. 2—73.)



1. An undergarment having a front length of a width which will extend past the sides of the wearer and a back width filling the space between the edges of the front width, horizontally disposed darts below the arms location of the garment, and vertically disposed darts at the sides of the garment in the front tapering from the shoulders to the waistline portion of the garment.

1,635,037. MEANS FOR AGITATING AND STIRRING MOLTEN METAL IN OPEN-HEARTH AND LIKE FURNACES. JOHN EDWARDS, Swansea, England. Filed May 7, 1926, Serial No. 107,393, and in Great Britain Sept. 28, 1925. 6 Claims. (Cl. 259—144.)

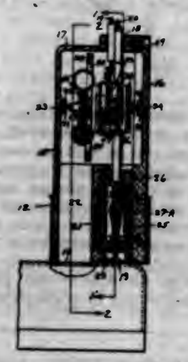


1. A device for agitating molten metal in an open hearth furnace comprising a shaft, agitating means carried by said shaft, means for rotating said shaft, means for tilting said shaft, and means for longitudinally advancing and retracting said shaft.

1,635,038. WIND TUNNEL FOR FLIGHT OF MODELS. ELISHA N. FALES, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,366. 10 Claims. (Cl. 35—12.)

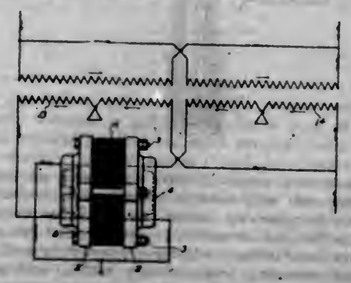
1. In combination a pivoted wind tunnel for the aerodynamic testing of freely suspended aerial models, and means for adjusting the angular position thereof.

1,635,039. MEANS FOR COOLING HEATED SURFACES. ELISHA N. FALES, Lake Forest, Ill. Filed Mar. 21, 1923. Serial No. 626,548. 1 Claim. (Cl. 123—171.)



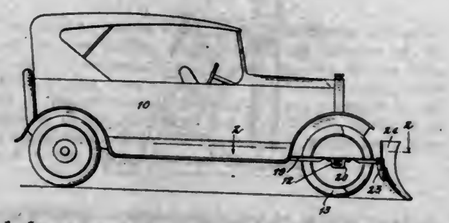
Cooling means for the cylinders of an internal combustion engine including a plurality of cooling flanges on the cylinders interposed with each other said flanges having uniformly increasing and decreasing diameters and an air confining jacket surrounding the cylinders and spaced therefrom, and having entrance and exit passages located to cause a turbulent air current past the cylinders by contact with the flanges of different sizes at right angles thereto.

1,635,040. FLOWMETER. ELISHA N. FALES, Lake Forest, Ill. Filed June 9, 1923. Serial No. 644,516. 5 Claims. (Cl. 73—167.)



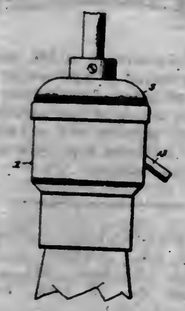
1. A flowmeter comprising a fluid passage having normally a Venturi shape and having a yielding wall permitting collapse of the passage as the flow increases.

1,635,041. CONTROL FOR ELECTRIC FLATIRONS. JOHN HARPER, Portland, Oreg. Filed Apr. 29, 1925. Serial No. 26,643. 4 Claims. (Cl. 200—140.)



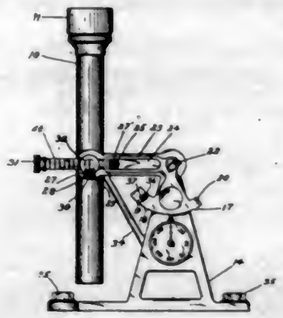
1. A temperature controlled switch having a casing a rotatable disk mounted in said casing; a mercury reservoir bulb mounted on said disk below its center of rotation; an overflow bulb above said reservoir bulb; a tube connecting said reservoir and overflow bulb; a mercury containing contact chamber on said disks; a pair of spaced electrodes normally touching the mercury in said container; and means for unbalancing said disk in a manner to raise one of said electrodes out of said mercury.

1,635,042. REACTOR. JOSEPH S. HEBREW, Masury, Ohio, and EDWARD E. ROAS, Sharon, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1925. Serial No. 29,287. 9 Claims. (Cl. 175—356.)



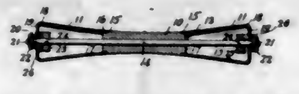
1. In an electrical reactor, a plurality of laminations, a pair of end frames, means for clamping the end frames and laminations together, a bushing having a plurality of straight passageways extending longitudinally of the reactor, and electrical conductors constituting portions of electrical circuits in said passageways whereby the current traversing one of the conductors influences the value of the current traversing the other conductor or conductors.

1,635,043. AUTOMOBILE SNOWPLOW. JAKOB HOJNOWSKI, Nekoosa, Wis. Filed Aug. 5, 1926. Serial No. 127,337. 3 Claims. (Cl. 37—42.)



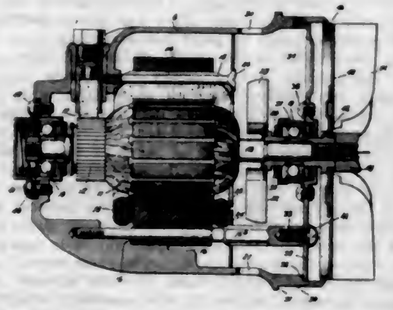
1. In an automobile, the combination with its truck frame including a crossbar, a bar having curved outer ends attached to said crossbar intermediate its ends, side bars having curved inner ends attached to the curved ends of said first named bar, brackets for securing said bars intermediate their ends to the front axle of a car, a front crossbar, and a plurality of snow removing implements attached to said front crossbar in front of the car wheels.

1,635,044. ELECTRIC SWITCH. WILLIAM ILB, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed May 20, 1925. Serial No. 31,649. 1 Claim. (Cl. 173—346.)



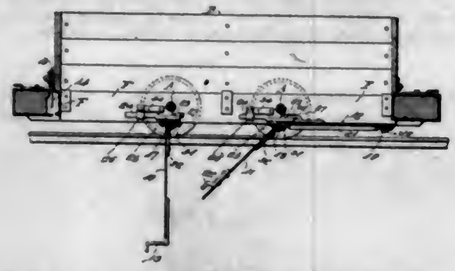
An electric switch including a bracket having spaced vertical sides provided with upper and lower relatively narrow arms arranged in pairs and extending from the sides of the bracket in the planes of the said sides and curved downwardly and upwardly respectively toward each other and provided at their extremities with outwardly extending laterally projecting lugs and having at their bases inwardly extending laterally projecting lugs located in the crotches formed by the arms and the sides of the bracket, an operating lever pivotally mounted within the bracket and having spaced sides adjacent the sides of the bracket and arranged to swing between and have their movement limited by the laterally projecting lugs at the bases of the arms, a yoke pivotally mounted on the sides of the bracket at the outer faces thereof and arranged to swing between and have its upward and downward movement limited by the outwardly extending laterally projecting lugs, a rocking plate mounted between the sides of the operating lever, a pin mounted at its terminals on the yoke and the said plate, and a coiled spring disposed on the pin and interposed between the yoke and the plate.

1,635,045. GROUND-SPEED INDICATOR. ROBERT KAUCH, Dayton, Ohio. Filed Oct. 31, 1922. Serial No. 598,154. 6 Claims. (Cl. 33—46.5.)



1. An apparatus of the class described, comprising a pivoted sighting member, a stop watch mechanism, a lever pivoted adjacent thereto and having means for starting and stopping said mechanism, and a link carried by said sighting member for movement therewith and having a pivoted sliding connection with said lever whereby a setting for altitude may be effected.

1,635,046. HAIR CURLER. JACOB KREISBERG, New York, N. Y. Filed Feb. 16, 1927. Serial No. 168,484. 15 Claims. (Cl. 132—34.)

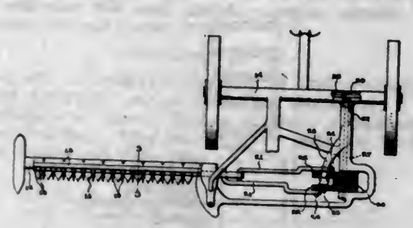


1. In a hair curling stick, a middle section adapted to have the ends of a strand of hair wound thereabout, and to receive the middle hairs of the strand on the rotation of said section, and a pair of end sections, each adapted to have the outside hairs of the strand wound thereon and each mounted coaxially with, and for rotation relatively to said middle section.

1,635,047. DYNAMO-ELECTRIC MACHINE. HENRY T. LANG, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Co., Inc., Cleveland, Ohio, a Corporation of New York. Filed Mar. 10, 1925. Serial No. 14,358. 6 Claims. (Cl. 172—36.)

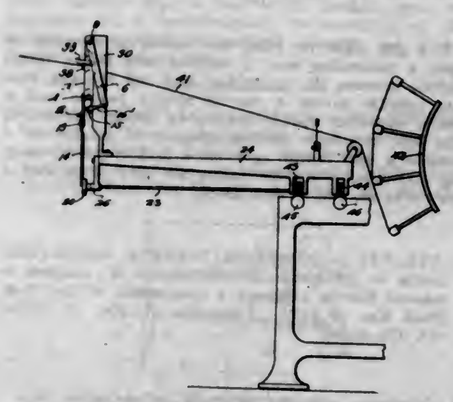
1. In a dynamo-electric machine, the combination of an armature, a shaft therefor, bearings for the shaft, a field magnet structure which encloses the armature, a casing for the armature and magnet and on which the latter is supported, a thin metal disk member which is seated on the casing at one end thereof, carries one of the shaft bearings and serves to separate the machine parts from the device cooperating therewith, and means for anchoring said member in place and also for preventing the central portion thereof from vibrating.

1,635,048. DROP-BOTTOM MINE CAR. SAM H. MCCRARY, Knoxville, Tenn., assignor of one-half to William A. Fowler, Knoxville, Tenn. Filed Nov. 22, 1926. Serial No. 150,029. 4 Claims. (Cl. 105—364.)



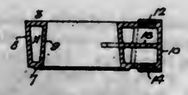
2. In a car whose bottom embodies a downwardly swingable section, a transverse shaft extending across the car body at one end of said section, a pair of pinions mounted on said shaft and having integral arms secured to said section, said arms, pinions and shaft hingedly mounting said section for downward swinging, and bolts slidably mounted on the car body for normally holding another bottom section, said bolts having rack teeth with which said pinions mesh, whereby retraction of the bolts is effected by rotation of the pinions incident to downward swinging of the first mentioned bottom section.

1,635,049. EXPULSION FUSE. RICHARD R. MCGEE, Ballston Lake, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 13, 1925. Serial No. 43,106. 4 Claims. (Cl. 200—127.)



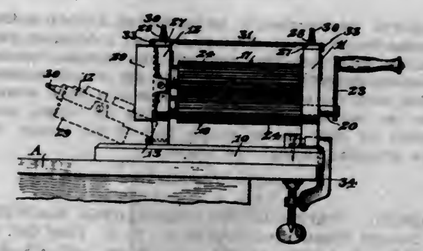
1. An electric expulsion fuse comprising an elongated insulating shell with metallic end terminals, one of which terminals is releasably sealed and the other unsealed, a short fusible link connected to said sealed terminal, a relatively non-fusible conductor connected to said fusible link and extending longitudinally within said shell to the unsealed terminal thereof, and spring means normally maintaining tension on said fusible link through said non-fusible conductor and acting to withdraw said conductor from the shell upon melting of the said link.

1,635,050. MOWER. ARCHIE MCKELLAR, Wausau, Wis. Filed Nov. 16, 1926. Serial No. 148,652. 1 Claim. (Cl. 56—275.)



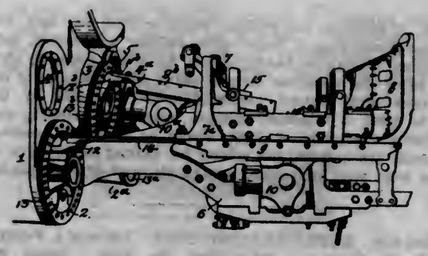
A mower comprising a frame having a finger bar extending laterally therefrom, cutter bars carried by the finger bar and arranged in superposed relation, the lower cutter bar being slidably supported on the finger bar and the upper cutter bar being slidably supported on the lower cutter bar, a driven shaft extending forwardly of the frame, a stub shaft paralleling said latter shaft and journaled in the extremity of an overhanging arm carried by the frame, spur gears carried at the extremities of the stub shaft and on opposite sides of said arm and provided with wrist pins disposed eccentrically of the gears and having a relative angular displacement of one hundred and eighty degrees, links connecting the wrist pins respectively with the cutter bars, and a gear carried by the first said shaft and meshing with said spur gears.

1,635,051. AUTOMATIC REED-SAVING DEVICE. OTTO B. MEYERS, Quakertown, Pa. Filed Mar. 8, 1926. Serial No. 93,326. 3 Claims. (Cl. 28—54.)



1. An attachment for the reed of a warper; wherein the warper includes a carriage having a pair of arms extending vertically therefrom, said carriage being movable transversely of the warper; said attachment comprising a pair of brackets slidably mounted in the arms for vertical reciprocation independent of the reed and longitudinally of its dents, means for reciprocating the brackets vertically, a rod extending between the lower ends of the brackets and journaled therein, a second pair of brackets having their lower ends on the rod to pivotally mount the second brackets in relation to the first brackets, said second bracket reciprocating in unison with the first brackets, a bar extending between the second brackets.

1,635,052. TANK HEATER. ABRAM C. MOTT, Jr., Lansdale, Pa., assignor to Abram Cox Stove Company, Lansdale, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1926. Serial No. 90,348. 1 Claim. (Cl. 122—209.)



The combination in a hot water heater, of a cast metal water section having an extension, the interior of the extension communicating with the interior of the body portion of the heater; openings in the upper and lower ends of the extension; circulating pipes attached to the extension at the openings; and a horizontal partition in the extension for deflecting the incoming water and directing it to the body portion of the heater.

1,635,053. MEAT TENDERER. WILLIAM WALTER MYERS, Stony Point, N. C. Filed Mar. 14, 1927. Serial No. 175,278. 2 Claims. (Cl. 17—26.)

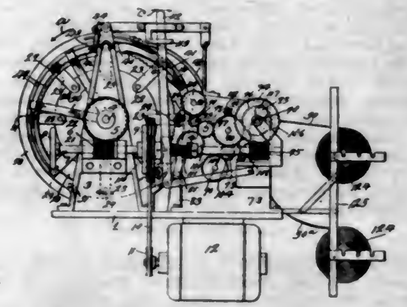
1. A machine for the purpose set forth comprising a base, a standard fixed thereto, a movable standard arranged thereover and spaced from the other standard, means for swingingly connecting the movable standard at its lower end to the base, superposed journals carried by the movable standard and provided with sockets, corrugated rollers arranged between the standards and including spindles removably mounted in said journals and in the fixed standard whereby on the swinging of the movable standard said rollers can be completely detached, means for maintaining said movable standard in an upright position, and gears connected with said journals for operating the rollers in reversed directions to each other.

1,635,054. LOCOMOTIVE CROSSHEAD GUIDE. LAWRENCE L. NEEBE, Woodbury, N. J. Filed Dec. 13, 1926. Serial No. 154,590. 3 Claims. (Cl. 105—37.)

1. The combination in a three-cylinder locomotive, of a main frame; a cylinder structure; three guides; crossheads mounted to slide on the guides; brackets on the

heads of the cylinders, the central guide being directly attached to the bracket of the head of the central cylinder; and bars connecting the side guides to the brackets of the heads of the side cylinders.

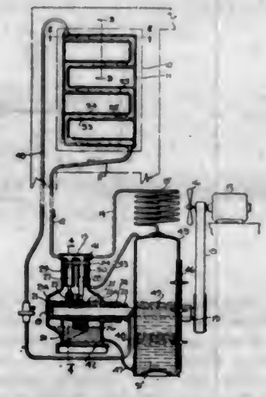
1,635,055. ALLOY FILAMENT. ALADAR PACZ, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Jan. 15, 1920. Serial No. 351,665. 8 Claims. (Cl. 176—132.)



1. A filament for incandescent lamps consisting of tungsten with less than 1% of zirconium.

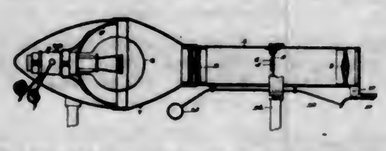
1,635,056. OUTLET. HENRY T. PAISTE, Philadelphia, Pa., assignor to H. T. Paiste Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1925. Serial No. 40,863. 3 Claims. (Cl. 173—330.)

1. The combination in an outlet, of a body portion having two T-shaped openings therein; a terminal plate in line with each opening; and two parallel terminal members projecting from each plate, one of said members being solid, the other having a tongue bent down between the two members, the member having the tongue being slotted at right angles to the face of the tongue, the slot extending through the tongue.



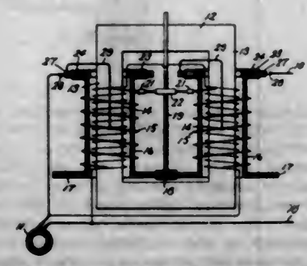
1,635,057. PAPER-RECEPTACLE-MAKING MACHINE. IGNAZIO PIERMATTEI, Landisville, N. J. Filed Oct. 20, 1926. Serial No. 142,893. 14 Claims. (Cl. 93—81.)

1. A machine for making paper receptacles, said machine comprising a paper strip feeding mechanism, said feeding mechanism having means for feeding a wide strip of paper and a narrow strip of paper with the sides of the narrow strip spaced inwardly from the sides of the wide strip, a rotatable spindle, means for gripping and holding the ends of both strips as they are twisted around the spindle and means for folding the portion of the wide strip extending beyond the end of the spindle.



1,635,058. REFRIGERATING UNIT. THOMAS I. POTTER, Portland, Oreg. Filed Nov. 10, 1926. Serial No. 147,534. 8 Claims. (Cl. 62—115.)

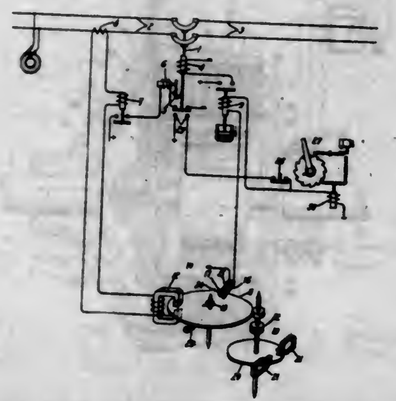
1. In a refrigerating machine, the combination of a compressor having an oil well formed therein with a separating compartment in which mixed oil and refrigerant can separate by gravitation, together with a duct for



carrying such separated oil back to said well by gravity; and an open connection between the separator and well above their highest liquid levels.

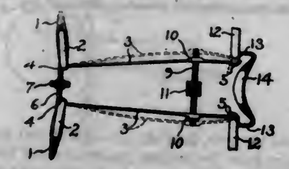
1,635,059. GUN SIGHT FOR NIGHT USE. HERBERT O. RUSSELL, Parlier, Calif., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,423. 2 Claims. (Cl. 88—24.)

1. A gun sight for night use embodying a source of light, a condensing lens, a focusing lens, and a target reticule between the condensing lens and focusing lens, said reticule having a central opaque portion and a second encircling opaque portion in spaced relation to said first mentioned portion adapted to produce at a distance a dark central spot and a dark circle surrounding said spot, a suitable casing for said parts, and a shutter at the end of said casing.



1,635,060. INDUCTION VOLTAGE REGULATOR. LOUIS W. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 1, 1927. Serial No. 171,864. 5 Claims. (Cl. 171—119.)

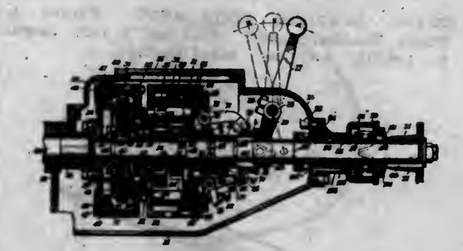
1. An induction voltage regulator comprising a magnetic core, an exciting winding for said core, a rotatable voltage regulating winding surrounding a part of said core, a magnetic ring, a winding on said ring, a contact ring having its contacts connected to points dis-



tributed along said magnetic ring winding, said magnetic ring winding being electrically connected to said voltage regulating winding, said magnetic ring with its winding and contact ring being arranged to rotate about a part of said core with said voltage regulating winding, and a brush for said contact ring.

1,635,061. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 30, 1926. Serial No. 158,090. 9 Claims. (Cl. 175—294.)

1. In an automatic reclosing circuit breaker system, a circuit breaker for connecting two electric circuits together, means for effecting the opening of said circuit breaker, and means for effecting the reclosing of said circuit breaker after a time which depends upon the magnitude of a predetermined characteristic of the electric power being transmitted through the circuit breaker at the time it opens.

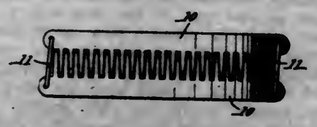


1,635,062. BINOCULAR MAGNIFYING-LENS HOLDER. GEORGE L. TULLY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 12, 1926. Serial No. 147,947. 3 Claims. (Cl. 88—41.)

1. A holder for a binocular magnifier comprising a pair of separated resilient arms each having engaging members adjacent one end and the lens holding means adjacent the other end, and adjustable means adjacent each end adapted to change the distance between the arms at their respective ends.

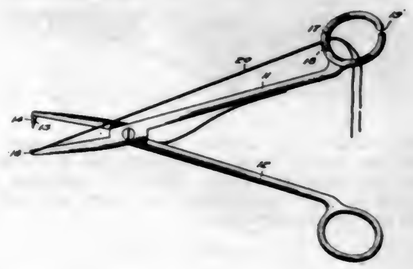
1,635,063. TRANSMISSION MECHANISM. JULIUS M. ULRICH, Greenwich, Conn., assignor to Palmer Bros. Engines, Inc., Coscob, Conn., a Corporation of Connecticut. Filed Jan. 20, 1925. Serial No. 3,593. 14 Claims. (Cl. 74—34.)

1. A transmission, comprising a driving shaft, a driving head therefor, a driven shaft aligned with the driving shaft and journalled at one end in said driving head, a clutch member journalled for free rotation on said driven shaft and slidably engaged with said driving head, a thrust abutment member solid with the driven shaft and cooperating friction members respectively engaged with said abutment member and with said clutch member, in combination with means for longitudinally displacing said clutch member on the driven shaft to cause said friction members to engage, and a system of fixed and planetary gearing frictionally controlled and adapted to drive said driven shaft from said driving shaft in a reverse direction.



1,635,064. TRANSFORMER. EDWARD A. WAGNER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 15, 1926. Serial No. 155,053. 5 Claims. (Cl. 175—356.)

1. The process of producing high reactance transformer core laminations, said process comprising the steps of forming four openings in each of a plurality of sheets of magnetic material to define three leg portions connected by two yoke portions and two side extensions offset from the longitudinal center of said center leg portion and extending from the center leg portion to the two outer leg portions, and severing each of said side extensions along a line adjacent one end thereof and cutting said center leg portion along symmetrical lines at its two ends from the two yoke portions, whereby said center leg portion may be reversed in position between said yoke portions to provide a gap at one end of each of said side extensions.

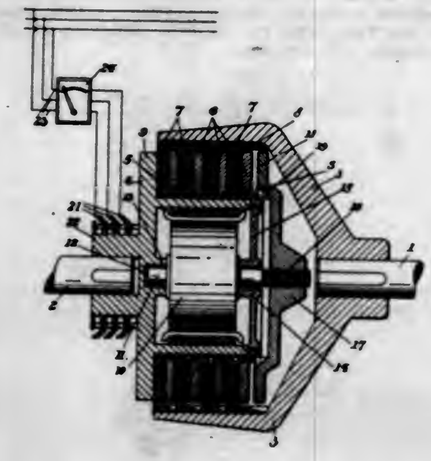


1,635,065. WATER WAVER. PHILIP H. WATSON, Leominster, Mass., assignor to Standard Pyroxoloid Corporation, Leominster, Mass., a Corporation of Massachusetts. Filed Aug. 25, 1926. Serial No. 131,482. 2 Claims. (Cl. 132—31.)

1. As an article of manufacture, a water waver for the hair comprising two comb-like side pieces adapted to be placed with their teeth projecting toward each other

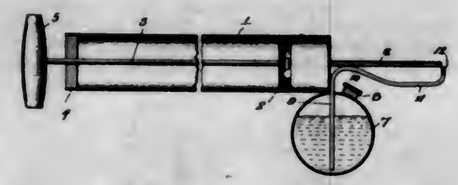
at a distance apart and having a pair of elastics permanently connecting the ends of both and of such length as to normally force the two pieces together with the teeth of each one extending into the spaces between the teeth of the other.

1,635,066. SURGICAL INSTRUMENT. WALTER A. WELLS, Washington, D. C. Filed Feb. 8, 1927. Serial No. 166,716. 6 Claims. (Cl. 128—334.)



1. In a surgical instrument, the combination with a pair of jaws, of a needle extending from the face of one jaw in the direction of the companion jaw and provided with a transverse suture receiving notch, the companion jaw being provided with a needle receiving recess and an outwardly open transverse slot adapted to form a suture holder during the operation of the instrument.

1,635,067. REAMER. JAMES ROY AULENBACK, Bridgewater, Nova Scotia, Canada. Filed May 11, 1923. Serial No. 638,359. 1 Claim. (Cl. 77—75.5.)



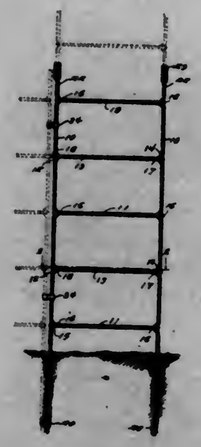
A reamer embodying a hollow shank having diametrically opposed lugs extending from its outer end, a hollow mandrel having notches provided at its inner end to receive the lugs of the shank, said mandrel also having spaced longitudinally disposed slots the slots having inclined bottoms and a socket in its outer end, a ring receivable within the socket and having an annular transversely right angular seat in one face and a beveled annular seat within its opposite face, cutter blades arranged within the slots, beveled shoulders upon the blades to engage the beveled seat, a rod mounted within the mandrel and shank, a head upon the outer end of the rod for position within the right angular seat, a sleeve threadedly adjustable upon the mandrel and having an inwardly beveled edge to provide beveled engagement between the sleeve and the adjacent ends of the blades, and means to rotate the shank and rod.

1,635,068. ELECTROMAGNETICALLY-OPERATED FRICTION CLUTCH. JULIUS BING, Eisenach, Germany, assignor to the Firm Magnet-Werk G. m. b. H. Eisenach Spezialfabrik für Electromagnet-Apparate, Eisenach, Germany. Filed June 1, 1925, Serial No. 34,202, and in Germany June 11, 1924. 15 Claims. (Cl. 192—84.)

1. In a clutch in combination, two rotary members, operating means adapted to cause said members to engage and thus to couple them, and an electromotor comprising a rotor to actuate said operating means, said electromotor being mounted within and coaxially to said rotary members.

1,635,069. SPRAYER. ADOLF GERMAN BULLE, Habana, Cuba. Filed Jan. 30, 1926. Serial No. 84,984. 1 Claim. (Cl. 299—88.)

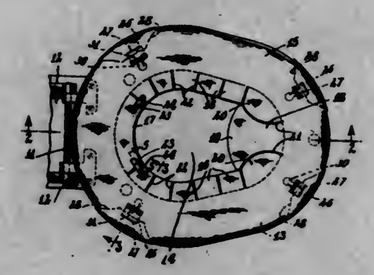
A portable sprayer, including a cylindrical air pump, an air discharge tube projecting longitudinally from the end of the pump, a reservoir secured to the pump beneath the same, an outlet pipe communicating with the interior of the reservoir, said pipe extending upwardly from the reservoir to a point adjacent the tube, then extending downwardly and forwardly, and then upwardly to a point adjacent the extremity of the air tube whereby a portion of the material is trapped between the first-mentioned bend of the pipe and outlet end thereof.



1,635,070. BOTTLE CONSTRUCTION. ELLIOTT B. CLARK, Weldon, N. C. Filed Dec. 10, 1924. Serial No. 755,089. 1 Claim. (Cl. 215—2.)

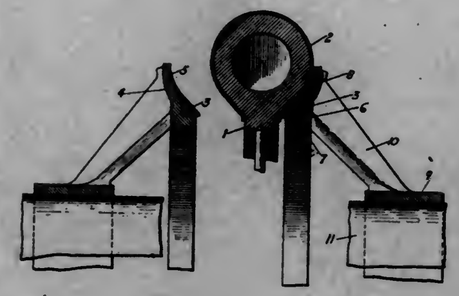
A bottle having an opening therein surrounded by concentrically arranged inner and outer radially spaced flanges of an appreciable depth, the opening being adapted to be closed by a seal having flanges crimped around the inner flange of the bottle, the outer edge of the outer flange extending beyond the inner flange and providing a base to support the bottle when the latter is sealed and

the outer flange having an interrupted portion therein to permit of the insertion of an instrument beneath the flange of the seal.



1,635,071. VINE HOLDER. CHARLIE A. COMSTOCK, Fullerton, Calif. Filed July 28, 1926. Serial No. 125,519. 3 Claims. (Cl. 47—47.)

3. A vine holder comprising spaced side members and a plurality of cross members connecting said side members, alternate cross members being permanently connected to the side members, the remaining cross members being hinged to one of the side members and having latching engagement with the other side member.

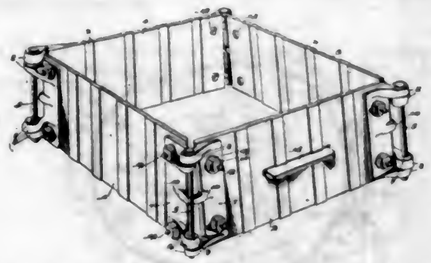


1,635,072. SANITARY TOILET-SEAT COVER. ARTURO DE LUNA, Buffalo, N. Y. Filed Oct. 21, 1926. Serial No. 143,056. 1 Claim. (Cl. 4—243.)

A sanitary cover for toilet seats comprising a main element adapted to cover the top of a toilet seat, and provided with depending side flaps, and with a depending rear flap, and with a front flap, adjacent depending flaps, said flaps formed by elongated slots cut therein, said flaps adapted to cover the edges of an opening in the said toilet seat, said side flaps adjacent to the said rear flap

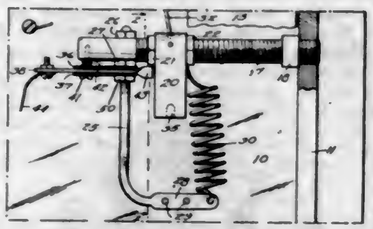
provided with clips as a means of bending downward the said rear flap when the said side flaps are bent downward.

1,635,073. BEAD-PLACING RING. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 20, 1924. Serial No. 700,481. 1 Claim. (Cl. 154—9.)



A ring for applying beads having outwardly extending fabric webs thereon, to an unfinished tire carcass upon a core, said ring having a seat of a diameter equal to the interior diameter of the bead in the complete carcass, an outwardly extending flange extending about the circumference of the ring and having a diameter equal to approximately the diameter of the median line of the core, the flange fitting against the outer surface of the bead and the outer curvature of the core above the bead and adapted to support the outwardly extending web and apply it to the core at the same time that the bead is applied to the core by pressure exerted upon the ring, and means to center the ring with respect to the core.

1,635,074. OVERJACKET FOR MOLDS. ADAM DIEHL, Springfield, Ohio. Filed May 13, 1926. Serial No. 108,900. 2 Claims. (Cl. 22—112.)



1. An overjacket comprising a plurality of rectangular plates having pairs of screw studs projecting therefrom in transverse positions adjacent to the longitudinal extremities, hinges connecting said plates comprising brackets applied to said extremities and having slots through

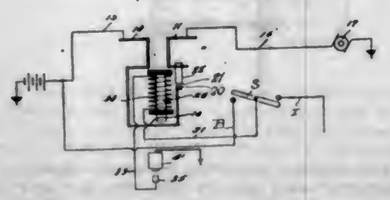
which the screws project, knuckles formed upon the brackets fitting upon each other and having registering holes, connecting means inserted in the holes and com-

pleting the hinge arrangement, and nuts applied to said screw studs permitting fixing the hinge brackets in adjusted position upon said plates.

1,635,075. COMBINED ELECTRICAL AND MECHANICAL SAFETY LOCK FOR VAULT DOORS. WILLIAM C. DILLON, Fort Dodge, Iowa, assignor to Dillon Bank Protection Service, a Corporation. Filed Sept. 30, 1920. Serial No. 413,799. 1 Claim. (Cl. 200—55.)

A circuit closing mechanism adapted for use on an auxiliary lock having a supporting rod and a locking lug rotatably and longitudinally adjustable thereon, said mechanism comprising bolts extending from said supporting rod, a contact element comprising a strip of metal having a longitudinal slot therein through which said bolts extend, means for allowing longitudinal adjustment of said strip on said bolts whereby said strip may be adjusted longitudinally relative to said supporting rod and a contact element on said lug adapted to coact with said strip when said lug is in one of its adjusted positions.

1,635,076. WINDOW SEAL. ANDREW CAPERS ENOCHS, Oklahoma City, Okla. Filed Nov. 16, 1923. Serial No. 675,186. 1 Claim. (Cl. 292—342.)

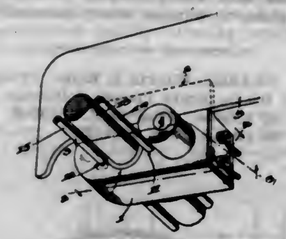


The combination with a window frame and the cooperative vertically sliding upper and lower sashes therein, of a pair of cam plates respectively supported on the outer faces of the stiles of the upper sash and each having a downwardly inclined outwardly extending cam projection thereon, a pair of similar cam plates respectively supported on the inner faces of the stiles of the lower window sash, each of said second named cam plates having an upwardly inclined projection thereon, a peripherally grooved roller for each of said cam plates, two of said rollers being rotatably supported on the outer or blind strips of the window frame in position to engage with the cams of said first named plates when the upper sash is moved to a closed position and to thus force said upper sash inward, the remaining rollers being rotatably supported on the inner vertical guide strips of the window frame in position to engage with the cams of the second named plates when the lower sash is moved to closed position and to then force the lower sash outward.

1,635,077. MONOGRAM. JAMES EDISON ERSKINE, Jacksonville, Fla. Filed Dec. 29, 1924. Serial No. 758,662. 1 Claim. (Cl. 40—140.)

In a monogram, separate letters designed to be assembled to give the appearance of a complete and unitary monogram, each letter having a background made up of triangular striations, the faces of which provide light reflecting surfaces whereby the line of juncture between the letters is concealed.

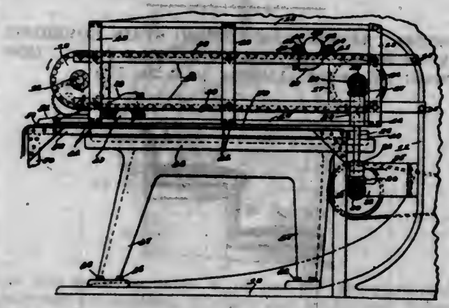
1,635,078. AUTOMATIC SWITCH. LEWIS W. GILBERT, Seneca Falls, N. Y. Filed Jan. 19, 1924. Serial No. 687,322. 1 Claim. (Cl. 290—38.)



In a device of the class described, a circuit including a source of current, a starting motor in the circuit, electrically operated means for closing the circuit, said means including a second circuit, means responsive to suction for opening the second circuit, said means last named including a cylinder and a plunger, contact members carried respectively by the plunger and by the lower end of the cylinder, the cylinder being mounted vertically, and the upper end of the cylinder including a tubular connection for establishing communication with an air intake manifold of an engine, and a valve carried by the plunger for closing said tubular connection when the plunger responds to suction and separates the contact members, the cylinder having a port admitting air above the plunger when the latter is not under the influence of suction.

1,635,079. AUTOMOBILE LOCK. VICTOR L. GILPIN and CHESTER READ WELLS, Baltimore, Md.; said Wells assignor to said Gilpin. Filed May 25, 1925. Serial No. 32,690. 21 Claims. (Cl. 70—127.)

1. In combination with a revoluble part of the steering mechanism of a vehicle, a non-circular portion upon said revoluble part, a locking plate having a corresponding non-circular opening, and means situated parallel to the axis of said revoluble part for bodily shifting the locking plate in a direction parallel to the axes of said revoluble part and said parallel means.

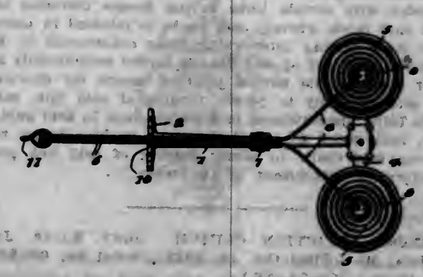


1,635,080. AUTOMOBILE LOCK. VICTOR L. GILPIN and CHESTER R. WELLS, Baltimore, Md.; said Wells assignor to said Gilpin. Filed July 6, 1925. Serial No. 41,829. 5 Claims. (Cl. 70—127.)

1. In combination with a revoluble member including a steering post and an ignition circuit, a non-circular head carried by the steering post, a casing through which the steering post extends and in which said head is occupied, means to fixedly secure the casing, contacts carried by said casing constituting terminals of said circuit, a bolt contained and guided by said casing and having a non-circular recess, flared jaws providing the approaches to said recess being capable of partially turning said steering post upon certain engagements with said head so that proper registration of said head with said recess may be effected, a slot formed in said bolt, a key-actuated eccentric operating in said slot to reciprocate the bolt either in the direction of the steering post or in the direction of the contacts, and a contactor carried by the bolt for bridging the contacts upon said latter action of the bolt.

1,635,081. CHAIN-DRIVE GLAZING MACHINE. DANA E. HARDING, Arlington, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1925. Serial No. 51,005. 3 Claims. (Cl. 149—19.)

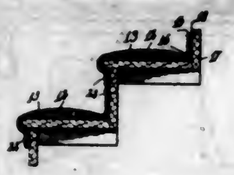
1. In an improved glazing machine, a pair of endless chains arranged parallel to each other and with their lower reaches lying in the same horizontal plane, means for moving said lower reaches in the same direction and at the same speed, a work support or bed lying beneath, spaced apart from, and parallel to the lower reach of such chains, a worktable cooperating with said work support or bed, a clamping means associated with said worktable, glazing rolls mounted on and movable with said endless chains, means for maintaining the clamping



means in operative relation to the work on the worktable, and means controlled by the endless chains for intermittently removing the clamping means from the table.

1,635,082. SELF-LOCKING NUT. AXEL GUSTAF EMANUEL HULTGREN and JOSEF HENRIK EMANUEL THORÉN, Gottenborg, Sweden, assignors to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed June 7, 1922. Serial No. 566,534, and in Sweden June 15, 1921. 3 Claims. (Cl. 151—38.)

1. A self-locking nut, comprising a thread and an unthreaded portion the unthreaded portion being set off from the threaded portion by a plurality of open circumferential slots overlapping each other and disposed in transverse planes.



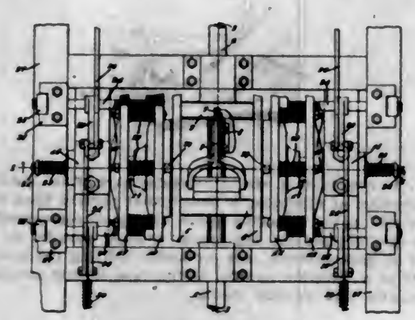
1,635,083. TANDEM WAFER REGULATOR. ANTHONY JOSEPH HERMSMEYER, Quincy, Ill., assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,911. 2 Claims. (Cl. 297—9.)

1. The combination of a supporting arm, a cross arm carried by said supporting arm substantially at the outer end thereof, a plurality of wafer thermostats carried

by the cross arm on opposite sides of the supporting arm, operating levers extending substantially parallel and in close proximity with each other throughout a portion of their lengths and having divergent outer ends extending into position to be actuated by the wafer thermostats.

1,635,084. REVERSIBLE FOLDED STAIR COVERING. ELIAS HYMAN, New York, N. Y. Filed June 2, 1925. Serial No. 34,310. 1 Claim. (Cl. 20—79.)

In a stair covering, a mat comprising a base element preferably of rubber, a ground element superimposed over said base element, a stiffening frame of dimensions less than the dimensions of said mat disposed between said ground and base elements, an upper covering preferably comprising carpet material disposed over said ground element, a cushion disposed between said upper covering and said ground element positioned centrally and extended transversely of said mat, said cushion being substantially the width of the horizontal surface of a step, a metal frame of U-shaped cross section disposed around the edges of said mat, adapted to clamp the edge portions of said base, ground and covering elements together, said mat being adapted to cover the upper riser, encircle the nosing and cover the upper section of the lower rises of said stair.

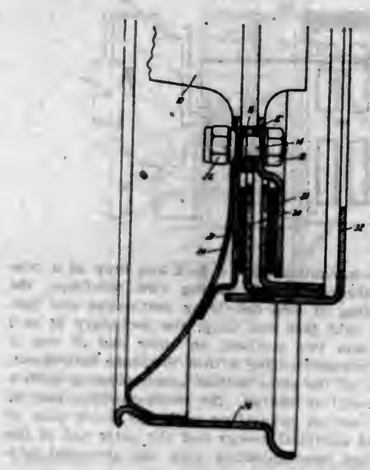


1,635,085. CONVEYER CHAIN FOR COAL-LOADING MACHINES. THOMAS L. JOHNSON, Charleston, W. Va. Filed June 9, 1926. Serial No. 114,773. 1 Claim. (Cl. 198—175.)

In a conveyer, a guideway for a conveyer chain, said guideway being provided with beads, and said chain being provided with certain links having flanges traveling behind said beads whereby said chain is retained in place, said chain having interlocking links constructed to be detached after one of said links is turned substantially at right angles to its normal position, means for shortening said guideway to permit turning of said link, said beads being discontinuous in a certain zone in said guideway, into which zone said link may be brought by revolving said chain, to permit turning of said link preparatory to detachment of the same.

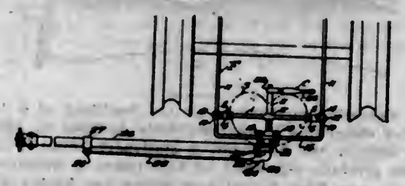
1,635,086. FRICTION CLUTCH. JOHN KALAF, Jr., Meta, Mo. Filed Oct. 16, 1923. Serial No. 668,882. 1 Claim. (Cl. 74—26.)

In a device of the character described, a driving shaft, a wheel mounted on the shaft, bearings supported laterally of the driving shaft, hollow shafts supported within the bearings, outer and inner disk-like plates mounted on the hollow shafts and secured thereto, coiled springs between the disk-like plates to force the plates apart, shafts extending through the hollow shafts, plates mounted on the last mentioned shafts and disposed adjacent to the outer plates, ball bearings supported between the last mentioned plates and outer disk-like plates, springs mounted on the last mentioned shafts and adapted to exert a



pull on the last mentioned shafts to draw the plates together, and said wheels adapted to engage the last mentioned plates to transmit rotary movement thereto.

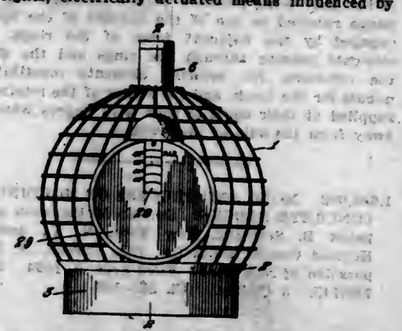
1,635,087. BRAKE. WALTER L KRIEG, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1925. Serial No. 57,594. 10 Claims. (Cl. 188—78.)



1. A brake comprising, in combination, a drum, a floating friction device engageable with the drum and anchoring at one end when the drum is turning in one direction and at the other end when the drum is turning in the other direction, a floating servo member between said ends of the friction device, and a device rocked by movement of the servo member and connections operated by rocking of said device for forcing the ends of the friction device in opposite direction against the drum.

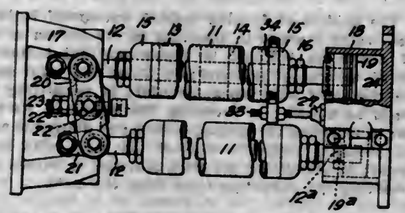
1,635,088. WHEEL WITH BRAKE DISK. LUDGER ELIZÉ LA BRIE, South Bend, Ind., assignor to Motor Industries, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1925. Serial No. 57,556. 8 Claims. (Cl. 301—6.)

6. A wheel comprising a wheel disk body flaring outwardly and having secured on its inner side a member providing a radially-extending braking surface, in combination with a part rotating with the disk body and having a cooperating radially-extending braking surface facing the braking surface on the member.



1,635,089. MARKER. LEE P. LEWIS and WILLIAM MORGENTHALER, Hallsville, Mo. Filed Mar. 4, 1926. Serial No. 92,335. 4 Claims. (Cl. 97—230.)

1. In combination with the side members and an end member of a planter frame, a bar, hook members engageable with the side members of the frame, means for adjustably connecting the hook members with the end portions of the bar, said bar intermediate its ends being provided with a bearing, a bearing box, means for securing the bearing box to the end member of the planter frame, a shaft rotatably supported by the bearing of the bar and the bearing box, the outer end of the shaft extending beyond the end member of the frame, said extended portion being provided with a rock arm, a marker arm operatively engaged with the extended portion of the shaft and the rock arm, and a foot crank carried by the inner portion of the shaft.



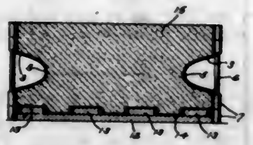
1,635,090. SCALE. LOUIS LINWOOD, Shelby, Miss. Filed Nov. 5, 1926. Serial No. 146,489. 3 Claims. (Cl. 265—37.)

1. A poultry weighing scales including a cage having a door for the insertion of poultry therein, a platform in the bottom of the cage, beams influenced by the platform, swingable weights influenced by the movement of the beams, a computing dial revoluble by the movement of the weights, electrically actuated means influenced by

the dial when the latter is at rest and the platform is depressed for sounding an alarm and for likewise flashing a lamp.

1,635,091. APPARATUS FOR MOIRÉ-FINISHING CLOTH. JOHN J. LYTH, Valleyfield, Quebec, Canada. Filed Dec. 7, 1923. Serial No. 679,222. 7 Claims. (Cl. 26—69.)

1. A cloth treating apparatus comprising in combination with the calendering machine a pair of cloth directing elements over each of which a layer of cloth may pass into the nip of the calender rolls, connection between said elements to cause relatively opposite reciprocation thereof in their axial direction thereby to relatively oscillate the two layers of cloth passing between said elements and the calender, and fluid pressure motors connected to the elements to move both in the same direction, the said motors including valve mechanism to secure alternate operation of the motors.



1,635,092. INSERT FOR TIMERS. EDGAR G. MCLEAIRD and JOHN C. MCLEAIRD, Nashville, Ark. Filed Feb. 2, 1923. Serial No. 616,582. 1 Claim. (Cl. 200—24.)

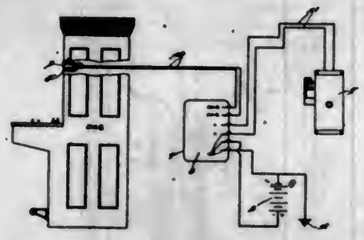
As an article of manufacture, an auxiliary timer-track, comprising an inner ring, an outer ring, an annular spacer between the rings and having notches in its outer edge, the notches extending entirely through the spacer, a plurality of retainers each comprising a straight body

disposed parallel to the axis of the track and bearing at one end upon the periphery of the outer ring, said end of the body being provided with a rectangularly disposed flange received in one of the notches of the spacer and engaged by the adjacent faces of the rings, securing elements passing through the rings and the flanges of the retainers, the securing elements constituting terminals for the track, and the bodies of the retainers being supplied at their opposite ends with fingers which extend away from the axis of the track.

1,635,093. MOLD AND PROCESS OF MOLDING FACED CONCRETE BLOCKS. DONALD MCPHERSON and FREDERICK B. SCHULTZ, New York, N. Y., assignors to Keyroid Cement Block Co., Inc., Corona, N. Y., a Corporation of New York. Filed Sept. 9, 1924. Serial No. 736,745. 5 Claims. (Cl. 25—155.)

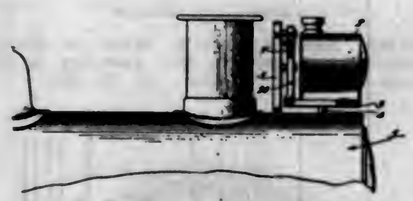
1. The method of forming molded waterproof building blocks, which consists in inserting in the bottom of the mold a spacing bottom; in laying on said bottom a sheet of waterproof material; in filling the mold space above the sheet with block material; in permitting the material to harden; in inverting the mold and its contents; in removing the spacing bottom; in filling the mold space above the opposite side of the sheet with block material; in permitting the block material to harden and in removing the completed block from the mold.

1,635,094. SAND BAG. EMIL NESTLER, New York, N. Y. Filed July 2, 1926. Serial No. 120,183. 2 Claims. (Cl. 18—45.)



1. A sand bag of the character described, comprising a casing composed of fabric, the sections thereof being connected at the inner portion of the bag by a flexible line of stitching, said casing being curved longitudinally in the arc of a circle and adapted to be filled with sand and the like.

1,635,095. PAINT AND PLASTIC SUBSTANCE. STANLEY I. ROBINSON, Nampa, Idaho. Filed Apr. 24, 1924. Serial No. 708,804. 1 Claim. (Cl. 134—52.)

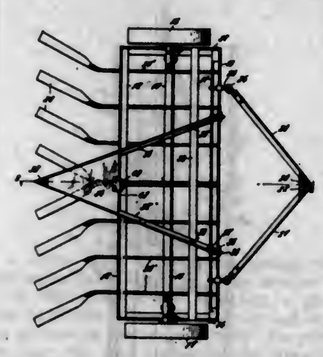


That process of making paint, which consists in making lime water, mixing sufficient lime therewith to make a thin cream, then mixing from one-half to three-fourths part, by volume, of liquid tar therewith prior to the loss of all the heat of the chemical reaction of the lime and water, drawing off the upper layers of the mixture, and utilizing the precipitate as a pigment.

1,635,096. ADAPTER COIL. EARL C. RODMAN, deceased, Tuscola, Ill., by Blanche Rodman, administratrix, Tuscola, Ill. Filed Oct. 9, 1925. Serial No. 61,570. 3 Claims. (Cl. 179—68.)

1. In the combination with a jack and drop of a telephone switchboard, a coil having two windings, the primary winding of said coil being continuous and connecting with said jack and drop, the secondary of said coil divided into two sections, an outer end of one of said sections communicating with a telephone instrument, the inner end of the same section communicating with a source of electrical energy, the corresponding end of the opposite section connecting with the other pole of source of said electrical energy and the outer end of the opposite section communicating with the aforesaid telephone instrument.

1,635,097. OPERATING MECHANISM FOR DIRIGIBLE HEADLIGHTS. THOMAS P. SALLEY, Mobile, Ala. Filed Mar. 27, 1926, Serial No. 97,956. Renewed Jan. 29, 1927. 2 Claims. (Cl. 240—62.)



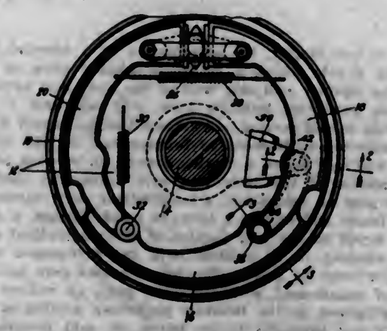
1. Operating mechanism for the headlight of a locomotive comprising a rotatable table designed to receive and support the headlight, a stationary frame, a gear sector pivotally supported on said frame, a weight supporting arm fixed to the gear sector and having slots, weights having slots in which the slotted portions of the arm are fitted, and fastening means extending through the slots of the arm and engageable with the weights for holding the weights in adjusted position, and a gear element between the gear sector and the table.

1,635,098. WEEDING MACHINE. ORIEN R. SAUNDERS, Cove, Oreg. Filed Oct. 29, 1926. Serial No. 145,039. 4 Claims. (Cl. 97—144.1.)

1. In a machine of the class described, a frame including front and rear transverse bars, weeding blades mounted in said frame and extending longitudinally of the machine and under the rear bar, bars extending parallel with said front and rear bars and having their ends connected with the frame, the blades including shanks engaging the bars mounted in the frame, and an upper bar bearing on the shanks and retaining the elements thus engaged in fixed relation.

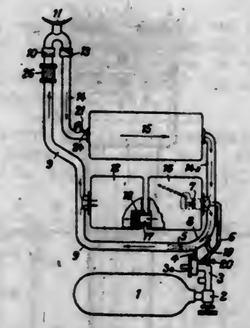
4. In a machine of the class described, a frame, wheels for carrying the frame, weeding blades mounted in the frame, said blades including shank portions, means carried by the under side of the rear portion of the frame

for spacing and engaging the shanks and blades, from the upper edges of the shanks, a bar extending transversely of the frame and having its lower edge engaging



the shanks on their upper portions, and additional means including a channel structure for spacing and engaging the ends of the shanks of the blades.

1,635,099. WIG. LEON A. SEILAZ, Zurich, Switzerland. Filed Sept. 11, 1923, Serial No. 662,130, and in Germany Sept. 16, 1922. 1 Claim. (Cl. 132—56.)

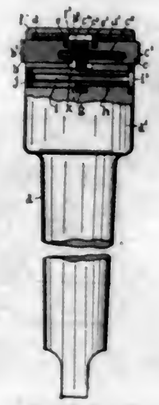


A wig comprising a shaped element composed of a plurality of superposed layers of fabric, arranged with the warp threads of each layer at an angle to and crossing those of the next adjacent layer, and knotted hairs arranged with their knots between two of the layers, said hairs extending out through the outer layer.

1,635,100. BRAKE. GEORGE J. THOMAS, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1925. Serial No. 47,453. 23 Claims. (Cl. 188—78.)

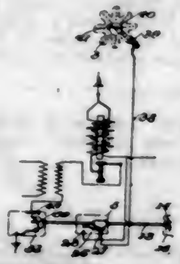
1. A brake comprising, in combination, a central shoe anchored at one end, a pair of oppositely-extending end shoes connected to the central shoe adjacent its ends, and means for forcing the end shoes apart to apply the brake.

1,635,101. OXYGEN-RESPIRATORY APPARATUS. CARL VON HOFF, Essen, Germany. Filed Mar. 12, 1925, Serial No. 15,049, and in Germany June 20, 1923. 3 Claims. (Cl. 128—191.)



1. In oxygen respiratory apparatus, the combination of a pipe system for the circulation of air; a mouth piece enabling air to be inhaled from and exhaled into said system; a reservoir for oxygen under pressure; means, including an injector, for connecting said reservoir to said system, whereby the oxygen admitted induces circulation of air therein; a breathing bag connected to a part of the system where air flows from the mouth piece toward the injector; means connecting the bag to a part of the system where air flows from the injector toward the mouth piece; supplementary means for admitting oxygen to said system including a valve within said bag adapted to be opened by the collapse of the bag; a purifier in the system between the mouth piece and the bag; and automatic blow-off and throttle valves in said system between said purifier and mouth piece, the opening of the throttle valve varying in response to the rate of air flow so that the discharge of air through the blow-off valve remains substantially constant.

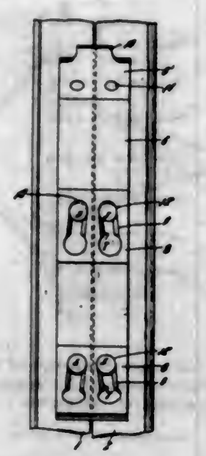
1,635,102. WRENCH. LEONARD E. WATSON, St. Marys, W. Va. Filed June 21, 1926. Serial No. 117,473. 1 Claim. (Cl. 81—63.)



A wrench of the class described comprising a pair of plates, each provided with a circular head having an opening therein, means for connecting the plates together in spaced relation, a rotary member supported in the openings by the heads, said member being recessed to receive a nut and a washer, there being ratchet teeth on the member, a double dog pivotally arranged in the space between the two plates, a double spring in said space having its extremities engaging the two portions of the dog, an S-shaped slot in one plate, a pin slidably mounted in the slot and having a part on its inner end for engaging the spring for placing either portion of the spring under tension or for freeing both portions of tension, a sliding plate slidably mounted on one of the other plates for holding the washer and nut in the rotary member.

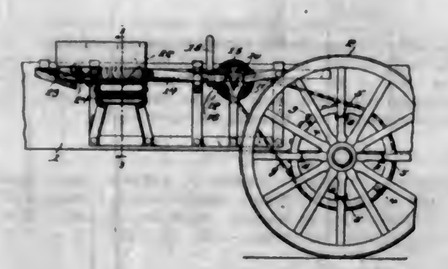
1,635,103. EXPANDING REAMER. SILAS WELSBY, Huddersfield, England, assignor to David Brown & Sons (Huddersfield) Limited, Huddersfield, England. Filed Apr. 22, 1926, Serial No. 103,934, and in Great Britain June 2, 1925. 6 Claims. (Cl. 77—58.)

1. An expanding reamer comprising a head, opposite cutters slidable transversely in the head, and means between the cutters for adjusting them relatively to one another, said cutters and means being capable of movement as a unit transversely of the head in either direction.



1,635,104. GAS-IGNITING DEVICE. SAMUEL JOSEPH WOODS, Newport, R. I. Filed July 7, 1925. Serial No. 42,053. 6 Claims. (Cl. 175—115.)

1. An electric lighter for the burners of gas stoves having valves regulating the supply of gas thereto, an electrical ignition system including a primary circuit and a secondary circuit, a sparking device associated with each burner of the stove, said sparking devices being embodied in the secondary circuit of the ignition system, and means including a single circuit maker and breaker arrangement separate from and independent of the electrical ignition system operable from any of the valves for making and breaking the currents when any valve is turned on.

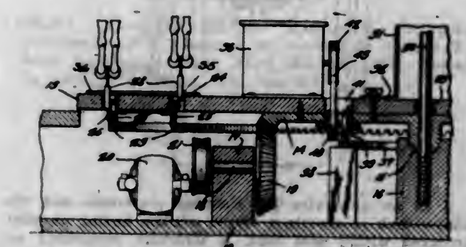


1,635,105. TIRE RIM. BENJAMIN J. ZOBEL, Buffalo, N. Y. Filed Mar. 29, 1926. Serial No. 98,282. 3 Claims. (Cl. 301—35.)

1. A rim of the class described comprising two sections, headed lugs on the inner faces of the sections, a locking plate having pairs of keyhole-shaped slots therein for receiving the lugs, each pair of slots being convergent so that when the locking plate is moved forwardly to cause the lugs to engage the narrow portions of the slots, the sections will be drawn together, said locking plate

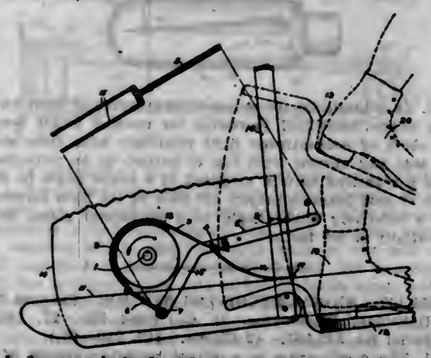
having a hole therein and a projection carried by the rim for engaging the hole when the locking plate is in locking position, said plate being of spring metal.

1,635,106. MEANS FOR HEADING AND LOADING KAFIR CORN, MAIZE, AND THE LIKE. CONLEY T. BARKER, Gate City, Va. Filed Aug. 28, 1924. Serial No. 734,807. 1 Claim. (Cl. 56—56.)



In a row header, the combination of a wheeled body having a side wheel, a frame detachably hung on and bearing against said side wall of the body and having a portion projecting laterally from said side wall, a spur included in said portion and arranged adjacent said wheel, a transverse shaft mounted between and carried by the spur and said frame, a driving connection between one of the wheels of the body and said transverse shaft, a miter gear on said shaft, a longitudinal shaft carried by said frame and having a forward crank portion, a miter gear keyed on the rear portion of the longitudinal shaft and adapted to be meshed with the first-named miter gear, a lever for moving the second-named gear into and out of engagement with the miter gear, an endless conveyor carried by the laterally projecting portion of said frame and arranged to be driven by said longitudinal shaft, and cutting mechanism carried in front of the outer portion of said laterally projecting portion and having a reciprocatory cutter bar connected with the said crank portion of the longitudinal shaft.

1,635,107. CELLAR-DOOR HINGE. HYMAN BLUM, Pittsburgh, Pa. Filed Apr. 10, 1925. Serial No. 22,237. 4 Claims. (Cl. 16—135.)

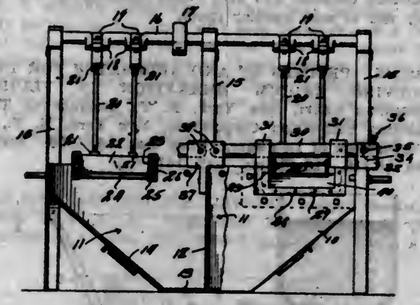


1. In a cellar door, a hinge-box having an anchor flange and an inclined bottom, a hinge member revolubly mounted in the walls of the hinge-box, a plurality of transverse ice-cutters formed on the rear and downwardly extending portion of the hinge member, for removing ice from the rear side and bottom of the hinge-box when the hinge member is revolved on its pintles.

1,635,108. MERRY-GO-ROUND. GUSTAV A. BLUTHARDT, Dorchester, Mass. Filed Jan. 4, 1926. Serial No. 79,223. 2 Claims. (Cl. 272—68.)

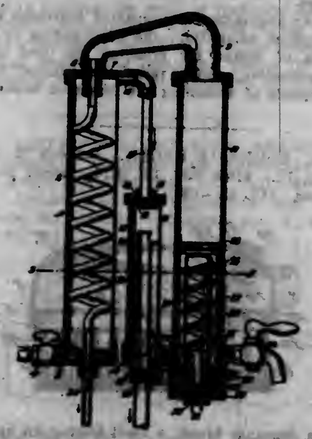
1. In a merry-go-round, circular spaced track ways, traction wheels arranged in pairs for movement over said track ways, bars having their ends eccentrically connected to adjacent pairs of wheels, upwardly extending arms at the ends of said bars, figures carried by said arms and means having operative connection with said wheels for imparting movement to the same over said track ways.

1,635,109. VELOCIPEDE BRAKE. JULIEN A. BRIED, Oakland, Calif., assignor to H. C. White Company, North Bennington, Vt., a Corporation of Vermont. Filed June 3, 1922. Serial No. 565,594. 4 Claims. (Cl. 188—20.)



1. In a velocipede of the character described, an operating pedal pivotally supported on the vehicle and having a free end, a vertically arranged guide against which the free end of the pedal is movable up and down, and a brake for the velocipede having an operating lever projecting through and guided by a slot in said guide.

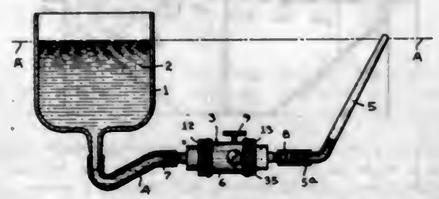
1,635,110. PAINT. JOHN J. RUCKER BRISTOW, Tampa Shores, Fla., assignor to John W. Beach, Tampa, Fla. Filed Feb. 8, 1926. Serial No. 86,937. 2 Claims. (Cl. 134—50.)



1. A coating composition comprising the following ingredients mixed together in approximately the proportions stated by weight; kaolin, from 60 to 65 parts; silicate of soda, from 25 to 30 parts; zinc oxide, from 6 to 9 parts; casein, from 3 to 7 parts.

1,635,111. GRAVITY SEPARATOR FOR GARNET ORES. FRANCIS B. BURNS, North River, N. Y. Filed Apr. 27, 1926. Serial No. 104,994. 4 Claims. (Cl. 209—425.)

1. An ore separator of the character described including a tank having a discharge gate in its bottom, a screen frame open at one end and carrying a screen, the open end of the screen discharging through an end wall of the tank, power operated means for giving vertical oscillation to the tank, and including two vertically reciprocable rods connected to that end of the screen remote from its discharge end, the screen being connected to each rod for vertical adjustment, a transversely extending horisontal support for the discharge end of the screen pivotally mounted at one end and means for vertically adjusting the other end of the pivotal support to thereby adjust the screen in a vertical plane.

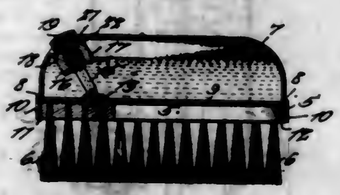


1,635,112. HOUSEHOLD STILL. WILBUR J. CARLSON, Rochester, and JAMES J. LANAHAN, Buffalo, N. Y. Filed June 29, 1925. Serial No. 40,207. 2 Claims. (Cl. 203—5.)

1. In a household still, in combination, an upright tubular inlet chamber having an inlet connection for

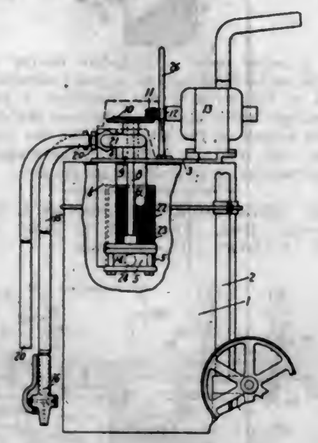
communication with a tap, an upright tubular vaporizing chamber, a relatively short elbow connected to the top of said vaporizing chamber and in open communication with the same and also connected to the top of said inlet chamber, a condensing coil located in said inlet chamber with one end connected to said elbow and the other end projecting externally, a pipe connected to said inlet chamber at its upper end and extending downward from its point of connection in the space between said chambers, an upright shell also located within the space, a nipple connecting the lower end of said shell and the lower end of said vaporizing chamber, said pipe being connected at its lower end to the top of said shell, an overflow pipe in said shell having a drainage connection through the bottom of said shell, and an electric heating element in the lower portion of said vaporizing chamber, said heating element providing an annular space in said vaporizing chamber and said nipple discharging into the lower end of said annular space.

1,635,113. PROCESS OF AND APPARATUS FOR DISSOLVING RADIUM EMANATION IN FLUIDS. ARMANDO CERVI, New York, N. Y., assignor to The Radium Emanation Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 16, 1926. Serial No. 95,119. 13 Claims. (Cl. 167—7.)



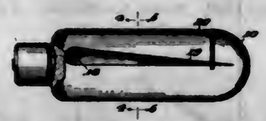
7. An activated liquid carrying radium emanation impregnated therein in which diluting fluids are substantially absent.

12. Apparatus for preparing activated fluids containing radium emanation for internal administration comprising a receptacle having a fluid present to seal the receptacle from the atmosphere, a crushing mechanism in operative connection with said receptacle, a fragile seed in said crushing mechanism having present radium emanation capable of being liberated on crushing, and going into solution in the fluid, an administering conduit adapted to receive the activated solution and a hydrostatic head to positively administer the activated fluid and prevent the same from coming in contact with the atmosphere.



13. In an apparatus for preparing activated fluids containing radium emanation, the combination in operative connection of means for crushing the seed containing radium emanation, and a receptacle adapted to contain a fluid capable of absorbing the liberated radium emanation.

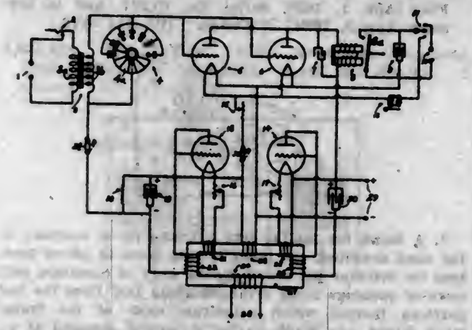
1,635,114. FOUNTAIN BRUSH. NORMAN M. COTTRELL, Chicago, Ill. Filed Nov. 13, 1926. Serial No. 148,249. 3 Claims. (Cl. 15—138.)



1. In a fountain brush, a shell having an aperture the said shell being indented and provided with an inwardly extending flange around the aperture, a threaded bushing in the aperture, an externally threaded valve in the bushing, an apertured partition in the shell, said partition having a valve seat at the aperture adapted to coact with the aforesaid valve, a brush head having tufts of bristles through which fluid may penetrate, and means for securing the head of the brush in the shell in close proximity to the partition.

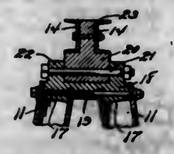
1,635,115. APPARATUS FOR CLEANING CONTAINERS AND THE LIKE. LEO DEUTSCH and FERDINAND A. PFEIFER, Springfield, Ohio; said Pfeifer assignor to said Deutsch. Filed Oct. 21, 1925. Serial No. 63,912. 33 Claims. (Cl. 184—1.5.)

1. In an apparatus for cleaning containers and the like, a tank to contain a liquid, a pump having an inlet arranged within said tank, a structure comprising an inlet chamber communicating with the inlet of said pump and having a foraminous wall, a conduit connected with said pump and adapted to discharge a stream of liquid into a container which is to be cleaned, means for withdrawing the liquid from said container, and discharging the same against the foraminous wall of said inlet chamber, and means for operating said pump.



1,635,116. HEADLIGHT. WINFIELD R. DU BREUIL, Elmhurst, Ill. Filed Jan. 9, 1925. Serial No. 1,474. 7 Claims. (Cl. 176—34.)

1. In a headlight for automobiles a source of light having means associated therewith for causing a flat beam or shaft of concentrated light relatively wide from side to side and narrow from top to bottom to be projected, and a reflecting surface arranged at a slight angle to the line of said beam to project the bulk of the light forward at a relatively slight angle to a horizontal plane, substantially as set forth.



1,635,117. SIGNAL-RECEIVING SYSTEM. FRANCIS W. DUNMORE, Washington, D. C. Filed Feb. 27, 1922. Serial No. 539,591. 12 Claims. (Cl. 250—27.)

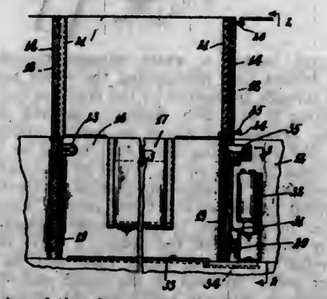
1. The combination in a signal receiving system of a source of audio frequency signals, a plurality of thermionic vacuum tubes having grid, filament and plate electrodes, an audio frequency input circuit including each of said grid electrodes and an output circuit including each of said plate electrodes, a source of alternating current power supply, means associated with said alter-

nating current power supply for impressing a negative potential on said grid electrodes, and a positive potenial on said plate electrodes and energizing said filament electrodes and a relay in said output circuit and arranged to respond to said source of audio frequency signals.

1,635,118. PUMPING BEAM. HAROLD G. DURNELL, Bartlesville, Okla., assignor of one-half to Samuel T. Steel, Bartlesville, Okla. Filed Mar. 28, 1925. Serial No. 19,077. 2 Claims. (Cl. 74—5.)

1. In a device of the character described, a base, hollow posts rising therefrom in convergent relation, a bearing block including portions fitted in the upper ends of the said posts, and having its upper surface recessed, a pumping beam, a support therefor fitted within the recess of said bearing and pivotally associated with the latter, guy rods bracing said posts, a counterbalance suspended from one end of said beam, and means for operating said beam.

1,635,119. UTENSIL LIFTER. WOJCIECH DZIUBA and MIECZYSLAW GOLINSKI, Bayonne, N. J. Filed June 30, 1926. Serial No. 119,681. 3 Claims. (Cl. 53—7.)



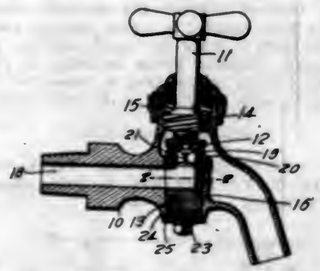
1. In combination with a utensil having a socket thereon and provided with aligned slots in the opposed walls thereof, an inclined seat in said socket, a lifter element comprising a hollow elongated handle, a resilient member enclosed within said handle, a head on one end of said handle and having an inclined face for co-action with the inclined seat in said socket, yieldable latch bolts extending outwardly from opposite sides of said resilient member and extending into said slots, and finger pieces on said resilient member extending through slots in opposite sides of said handle for manually retracting said latch bolts from said slots for facilitating the removal of said lifter element from said utensil.

1,635,120. UNION ALL. CHARLES S. FURMAN, Lansing, Mich., assignor to Furman Inventions Corporation, Lansing, Mich., a Corporation of Michigan. Filed Sept. 24, 1926. Serial No. 137,574. 4 Claims. (Cl. 2—79.)

1. A unionall comprising leg and body portions, said body portion having front and back openings and a two-part collar disposed between the openings, means for securing the front opening in closed position, means for securing the back opening in closed position, and reinforcing strain relieving straps arranged in the back of the body portion and secured in cross-wise relation with respect to each other and to the back opening.

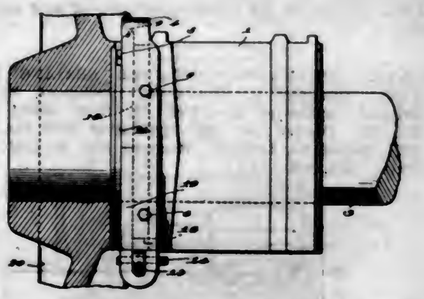
1,635,121. ANTIHOLDUP DEVICE. AARON GOODMAN, New York, N. Y. Filed Mar. 3, 1926. Serial No. 92,095. 5 Claims. (Cl. 268—2.)

1. A device of the class described, comprising an armor plate in a hidden position, springs to project the said plate to a shielding position, means for normally retaining said armor plate in the hidden position, escapement mechanism for permitting a partial projection of said armor plate to position the same in readiness for a later complete projection, manually controlled means for controlling said escapement mechanism and for releasing the said retaining means, and indicating means for disclosing the position of the partial projection of said armor plate.



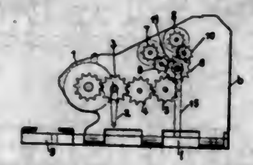
1,635,122. DISPENSING-CONTAINER SEALING DEVICE. CHAPMAN D. HENRIQUES, Larchmont, N. Y. Original application filed Dec. 21, 1921, Serial No. 523,949. Divided and this application filed Jan. 5, 1924, Serial No. 684,615. Renewed Apr. 8, 1927. 1 Claim. (Cl. 221—11.)

In a sealing device for a container provided with an opening, a tubular member of sheet metal forming a discharge neck, said member being formed with a section at



one end fitting into said opening, a sheet metal member presenting a seat member formed with a tubular portion extending through said opening but within the section on said neck, a tapering boss presenting a seat and a flange overlapping part of said section, means for securing said flange to said neck, a sealing plug formed with an annular flange, said sealing plug co-acting with said seat for closing the same, said sealing plug being positioned with the flange internal of said seat whereby the sealing plug can only be removed by being pushed inwardly, said neck being formed with threaded side walls and a removable threaded plug adapted to be screwed into said neck for closing the opening in said container when said sealing plug is removed.

1,635,123. FAUCET. FREDERICK J. HERMAN, Sacramento, Calif. Filed Nov. 23, 1926. Serial No. 150,266. 1 Claim. (Cl. 277—66.)



A faucet having a water passage therethrough, a vertical conical bore intercepting the water passage and opening through the bottom of the faucet, a conical valve-plug seating in said bore, means on the end of the plug extending beyond the faucet to permit turning of the plug, a nut cooperating with such means to secure the plug in fixed relation to the faucet at will, said plug being formed with a continuous passage horizontal in part and vertical in part to selectively provide a continuation of or an interruption to said water passage, a stem vertically adjustable in the faucet, a valve disk removably carried by the stem, and a valve seat for said disk, said seat being threaded in the upper end of the plug and having a diameter less than the diameter of the proximate end of the plug to avoid interference with the complete seating of the plug in the bore.

1,635,124. LATERAL-MOTION BEARING FOR JOURNAL BOXES. AUGUSTUS F. HODGO, Weatherly, Pa. Filed Nov. 1, 1926. Serial No. 145,629. 6 Claims. (Cl. 308—165.)

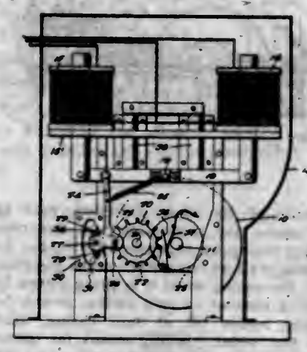
1. In a journal box, a substantially U-shaped retaining member at the open end of the body of the journal box, a lateral motion bearing fitting in said retaining member, and a removable key extending across the end portions of the legs of the retaining member for preventing displacement of the said bearing member.

1,635,125. CALCULATING MACHINE. HERMANN HOFFMEISTER, Gliesmarode, near Brunswick, Germany, assignor to Grimme, Natalis & Co. Aktiengesellschaft, Braunschweig, Germany, a Corporation of Germany. Filed Apr. 1, 1925, Serial No. 19,937, and in Germany Apr. 8, 1924. 3 Claims. (Cl. 113—116.)

1. A blank for folding into a frame for a machine of the class described, the blank having holes to afford bearings for machine parts and spaced rows of openings, said rows of openings being arranged along fold lines for end portions thereof which constitute sides of the frame when joined, the blank having a portion disposed at an angle to said rows to constitute a base for another machine part, the blank being notched at the junction of said portion with the remainder of the blank and in line with both rows of openings.

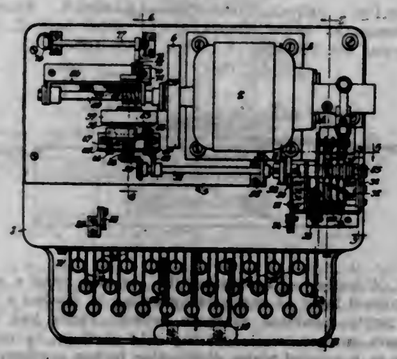
1,635,126. APPARATUS FOR DELIVERING MEASURED QUANTITIES OF A FLUENT MATERIAL. BOHUMIL JIROTKA, Berlin, Germany, assignor to the Firm Dr. Otto Sprenger, Patentverwertung Jirotka mit beschränkter Haftung, Vaduz, Germany. Filed May 27, 1926, Serial No. 112,091, and in Germany Dec. 29, 1923. 7 Claims. (Cl. 73—62.)

1. An apparatus for delivering a plurality of measured quantities of fluent material, comprising a vessel, partitions dividing said vessel into compartments, means of communication between said compartments operative when the vessel is filled for permitting the fluent material to seek a common level in all said compartments, and means for simultaneously closing said communication means and discharging the fluent material from all said compartments in separate streams.



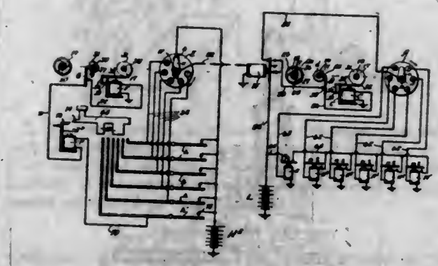
1,635,127. KEYBOARD CLEANER. ISAAC KIRSNER, Bronx, N. Y. Filed Aug. 27, 1926. Serial No. 131,986. 2 Claims. (Cl. 15—210.)

1. A keyboard cleaner comprising an elongated member having an exterior surface of polishing material, one side of said member having spaced transverse slots provided therein opening onto the side edges of said member, and flanges extending beyond one of the sides of said



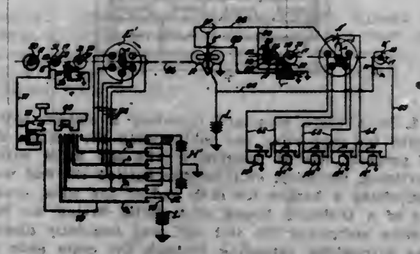
member intermediate said recesses adapted to pass under the fall board and a handle member extending from the opposite side edge of said member, substantially as and for the purpose specified.

1,635,128. INDICATOR. JOHN KLASNICH, Cleveland, Ohio. Filed Sept. 26, 1923. Serial No. 664,991. 2 Claims. (Cl. 40—59.)



1. A device of the character described including a rotatable drum, a lever pivoted intermediate its ends adjacent the drum, a solenoid supported at each end of the lever, springs bearing against the lever at opposite sides of the pivot point for normally retaining the lever in horizontal position, a toothed wheel supported adjacent the drum, means forming operative connection between the toothed wheel and the drum, means for consecutively energizing either of said solenoids at predetermined times for imparting rocking movement to the lever, means carried by the lever and having operative connection with the toothed wheel whereby to impart movement to the same upon pivotal movement of the pivoted lever in either direction and a spring pressed pawl cooperating with the toothed wheel to normally maintain the same against movement.

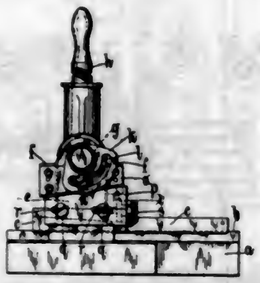
1,635,129. TELEGRAPH TRANSMITTER. CHARLES L. KRUM and HOWARD L. KRUM, Chicago, Ill., assignors, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Dec. 23, 1919, Serial No. 346,948. Divided and this application filed Aug. 24, 1922, Serial No. 583,975. Renewed May 4, 1927. 37 Claims. (Cl. 178—33.)



1. In a signalling apparatus, transmitter switch contacts, a set of selectors, a rotary cam member having a series of successively operative sections for effecting the operation of said contacts variably in accordance with the setting of said selectors and thereby transmit a corresponding succession of impulses, a power-driven start and stop clutch for rotating said cam member, a key board and solely mechanical means actuated by said key-board for setting said selectors and tripping said clutch.

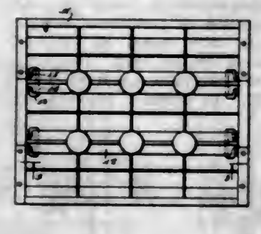
1,635,130. TELEGRAPH SYSTEM. HOWARD L. KRUM, Chicago, Ill., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed June 30, 1916, Serial No. 106,925, Patent No. 1,434,290, dated Oct. 31, 1922. Divided and this application filed Oct. 30, 1922, Serial No. 597,895. Renewed May 2, 1927. 21 Claims. (Cl. 178—33.)

1. A telegraph system including a line conductor and a source of current in series therewith, a set of selectable contacts arranged to close or open said line circuit dependent upon their selected or non-selected condition, means for selectively operating said contacts, a distributer mechanism movable from a normal position to successively bring said contacts into series relation with the line, a relay in circuit with said line responsive to the opening and closing thereof, a local circuit including a second distributer mechanism under the control of said relay, and means dependent upon the movement of said first mentioned distributer mechanism from its normal position to initially open said line circuit to initiate the operation of said second distributer mechanism.



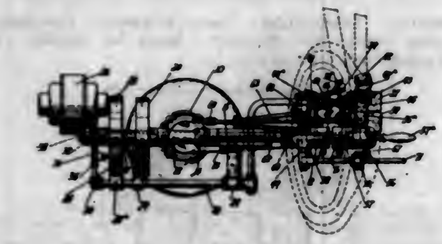
1,635,131. SELECTIVE TELEGRAPH SYSTEM. HOWARD L. KRUM, Chicago, Ill., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed June 30, 1916, Serial No. 106,925, Patent No. 1,434,290, dated Oct. 31, 1922. Divided and this application filed Oct. 30, 1922, Serial No. 597,896. Renewed May 10, 1927. 13 Claims. (Cl. 178—33.)

1. A telegraph system wherein the characters are represented by permutations of a definite number of two different impulses, including a line conductor, means for sending code impulses over said conductor, receiving dis-



tributing mechanism comprising contacts and a member adapted to be continuously advanced during each operation to successively complete circuit through said contacts, electro-magnets in circuit with said contacts, said mechanism having a rest position in which a circuit through one of said electro-magnets is completed through said mechanism, a receiving relay responsive in two different ways to the code impulses, and means responsive to both operations of said relay to start said mechanism and to one only of said operations to complete an energizing circuit through the rest position of said mechanism and the connected electromagnet.

1,635,132. PRESS FOR PRINTING, EMBOSSING, OR THE LIKE. ROLLS PERCIVAL LINK, London, England. Filed Mar. 17, 1926. Serial No. 95,370, and in Great Britain Dec. 18, 1925. 5 Claims. (Cl. 101—3.)

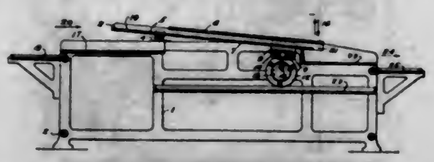


1. An embossing press comprising a lower ram plate, an upper ram plate, standards on the lower ram plate serving as guideways for the upper ram plate, a shaft mounted to rock in bearings in the standards, an operating handle arranged at a central part of the shaft, cams on the shaft between the said handle and the shaft bearings whereby the said upper ram plate can be depressed, grooved plates carried by the shaft, and means carried by the upper ram plate and working in the grooves of said plates to limit the movement of the upper ram plate.

1,635,133. CRATE. JOHN F. MAURER, Jr., Woodcliff, N. J. Filed Aug. 10, 1926. Serial No. 128,387. 3 Claims. (Cl. 217—10.)

1. In a crate structure including a slatted bottom, means for supporting and maintaining the bottom slats in properly related position to the end walls without mortising, recessing, or otherwise cutting the end walls, comprising a hanger for each end of the slats, consisting of a U-shaped length of material having the bight portion embracing the slat end, and angularly disposed free extremities extending through the crate ends and locked in place, the slat-embracing portion being disposed at an angle to the remainder of the hanger, whereby to position the slat-embracing portion in spaced relation to the end of the slat.

1,635,134. TIRE-FINISHING MACHINE. LLOYD E. MCCARDY, Racine, Wis., assignor to The Racine Horseshoe Tire Company, Racine, Wis., a Corporation of Wisconsin. Filed May 20, 1925. Serial No. 31,547. 16 Claims. (Cl. 154—10.)



1. Apparatus of the class described, said apparatus comprising means for supporting and circumferentially driving a tire casing by engagement with the inner surface of its side wall at one point, means yieldingly urged against said tire casing while it is being driven for applying a finishing element to said casing, means for lifting said applying means off of said casing, said means including a foot pedal, yielding means for operating the foot pedal to maintain the applying means on the casing, and an additional means for lifting the applying means off the casing independently of said pedal and said yielding means.

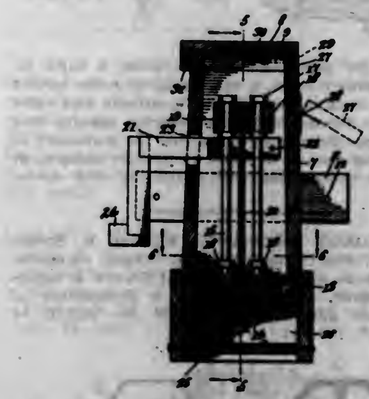
1,635,135. BELT BUCKLE. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., a Corporation of New York. Filed Apr. 9, 1923. Serial No. 630,682. 6 Claims. (Cl. 24—191.)

1. A buckle comprising a buckle frame, a clamping member pivoted to the buckle frame and means held in a rigid relation to the frame and having a resilient portion for engaging that side of the belt opposite the side engaged by the clamping member and directly opposite the portion engaged by the clamping member.

1,635,136. SEPARATION OF CARAMELS. FRANÇOIS FERDINAND MOLIÉ, Genoa, Italy. Filed Mar. 7, 1923. Serial No. 623,528. 3 Claims. (Cl. 107—7.)

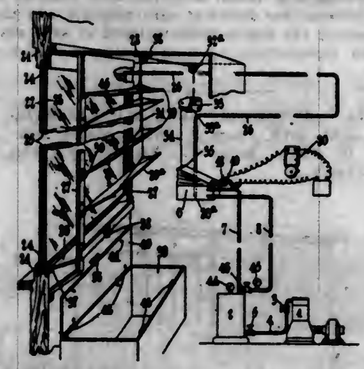
3. A method of separating the caramels from a partly separated layer of caramels consisting in moving a layer of partly separated caramels between upper and lower impact surfaces while causing said surfaces to reciprocate in a vertical plane, discharging broken portions from the caramel layer through one of said surfaces, and finally discharging the caramels from between said surfaces.

1,635,137. BONE CLAMP. CLARENCE E. MULLENS, Albany, N. Y. Filed Jan. 11, 1927. Serial No. 160,438. 10 Claims. (Cl. 128—346.)



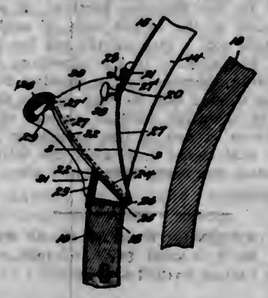
1. A bone clamp including a body, a pair of spaced stationary jaws rigidly connected to said body, a pair of spaced movable jaws movably connected to said body and cooperating with the stationary jaws, means for independently adjusting the movable jaws, and means for locking said jaws in any desired position of relative adjustment.

1,635,138. EYEGLASS CONSTRUCTION. GEORGE E. NEARNEY, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Nov. 24, 1926. Serial No. 150,414. 13 Claims. (Cl. 88—42.)



1. In eyeglass construction, in combination, a non-metallic eyeglass rim member, a metal member of tubular form mounted upon said rim member, said tubular metal member having a flange extending into said non-metallic material and rigidly secured therein, and a metal nose member clamped within said tubular member and extending outwardly therefrom.

1,635,139. POWDER DISPENSER. GEORGE ELLIS NECKLES, Zanesville, Ohio, assignor of one-half to Gust N. Calis, Zanesville, Ohio. Filed Aug. 29, 1924, Serial No. 735,028. Renewed May 20, 1927. 4 Claims. (Cl. 221—62.)



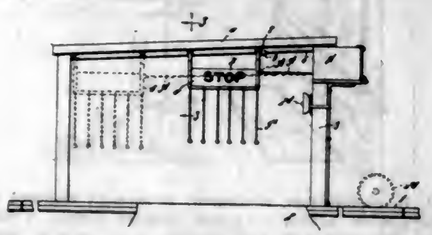
1. A powder dispenser comprising a receptacle for the powder having a perforated bottom, valve pins in the receptacle disposed loosely in the perforations of the bottom, collars on said valve pins adapted to close the perforations when the pins are lowered, said collars being substantially spaced from the walls of the powder receptacle to allow free flow of the powder to the perforations in the bottom, and means to raise and lower the pins with the collars thereon.

1,635,140. MEANS FOR THE PROTECTION OF JEWELERS' WINDOWS AND THE LIKE. MORGAN CYPRIAN MCMAHON O'BRIEN, Auckland, New Zealand. Filed Oct. 12, 1926, Serial No. 141,216, and in Great Britain June 10, 1925. 6 Claims. (Cl. 20—101.)

1. In combination, a window, an element disposed in said window having a vacuum chamber therein, a trip gear associated with and adapted to be released upon fracture of said element, and window contents protecting means controlled by said trip gear.

1,635,141. SUPPLY DOOR FOR WASH WHEELS. WILLIAM O. OLSON, East Orange, N. J., assignor to Asher Manufacturing Company, Irvington, N. J., a Corporation of New Jersey. Filed Apr. 28, 1925. Serial No. 26,535. 10 Claims. (Cl. 220—32.)

1. In a wash wheel, in combination, a drum having an opening therein, a main door slidable to close said opening and having a supply opening therein, a shutter for said supply opening, and means pivoting said shutter to said door within the space enclosed by the inner walls of said drum.

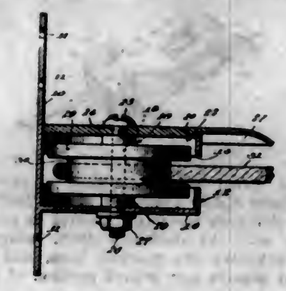


1,635,142. EYEGLASS CONSTRUCTION. WILBUR H. SIDDALL, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Nov. 18, 1926. Serial No. 149,061. 27 Claims. (Cl. 88—42.)

18. In eyeglass construction, in combination, a non-metallic rim, a metal nose member; and means for securing said nose member to said rim, said means in-

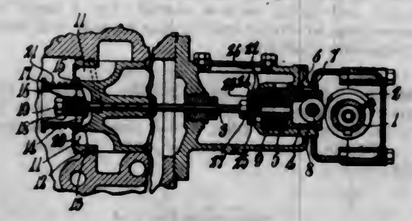
cluding a sheet metal member having a part resting exterior of the periphery of said rim and beneath which an end portion of said nose member is received, securing means acting between one of said members and the rim and entering the non-metallic material of said rim in a substantially radial direction, and securing means acting between the latter of said members and the rim and entering the non-metallic material of said rim in a direction substantially at right angles to said first direction.

1,635,143. AUTOMATIC RAILWAY-CROSSING SIGNAL AND BAR. SAM P. SMITH, Cabot, Ark. Filed July 11, 1926. Serial No. 725,468. 1 Claim. (Cl. 246—129.)



In a crossing safety device, the combination of uprights arranged at opposite sides of a crossing, a drag rod secured between said uprights at their upper ends, a gravitational signal member movable on said rod in the direction of the length thereof and to and from a position in coincidence with the crossing, said signal member including a frame, a body mounted in said frame, arms having forked upper ends and having their lower ends secured to the opposite portions of said frame, wheels journaled in the forked ends of said arms and mounted on said rod, a stop on the rod for limiting the movement of the member in one direction, means controlled by a train approaching the crossing for actuating said means for moving said member against the action of gravity and to operative position against said stop, illuminating means carried by one upright in confronting relation with said signal only when the latter is in its operative position and being illuminated when said signal is in said position.

1,635,144. COUPLING. WILLIAM GRANT STEVENS, Jr., New York, N. Y. Filed Dec. 18, 1926. Serial No. 155,737. 8 Claims. (Cl. 74—58.)

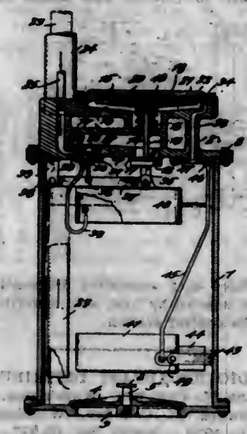


1. A coupling for two adjacent movable blocks, one of said blocks having a bore open at one end, a coupling member extending from the other block in position to enter said bore on movement of one of said blocks against the other block, an abutment within said bore, a latch member movably supported on said coupling member and normally disposed in position to clear said abutment when said blocks are moved together, and electro-magnetic controlled means for moving said latch member to position to engage said abutment on a definite retrograde movement of said coupling member in said bore during energization of the electromagnet, whereby complete withdrawal of said coupling members from said bore will be prevented and the blocks will be coupled together.

1,635,145. LINE PULLEY. ALBERT WATKINS TAYLOR, Peckville, Pa. Filed June 22, 1926. Serial No. 117,801. 2 Claims. (Cl. 254—190.)

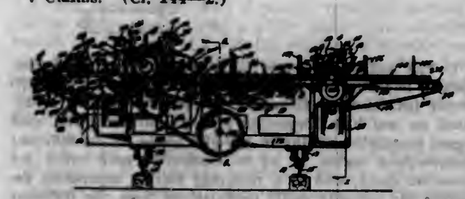
1. A line support comprising a cylindrical housing having a wall provided with a plurality of arcuately shaped slots, a base member formed integrally with the wall, a securing plate integral with and forming part of the wall, said plate projecting beyond said wall, a convexed cover plate for the housing having a water shed projecting beyond the wall and a shoulder snugly engaging the inner face of the wall, said base and cover having alined perforations, a spindle bolt mounted in the perforations and securing the cover to said housing and a pulley in the housing mounted on the bolt, said water shed having a notch to receive the securing plate.

1,635,146. VALVE MECHANISM. WADE H. WINEMAN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 29, 1924. Serial No. 689,377. 5 Claims. (Cl. 121—167.)



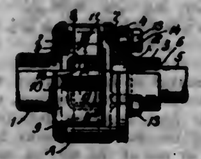
1. In a valve mechanism, a valve stem, a valve resiliently mounted thereon, a cam engaging roller carried by said valve stem, a cam adapted to actuate said valve stem, a means for moving said valve stem towards said cam, and means for positively limiting the movement of said valve stem toward said cam to prevent engagement of said roller by said cam for a portion of each revolution thereof.

1,635,147. METAL SHEETING. RICHARD R. BLOSS, HAVILEN T. STROUT, and HARRY R. ANSEL, Columbus, Ohio, assignors to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 5, 1926. Serial No. 99,691. 4 Claims. (Cl. 108—21.)



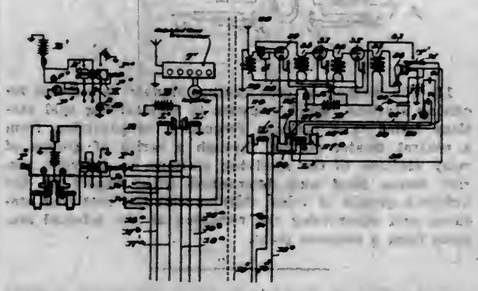
1. A sheeting comprising spaced parallel sheets having perforated depending edge flanges, a cap piece having a web adapted to fit between said flanges and having openings adapted to register in a variety of positions with the openings in said sheet edge flanges.

1,635,148. PUMP. CHARLES I. CHAMBERS, Seattle, Wash. Filed Mar. 6, 1926. Serial No. 92,766. 1 Claim. (Cl. 103—248.)



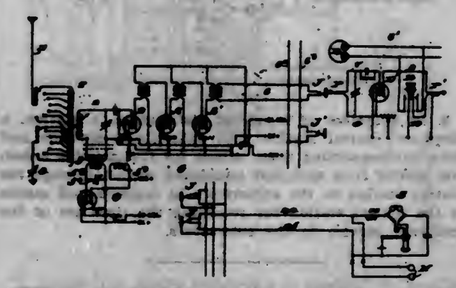
A pressure pump of the submerged type, including a cylinder having a water inlet, a water discharge pipe leading therefrom, an air pressure inlet, an air discharge outlet, valves for said inlet and outlet, a lever for operating the valves, and an open pan adapted to be sealed by the water in the cylinder and designed to receive the air pressure from the inlet, said pan being connected to and operating said lever.

1,635,149. VENEER-CORE MACHINE. SERN MADSEN, Clinton, Iowa, assignor to Curtis Companies, Inc., Clinton, Iowa. Filed Sept. 16, 1925. Serial No. 56,675. 7 Claims. (Cl. 144—2.)



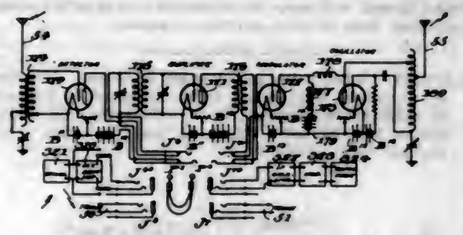
1. In a structure of the class described, the combination of an assembling table, a frame mounted for movement along the end of the table adjacent thereto, means on said frame for dressing and gluing core stock and delivering the stock to the table, and means on said frame for automatically gluing edge strips and delivering them to said table adjacent to the point of delivery from said first means.

1,635,150. SPRING-CROSS YIELDABLE COUPLING. JOHN J. SERRELL, Elizabeth, N. J., assignor to Smith and Serrell, Newark and Mahwah, N. J., a Copartnership consisting of John J. Serrell and Robert A. Smith. Filed Feb. 29, 1924. Serial No. 696,102. 6 Claims. (Cl. 64—26.)



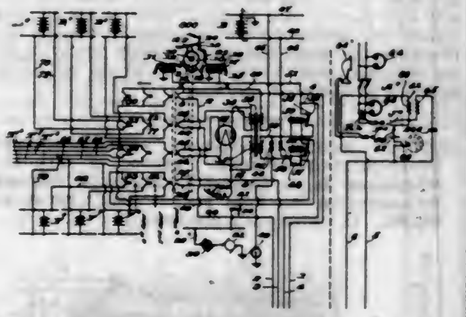
2. The yieldable coupling, comprising two cooperating coupling members each formed with a flange and slotted projections loosely interlocking with the similar projections of the cooperating coupling member and a resilient spring cross connecting member cooperating with the slots in said coupling members to cushion the driving forces between them, said connecting member comprising a plurality of sets of radial straight spring arms having interlocking oppositely directed securing cups of sheet metal formed with slots to accommodate said spring arms and hold their central portions together.

1,635,151. RADIO DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Dec. 21, 1923, Serial No. 681,991. Renewed Mar. 8, 1927. 28 Claims. (Cl. 179—2.)



1. The combination of a plurality of telephone substations, a central station, a line radio broadcasting transmitter at said central station, a receiver therefor at each substation, a wire line connecting each substation with the central station and a telephone on each line at each substation, with means at the central station to direct modulated waves from said broadcasting transmitter over said wire lines to said receivers, other means to interconnect the substations for conversation through said wire lines, and means also at said central station supplying operating energy to the receivers at the substations each over its individual wire line.

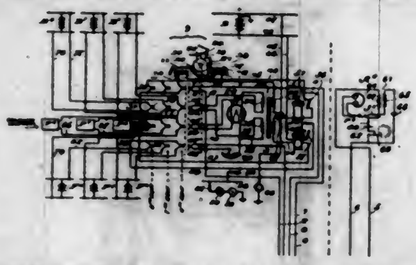
1,635,152. RADIO BROADCAST SELECTING AND DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Feb. 29, 1924. Serial No. 695,992. 11 Claims. (Cl. 250—6.)



11. In a combined telephone exchange and broadcast system having a central station and subscribers' stations with wire line circuits interconnecting them, a source of electrical signal waves at the central station for broadcast distribution, and a thermionic tube individual to each line arranged to be connected between the said broadcast source and its associated line with its plate circuit directly to line.

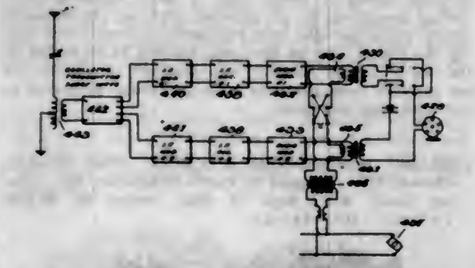
1,635,153. SUBDIVIDED SERVICE SYSTEM OF RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Oct. 28, 1924. Serial No. 746,357. 19 Claims. (Cl. 250—6.)

11. The method of broadcasting signals to selected receiving stations, which consists in maintaining said stations tuned to a common frequency, broadcasting from a central master station through a series of groups of relay stations to the receiving stations on different carrier waves fixed and determined with respect to the different groups of relay stations and the receiving stations, and supervising the reception at the selected stations from a common point.



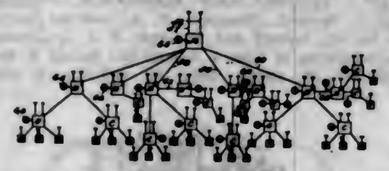
1,635,154. RADIO SERVICE METERING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Jan. 6, 1925, Serial No. 913. Divided and this application filed Aug. 1, 1925. Serial No. 47,545. 5 Claims. (Cl. 179—9.)

3. In a system of broadcast distribution, a station, a telephone central station with subscriber's stations and lines interconnecting them, means for transmitting broadcast matter from said first mentioned station through the central station to the subscribers in common and means at the central station for recording the time use of the broadcast service to the subscribers.



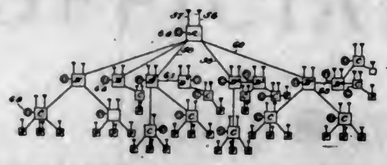
1,635,155. RADIO SERVICE METERING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Dec. 6, 1924, Serial No. 754,406. Divided and this application filed Aug. 1, 1925. Serial No. 47,550. 7 Claims. (Cl. 179—9.)

6. In a system of broadcast distribution, a central distributing station, subscribers' stations, means at said central station for distributing different items of broadcast programs to the subscribers, means at the subscribers' stations controlled by the subscribers independently of other subscribers for selecting the available items they individually desire to receive, and means for metering



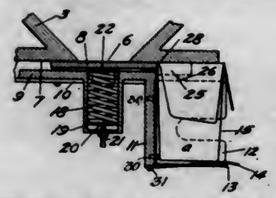
the service rendered each subscriber differentially according to the items selected by him, said metering means being located at the central station.

1,635,156. RADIO BROADCAST DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Oct. 21, 1925. Serial No. 63,977. 7 Claims. (Cl. 250—6.)



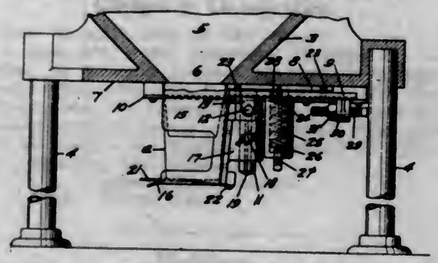
1. The method of secret radio transmission which consists in imposing the same signal modulations on two different intermediate frequency carrier waves both modulated on one high frequency primary carrier wave, said signal modulations being in opposite phase on the different intermediate waves so as to neutralize each other for detection alone, and at a receiving station separately detecting the opposite audio modulations from the different intermediate waves and bringing them into phase so as to augment each other.

1,635,157. RADIO BROADCAST DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Oct. 28, 1924, Serial No. 746,357. Divided and this application filed June 19, 1926. Serial No. 117,130. 43 Claims. (Cl. 250—6.)



35. The combination of an organized wire system and an organized radio broadcasting system, said wire system carrying a traffic load attaining definite proportions at different hours of the day, and means for adjusting the radio load curve or use of the service, so as to impose a complementary traffic load on the same system of wires, whereby to transmit the ideal flat load curve for both wires and operators.

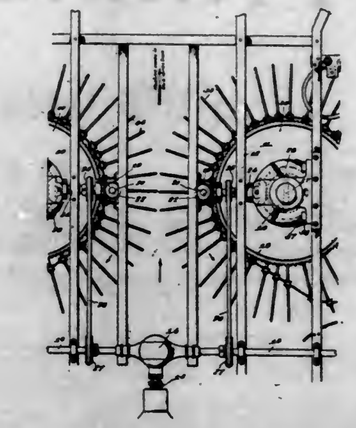
1,635,158. RADIO BROADCAST DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Oct. 28, 1924, Serial No. 746,357. Divided and this application filed June 19, 1926. Serial No. 117,131. 12 Claims. (Cl. 250—6.)



11. In an organized system of radio broadcast distribution, means for transmitting double modulated carrier waves to receiving stations in fixed tune, means for independently transmitting a master wave of exact intermediate frequency over the system, and means to synchronize the transmitted intermediate frequency therewith.

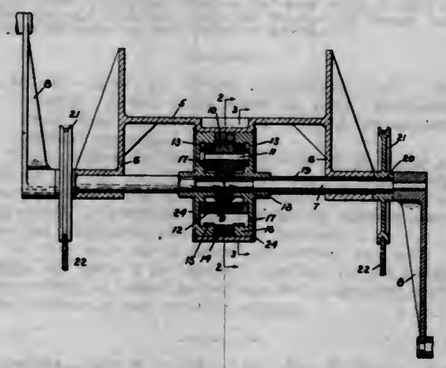
1,635,159. RECEPTACLE-FILLING APPARATUS. CHRISTIAN N. BERGMANN, Pittsburgh, Pa., assignor to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 19, 1926. Serial No. 89,337. 19 Claims. (Cl. 226—126.)

1. The combination with a supply reservoir having a bottom outlet opening and a plane under face extending beyond the opening, of a slidably mounted receptacle support having a valve plate fitting against said under face, and resilient means for holding an open top receptacle with its upper edges up against the plane under face of the reservoir bottom.



1,635,160. RECEPTACLE-FILLING APPARATUS. CHRISTIAN N. BERGMANN, Pittsburgh, Pa., assignor to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 21, 1926. Serial No. 123,907. 15 Claims. (Cl. 226—126.)

1. The combination with a supply reservoir having a plane under face, of a slidably mounted holder having a loosely mounted valve plate and a depending mounting stem, and a receptacle support adjustable vertically on the stem.



1,635,161. COTTON PICKER. HIRAM N. BERRY, Greenville, Miss. Filed May 13, 1926. Serial No. 108,927. 3 Claims. (Cl. 56—44.)

1. In a cotton picker, a picking cylinder, means for revolving the cylinder, a stationary axial post on which the cylinder is journalled, a series of shafts journalled vertically in the cylinder and around the said post, picking fingers radiating from the cylinder, and geared in groups to said vertical shafts, each of said shafts having upon its upper end portion a loosely mounted gear, a rotating gear sleeved on said post in the upper portion of the cylinder and in constant mesh with the said upper

gears of the several shafts, means upon the upper portion of each of the shafts for clutching its said gear in connection with the shaft and including a controlling spring, gearing for rotating said upper gear of the cylinder, a stationary top plate closing the top of the cylinder and secured to said post, and means controlled by the top plate for shifting the gear clutching means of the several shafts into and out of active position.

1,635,162. HOIST. BRYAN P. JOYCE, Davenport, Iowa, assignor to Thomas A. Conlon, Silver Spring, Md. Filed Sept. 6, 1923. Serial No. 661,273. 2 Claims. (Cl. 254—184.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A hoisting device embodying a bracket, an annular gear secured to the bracket, rotary members formed with annular gears housed in the bracket and positioned on each side of the annular gear, sheaves supported by the bracket and connected to the rotary members, shafts passing through the sheaves and the rotary members, means for rotating the shafts and a gear train interposed between the shafts, the annular gear and the rotary members for transmitting rotation of the shafts to the rotary members and sheaves.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 360—No. 2. TUESDAY, JULY 12, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Classification.

Order No. 3,016, June 28, 1927, directs:

In *class 137, Water Distribution* (Division 30), establish the following subclass, the patents contained therein having been taken for the most part from class 137, subclasses 156, Pressure-responsive devices, and 157, Pressure-responsive devices, Diaphragm, and from class 297, Thermostats and Humidostats, subclass 8, Thermostats, Expanding fluid, Bellows type:

Pressure-responsive devices

156.5 Bellows type.

Disclaimers.

1,466,887.—*William Sparks*, Jackson, Mich. Liquid-Feeding Device. Patent dated August 28, 1923. Disclaimer filed June 16, 1927, by the assignee by mesne assignments, *Stewart-Warner Speedometer Corporation*.

Hereby enters this disclaimer to all three claims of the specification as issued in said Letters Patent No. 1,466,887, and which are in the following words, to wit:

"1. In a device of the class described an upper chamber and a lower chamber, means for alternating vacuum and atmospheric pressure in the upper chamber, a siphon tube connecting said chambers and having one leg terminating in the upper chamber and its other leg terminating in the lower chamber, a float valve controlling communication of said siphon with the upper chamber, and means for holding said float-valve open when the level of liquid in the upper chamber is below a predetermined point.

"2. In a device of the class described, an upper chamber and a lower chamber, means for maintaining atmospheric pressure in the lower chamber, means for alternating vacuum and atmospheric pressure in the upper chamber, a siphon tube having one leg terminating in the upper chamber and its other leg terminating in the lower chamber, a valve casing associated with the end of said leg terminating in the upper chamber, a float in said chamber adapted to close communication between the upper chamber and said siphon tube, and means for holding said float in a position to permit communication between the upper chamber and the siphon tube when the liquid in the upper chamber is below a predetermined level.

"3. In a device of the class described, an upper chamber and a lower chamber, means for alternating vacuum and atmospheric pressure in the upper chamber and a siphon tube connecting said chambers and having one leg terminating in the upper chamber and the other leg terminating in the lower chamber, a buoyancy-actuated valve controlling communication of said siphon with the upper chamber and means for holding said valve open when the level of liquid in the upper chamber is below a predetermined point, said means comprising a lever arm fulcrumed between its ends with a float at one end and with the other end disposed to engage said valve through the port which it governs."

1,487,042.—*John T. Wilkin*, Connersville, Ind. Gas Meter. Patent dated March 18, 1924. Disclaimer filed June 20, 1927, by the assignee, *Connersville Blower Company*.

Hereby enters its disclaimer to so much of claims 11, 12, 13, 14, 15, 16, 19, 20, 21, 22 and 23, respectively, as may cover a gas meter as specified in said claims, respectively, in which the bearings for the impeller shafts are not antifriction ball or roller bearings.

So that said claims above enumerated, and each of them, will cover a gas meter as specified in said claims, respectively, in which the bearings for the impeller shafts are antifriction ball or roller bearings.

1,523,723.—*Carl R. Houghton* and *John T. Wilkin*, Connersville, Ind. Meter. Patent dated March 3, 1925. Disclaimer filed June 20, 1927, by the assignee, *Connersville Blower Company*.

Hereby enters its disclaimer to so much of claims 1, 2, 3, 4, 5, 6, 7 and 8, respectively, as may cover a gas meter as specified in said claims, respectively, in which the bearings for the shafts of the lobed rotary elements are not antifriction rolling bearings.

So that said claims above enumerated, and each of them, will cover a gas meter as specified in said claims, respectively, in which the bearings for the shafts of the lobed rotary elements are antifriction rolling bearings.

Condition of Applications Under Examination at Close of Business July 1, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 64,714; Trade-Mark Division, 1,301. Oldest new case, Nov. 27, 1926; oldest amended, Dec. 1, 1926. The dates given are 1927 except where † indicates 1926.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application awaiting office action.	Oldest action by applicant awaiting office action.	No. of applications awaiting action.
		New.	Amended.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

Ex parte Vial and Starkey.

Decided March 23, 1927.

1. Application—Abandonment—Delay in Prosecution Following Interference Proceeding.

Where an application of V. and S. containing claims standing under rejection was placed in interference on another claim, and after the interference terminated on April 10, 1925, by award of priority of invention to V. and S. they took no further action until January 17, 1927, *Held* that the application is abandoned.

2. Same—Same—Statutory Period for Action Following an Interference Proceeding.

Where the condition of an application requires no further action by the Primary Examiner after the termination of an interference, *Held* that the date the interference decision becomes final marks the beginning of the statutory period for response to any unanswered action by the Office.

3. Same—Same—Examiner Not Required to Advise Winning Party to an Interference Proceeding of Status of Application.

Where it was urged that after the interference terminated the Primary Examiner should have notified the winning party of the status of his application, *Held* that such notification would give the applicants no additional information, would impose an unnecessary burden on the Examiner, and need not be given.

On petition.

Application for patent for wheel breakers.

Messrs. Munday, Clarke & Carpenter for the applicant.

Kinnan, *First Assistant Commissioner:*

The applicants petition the Commissioner to hold this application is not abandoned, that the applicants have been guilty of no delay whatever in its prosecution, that the case is properly awaiting and still awaits action by the Examiner, and, further, that the Examiner be directed to resume jurisdiction of the application and notify the applicants he has done so to the end they may know when the period of one year within which the case must be amended begins to run.

It appears that for nearly two years after the final decision of the Examiner of Interferences awarding priority of invention to the applicants no action was taken by the latter. Petitioners recite that on personal investigation in the Examining Division it has been learned the instant application has been considered by the Examiner to be abandoned and so marked on the division docket, but that no notice of such action was given petitioners.

The record shows that on January 17, 1924, the Examiner made an action rejecting a number of claims and allowing the remainder. On November 15, 1924, a word was changed in one of the allowed claims by Examiner's amendment and on the same date an interference was set up by the Examiner with the changed claim as the single count. On February 12, 1925, another party was added to the interference, the issue remaining unchanged.

The decision of the Examiner of Interferences awarded priority to petitioners, his decision bearing date of April 10, 1925. The decision was based on concessions of priority by the other parties which were construed as waivers of the right of appeal, and therefore no time for appeal was set.

The instant case was returned to the Examiner, and no further action followed until the filing of this petition on January 28, 1927.

The petitioners claim that the Examiner upon return of the application to him should have given notice of this fact and that the case awaited amendment in response to Office action of January 17, 1924; further, that in accordance with the practice in the Office of waiving objections by failing to repeat them in subsequent actions petitioners were entitled to suppose their application was allowable; that the Examiner's amendment of November 17, 1924, in the instant case was such a "subsequent action" and petitioners were entitled to believe that all prior rejections, formal requirements, etc., were waived or withdrawn by the Examiner. It is urged in the petition that if an applicant were advised of the date when his application involved in an interference is restored to the jurisdiction of the Examiner he would know when his statutory year for response, if the condition of the case required one, commenced to run.

The contentions of petitioners are wholly wanting in merit. The Examiner's amendment of November 15, 1924, involved a change of a single word and was made to secure a uniformity of wording of the claim of the parties that was to form the issue. The petitioners could and undoubtedly did see this slight change when the interference was declared. Such change could in no way affect the rejection of other claims, as noted in the Examiner's letter of January 17, 1924.

In the instant case the petitioners not only waited the full year from the decision of April 10, 1925, terminating the interference, but delayed making an inquiry until about January 15, 1927. Counsel for petitioners states, in excuse, that it has long been the practice in the various divisions of the Office for the Examiner to notify a winning party in an interference that jurisdiction has been restored to the Examiner and that the case awaits response to a previous Office action, if such is the condition of the case.

[1] Whatever may be the practice in some of the divisions, petitioners' long delay in making inquiry is not excused thereby. It is the duty of an applicant, after the expiration of a reasonable time for the receipt of an expected Office letter and

after allowing for the arrearages of work in the Office, to investigate the status of his case. The expected letter might have been mailed, but not received by the applicant. In this connection the decision in *Ex parte Engman*, 292 O. G. 213, should be reviewed.

It is noted the rules of this Office do not require an action in the case of a winning party, after final judgment of priority to such party, where there are claims in the application under rejection at the time the interference was declared unless there has been a response made to the rejection. The Examiner in explanation of his failure to notify the petitioners when the case was returned to his jurisdiction after the judgment in the interference refers to the decision in *Ex parte Buchenberg*, 327 O. G. 216. That decision establishes that the Examiner should take no action in a case in which a decision has been rendered by the Examiners in Chief, the Commissioner, or the Court of Appeals of the District of Columbia in an appeal from a rejection of a claim or claims by the Examiner so long as there remains in the case any rejected claim not found allowable by the appellate tribunal and regarding which no responsive action has thereafter been taken by the applicant. The Examiner reasons from this decision that a similar practice should obtain under the circumstances here presented or in any situation where the successful applicant in an interference had previously been called upon to take some action, unrelated to the interference, before the declaration of such interference and no response to such requirement has been made.

[2] This reasoning appears sound. A letter from the Examiner could only repeat what he has said before. The decision of the Examiner of Interferences when it becomes final at its date when no appeal lies, as in the instant case, or at the expiration of the time limit for appeal if no appeal is taken should mark and does mark the beginning of the statutory period for response to any unanswered action by the Office.

As to the benefit to an applicant in being informed when jurisdiction is restored to the Examiner after an interference, the following may be said:

The decision of the Examiner of Interferences always states whether an appeal may be taken therefrom and when the limit of time for appeal expires. This sufficiently indicates when the interference terminates if no appeal be taken. Should an appeal be filed by a defeated party, the winning party must be notified thereof under the provisions of rule 153(*a*) before the appeal is docketed or forwarded.

[3] It is well known that the application files are returned to the Examiner and his jurisdiction restored on the termination of an interference. To require the Examiner to write a letter in the case of the winning party would give such party no further information than he has already been furnished and would impose an unnecessary burden on the Examiner. He is now required under rule 132 to write to the defeated party or parties, and this is considered sufficient.

The petition is denied.

Court of Appeals of the District of Columbia.

LONG *v.* GULICK.

No. 1,868. Decided February 7, 1927.

INTERFERENCE—RIGHT TO MAKE CLAIM.

Where G.'s drawings clearly disclose a piston having the structure of the claim of the count, but L. contends that G.'s structure will not permit free expansion and contraction of the skirt portion, *Held* that the language "said skirt being split from top to bottom on one side only of the pin bosses to permit free expansion and contraction of the skirt portion" of the claim covers the objection, since under the action of heat the circumferential expansion of the skirt would necessarily flex the webs sufficiently to permit the expansion without substantial increase in diameter and that G. can make the claim.

APPEAL from the Patent Office. Affirmed.

Mr. H. H. Knight for Long.

Mr. Ray S. Gehr for Gulick.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.*:

This appeal is from the decision of the Commissioner of Patents in an interference proceeding in which priority of invention was awarded to the senior party Gulick.

The single count in issue reads as follows:

A piston having a head portion with a ring groove therein, a skirt portion having its cylinder-engaging part separated from the head portion, separated pin bosses having integral flanges connecting them with the skirt on both sides of the bosses and with the head portion respectively, said skirt being split from top to bottom on one side only of the pin bosses to permit free expansion and contraction of the skirt portion.

The party Long moved to dissolve the interference on the ground that Gulick is not entitled to make the claim. The motion was denied by the Law Examiner, and his ruling was sustained on appeal by the Board of Examiners in Chief and by the Commissioner of Patents.

No testimony was taken in the case, and Long being the junior party, the only question to be reviewed is Gulick's right to make the claim.

The drawings of Gulick, we think, clearly disclose the structure of the count. It is contended, however, that his structure is not such as will "permit free expansion and contraction of the skirt portion." But the claim expressly covers this objection in the following language:

Said skirt being split from top to bottom on one side only of the pin bosses to permit free expansion and contraction of the skirt portion.

We think it clear that the object of the split is to permit of this expansion and, as held by the Board of Examiners,

under the action of the heat, the circumferential expansion of the skirt would necessarily flex the webs sufficiently to permit the expansion without substantial increase of the diameter of the skirt.

In this view of the case the right of Gulick to make the claim is beyond question. This point being settled, priority on the record goes to the party Gulick as a matter of course.

The decision of the Commissioner is affirmed.

PATENT SUITS.

Interference Notices.

U. S. PATENT OFFICE, *Washington, June 28, 1927.*

Warren E. Sadler, his assigns or legal representatives, take notice:

Interferences have been declared by this Office between an application for patent filed by Warren E. Sadler, 1440½ West Twenty-third Street, Los Angeles, Calif., and applications for patent filed by Samuel K. Wellman, 2720 Derbyshire Road, Cleveland Heights, Ohio, and Arch M. Brown, 423 Kansas Avenue, Chickasha, Okla. Counsel for Sadler state they are unable to locate said Sadler. Notice is hereby given that unless said Sadler, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, June 28, 1927.*

Henry F. Bauer, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent filed by Harry Aaron, 415 North Washington Avenue, Scranton, Pa., and Patent No. 1,494,573, issued May 20, 1924, to Henry F. Bauer, Wheaton, Minn., and a notice of such declaration sent by registered mail to said Henry F. Bauer at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Henry F. Bauer, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 12, 1927.

[VOL. 360. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 210,803. (CLASS 39. CLOTHING.) NATIONAL ASSOCIATION OF LEATHER GLOVE AND MITTEN MANUFACTURERS, Utica, N. Y. Filed Mar. 10, 1925.

PROTEKTOR

Applicant owns registration No. 192,604.

Particular description of goods.—Leather Gloves.

Claims use since Jan. 6, 1925.

Ser. No. 211,369. (CLASS 38. PRINTS AND PUBLICATIONS.) NATIONAL ASSOCIATION OF MASTER PLUMBERS, Wilmington, Del. Filed Mar. 20, 1925.

NATIONAL PLUMBING STANDARDS
NAMP
QUALITY

Particular description of goods.—Publications—Namely, Prints Showing Approved Plumbing Installations.

Claims use since Dec. 10, 1924.

Ser. No. 212,704. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE JAKE TENNENBAUM COMPANY, Cincinnati, Ohio. Filed Apr. 14, 1925.

If Tennenbaum, it's

Applicant disclaims exclusive right to the word "Tennenbaum" except in the connection shown.

Particular description of goods.—Baby Walkers, Bassinets, Beds, Benches for Household Use, Bookcases, Breakfast Sets Comprising Tables, Chairs, Etc.; Buffets, Cedar Chests, Chairs for Household Use, Morris Chairs, Chests of Drawers, Chiffonobes, Chiffoniers, China Closets, Costumers, Cots, Cribs, Desks, Dressers, Ferneries, Kitchen Cabinets, Living-Room Sets, Mattresses, Medicine Cabinets, Mirrors, Music Cabinets, Night Stands, Pedestals, Pillows, Rockers, Sanitary Couches, Servers or Serving Carts, Settees, Shades, Bed Springs, Stools, Card Tables, Center Tables, Console Tables, dressing Tables, End Tables, Extension Tables, Gate-Leg Tables, Kitchen Tables, Library Tables, Nest Tables, Taboret, Telephone Stands, Vanity Dressers, Reed Tables, Reed Furniture—Namely, Reed Chairs, Reed Tables, Reed Settees, Reed Desks; Bedroom Sets, Couches, Cradles, Davenports, Folding Beds, Hall Racks, High Chairs, Kitchen Safes, Library Sets, Mantel Cabinets, Parlor Sets, Princess Dressers, Blacking Cabinets or Stands, and Washstands.

Claims use since Jan. 1, 1912.

Ser. No. 223,979. (CLASS 39. CLOTHING.) WINSHIP, BOIT & CO., Wakefield, Mass. Filed Nov. 28, 1925.

SHORTEES

Particular description of goods.—Women's and Misses' Underwear Made of Knitted or Textile Fabrics or of a Combination of said Fabrics.

Claims use since on or about Sept. 22, 1925.

Ser. No. 224,078. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHABROW BROTHERS, Philadelphia, Pa. Filed Dec. 2, 1925.

Particular description of goods.—Butter and Bread.

Claims use since July, 1922.

Ser. No. 225,208. (CLASS 39. CLOTHING.) THE TROY SUNSHADE COMPANY, Troy, Ohio. Filed Dec. 26, 1925.

RED THREAD

Particular description of goods.—Carpenters' Aprons, Work Aprons, and Change Aprons.
Claims use since Dec. 2, 1925.

Ser. No. 228,963. (CLASS 38. PRINTS AND PUBLICATIONS.) CLYDE BANKS, Bellingham, Wash. Filed Mar. 22, 1926.

Clyde Banks CRYSTALSHEEN TRADEMARK PICTURES

Applicant disclaims apart from the mark all wording appearing on the drawing except the word "Crystalsheen," including the name of applicant.
Particular description of goods.—Photographs.
Claims use since Mar. 10, 1926.

Ser. No. 229,632. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) IVER JOHNSON'S ARMS & CYCLE WORKS, Fitchburg, Mass. Filed Apr. 3, 1926. Under 10-year proviso.

Iver Johnson

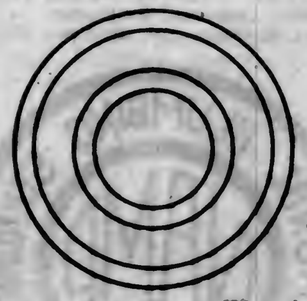
Particular description of goods.—Bicycles.
Claims use since Sept. 1, 1894.

Ser. No. 229,894. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BERNET, CRAFT & KAUFFMAN MILLING COMPANY, St. Louis, Mo. Filed Apr. 9, 1926.

Particular description of goods.—Wheat Flour.
Claims use since 1877.

Ser. No. 230,081. (CLASS 37. PAPER AND STATIONERY.) THE BUZZA COMPANY, Minneapolis, Minn. Filed Apr. 13, 1926.

HARLEQUIN



Particular description of goods.—Tally Cards and Score Pads with Blanks to Fill In.
Claims use since Mar. 15, 1926.

Ser. No. 230,427. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) U. S. SANITARY SPECIALTIES CORPORATION, Chicago, Ill. Filed Apr. 19, 1926.

OLIVENA

Particular description of goods.—Soap.
Claims use since Nov. 15, 1922.

Ser. No. 230,496. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) MASAHACHI NAKATA, doing business as M. Nakata Co., Seattle, Wash. Filed Apr. 21, 1926.

Particular description of goods.—Logs.
Claims use since 1917.

Ser. No. 231,124. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SHELLABARGER MILLS & ELEVATOR COMPANY, Salina, Kans. Filed May 4, 1926.

Hy-Tone

Particular description of goods.—Wheat Flour.
Claims use since Dec. 20, 1925.

Ser. No. 231,206. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PATHÉ EXCHANGE, INC., New York, N. Y. Filed May 6, 1926.

Pathécomedy

No exclusive claim is made to the descriptive word "Pathécomedy" except as associated with the other features of the mark.
Particular description of goods.—Cinematographic Films.
Claims use since Jan. 1, 1922.

Ser. No. 231,207. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PATHÉ EXCHANGE, INC., New York, N. Y. Filed May 6, 1926.

Pathépicture

No exclusive claim is made to the descriptive word "Pathépicture" except as associated with the other features of the mark.
Particular description of goods.—Cinematographic Films.
Claims use since Jan. 1, 1922.

Ser. No. 231,208. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PATHÉ EXCHANGE, INC., New York, N. Y. Filed May 6, 1926.

Pathéserial

No exclusive claim is made to the descriptive word "Pathéserial" except as associated with the other features of the mark.
Particular description of goods.—Cinematographic Films.
Claims use since Jan. 1, 1922.

Ser. No. 231,221. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) WALDORF PIANO CO., New York, N. Y. Filed May 6, 1926.

WALDORF

Particular description of goods.—Pianos and Player Pianos.
Claims use since 1899.

Ser. No. 232,321. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMAS CHRISTY, doing business as Christy Medicine Company, St. Louis, Mo. Filed May 27, 1926.

VEGETA

Particular description of goods.—Laxative for the Treatment of Constipation and Kindred Ills.
Claims use since May, 1898.

Ser. No. 232,445. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CHRYSSI ANDREWS, doing business as Andre Velvo Art Craft Co., New York, N. Y. Filed May 29, 1926.

No claim is made to the words "Velvo Art Work Guaranteed" or "New York" apart from the mark shown in the drawing. The lines on the drawing indicate shading.
Particular description of goods.—Ornamented Fabrics Made of Silk, Cotton, Wool, or Combinations Thereof in the Piece.
Claims use since Jan. 1, 1926.

Ser. No. 232,596. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WALLA WALLA GARDENER'S ASSOCIATION, Walla Walla, Wash. Filed June 1, 1926.

GLORIA

Particular description of goods.—Fresh Fruits and Vegetables.
Claims use since July 8, 1910.

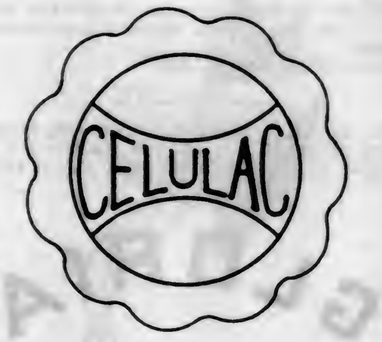
Ser. No. 232,926. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LINCOLN PACKING CO., Lincoln, Calif. Filed June 9, 1926.

LINCOLN

The mark comprises the surname and portrait of Abraham Lincoln (deceased).

Particular description of goods.—Canned Fruits.

Claims use since Apr. 3, 1926.



Ser. No. 233,385. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) JOSEPH B. MOSSMAN, New Brighton, N. Y. Filed June 17, 1926.

DANAP

Particular description of goods.—Eye Shades, Eye Blinds, and Face Masks.

Claims use since Apr. 10, 1926.

Ser. No. 233,818. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) GERMAIN BROTHERS CO., Saginaw, Mich. Filed June 28, 1926.

Particular description of goods.—Toilet Seats and Toilet Tanks.

Claims use since Dec. 1, 1925.

Ser. No. 233,931. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARION C. HANSEN, doing business as Mrs. Fred H. Hansen, Fresno, Calif. Filed June 30, 1926.

The wording "Gold Medal of Honor Quality" is disclaimed apart from the mark as shown. The drawing is lined to indicate the color gold.

Particular description of goods.—Dried Fruits, Particularly Figs and Raisins.

Claims use since Jan. 29, 1914.

Ser. No. 235,242. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) WICHITA FALLS MOTOR COMPANY, Wichita Falls, Tex. Filed July 27, 1926.

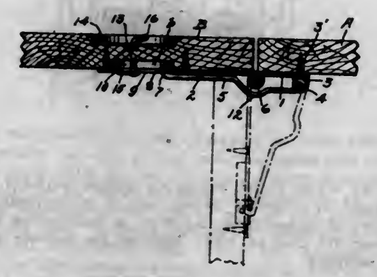
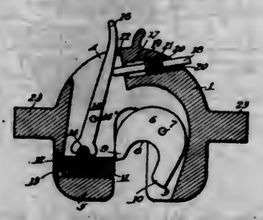
REISSUES

JULY 12, 1927.



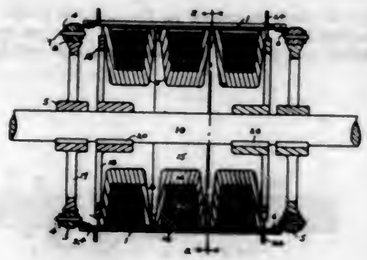
16,670. MECHANICALLY-PACKED PACKER. IVAN C. BELL, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Feb. 8, 1927. Serial No. 166,796. Original No. 1,526,411, dated Feb. 17, 1925, Serial No. 731,541, filed Aug. 12, 1924. 20 Claims. (Cl. 166—12.)



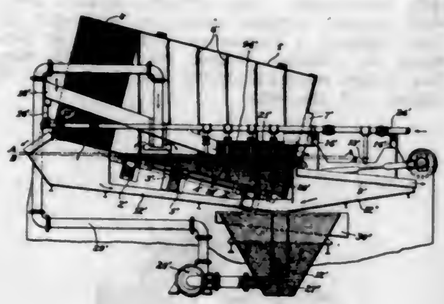
17. As a sub-combination in a packer for wells, a rotatable sleeve, and spring arms attached to the sleeve and bowed therefrom for engaging the walls of a well, said arms having their bowed portions disposed uprightly and at an angle and tending to rotate the sleeve when the latter is moved downwardly in a well.

16,671. LOCK HINGE FOR DOORS AND OTHER MOVABLE ELEMENTS. ALBERT F. WALTERS, Syracuse, N. Y. Filed Apr. 29, 1925. Serial No. 28,246. Original No. 1,480,647, dated Jan. 15, 1924, Serial No. 614,774, filed Jan. 25, 1923. 3 Claims. (Cl. 16—146.)

1. A locking hinge comprising a relatively fixed hinge section and a movable hinge section, in combination with a latch bar hinged at one end to the fixed section to swing vertically and horizontally and having its other end extended across and some distance beyond the hinge joint and provided with an offset slidable in a slot in the movable hinge section as the door is opened and closed, said slot having a downwardly extending branch into which the offset of the latch bar is adapted to drop when the door is opened to lock the door in said open position, and a rock shaft journaled on the movable hinge section and having one end provided with a cam for engaging said offset and tripping the latch from its locking position when the rock shaft is rotated in one direction, and a hand piece on the other end of the rock shaft for operating the same.



16,672. ELEVATOR. JOHN BERGSTEN, Redondo Beach, Calif., assignor, by mesne assignments, to Standard Machine Company, a Corporation. Filed Oct. 10, 1924. Serial No. 742,924. Original No. 1,434,673, dated Nov. 7, 1922, Serial No. 519,472, filed Dec. 2, 1921. 14 Claims. (Cl. 294—91.)

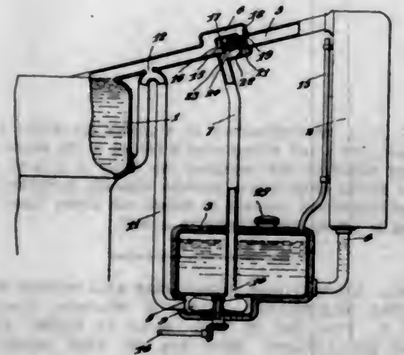


6. An elevator including, two work holding parts connected for one to swing horizontally with relation to the other between a position where the parts are open and a position where the parts are closed, means whereby the parts are automatically closed upon application of work thereto, and means other than the frictional resistance of the connection between the parts for holding the parts in both the open and closed positions.

16,673. ELECTROMAGNETIC APRON FEEDER. JOHN P. BETHKE, Milwaukee, Wis., assignor to Magnetic Manufacturing Co., Milwaukee, Wis. Filed Mar. 25, 1927. Serial No. 178,493. Original No. 1,531,372, dated Mar. 31, 1925, Serial No. 627,297, filed Mar. 24, 1923. 17 Claims. (Cl. 209—218.)

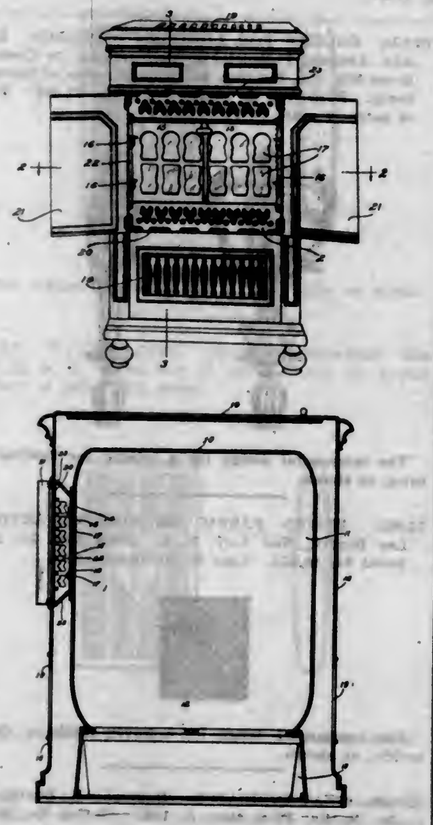
1. An apron feeder having an endless conveyor apron composed of a flexibly formed belt of substantially rigid sections of magnetizable material, in combination with a magnet, the field of which includes the delivery end of the conveyor.

16,674. METHOD AND APPARATUS FOR SEPARATING MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. THOMAS M. CHANCE, Philadelphia, Pa. Filed Mar. 15, 1926. Serial No. 94,969. Original No. 1,559,938, dated Nov. 3, 1925, Serial No. 573,471, filed July 7, 1922. 7 Claims. (Cl. 209—173.)



1. Apparatus for the separation of materials of different specific gravity comprising in combination a rotatable receptacle adapted to contain a fluid mass consisting of an agitated mixture of liquid and comminuted solids insoluble in said liquid; a fluid mass of said type in said receptacle; means for maintaining, by rotation of said receptacle and by the introduction of liquid under pressure, the fluid properties of said fluid mass said means comprising conduits extending into said receptacle and into said fluid mass, said conduits being connected to a source of supply of liquid under pressure, a partition extending into said fluid mass adapted to confine the movement of materials floating in the upper part of said fluid mass to a direction toward the region of discharge for said floating materials; means for introducing into said fluid mass the materials to be separated and means for removing said materials, after separation has been effected, from said fluid mass.

16,675. ATTACHMENT FOR VAULT DOORS. NOBLE Z. SMITH, Champaign, Ill., assignor to M. L. Canott and J. E. Hall, San Francisco, Calif. Filed Nov. 8, 1926. Serial No. 147,163. Original No. 1,514,866, dated Nov. 11, 1924, Serial No. 553,412, filed Apr. 17, 1922. 13 Claims. (Cl. 109—1.)

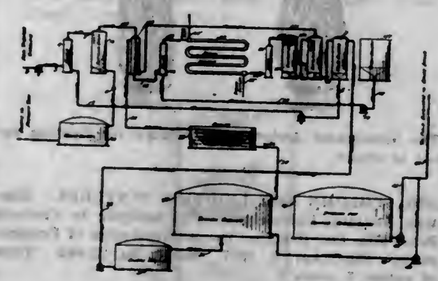


1. The combination with the mounted door of a vault and the door-jamb, of mechanism movable in and during the act of moving the door to its closed position, the same adapted to engage at one end a relatively immovable part during said act whereby to carry the other end of said mechanism between the door-jamb and an edge of the door for preventing entirely closing the latter.

16,676. COOLING SYSTEM. WELLINGTON W. MUIR, Lockport, N. Y. Filed Mar. 20, 1922. Serial No. 545,374. Original No. 1,346,331, dated July 13, 1920, Serial No. 311,009, filed July 15, 1919. 29 Claims. (Cl. 123—174.)

1. In a cooling system for internal combustion engines, a circuit for cooling fluid comprising a jacket, a radiator, normally acting as a condenser, means for maintaining an excess supply of cooling liquid, and means for delivering the fluid from the radiator beneath the surface of the liquid in said supply and thereby trapping and condensing the vapor which has passed through the radiator without being condensed.

16,677. HEATER. WILLIAM F. ALLEN, Nashville, Tenn. Filed May 18, 1927. Serial No. 192,457. Original No. 1,604,869, dated Oct. 26, 1926, Serial No. 85,231, filed Feb. 1, 1926. 14 Claims. (Cl. 126—67.)



1. A heater including an inner heating unit having a fuel feed opening and a transparent closure, an outer casing unit having an opening alined with the fuel feed opening, an opaque closure for said opening, and means provided respectively at the sides of the fuel feed closure and adjacent the top and bottom of the opening in the outer casing unit for concealing the remainder of the inner unit and the air-circulation spaces between the units when the outer casing closure is opened for the purpose of exposing the glow of the fire.

16,678. DRY-PIPE-VALVE ACCELERATING DEVICE. EMIL TYDEN, Hastings, Mich. Filed Apr. 25, 1927. Serial No. 186,534. Original No. 1,615,056, dated Jan. 18, 1927, Serial No. 659,334, filed Aug. 25, 1923. 18 Claims. (Cl. 169—22.)

1. In a dry pipe sprinkler system in combination with a dry pipe main valve constructed for exposing differential areas to the water and air pressure respectively at its opposite sides, and having for that purpose at the water inlet side a chamber in which the pressure is normally substantially atmospheric; a passage leading from the region of one of said pressures to said chamber; a valve controlling said passage; an expansible and collapsible device exposed to air pressure from the system reaching two different areas of the movable wall of said device through two ports affording unequal access to said areas; whereby change of air pressure in the system causes temporarily unequal pressures at said different areas of said movable wall; a casing in which said device is contained which is closed except as to its communication with the air pressure region of the system, and connections operated by the moving wall of said device for controlling said pressure-passage-controlling-valve, said connections comprising parts which are accessible exteriorly of said casing for manipulation at will for testing said device.

16,679. TREATMENT OF PETROLEUM PRODUCTS. JOHN C. BLACK, Destrehan, La., and WIRT D. RIAL and RAYMOND T. HOWES, Los Angeles County, Calif., assignors to Pan American Petroleum Company, Los Angeles, Calif., a Corporation of California. Filed Oct. 26, 1926. Serial No. 144,371. Original No. 1,592,329, dated July 13, 1926, Serial No. 84,024, filed June 1, 1925. 8 Claims. (Cl. 196—41.)

6. A process of removing gum-forming constituents from cracked gasoline which comprises heating a mixture of said gasoline and alkali solution to an elevated temperature and pressure and for a period of time sufficient to convert said gum-forming constituents and further purifying the thus treated gasoline by distillation to obtain a gasoline substantially free of gum-forming constituents.

DESIGNS

JULY 12, 1927.

73,018. COLUMN FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1927. Serial No. 21,440. Term of patent 7 years.

The ornamental design for a column for lighting fixtures, as shown.

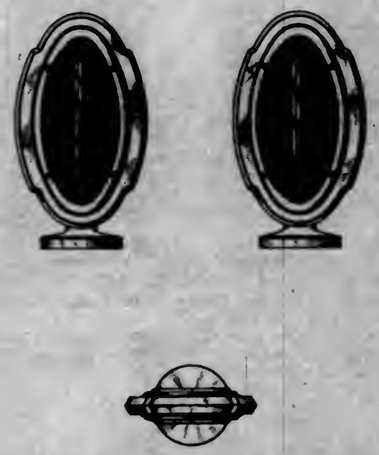
73,019. COLUMN FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1927. Serial No. 21,441. Term of patent 7 years.

The ornamental design for a column for lighting fixtures, as shown.

73,020. COLUMN FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1927. Serial No. 21,442. Term of patent 7 years.

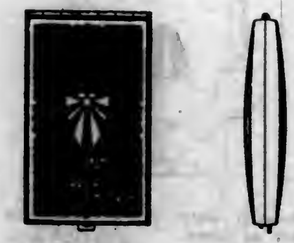
The ornamental design for a column for lighting fixtures, as shown.

73,021. COLUMN FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1927. Serial No. 21,443. Term of patent 7 years.



The ornamental design for a column for lighting fixtures, as shown.

73,022. WOVEN FABRIC OR SIMILAR ARTICLE. LEO BLUHM, New York, N. Y. Filed Mar. 17, 1926. Serial No. 16,969. Term of patent 3½ years.



The ornamental design for a woven fabric or similar article, as shown.

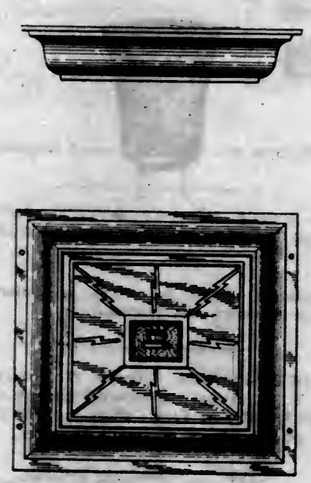
73,023. HEAT INDICATOR. HARRISON H. BOYCE, Jericho, N. Y. Filed Mar. 5, 1927. Serial No. 20,987. Term of patent 14 years.

The ornamental design for a heat indicator, substantially as shown.

73,024. VANITY CASE. RUBY T. BREWSTER, New York, N. Y. Filed May 11, 1927. Serial No. 21,937. Term of patent 3½ years.

The ornamental design for a vanity case, as shown.

73,025. VANITY CASE. RUBY T. BREWSTER, New York, N. Y. Filed May 11, 1927. Serial No. 21,938. Term of patent 3½ years.



The ornamental design for a vanity case, as shown.

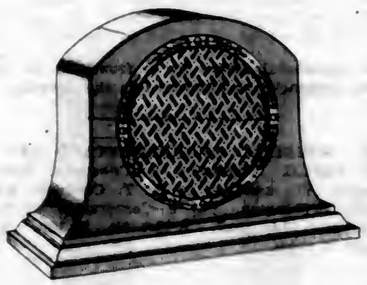
73,026. RADIATOR-CAP ORNAMENT. JOSEPH E. CORKER, Fort Lee, N. J., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 25, 1926. Serial No. 18,184. Term of patent 14 years.

The ornamental design for a radiator cap ornament, as shown.

73,027. FRONT FOR AN ELECTRICAL FLATIRON RECEPTACLE. PERCY C. CUNNINGHAM, Los Angeles, Calif. Filed Jan. 26, 1926. Serial No. 16,276. Term of patent 14 years.

The ornamental design for a front for an electrical flatiron receptacle, as illustrated in the drawing.

73,028. COMBINED SMOKER'S STAND AND TILTING TABLE. FREDERICK B. CUSHMAN, North Bennington, Vt., assignor to H. T. Cushman Mfg. Co., North Bennington, Vt., a Corporation of Vermont. Filed Mar. 14, 1927. Serial No. 21,129. Term of patent 7 years.



The ornamental design for a combined smoker's stand and tilting table substantially as shown.

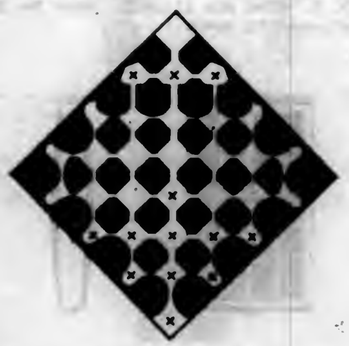
73,029. CUP OR SIMILAR ARTICLE. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,971. Term of patent 14 years.

The ornamental design for a cup or similar article substantially as shown and described.

73,030. LOUD SPEAKER. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 27, 1927. Serial No. 20,517. Term of patent 14 years.

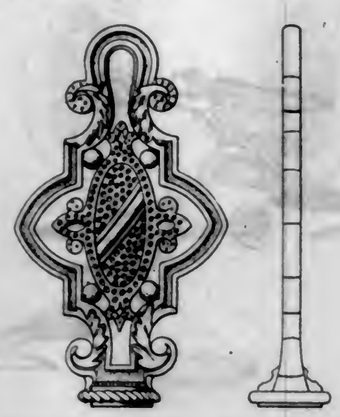
The ornamental design for a loud speaker substantially as shown.

73,031. TUMBLER. THOMAS CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio. Filed Apr. 23, 1926. Serial No. 17,415. Term of patent 14 years.



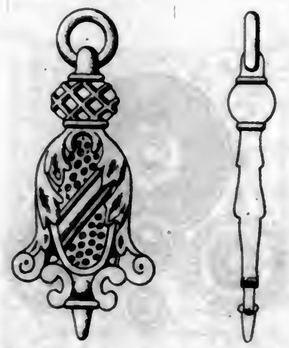
The ornamental design for a tumbler, as shown.

73,032. COMBINATION SALT AND PEPPER SHAKER. THOMAS CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a Partnership. Filed Apr. 15, 1927. Serial No. 21,608. Term of patent 14 years.



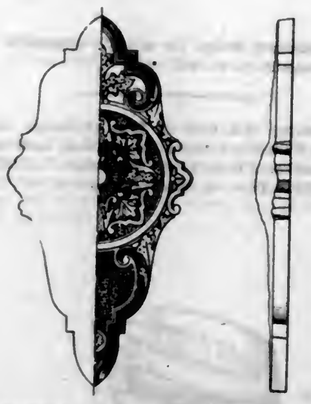
The ornamental design for a combination salt and pepper shaker, as shown.

73,033. GAME BOARD. HENRY HIMMELMAN, Winnipeg, Manitoba, Canada. Filed Oct. 17, 1922, Serial No. 4,009, and in Canada Aug. 10, 1922. Term of patent 3½ years.



The ornamental design for a game board as shown.

73,034. LIGHTING-FIXTURE LOOP OR ANALOGOUS ARTICLE. JOHN F. HURD, Brooklyn, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed May 14, 1927. Serial No. 21,977. Term of patent 3½ years.



The ornamental design for a lighting fixture loop or analogous article substantially as shown.

73,035. LIGHTING-FIXTURE TASSEL OR ANALOGOUS ARTICLE. JOHN F. HURD, Brooklyn, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed May 14, 1927. Serial No. 21,978. Term of patent 3½ years.

The ornamental design for a lighting fixture tassel or analogous article substantially as shown.

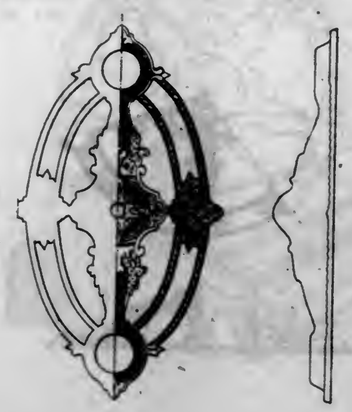
73,036. BACKPLATE FOR LIGHTING FIXTURES. JOHN F. HURD, Brooklyn, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed May 14, 1927. Serial No. 21,979. Term of patent 3½ years.

The ornamental design for a backplate for lighting fixtures substantially as shown and described.

73,037. LIGHTING-FIXTURE CANOPY OR ANALOGOUS ARTICLE. JOHN F. HURD, Brooklyn, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed May 14, 1927. Serial No. 21,980. Term of patent 3½ years.

The ornamental design for a lighting fixture canopy or analogous article substantially as shown.

73,038. BAR AND SHELF BRACKET. ROY E. JORDAN, Newark, N. J., assignor to The Mosaic Tile Company, a Corporation of Ohio. Filed Mar. 4, 1924, Serial No. 8,827. Term of patent 14 years.



The ornamental design for a bar and shelf bracket, as shown.

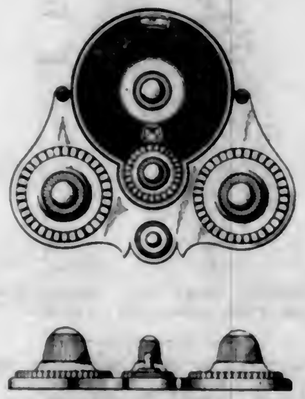
73,039. STUDY CHAIR. EDWIN O. KLEMM, Saginaw, Mich. Filed July 26, 1926. Serial No. 18,487. Term of patent 14 years.

The ornamental design for a study chair, as shown.

73,040. LIGHTING-FIXTURE PLATE. JOHN KNIERIEM, Glendale, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed May 14, 1927. Serial No. 21,986. Term of patent 3½ years.

The ornamental design for a lighting fixture plate substantially as shown and described.

73,041. LIGHTING-FIXTURE PLATE. JOHN KNIERIEM, Glendale, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed May 14, 1927. Serial No. 21,987. Term of patent 3½ years.

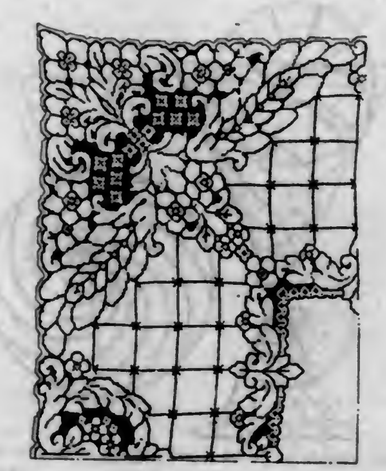


The ornamental design for a lighting fixture plate substantially as shown and described.

73,042. LIGHTING-FIXTURE PLATE. JOHN KNIERIEM, Glendale, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed May 14, 1927. Serial No. 21,988. Term of patent 3½ years.

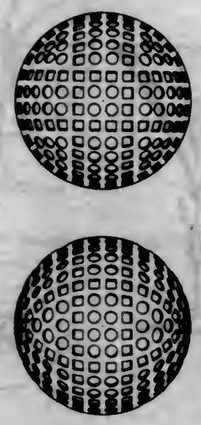
The ornamental design for a lighting fixture plate substantially as shown and described.

73,043. RADIO APPARATUS MULTIPLE DIAL. FERDINAND KULHAWY, Guttenberg, N. J. Filed Mar. 18, 1926. Serial No. 16,965. Term of patent 3½ years.



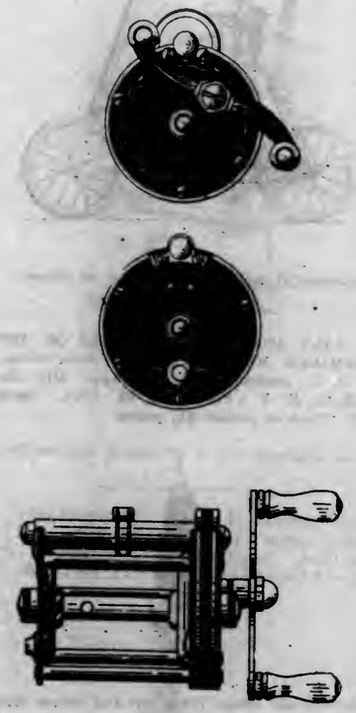
The ornamental design for a radio apparatus multiple dial substantially as shown.

73,044. BOOT. CHESTER B. LORD, Endicott, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 20,995. Term of patent 3½ years.



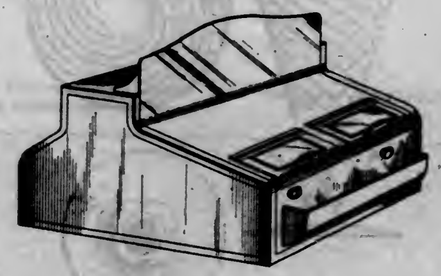
The ornamental design for a boot, substantially as shown.

73,045. EMBROIDERED CLOTH TABLE COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Apr. 29, 1927. Serial No. 21,797. Term of patent 3½ years.



The ornamental design for an embroidered cloth table cover or the like substantially as shown and described.

73,046. GOLF BALL. ALBERT ERNEST PENFOLD, Birmingham, England, assignor to The Dunlop Rubber Company Limited, Fort Dunlop, Birmingham, England, a Corporation of Great Britain. Filed Jan. 29, 1927. Serial No. 20,527, and in Great Britain Nov. 3, 1925. Term of patent 14 years.



The ornamental design for a golf ball as shown.

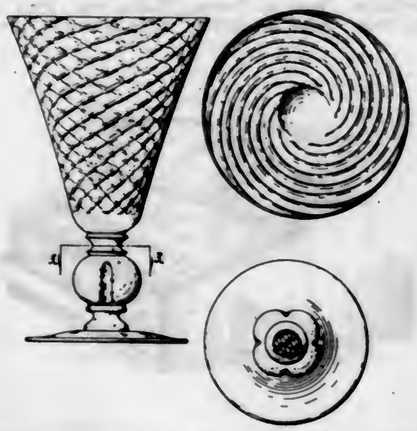
73,047. FISHING REEL. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 21, 1927. Serial No. 21,234. Term of patent 14 years.

The ornamental design for a fishing reel, as shown.

73,048. COMBINED BEVERAGE COOLER AND DISPENSER. MARK A. POWERS, Dallas, Tex. Filed Apr. 29, 1927. Serial No. 21,787. Term of patent 7 years.

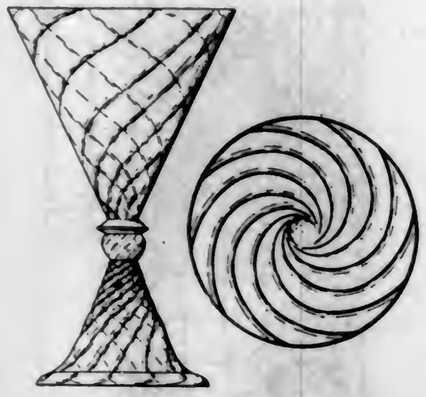
The ornamental design for a combined beverage cooler and dispenser, as shown.

73,049. BICYCLE. MAYO E. ROE, Elyria, Ohio. Filed Jan. 2, 1926. Serial No. 15,944. Term of patent 7 years.



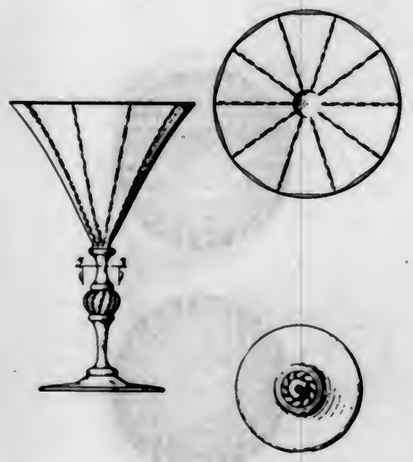
The ornamental design for a bicycle, as shown.

73,050. SALT AND PEPPER SHAKER OR ARTICLE OF SIMILAR NATURE. HARRY SCHATTMAN, New York, N. Y., assignor to A. L. Wagner Mfg. Co. Inc., New York, N. Y. Filed May 21, 1927. Serial No. 22,122. Term of patent 3½ years.



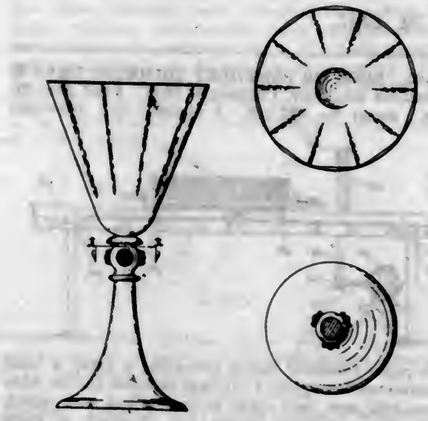
The ornamental design for a salt and pepper shaker, or article of similar nature, as shown.

73,051. GOBLET OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Mar. 14, 1927. Serial No. 21,124. Term of patent 7 years.



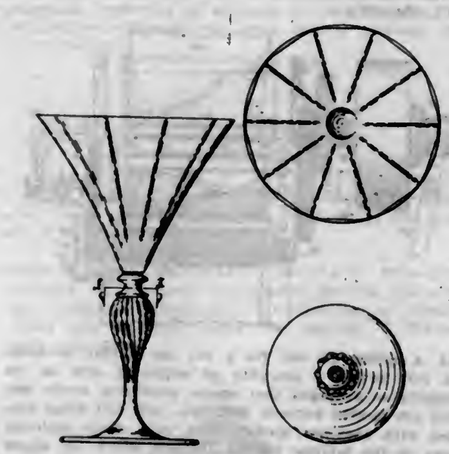
The ornamental design for a goblet or similar article as shown.

73,052. GOBLET OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Mar. 14, 1927. Serial No. 21,125. Term of patent 7 years.



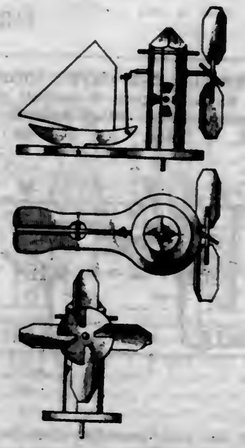
The ornamental design for a goblet or similar article, as shown.

73,053. GOBLET OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Mar. 14, 1927. Serial No. 21,126. Term of patent 7 years.



The ornamental design for a goblet or similar article, as shown.

73,054. GOBLET OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Mar. 14, 1927. Serial No. 21,127. Term of patent 7 years.



The ornamental design for a goblet or similar article, as shown.

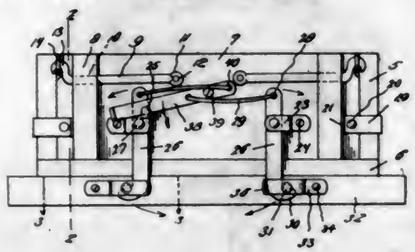
73,055. GOBLET OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Mar. 14, 1927. Serial No. 21,128. Term of patent 7 years.

The ornamental design for a goblet or similar article as shown.

73,056. TOY WINDMILL. WALTER B. SCOTT, Marblehead, Mass. Filed June 15, 1925. Serial No. 13,786. Term of patent 14 years.

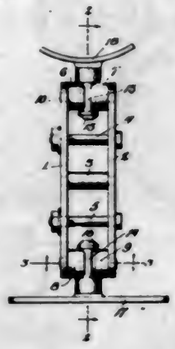
The ornamental design for a toy windmill, as shown.

73,057. CHANDELIER. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed May 14, 1927. Serial No. 21,975. Term of patent 7 years.



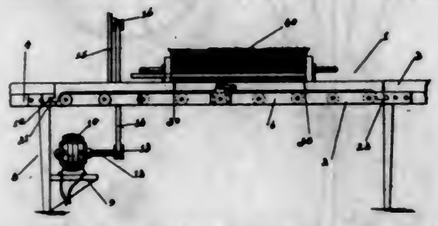
The ornamental design for a chandelier substantially as shown and described.

PATENTS



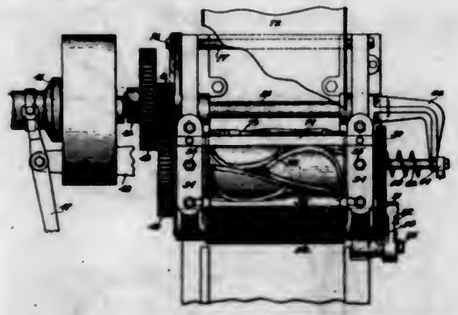
GRANTED JULY 12, 1927.

1,635,163. VEHICLE END GATE. CHARLES F. ALLISON, Wells, Kans., assignor of one-half to Harrison B. Peatling, Salina, Kans. Filed June 7, 1926. Serial No. 114,213. 1 Claim. (Cl. 296—50.)



A device of the class described including, in combination, a wagon body comprising a pair of side boards and a bolster, an end gate, means for engaging the end gate with the side boards, a pair of brackets on the end gate, said brackets being disposed at the same level one to each side of the center of the end gate, one of the brackets being provided with a lip projecting outwardly and upwardly, a pair of levers pivoted intermediate their ends, one to each bracket, and having their lower ends terminating in outwardly disposed hooks, pins on the bolster for engagement with the hooks, links engaged with the upper ends of the levers, a crank pivoted on the end gate intermediate its ends above the level of the brackets, said links being engaged with said crank, one on each side of the pivot thereof, one end of the crank being adapted to engage with the lip to prevent the swinging of the levers when the hooked ends thereof are engaged with the pins on the bolster.

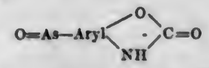
1,635,164. UNIVERSAL JOINT. NOAH W. AMDUR, New Rochelle, N. Y., assignor to Sun-Ray Lighting Products, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 18, 1924. Serial No. 750,688. 3 Claims. (Cl. 287—14.)



1. A universal joint, which comprises a frame, a pair of segmental bearing blocks rotatably mounted within the frame adjacent one end thereof for rotation around an axis at right angles to the longitudinal axis of the frame, and a journal embraced by said blocks, said journal element adapted for rotation around an axis at right angles to the axis of the blocks.

1,635,165. BOOK OR PAMPHLET TRIMMING DEVICE. CORNELIUS ADAMSKY, Cincinnati, Ohio. Filed Jan. 21, 1924. Serial No. 687,525. 4 Claims. (Cl. 164—35.)

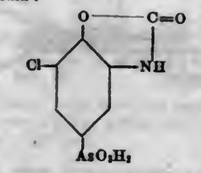
1. A paper trimming device embracing a table, a band saw connected therewith, a carriage operable on the table to pass said saw, said table having rollers over which said carriage operates, means for clamping a stack of paper on said table, means for preventing the buckling of said stack, said means consisting of a rod mounted over said stack.



1,635,166. CUTTING MACHINE. WILLIAM H. ALBEE, Marlboro, Mass., assignor to B. A. Corbin & Son Company, Marlboro, Mass., a Corporation of Massachusetts. Filed Feb. 5, 1923. Serial No. 616,896. 12 Claims. (Cl. 164—28.)

11. A cutting-die roll for a box toe cutting machine, said roll having a plurality of adjoining dies on its periphery so arranged that spaces producing waste material are located between said dies, said roll being provided with openings leading from said waste material spaces to the interior thereof through which the waste material may be discharged.

1,635,167. BENZOXAZOLON ARSINE OXIDES. LUDWIG BENDA, Mainkur, near Frankfort-on-the-Main, and OTTO SIEVERS, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, a Corporation of Germany. Filed June 19, 1925, Serial No. 38,328, and in Germany June 25, 1924. 3 Claims. (Cl. 260—14.)



1. As new substances benzoxazolon arsine oxides of the general formula:

forming white powders insoluble or sparingly soluble in water, alcohol sodium carbonate and sodium acetate solution, readily soluble in a hot sodium carbonate solution and also in a cold caustic soda solution and being substantially identical with the compounds obtainable by gently reducing benzoxazolon arsonic acids.

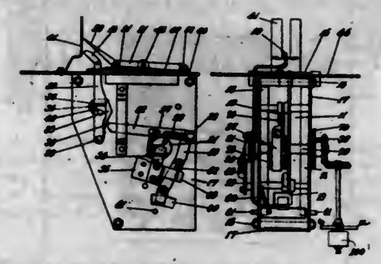
1,635,168. BENZOXAZOLON ARSONIC ACIDS. LUDWIG BENDA, Mainkur, near Frankfort-on-the-Main, and OTTO SIEVERS, Fechenheim, near Frankfort-on-the Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, a Corporation of Germany. Filed July 27, 1925, Serial No. 46,500, and in Germany Aug. 11, 1924. 2 Claims. (Cl. 260—14.)

2. As new product the 7-chlorobenzoxazolon-5-arsonic acid of the formula:

forming colorless crystals, easily soluble in alkalies, sparingly soluble in hot water, insoluble in cold water and in the customary organic solvents.

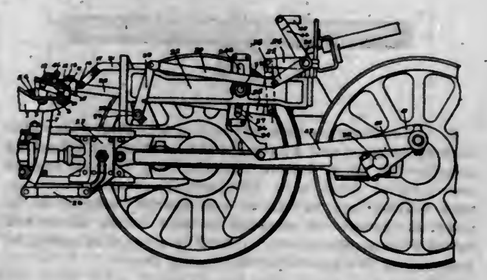
1,635,169. STABLE AND STERILIZABLE SOLUTIONS CONTAINING ORGANIC PHOSPHORUS AND COMPLEX AURO COMPOUNDS. LOUIS BENDA, Mainkur, near Frankfort-on-the-Main, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, a Corporation of Germany. Filed June 18, 1926. Serial No. 116,953, and in Germany June 22, 1925. 3 Claims. (Cl. 260—11.)

1. A process for producing stable and sterilizable solutions, containing organic phosphorus and complex auro compounds consisting in allowing to react soultions of dialkylaminoarylphosphinous salts, having probably the general formula:



in which formula X means an alkyl radical, Y an alkali metal, on auro-sodium thiosulfate solutions in the presence of an alkali thiosulfate.

1,635,170. SWITCH SOCKET. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1922. Serial No. 540,195. 9 Claims. (Cl. 173—355.)



1. A switch socket construction comprising a shell receptacle contact, switch mechanism, a transversely extending push-bar for operating said switch mechanism, and a screw for limiting the movement of said push-bar, the head of said screw being positioned to form a center receptacle contact.

1,635,171. MACHINE FOR ISSUING PAPER AND PRINTED MATTER IN BOOKLET, CARD, TICKET, OR OTHER FORMS. JESSE SAMUEL BERNSTEIN and LEONARD HULBERT, London, England; said Hulbert assignor to Automaticket Limited, London, England, a British Company. Filed Apr. 27, 1923, Serial No. 635,165, and in Great Britain Dec. 4, 1922. 17 Claims. (Cl. 211—33.)

1. In a machine for issuing tickets from an apertured strip thereof, the combination of a delivery outlet, a power motor, a shaft driven thereby, a rotary cam on the said shaft, a spring controlled member operated by the said rotary cam, motor control means connected with the cam and the member, means for holding the member against operation when an end portion of the strip is in the delivery outlet and automatically operated means for rendering the member inoperative when the apertured strip is exhausted.

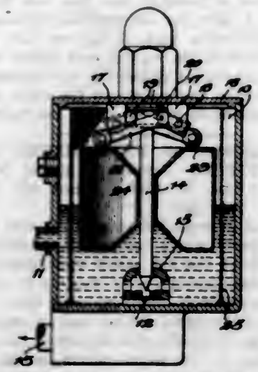
1,635,172. ENGINE VALVE GEAR. JOHN B. BROWN, Portland, Oreg. Filed Dec. 5, 1921. Serial No. 519,889. 6 Claims. (Cl. 121—163.)

3. In a valve gear of the radial type for operating the valves of a steam locomotive, a combining lever for determining the valve lead, a movable fulcrum for said lever, a valve rod actuated by the lever and directly connected thereto, a guide for constraining movement of the fulcrum in parallelism with the valve rod, means for varying the cut-off of the valves, and means cooperating with said last mentioned means for continuously varying the distance between the guide and the valve rod proportionate to variations in the cut off of the valves.

1,635,173. PROCESS OF REPRODUCING PICTURES OF ART SUBJECTS. GEORGE E. BUZZA, Minneapolis, Minn. Filed Dec. 7, 1925. Serial No. 73,935. 5 Claims. (Cl. 101—129.)

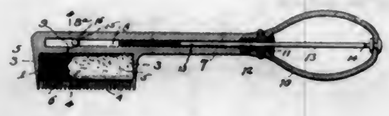
1. The process of reproducing pictures and representations of art objects which consists in forming a multiplicity of proofs of the art object upon sheets of paper wherein each proof has the same relation to the edges of said sheets, successively applying said proof sheets to stencil sheets of the same size as and in matching relation with said proof sheets, and, by use of the reproduced marks appearing on the proof sheets as the same are related to the colors of the art object cutting out from said stencil sheet portions thereof corresponding to distinct colors to be applied, which cut-out portions have

the same relation to the margins of the stencil sheet as do the corresponding portions of the proof, and thereafter successively applying all of said stencils to a reproduction sheet of the same size as the proof sheets and stencil



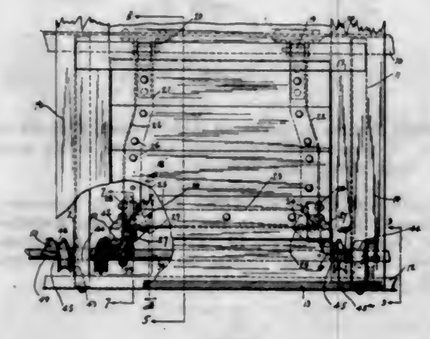
sheets so that the margins of the stencils and reproduction sheets coincide, and hand brushing over the stencil sheet and upon the reproduction sheet the appropriate color for each said stencil sheet.

1,635,174. THERMOMETER OR THERMOMETER-TUBE SUPPORT. JOHN B. CARROLL, Oak Park, Ill. Filed Oct. 20, 1924, Serial No. 744,667. Renewed May 13, 1927. 4 Claims. (Cl. 73—52.)



1. A thermometer-tube support comprising a metallic backing member and a facing sheet, said metallic backing member having a flexible tube-engaging loop formed in one integral piece with said metallic backing member, said flexible loop having an end portion adapted to be inserted through an opening in said facing sheet and folded over a thermometer tube to be secured in operative position on the outside of the facing sheet.

1,635,175. LIQUID-HEAD-MAINTAINING DEVICE. HOWARD R. CORWIN, Newark, N. J. Filed Aug. 27, 1925. Serial No. 52,815. 3 Claims. (Cl. 137—68.)



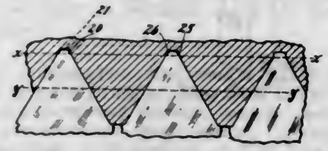
1. In a liquid head maintaining device, a chamber having an inlet and an outlet, a needle valve controlling the outlet, pivotally mounted weighted arms in the top of the supply chamber, means operatively associating the arms and needle valve to control the valve by the operation of the arms and a liquid controlled float movable longitudinally of the needle valve and engaging the arms to control the discharge of liquid from the supply chamber.

1,635,176. APPLICATOR. FRANK C. DORMENT, Wellington, Ohio. Filed July 18, 1924. Serial No. 726,782. 12 Claims. (Cl. 132—13.)

1. An applicator comprising a body portion having laterally projecting parallel spaced webs forming a channel between them, said webs having closely spaced comb teeth formed in the outer edges thereof and terminating short of the bases of the webs, and a liquid retaining body secured in said channel with the major portion thereof above the comb teeth and with its outer edge lying between the teeth of the two combs.

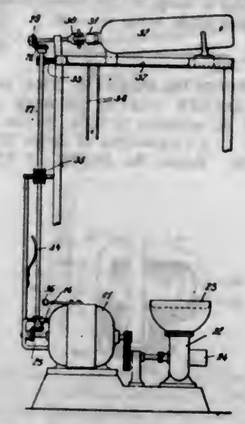
1,635,177. CAR-DOOR-OPERATING MECHANISM. GEORGE B. DOREY, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1923. Serial No. 658,695. 15 Claims. (Cl. 105—300.)

1. In a dump car, the combination with a door; of a sheave having a guideway provided with helical grooves of varying diameter, the largest of said grooves being disposed beyond the side of the door and the smallest of such grooves being disposed in the plane of movement of the door; and a flexible connection between the door and sheave adapted to wind in the said guideway.



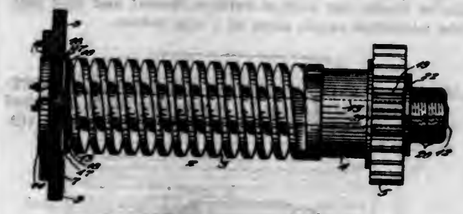
1,635,178. LINED VENT FOR UNLINED OR PARTLY-LINED GARMENTS AND METHOD OF MAKING IT. RICHARD A. FEISS, Cleveland, Ohio, assignor to The Joseph & Feiss Co., Cleveland, Ohio. Filed Feb. 10, 1923. Serial No. 618,345. 11 Claims. (Cl. 2—93.)

2. A garment provided with a pair of partway seamed half backs, one of the seam-bordering portions of the half back being partially severed so as to be adapted to be flapped across said seam line, a folded lining piece in its entirety juxtaposed to one side of said flapped-over strip, and felling stitches for fastening together juxtaposed



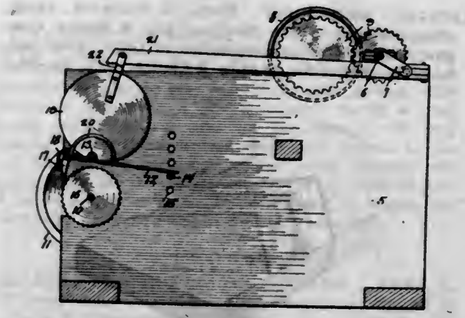
edges of said lining piece and the edge of said flapped strip and for securing the upper part of the composite flap to the same half back.

1,635,179. THREADING TOOL. RALPH E. FLANDERS, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed June 13, 1925. Serial No. 36,780. 5 Claims. (Cl. 10—141.)



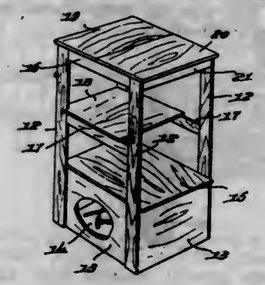
2. A thread cutting tool having its apex formed at a more acute angle than the flanks of adjacent threads to be cut and extending beyond the extreme diameter of said thread.

1,635,180. FIRE-FIGHTING SYSTEM. ISAAC GARZON FORERO, Bogota, Colombia. Filed Aug. 24, 1923. Serial No. 659,123. 6 Claims. (Cl. 169—11.)



1. In a fire-fighting system, a fire-extinguishing device comprising in combination a motor, a device driven therefrom adapted to reduce the percent of oxygen in the atmosphere surrounding the fire by removing oxygen therefrom, a valve tank for compressed non-oxidizing gas, means operated by said motor for actuating the discharge valve of the tank, and conducting means from said discharge to said atmosphere.

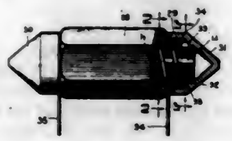
1,635,181. GILL SCREW. WILLIS HOLDSWORTH, Providence, R. I. Filed Sept. 3, 1925. Serial No. 54,278. 7 Claims. (Cl. 19—129.)



1. A gill-screw for gill-drawing frames provided with an axial bore extending throughout its length, a cam at the end of the screw, and a bolt extending through the bore in the screw and having means at its projecting end for securing it to hold the cam in place on the screw.

1,635,182. MECHANICAL MOVEMENT. ARMOND D. HUDSON, Keyapaha, and EDWARD L. SMITH, Millboro, S. Dak., assignors of one-fourth to Worley A. Tibbles, Millboro, S. Dak., and one-fourth to Benjamin B. Butts, Winner, S. Dak. Filed June 23, 1926, Serial No. 118,040. Renewed May 31, 1927. 8 Claims. (Cl. 74—54.)

8. In a power transmission mechanism, a lever pivoted between its ends for vertical rocking movement and having side guide rails, a heavy wheel mounted for rolling movement on and entirely supported by said lever between said guide rails, means to roll said wheel back and forth past the pivot of the lever, and means to transmit movement from the lever to a driven element.

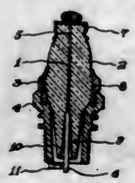


1,635,183. COMBINED STOOL, STEPS, AND TOOL BOX. ARTHUR A. JEANNOTTE, Nashua, N. H. Filed July 12, 1926. Serial No. 121,794. 2 Claims. (Cl. 155—42.)

1. An article of furniture comprising a frame provided with a horizontal top at its highest portion accessible from all sides as a seat member, a platform below said

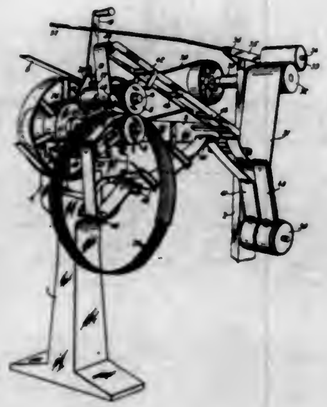
top and terminating short of the front portion of the frame, said top having a fixed portion and a hinged portion, the hinged portion being movable onto said fixed portion to render the bottom surface thereof and said platform accessible as the steps of a step ladder.

1,635,184. MANUFACTURE OF ELECTRICAL RESISTANCE UNITS. LESTER L. JONES, Oradell, N. J. Filed Oct. 27, 1924. Serial No. 746,026. 12 Claims. (Cl. 201—75.)



5. A resistance unit comprising a cylindrical base having a hard and semi-permeable surface, a homogeneous layer of graphite intimately united with the surface of the base, the said layer having a helical groove cut thereinto to produce a helical resistance path of predetermined value.

1,635,185. BELT JOINT. ELMER G. KIMMICH, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 1, 1925. Serial No. 59,845. 9 Claims. (Cl. 24—38.)

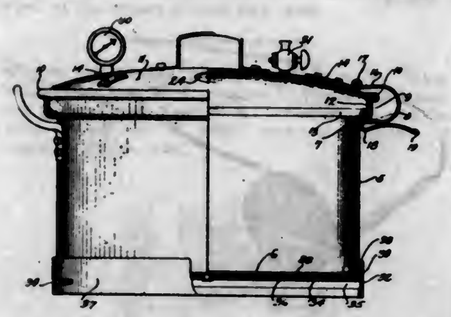


1. The method of joining laminated bands which comprises cutting the ends of the band to expose layers thereof, overlapping the ends and interconnecting one layer of each end only.

1,635,186. SPARK PLUG. JESSE T. LITTLETON, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Original application filed Apr. 25, 1921, Serial No. 464,143. Divided and this application filed Feb. 28, 1923. Serial No. 621,767. 4 Claims. (Cl. 123—169.)

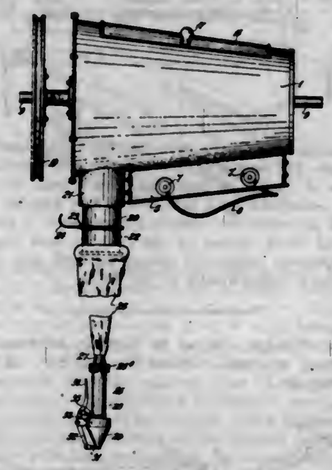
1. A spark plug comprising a glass core and an electrode composed of a plurality of axial sections of different materials, one of which is of a material having a low coefficient of expansion, and is sealed to the core, and the other of which is of material resistant to destruction by arcing and is contained within, but not sealed to, the core.

1,635,187. APPARATUS FOR COVERING ANNULAR RINGS. HECTOR V. LOUGH, Hartford, Conn., and GUSTAVE B. MIX, Detroit, Mich., assignors to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed May 25, 1923. Serial No. 641,373. 15 Claims. (Cl. 154—9.)



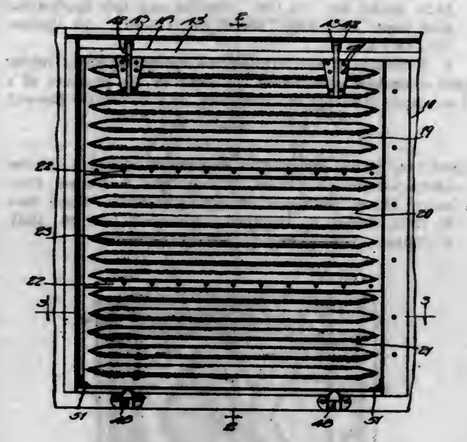
1. A machine for covering bead rings with rubber composition comprising, in combination, a driven grooved roll, a second and cooperating grooved roll located above the first, the bight between said rolls being accessible from one side thereof for the introduction or removal of rings, means for leading strips of vulcanizable rubber composition between the grooved rolls including two sets of guiding devices, said sets of guiding devices directing the strips convergently to the bight between the grooved rolls, and one of said sets of guiding devices including members deflecting a strip in its travel from contacting with a plurality of rings being covered.

1,635,188. METHOD OF FORMING THE BODY MEMBER OF A SAFETY CATCH. EUGENE MOSEHOUSE, Providence, R. I., assignor to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 26, 1925. Serial No. 18,573. 3 Claims. (Cl. 29—160.6.)



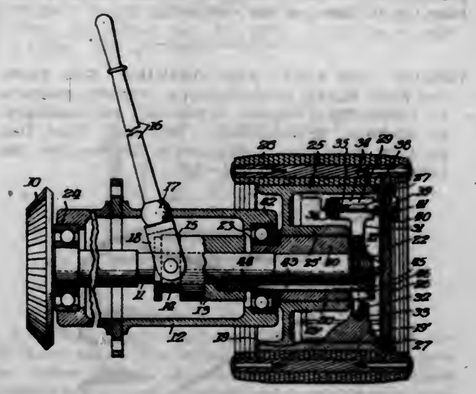
1. An improved method of forming a body member for safety catches, which consists in swaging the same from sheet stock to provide a pair of ear members connected by a shank to a base portion and having a rib on each shank portion, and bending the ears and shanks upward and simultaneously stretching the base portion to separate the ribs whereby the lower ends of said ribs serve to enlarge the area of the supporting base of the body.

1,635,189. COOKING UTENSIL. ELMER P. MCCLURE, Western Springs, Ill., assignor to Aluminum Products Company, a Corporation of Illinois. Filed Jan. 28, 1926. Serial No. 84,271. 3 Claims. (Cl. 53—1.)



1. A clamp for a cooker comprising a clamping member of resilient material having hinge means at one end, a cooperating hinge member therefor secured to the cover of said cooker, the other end of said clamping member outturned to form a handle, the intermediate part having a bight formed therein to engage beneath an outturned portion of the cooker to yieldingly clamp the cover and cooker together.

1,635,190. APPARATUS FOR DECORATING CHOCOLATES, CONFECTIONERY, AND THE LIKE. FRANCIS JOSEPH MICHALLAT, Norwich, England, assignor, by mesne assignments, to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Nov. 7, 1924, Serial No. 748,389, and in Great Britain Dec. 15, 1923. 9 Claims. (Cl. 107—27.)

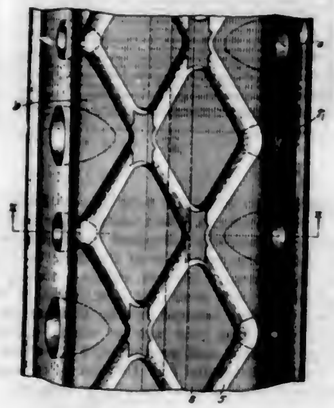


6. Apparatus for decorating confectionery comprising a container for decorating substance disposed with its axis horizontal or substantially horizontal and having a downwardly inclined base, said container having an outlet adjacent its lowest part to which the substance is led by said inclined base, flexible discharge bag applied to said outlet, a revoluble perforated baffle within the container in advance of the outlet, means for providing access to the container and to both sides of the perforated baffle, a discharge nozzle applied to the outlet end of the bag, a valve in said nozzle and manipulative means carried by the nozzle for controlling said valve.

1,635,191. SHEET-METAL CAR DOOR. WALTER P. MURPHY, New York, N. Y. Filed May 8, 1920, Serial No. 379,807. Renewed Feb. 27, 1925. 3 Claims. (Cl. 189—46.)

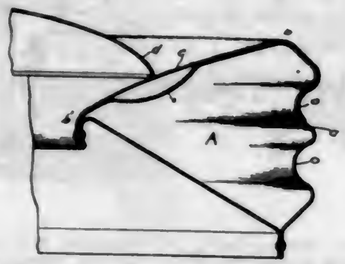
1. In combination with the body of a railway box car having a door opening, a sheet metal door formed with substantially horizontally disposed corrugations which terminate within the rear edge of the door leaving a flat margin at this place, a closure member having a rearwardly projecting web near the rear edge of the door opening, and a Z-bar secured to the flat margin at the rear edge of the door, one web of which projects outwardly from the door and another web of which is bent so as to project inwardly and forwardly to engage the rearwardly projecting web of the closure member.

1,635,192. FRICTION-CLUTCH PULLEY. ALOIS L. PREIMESBERGER, Menasha, Wis., assignor of one-half to Frank E. Sensenbrenner, Menasha, Wis. Filed Oct. 17, 1924. Serial No. 744,220. 11 Claims. (Cl. 192—78.)



1. In a friction clutch, the combination of a normally contracted divided ring having inwardly converging ends, a split wedge block disposed between said ends, an adjusting member in said block having tapered wedge members in both ends for uniformly expanding the same throughout its length, and means for moving said block substantially radially of said ring to expand said ring.

1,635,193. METHOD OF ACCELERATING THE VULCANIZATION OF RUBBER AND PRODUCT THEREOF. LOBIN B. SEBRELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Apr. 4, 1924, Serial No. 704,159. Divided and this application filed Sept. 16, 1926. Serial No. 135,992. 10 Claims. (Cl. 18—53.)

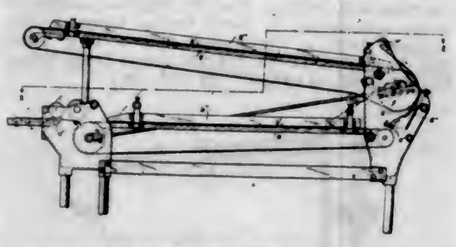


1. A method of accelerating the vulcanization of rubber that comprises vulcanizing the same in the presence of a 1-mercapto dimethyl bensothiazole, or a derivative thereof.

1,635,194. CUSHION TIRE. WALTER E. SHIVELY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 8, 1923, Serial No. 673,508. Renewed Jan. 25, 1927. 6 Claims. (Cl. 152—1.)

3. A cushion tire comprising a metal base band, and a cushion body vulcanized to said base band and having a continuous, annular internal chamber and a substantially flat unitary tread surface supported from the base band by divergent side walls, each of the side walls having a plurality of recesses extending laterally inwardly less than the thickness of the side wall.

1,635,195. GAS VALVE FOR AIRSHIPS. KARL STAHL and KARL SILLER, Friedrichshafen, Germany, assignors to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Dec. 10, 1924, Serial No. 754,974, and in Germany Dec. 24, 1923. 4 Claims. (Cl. 251—167.)



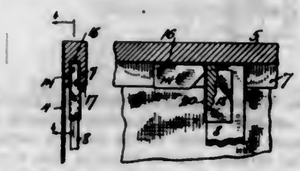
1. A gas valve comprising a valve seat and a cover disc, said valve seat comprising a hollow ring and having a membrane stretched over it.

1,635,196. CORD TIRE FABRIC. SAMUEL A. STERN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 19, 1925. Serial No. 70,095. 4 Claims. (Cl. 154—2.)

1. That step in the fabrication and processing of cord tire fabric prior to the bias cutting operation which comprises weaving in substantially one per cent more cord in the selvage than the body portion of the fabric.

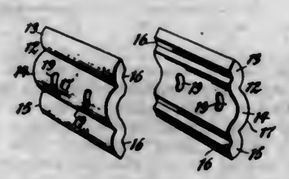
1,635,197. PAPER DEFLECTOR. LESLEY R. TUFTS, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 22, 1924. Serial No. 757,349. 8 Claims. (Cl. 271—38.)

1. In apparatus of the class described, the combination with means for conveying and reversing the arrangement of sheets of paper, of upper and lower sets of resilient members associated with said means and adapted to bear upon and maintain the relative arrangement of the sheets throughout their course of reversal in said apparatus, and independent tensioning means for both sets of resilient members, substantially as set forth.



1,635,198. TRUCK. GILES M. TURNER, Milwaukee, Wis. Filed May 7, 1923. Serial No. 637,229. 2 Claims. (Cl. 280—46.)

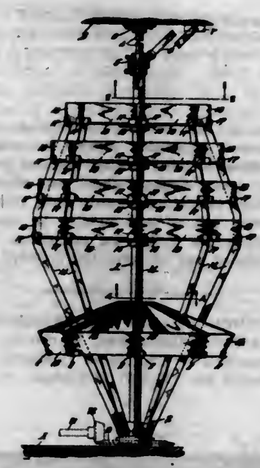
1. In a truck construction of the class described, a truck body, a coupling tongue secured to the forward end of said body, said coupling tongue comprising a pair of plates rigidly secured together throughout a portion of their length and bent to form an inclined bearing surface, said plates being divided throughout the remainder



of their length to form an angular portion adapted to be secured to the truck body, and a wheeled jack truck, said jack truck being formed with means for pivotally engaging the bearing surface on the said tongue, said engaging bearing surfaces being arranged wholly forward of the centers of the wheels of said jack truck.

1,635,199. FOLDING SCREEN. WESLEY L. WADSWORTH, Brooklyn, N. Y., assignor to Wadsworth Mounting Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 2, 1923. Serial No. 672,276. 1 Claim. (Cl. 40—125.)

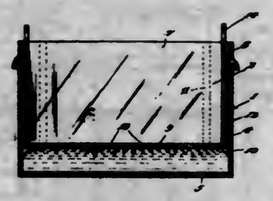
A collapsible screen comprising a sheet of pliable material and a collapsible frame therefor, including strips attached to the sheet and spaced in parallel relation, said strips having longitudinal grooves in their opposing edges, a spreader adapted to lie partially in the groove of one of said strips and having one end hinged in said groove by means of a pliable member having connected sections, one of said sections being glued to the bottom and side surfaces of the groove of one of said strips, and the other section having walls glued to the edge and side surfaces of said spreader.



1,635,200. WIRE CONNECTER. JOHN ZILLIOX, Orchard Park, N. Y., assignor to Park Metalware Co. Inc., Orchard Park, N. Y. Filed July 19, 1922. Serial No. 576,081. 1 Claim. (Cl. 173—263.)

A wire connecter comprising two plates each of which is bent from a piece of sheet metal to form three parallel corrugations having convex outer sides and concave inner sides, the central corrugation of each plate being wider than the end corrugations on opposite sides thereof and each central corrugation having an opening, said plates being assembled with the concave sides of their end corrugations facing each other and adapted to engage opposite sides of the wires to be gripped, and a clamping bolt passing through the openings of the central corrugations and bearing with its head against the convex side of the central corrugation of one plate and with its nut against the convex side of the central corrugation of the other plate.

1,635,201. DISPLAY RACK. CLINTON L. BELL, Decatur, and MORRIS S. KESSLER, Auburn, Ill., assignors, by mesne assignments, to Decatur Rotary Display Company, Decatur, Ill. Filed Mar. 8, 1924. Serial No. 697,943. 3 Claims. (Cl. 211—20.)



1. A display rack comprising a central support, means on said support for holding a plurality of trays in radial arrangement thereabout and in inclined positions in relation to the support, other means for holding a series of sets of trays in radial arrangement around said support and in pyramidal arrangement above each other and bracing bars secured to the support and to the supporting and holding means outwardly from the support, said bracing bars being common to the several supporting and holding means.

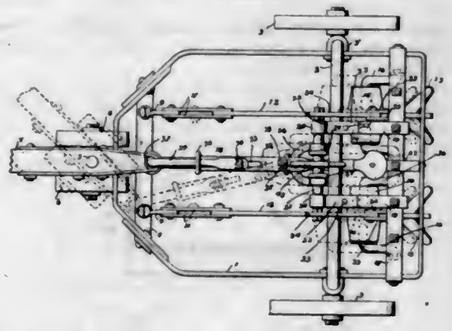
1,635,202. COMPOSITION FOR CLEANING BRUSHES AND THE LIKE. FRED COLEMAN BRAY, Moncton, New Brunswick, Canada. Filed Sept. 11, 1924. Serial No. 737,205. 1 Claim. (Cl. 87—5.)

A composition for cleaning brushes and the like consisting of common soap, 4 lbs.; sal soda, 1 lb.; pumice, 1 lb.; sugar, 1 lb.; creosote oils in a resin soap solution, 2 oz.; glycerine, 2 oz.; and witch-hazel, 1 oz.

1,635,203. FLOWER BOX. ANDREW BROSNICK, New Derry, Pa. Filed Dec. 12, 1925. Serial No. 75,020. 1 Claim. (Cl. 47—38.)

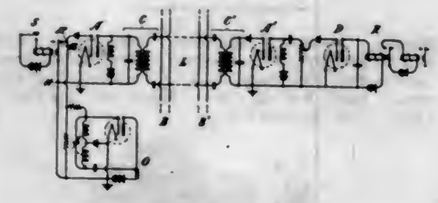
A rectangular flower box comprising an outer container for water having lugs within its corners disposed above the bottom thereof, an inner soil container removably mounted in the outer container and having handles upon its upper edge, the bottom of the inner container being adapted to rest upon the lugs to hold said bottom spaced above the bottom of the outer container and the handles above the upper edge of the outer container, and ribs carried by the outer walls of the inner container for engaging the inner surfaces of the outer container to space said container to provide an air space about the inner container.

1,635,204. DIVING BOARD. WALTER STERRY BROWN, Urbana, Ill. Filed June 7, 1926. Serial No. 114,328. 5 Claims. (Cl. 272—66.)



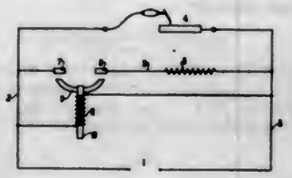
1. A device of the character described comprising a frame, a crossbar adjustably carried by said frame, an elongated resilient member having one end disposed upon said crossbar, means disposed above said elongated resilient member and extending beneath said frame for holding the adjacent end of said member in close proximity to said crossbar, and a fulcrum adjustably disposed beneath said member and adjacent the forward end thereof.

1,635,205. UNDERCLEARER FOR SPINNING FRAMES. WILLIAM ANDREW CARPENTER, Hartsville, S. C., assignor of one-half to Charles H. Campbell. Filed Oct. 2, 1926. Serial No. 139,127. 3 Claims. (Cl. 19—140.)



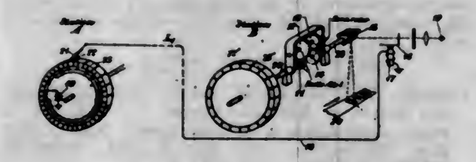
1. An under clearer for spinning frames comprising a roller, a fibrous sleeve co-extensive with the roller and adapted to surround the same, trunnions projecting from the ends of the roller, and fibrous end discs mounted on the trunnions and abutting the ends of the roller and sleeve.

1,635,206. AGRICULTURAL MACHINE. JACOB A. ELLER, Clovis, N. Mex. Filed May 29, 1926. Serial No. 112,501. 7 Claims. (Cl. 97—75.)



1. The combination with an agricultural machine including an implement beam mounted for swinging movement in a vertical plane and a laterally swingable tongue, of a rock shaft mounted transversely above the beam, connections between the rock shaft and the beam, and a pulling bar pivoted at its front end to the tongue and engaged at its rear end with the rock shaft, the pulling bar being normally alined with the tongue and shiftable to angular relation thereto when the tongue swings laterally whereby to rock the shaft forwardly and lift the implement beam.

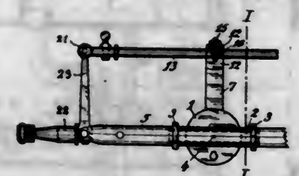
1,635,207. CARRIER CURRENT TELEGRAPHY. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 4, 1922. Serial No. 534,175. 7 Claims. (Cl. 178—66.)



1. Carrier current telegraph receiving apparatus comprising an amplifier for the incoming currents, a detector with its input connected to the receiver output, means to adjust the detector and its input so that it will exhibit saturation at the maximum voltage of the signal waves, and a receiving device responsive to the signal waves.

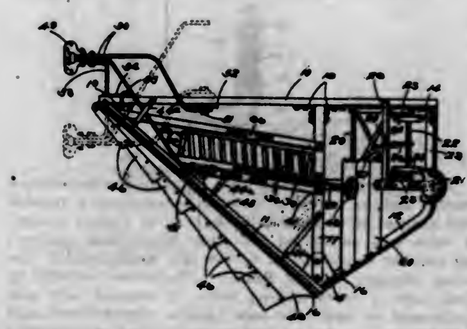
1,635,208. ELECTRIC-ARC WELDING APPARATUS. JAN HENDRIK EZENDAM, Amsterdam, Netherlands, assignor to N. V. Industrie- en Handelmaatschappij V. H. Harms & Co., Amsterdam, Netherlands. Filed Jan. 2, 1926, Serial No. 78,941, and in the Netherlands Dec. 20, 1924. 3 Claims. (Cl. 219—8.)

1. In an electric arc-welding apparatus, a welding circuit, a shunt circuit across the welding circuit including a resistance, electromagnetic means for opening and closing the shunt circuit, the energization of the electromagnetic means being dependent upon the voltage across the welding arc and also, but reversely, dependent of the strength of the welding current whereby the energization by the voltage prevails over that by the strength of the current, if the voltage rises to a predetermined value prior to the welding arc breaking.



1,635,209. TELEGRAPH DISTORTION-MEASURING SYSTEM. JOHN M. FELL, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 8, 1925. Serial No. 49,113. 6 Claims. (Cl. 178—69.)

1. The method of determining the magnitude of the distortion of telegraph signals resulting from transmission

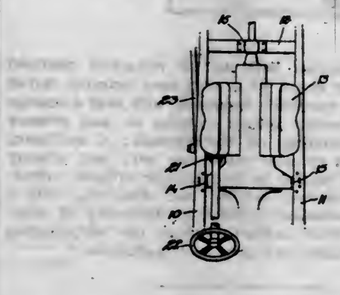


of the said signals, which consists in projecting a beam of light upon a recording surface and controlling the duration of the projection of the said beam by and in accordance with telegraph signals.

1,635,210. STEERING-GEAR BRAKE. NIS CHRISTIAN FRIKKE, Esbjerg, Denmark. Filed Aug. 25, 1924, Serial No. 734,053, and in Denmark Mar. 17, 1924. 1 Claim. (Cl. 280—89.)

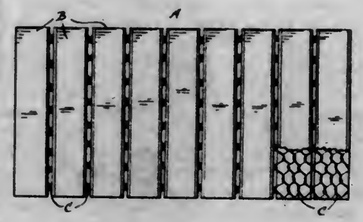
Steering gear brake for use with automobiles and other vehicles consisting of a brake member fitted to the front axle, another brake member, frictionally movable on said first brake member, a spring pressing the said two brake members together, the movable brake member having an arm, an angular member clamped to the steering rod of the steering gear, said angular member being secured to the free end of the arm of the movable brake member by means of a bolt and nut passing through the said two parts and having a coiled spring under the said nut.

1,635,211. COMBINED BRUSH-CUTTING AND ROAD-SCRAPING MACHINE. AUGUST FRITSCH, Engelfeld, Saskatchewan, Canada. Filed Mar. 27, 1924. Serial No. 702,309. 1 Claim. (Cl. 55—60.)



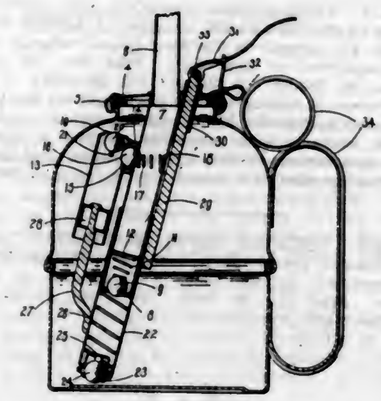
In a machine of the class described, comprising in combination a frame structure; said frame structure being formed with one portion in alignment with the direction of travel, a second portion having its forward end connected to and being disposed at an acute angle relative to said first portion and a third portion connecting the rear ends of the first said portion and the second said portion; an auxiliary frame supported intermediate the said frame structure; a main supporting wheel mounted in said auxiliary frame and acting as a fulcrum relative to said structure; a means for raising and lowering of said auxiliary frame and said frame structure relative to said main supporting wheel; a mould-board carried by said second portion of said frame structure; a transverse supporting rod carried between the first and third said portions of said frame structure; brackets each having one end pivotally mounted on said rod and extending rearwardly therefrom; an axle supported in the other ends of said brackets; ground wheels mounted on said axle and a means for fixedly adjusting said wheels for tilting said frame structure relative to said main supporting wheel.

1,635,212. LIME-SLUDGE PRODUCT AND PROCESS OF MAKING THE SAME. CLARENCE J. HERBLY, Pittsburgh, Pa., assignor to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed Feb. 19, 1924. Serial No. 693,897. 9 Claims. (Cl. 18—475.)



1. Process of making building blocks and the like, comprising mixing together lime sludge, a cellulosic material, and an inorganic water absorbing material to form a plastic composition; shaping the composition; and baking the shaped product at a temperature in excess of 200° C.

1,635,213. YIELDING MOTOR SUSPENSION. FENN M. HOLDEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 20, 1921. Serial No. 463,021. 3 Claims. (Cl. 180—64.)

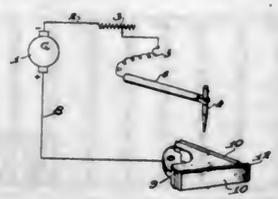


1. Engine suspending means comprising a frame having two side members, an engine, means for rigidly connecting the engine to one of said members, and means for suspending the engine from the other member comprising a vertically arranged flexible link fixed at its upper end to the side member and at its lower end to the engine.

1,635,214. WALL BOARD. RASMUS N. JENSEN, Salt Lake City, Utah. Filed Oct. 19, 1925. Serial No. 63,302. 1 Claim. (Cl. 72—116.)

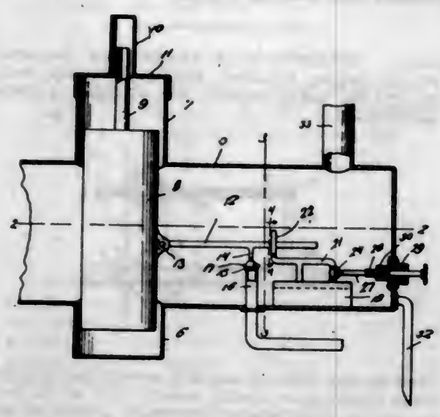
A flexible wall board consisting of a flexible sheet of perforated reenforcing material, a plurality of bars of plaster board material formed on the flexible sheet in spaced relation to each other to leave portions of the sheet completely exposed, the bars having their adjacent edges beveled at both sides of the sheet.

1,635,215. OIL CAN, LUBRICATOR, AND THE LIKE. ALBIK JOHNSON, OLOF PERSSON, and PETE JOHNSON, Kelliher, Saskatchewan, Canada. Filed May 24, 1926, Serial No. 111,349, and in Canada May 11, 1926. 4 Claims. (Cl. 221—51.)



1. The combination with an oil receptacle provided with a discharge spout, of a stationary primary valved cylinder in said receptacle connected with said discharge spout; a reciprocable plunger cylinder on said primary cylinder for delivering oil therethrough; a stationary secondary valved cylinder connecting with said primary cylinder; means carried by said plunger cylinder extending into the secondary cylinder and connecting with a piston in said secondary cylinder for delivering oil therethrough; and hand actuated means for reciprocating said plunger cylinder and associated mechanism.

1,635,216. METHOD AND MEANS FOR USING LOW-COMPRESSION FUELS. CHARLES F. KETTERING and THOMAS MIDGLEY, Jr., Dayton, Ohio, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 3, 1924. Serial No. 684,255. 4 Claims. (Cl. 44—9.)



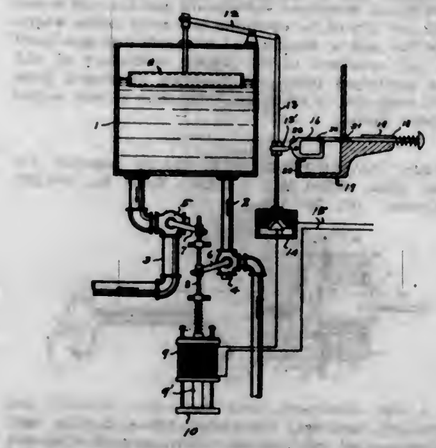
1. A fuel for internal combustion engines, containing iodine.

1,635,217. PROCESS OF WELDING MANGANESE STEEL TO CARBON STEEL. FERDINAND H. KIRCHMAN, Washington, D. C., assignor to Edward C. Foster, Washington, D. C. Filed Oct. 5, 1926. Serial No. 139,671. 4 Claims. (Cl. 219—10.)

2. The process of uniting the manganese steel body of a tooth for an earth excavator or dredge with a facing of iron or steel which comprises bringing the facing of manganese steel into close relationship with a solid body of iron or steel, bringing proximate parts of said bodies to their fusion points substantially in the absence of additions of extraneous metal and causing said fused parts to intermingle to form a connection between said bodies.

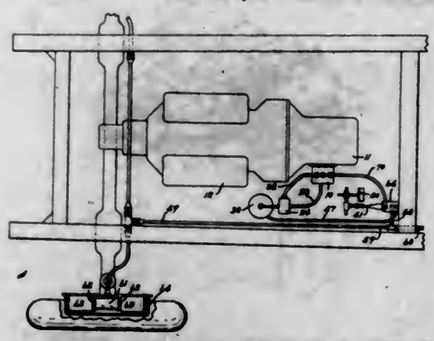
1,635,218. OIL SEPARATOR. WILLIAM M. LITTLE and JESSIE L. SHERMAN, Norphlet, Ark. Filed Mar. 27, 1926. Serial No. 97,922. 3 Claims. (Cl. 210—54.)

1. An oil separator of the class described including, in combination, a tank, a pipe leading from the tank, a valve seat formed at the inner end of the pipe, a float operable in the tank, a lever pivoted to the float, a valve on the lever associated with the valve seat, and an adjustable fulcrum for the lever.



1,635,219. OIL-VALVE ATTACHMENT FOR ENGINE CRANK CASINGS. CHARLES S. LUTES, Saskatoon, Saskatchewan, Canada. Filed Mar. 15, 1924, Serial No. 699,606. Renewed Dec. 6, 1926. 1 Claim. (Cl. 251—134.)

An oil valve attachment for a crank casing including a turned member having a through passage and a reduced end adapted to be secured in the wall of a crank casing; a valve tube carried by the other end of said member; an annular flange carried by the said member; said tube being engaged on said flange; a valve seat carried by said tube; a valve member normally engaged with said valve seat to close said tube; means engaged with said valve member and with said flange of the first mentioned member to resiliently retain said valve member in engagement with said valve seat; a valve opening member for forcing said valve member away from said valve seat to open said valve tube; and means for pivotally mounting said valve opening member on said valve tube.



1,635,220. AUTOMATIC OIL PUMP. JOE C. PALMER, Houston, Tex. Filed Mar. 7, 1924. Serial No. 697,684. 2 Claims. (Cl. 221—110.)

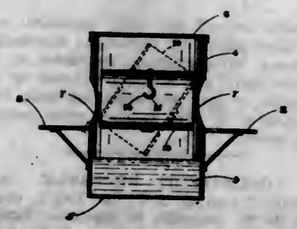
1. A device of the character described including a liquid chamber, an inlet line entering the chamber, a delivery line leading therefrom, a valve controlling each line, a weight having connections with said valves and normally holding the outlet valve open and the inlet valve closed, a magnet through the influence of which said connections may be actuated to reverse the position of said valves, when the magnet is energised, an electrical circuit into which the magnet is connected, a switch arranged to complete or break said circuit, a float in said chamber, operative connections through which the float operates the switch into open or closed position, a

device normally holding the switch open, and a manually operable means adapted to release said holding means, to permit the switch to close.

1,635,221. HYDRAULIC BRAKE SYSTEM FOR MOTOR VEHICLES. FRANK C. PEARSON, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 26, 1925. Serial No. 39,834. 10 Claims. (Cl. 303—11.)

3. In a hydraulic braking system for motor vehicles, in combination, a pressure reservoir containing oil and air under pressure, a brake cylinder, a duct leading from said reservoir to said cylinder, a manually operated control valve in said duct operable to permit the actuation of the brake cylinder, a relatively small servo-pump for maintaining a supply of oil and compressed air in said reservoir, and means for returning the oil from the brake cylinder to the inlet of said pump when the brake is released.

1,635,222. FLEXIBLE SOLDER. JEROME PLAUT, Hamilton, Ohio. Filed May 22, 1926. Serial No. 111,066. 3 Claims. (Cl. 118—110.)



1. As a new article of manufacture, an elongated body of string solder provided at uniform intervals throughout its length with integral panel portions, said panel portions each bearing a permanent legend indicating the alloy of the solder, said panels being consecutively numbered from one end of the body to the other to indicate the number of unit lengths contained between a given end and a given panel.

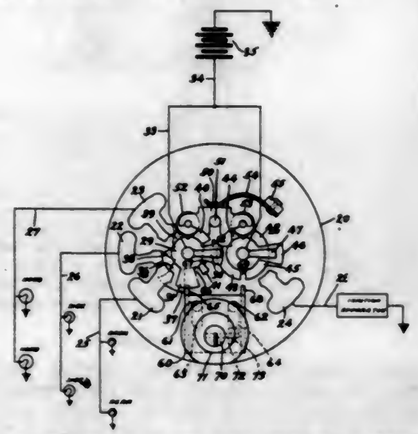
1,635,223. TOY. HUGO ROST, Dover, N. J. Filed July 31, 1926. Serial No. 126,127. 4 Claims. (Cl. 244—21.)

1. A toy comprising a tube, a parachute secured by strands to one end of the tube and adapted to be stuffed lightly within, one end of the tube being weighted, and a tripping device for expelling the parachute and being released when the tube is positioned with its weighted end down.

1,635,224. TRAP. CHARLES PERCY ROWLEY, Ninette, Manitoba, Canada. Filed Aug. 12, 1924. Serial No. 731,667. 1 Claim. (Cl. 43—69.)

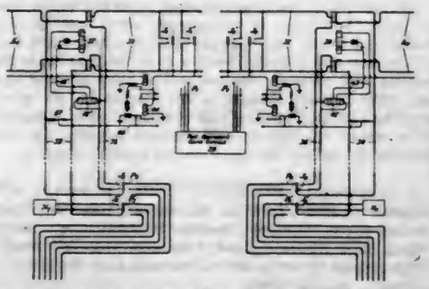
A trap comprising a housing; openings in the opposite sides of said housing; a tubular member open at each end and pivotally mounted intermediate its ends in said housing; the opposite ends of said tubular member being normally in alignment with and in close proximity to said openings in said housing; said housing covering said tubular member to prevent animals from touching said tubular member except through said openings; said tubular member, when turned on its pivotal mounting, closing off retreat through said openings; and a means carried by said tubular member for automatically returning the same to its normal position.

1,635,225. LENS. EWALD K. SCHADT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 7, 1924, Serial No. 718,532. Renewed May 14, 1927. 4 Claims. (Cl. 40—136.)



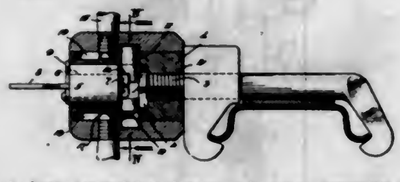
1. A lamp comprising, in combination, a casing, a source of light in the casing, and a glass lens which

has a smooth outer face, a plurality of sets of parallel ridges outlining letters on its inner face, light-refracting parts between the pairs of ridges, and opaque material



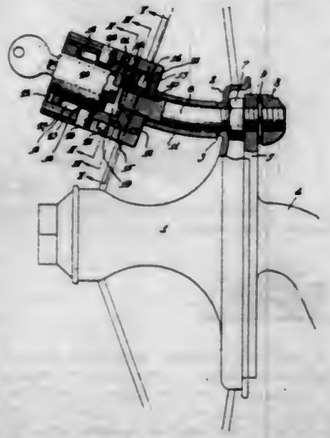
flowed over the entire rear or inner face of the lens except where dammed back by said ridges from covering the letters.

1,635,226. LOCK-CONTROLLED SWITCH. HERMAN SCHWARZE and FENN M. HOLDEN, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 6, 1921. Serial No. 498,931. 10 Claims. (Cl. 200—44.)



1. In mechanism of the class described, a movable member, locking means for preventing movement of said member beyond, but permitting movement to, a certain predetermined limit, and means positioned by movement of said member to said predetermined limit for causing further movement of said member when released from the locking means.

1,635,227. CORD-CIRCUIT REPEATER. SAMUEL P. SHACKLETON, Wyoming, N. J., and LEE L. GLEZEN, New Brighton, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 7, 1925. Serial No. 61,096. 6 Claims. (Cl. 179—41.)



1. A transmission line normally terminating in jacks located at a switchboard position, circuit arrangements associated with said line and terminating in jacks located at a different switchboard position, relay means associated with said line and said circuit arrangements, a cord circuit adapted to be associated with said jacks at said second mentioned switchboard position, and means in said cord circuit for operating said relay means whereby said line will be disconnected from said first mentioned jacks and connected to the talking conductors of said second mentioned jacks and said first mentioned jacks will be connected to the sleeve conductors of said second mentioned jacks.

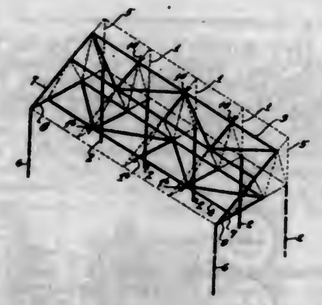
1,635,228. SPARE-TIRE LOCK. JACOB SOKOLOV, Detroit, Mich. Filed May 3, 1926. Serial No. 106,227. 5 Claims. (Cl. 70—122.)

1. A lock comprising inner and outer rotatable and reciprocable members, retractable means holding said members against reciprocation relative to each other and permitting one member to freely rotate relative to the others and a connection between said members conditioned by reciprocation of one member relative to the other to hold said members for rotation in synchronism so that one of said members may be attached to a support.

1,635,229. SPARE-WHEEL LOCK. JACOB SOKOLOV, Detroit, Mich. Filed Jan. 19, 1927. Serial No. 161,970. 9 Claims. (Cl. 70—90.)

1. The combination of a stationary member having a threaded and grooved end, a rotatable member screwed on said stationary member, a detent in said rotatable member adapted to extend into the groove of said stationary member, a reciprocable sleeve on said rotatable member adapted to cover said detent, and means in said rotatable member adapted to extend into said sleeve and prevent reciprocation thereof.

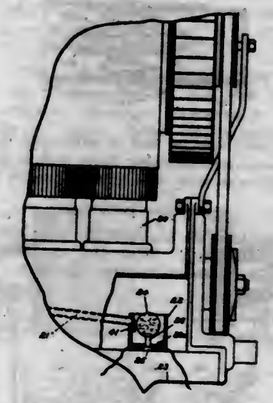
1,635,230. SPLINT. CHARLES R. SPICER, Hastings, Nebr. Filed Jan. 9, 1926. Serial No. 80,262. 2 Claims. (Cl. 128—87.)



1. An article of the class described, comprising transversely spaced end bands and an intermediate band, means for connecting the ends of each band detachably

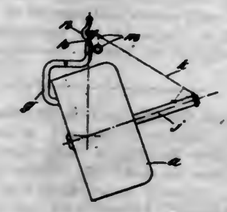
together, and a body made up of transversely spaced braces the ends of which are set inwardly from the outer lateral edges of the end bands, whereby the end bands will guard the extremities of the braces, means

for connecting the ends of all of the braces to the end bands, and means for connecting the intermediate band to the above-defined body, the intermediate band extending across all of the braces.



1,635,231. BUILDING CONSTRUCTION. WALTER S. ST. JOHN, New York, N. Y. Filed Nov. 2, 1922. Serial No. 598,616. 8 Claims. (Cl. 108—23.)

1. Building construction embodying a truss to be supported, a fixed fulcrum on which said truss bears, a supporting truss extending transversely of the supported truss and secured to the cantilever truss and upon which supporting truss the supported truss bears in one direction, a second supporting truss also extending transversely of the supported truss but in a different plane than the first supporting truss, said second supporting truss being also secured to the supported truss and upon which second supporting truss the supported truss bears in a different direction than said supported truss bears on the first supporting truss, and means for anchoring the opposite ends of both the supporting trusses.

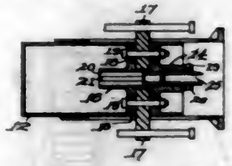


1,635,232. INDICATOR. CALEB E. SUMMERS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 20, 1922. Serial No. 607,963. 3 Claims. (Cl. 200—84.)

1. In a device of the class described, a vessel and means for supplying a liquid thereto, said vessel having a hole in its bottom wall; a switch; a float located within said vessel and having a rod depending through the hole aforesaid; and means whereby said float may act to close

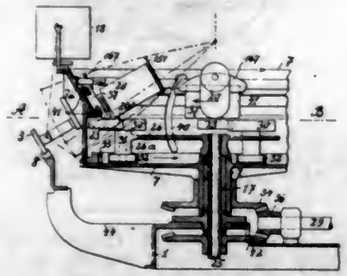
a circuit controlled by said switch, said vessel having a second unobstructed hole adjacent its lower end and through which liquid may flow therefrom.

1,635,233. APPARATUS FOR LIFTING OUT AND CLEANING CENTRIFUGAL DRUMS. KARL JOHAN SVENSSON, Lidingo Villastad, and KARL AXEL PATRIK NORLING, Sodertorns, Villastad, Sweden. Filed Oct. 4, 1926, Serial No. 139,441, and in Sweden Oct. 13, 1925. 2 Claims. (Cl. 210—73.)



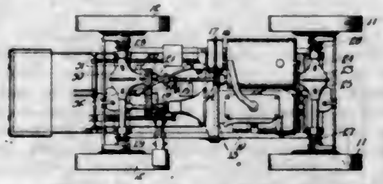
1. A device for lifting out and cleaning a vertical centrifugal drum or that part thereof in which the separated solid impurities accumulate, comprising a single bifurcated link cranked towards one side and adapted at its upper end to be secured to a suitable hoisting arrangement, and means at the lower end of said link adapted to be secured to a part of said drum inside the latter, said means being movable about a horizontal axis which is situated in a vertical plane in which lies the centre of gravity of the drum and which is situated at a suitable distance above said centre of gravity.

1,635,234. FUEL-FEEDING MECHANISM FOR UNDERFEED STOKERS. IRVING A. TAYLOR, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1921. Serial No. 526,370. 3 Claims. (Cl. 110—109.)



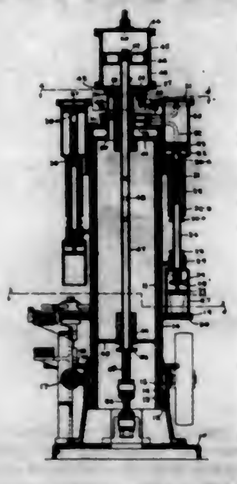
3. In an underfeed stoker, a cylinder, a coal feeding ram slidable therein, a crank shaft, a connecting rod, a yoke pivoted in said ram and having an opening in which

said rod is slidable, said rod having a projection thereon and said yoke having an abutment therein and engaged by said projection at a point within said yoke to limit



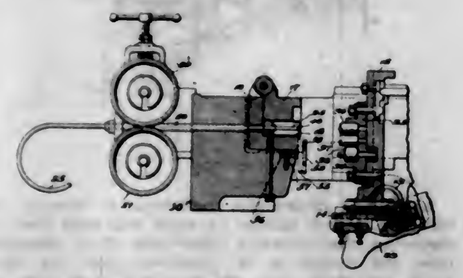
sliding movement of said rod in said yoke in one direction, and means to adjustably limit sliding movement of said rod relative to said yoke in the opposite direction.

1,635,235. BRAIDING MACHINE. CARL TONER, Berlin-Karlshorst, Germany. Filed Dec. 2, 1926, Serial No. 152,179, and in Germany Dec. 8, 1925. 18 Claims. (Cl. 96—6.)



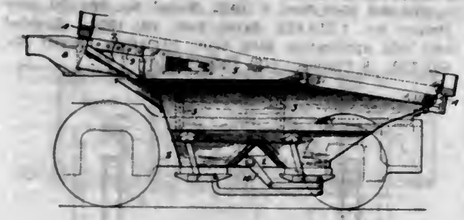
1. In a braiding machine the combination with inner and outer rows of bobbins moving in circular paths but in opposite directions of a roller system for moving the inner bobbins comprising drive rollers rotatable about their axes and about the braiding axis and rollers co-operating with said rollers and carried by the inner bobbin frame and a recess at the circumference of each drive roller adapted to receive the threads from the outer bobbins.

1,635,236. FOUR-WHEEL-DRIVE TRANSMISSION FOR TRACTORS. ROBERT L. TOLSON, deceased, Memphis, Tenn., by John W. Farley, administrator, Memphis, Tenn., assignor to John W. Farley, trustee, Memphis, Tenn. Original application filed Feb. 2, 1921, Serial No. 441,915. Divided and this application filed May 22, 1923. Serial No. 640,795. 1 Claim. (Cl. 180—45.)



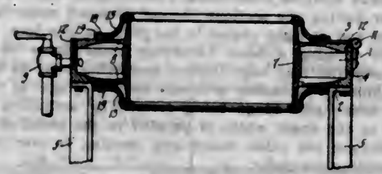
In a motor vehicle, front and rear wheels, differential gearing for the wheels of each set, a driving shaft connected to one of said sets of differential gearing and adapted to be driven from the engine, a driving shaft extending from the other set of differential gearing, means adapted to drive either or both of said shafts positively, a gear loosely mounted on the second driving shaft, a gear on the engine shaft for driving the same, and a drum driven by the first mentioned gear and adapted to drive the steering mechanism of the tractor, substantially as set forth.

1,635,237. SEALING MACHINE. HARRY E. TOWNSEND, Brooklyn, N. Y. Filed Aug. 26, 1919. Serial No. 320,008. 23 Claims. (Cl. 226—82.)



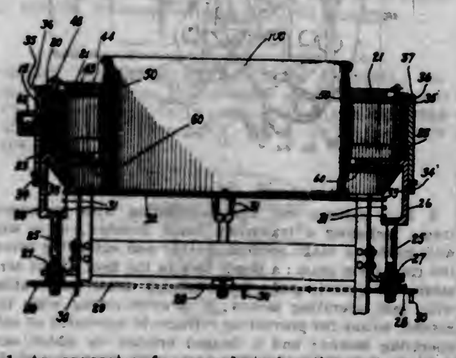
1. In a vacuum sealing machine, an upright column having a hollow interior constituting an exhaust-chamber, a carrier revolubly mounted on the column, a plurality of vacuum-chambers supported by the carrier, a stationary ported valve mounted above the column for controlling communication between the vacuum chambers and the exhanst-chamber, an exhaust pump above the valve, and exhaust connections from the pump to the exhaust-chamber.

1,635,238. NUT MACHINE. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 9, 1924. Serial No. 731,151. 31 Claims. (Cl. 10—76.)



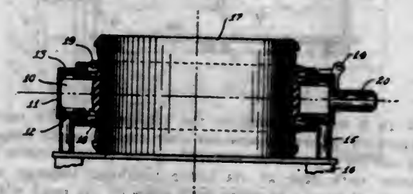
1. In an apparatus of the character described; companion dies movable toward and away from each other, in the outer face of which is a cavity, and extending rearwardly therethrough from the bottom of the cavity is an opening of substantially the same cross section as the rod from which the articles are produced; a punch for upsetting the projecting portion of a rod held between and by the dies, to fill said cavity and at the same time form a depression in the outer face of the upset portion; and another punch separate from the one first mentioned for extending the said depression and thereby forming a hole in the upset portion of the rod within the cavity that forces the material engaged thereby longitudinally between the said dies without severing the same from the rod, said dies being held together under lateral pressure while the first mentioned punch is in engagement with the rod and separated slightly when the second mentioned punch is forming the opening.

1,635,239. LOCOMOTIVE ASH PAN. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Feb. 20, 1925. Serial No. 10,499. 10 Claims. (Cl. 105—37.)



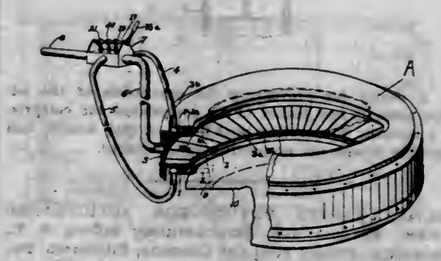
1. A locomotive ash pan structure carried by a truck beneath the fire box in position to receive the discharge of ashes from the fire box in all positions of the truck.

1,635,240. APPARATUS FOR MANUFACTURING TIRES. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Apr. 25, 1924. Serial No. 708,838. 5 Claims. (Cl. 154—10.)



1. A tire shaping apparatus comprising a non-collapsible hollow annular chamber having at its open inner periphery primary and secondary sealing members adapted respectively to initially and finally engage the beaded portions of a casing of a pulley band during its shaping treatment, and means for evacuating said chamber, the primary sealing members being airtightly secured to the chamber and extending laterally from opposite sides thereof sufficiently to make operative sealing engagement with the beaded margins of a casing at the commencement of a shaping treatment thereof.

1,635,241. VACUUM SHAPING MACHINE FOR STRAIGHT-SIDE TIRES. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan and Wright, Detroit, Mich., a Corporation of Michigan. Filed Oct. 22, 1925. Serial No. 64,143. 19 Claims. (Cl. 154—10.)

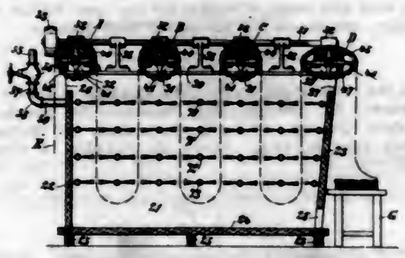


1. An apparatus for manufacturing tire casings comprising a hollow annular chamber open on its inner periphery and having top and bottom walls the inner margins of which are of a diameter greater than the bead diameter of the casing being manufactured, shiftable means for extending said walls to vary their inner girth and to provide initial contact with said casing and form with said casing a closure for the open side of said chamber, and means for exhausting said chamber.

1,635,242. TIRE-SHAPING APPARATUS. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed July 30, 1926. Serial No. 125,932. 8 Claims. (Cl. 154—10.)

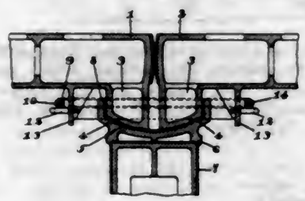
1. A tire shaping apparatus comprising a hollow annular chamber having relatively fixed top and bottom walls on the inner edges of which a casing is adapted to be finally sealed, said inner edges being of a diameter greater than the bead-diameter of the casing which is to be shaped, means for exhausting air from the chamber, and initinl sealing means supported in proximity to and of smaller internal diameter than said inner edges of the chamber.

1,635,243. VACUUM SHAPING MACHINE FOR TIRES. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Oct. 6, 1926. Serial No. 139,828. 18 Claims. (Cl. 154—10.)



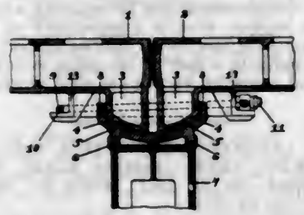
1. An apparatus for manufacturing tire casings comprising in combination means for applying a differential pressure to opposite faces of a pulley-band to transform it to approximate tire form, yielding means for maintaining a seal with a face of the pulley-band during its shaping, and means for varying the girth of said yielding means.

1,635,244. CLEANING COMPOSITION AND METHOD OF MAKING SAME. BROADUS BAILEY, Greenville, S. C. Filed Jan. 24, 1927. Serial No. 163,316. 4 Claims. (Cl. 87—5.)



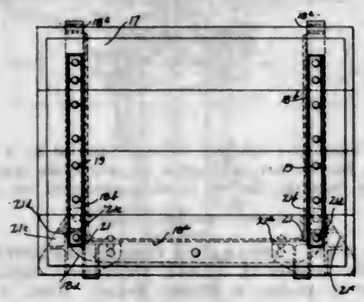
1. A preparation for cleaning oil painted surfaces, tile, enamel and the like, comprising substantially 7.50 parts by weight of sodium bicarbonate, 37.00 parts by weight of sodium silicate, 7.50 parts by weight of an impalpably powdered abrasive material, 14.50 parts by weight of soap 27.00 parts by weight of water, and 6.30 parts by weight of glycerine.

1,635,245. WASHING MACHINE. OSCAR BRÄNDLI, Philadelphia, Pa. Filed Oct. 7, 1924. Serial No. 742,133. 2 Claims. (Cl. 8—19.)



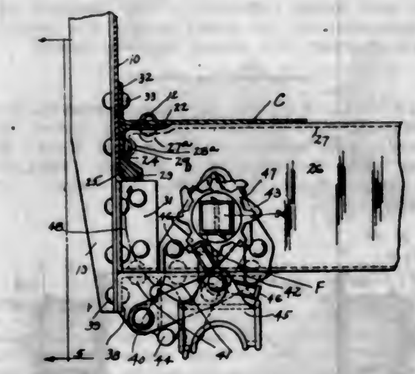
1. In a washing machine the combination of a casing, a plurality of reels journaled over the casing to suspend and convey a band of material to be cleaned, in a serpentine path free at its lower portions, through said casing and means to spray both sides of the band with a cleaning fluid while being conveyed through the casing.

1,635,246. SAFETY DEVICE FOR ARTICULATED CARS. FRANCIS MCF. BRINCKERHOFF, Suffern, N. Y., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 2, 1927. Serial No. 188,117. 7 Claims. (Cl. 105—4.)



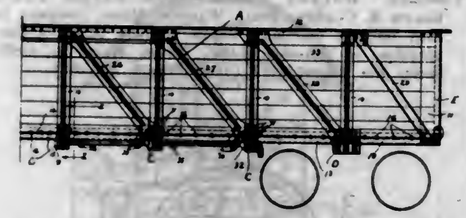
1. A device for preventing the separation of the adjacent ends of two bodies of an articulated car comprising a member cooperating with both of said bodies, and removable means for supporting said member.

1,635,247. SAFETY DEVICE FOR ARTICULATED CARS. FRANCIS MCF. BRINCKERHOFF, Suffern, N. Y., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 2, 1927. Serial No. 188,118. 4 Claims. (Cl. 105—4.)



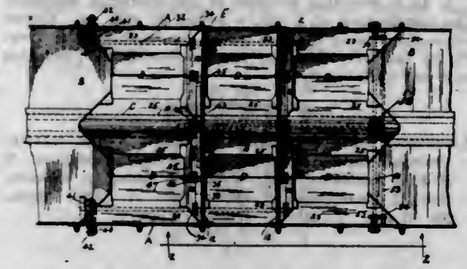
1. A device for preventing the separation of the adjacent ends of two bodies of an articulated car comprising a flexible member having its ends connected to form a loop, the connection between said ends being separable.

1,635,248. DUMP CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Original application filed Nov. 8, 1922, Serial No. 599,632, now Patent No. 1,515,833, dated Nov. 18, 1924. Divided and this application filed Sept. 10, 1923. Serial No. 661,752. 8 Claims. (Cl. 105—280.)



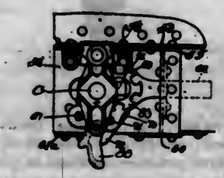
1. In a hinged dump door for railway cars, reinforcing means therefor comprising a continuous angle shaped member having the sections thereof disposed respectively parallel and at right angles to the plane of the door, said member forming a beam extending transversely of the door near the free edge thereof and being bent to form longitudinally extending members having hinges at their outer ends; said hinge being formed by extending the flange of the angle which is parallel to the plane of the door beyond the other flange and bending it over itself and welding the joint.

1,635,249. RAILWAY CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1924. Serial No. 734,841. 5 Claims. (Cl. 105—244.)



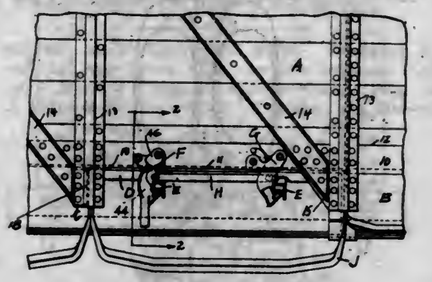
1. In a railway car, the combination with an underframe including a transverse beam member; of a side wall having a stake secured thereto and extending below the transverse beam; a dump door in the floor of the car; means for operating the door; ratchet means cooperating with said operating means; a pawl co-acting with the ratchet means for preventing retrograde movement of said operating means; and a flanged bracket on which said pawl is pivotally mounted, said bracket being secured by its flanges respectively to the transverse beam and to the downwardly extending portion of the side stake.

1,635,250. CAR SIDE CONSTRUCTION. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1924. Serial No. 734,842. 8 Claims. (Cl. 105—244.)



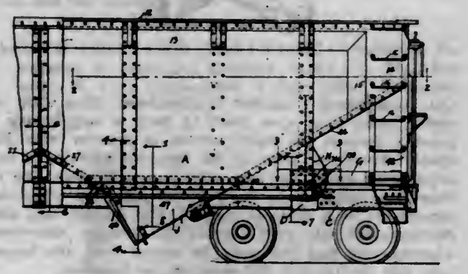
1. In a railway car, the combination with the transverse members of the underframe; of a trussed side including an upper chord, a lower chord, vertical members and diagonal members, said vertical members and diagonal members being extended downwardly below the lower chord and secured to the transverse members of the underframe and to the lower chord, said lower chord having a horizontal flange in engagement with the crossbeams and having vertical portions extending above and below said horizontal flange.

1,635,251. HOPPER CAR AND THE LIKE. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1924. Serial No. 737,343. 17 Claims. (Cl. 105—251.)



1. In a dump car having a hopper, the combination with a diverting member hinged adjacent the bottom of said hopper, swingable to divert material in different directions; of supporting means for the swinging edge of said diverting member, said supporting means being disposed only at the ends of the member; and a stiffening beam for the edge of said member adapted to bridge the distance between said respective end supports.

1,635,252. RAILWAY CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 16, 1925. Serial No. 15,748. 8 Claims. (Cl. 105—301.)

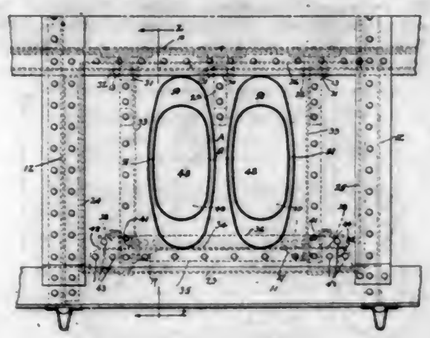


1. In a dump car, the combination with a bodily translatable door operating shaft; of a toothed wheel on the shaft; a fulcrum disposed on the car structure above the shaft; a lever member carried by said fulcrum; and means carried by the lever adapted to engage the toothed wheel to rotate the shaft.

1,635,253. DUMP CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1925. Serial No. 30,416. 9 Claims. (Cl. 105—308.)

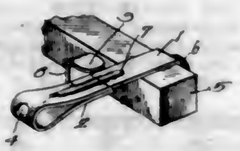
1. In a dump car, the combination with a dumping door; of a plurality of shouldered locking hooks adapted to supportingly engage the door, said hooks being adapted to move in the same direction in and out of supporting engagement with the door; a bar connecting the hooks; a slotted connection between the bar and one of said hooks whereby said hook may have a limited degree of independent movement relatively to the bar; and means whereby the locking of said independently movable hook will also lock the remainder of the hooks.

1,635,254. CAR CONSTRUCTION. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 20, 1926. Serial No. 110,392. 16 Claims. (Cl. 105—249.)



1. In a dump car having a discharge opening, the combination with a side wall having a vertical portion and an inwardly directed lower marginal portion; of a hopper section extending below the said marginal portion; said hopper section being defined by a tranaversely extending wall and a longitudinally extending wall, said longitudinal wall being formed to overlie the inwardly directed portion of the car side, and extended upwardly above the same and secured to the vertical wall portion of the car side.

1,635,255. DUMPING DOOR FOR RAILWAY CARS AND THE LIKE. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 16, 1925, Serial No. 15,748. Divided and this application filed July 29, 1926. Serial No. 125,609. 14 Claims. (Cl. 105—280.)

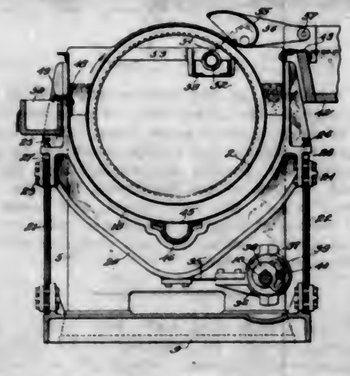


1. In a railway car, the combination with means defining a dumping opening; of door braces extending trans-

versely of said door; a Z bar having one flange connected to said door plate adjacent one longitudinal edge thereof, said Z bar having its ends spaced a small distance from

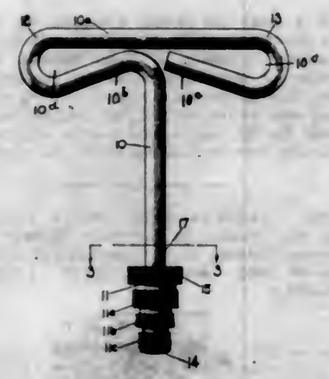
said door braces; and bracing means having a portion connected to the other flange of said Z bar and to the respective door braces.

1,635,256. TERMINAL CONNECTER. ALVA J. CARTER, Chicago, Ill., assignor to Carter Radio Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1924. Serial No. 686,764. 2 Claims. (Cl. 173—259.)



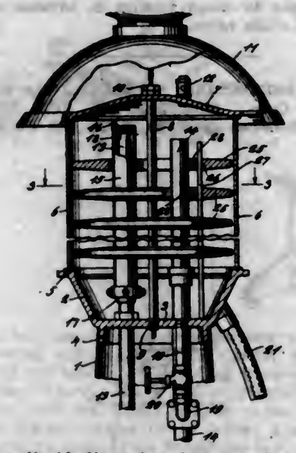
1. A terminal connecter in the form of a strip of spring metal bent upon itself to form a loop having a passage through its bight portion in register with the space between the sides of the loop for receiving a terminal with which the loop sides are engageable, one of these loop sides being continued beyond the other for attachment to a suitable support, the shorter loop side having a thumb piece extending laterally therefrom whereby this loop side may be moved from the longer loop side to facilitate the entry of the terminal.

1,635,257. SELF-LUBRICATING BRUSH FOR ELECTRICAL APPARATUS. CHARLES E. CHAPIN, Greenwich, Conn.; Franklin G. Chapin and Robert C. Glazier executors of said Charles E. Chapin, deceased. Filed Nov. 2, 1920. Serial No. 421,267. 8 Claims. (Cl. 171—325.)



8. The process of making a brush for use with electrical apparatus which comprises applying a lubricating metal to a portion of wire screen, folding said screen to form a block, covering the same with an exterior layer of uncoated screen and compressing said screen to form a brush.

1,635,258. ROTARY SCREEN FOR PAPER PULP. RALPH S. CLARKE, South Walpole, Mass., assignor to Bird Machine Company, South Walpole, Mass., a Corporation of Massachusetts. Filed May 19, 1925. Serial No. 31,297. 12 Claims. (Cl. 92—36.)



1. In a screening machine of the character described, the combination of a vat, a screen in said vat, flexible supports forming the sole means for sustaining said vat in its operative position, and mechanism for vibrating said vat horisontally.

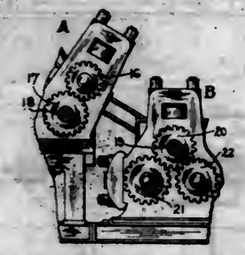
1,635,259. CYLINDER-HEAD-LIFTING TOOL. JAMES VERNER CRITCHLEY, Worcester, Mass., assignor to Walden-Worcester, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 11, 1926. Serial No. 87,498. 2 Claims. (Cl. 16—114.)

1. A lifting handle for cylinder heads comprising a shank, a member rotatably secured thereon adapted to fit various standard practice openings in the cylinder head without deforming said openings, and means for causing a non-rotative engagement between said shank and member, said shank being freely rotatable when said member is normally engaged to a cylinder head.

1,635,260. LIQUID-DISPENSING DEVICE. EMORY CROUSE, Wichita, Kans. Filed Aug. 16, 1926. Serial No. 129,341. 12 Claims. (Cl. 221—100.)

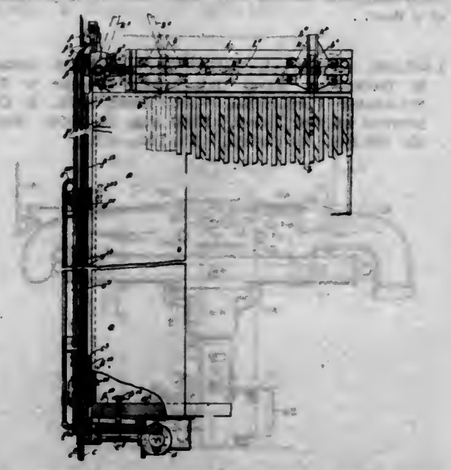
6. In a liquid dispensing device having a measuring bowl, the combination of a plurality of filler means located within the bowl and fixedly spaced along the axis thereof for the purpose of reducing the capacity of the bowl per unit length at spaced points.

1,635,261. PENCIL MOLD. CHARLES E. DANIELS, Sandusky, Ohio, assignor to The American Crayon Company, Sandusky, Ohio, a Corporation of Ohio. Filed Nov. 13, 1926. Serial No. 148,155. 2 Claims. (Cl. 18—34.)



1. A pencil mold comprising a plurality of mold units, each having a series of chambers open at one of their ends to receive a plastic mass and provided with a central recess at the other end of each mold chamber to receive one end of a pencil lead, means for rigidly securing a plurality of the mold units in connected relation, and means adapted to be removably connected with each mold unit and extending over the open ends of the mold chambers to support the other ends of the pencil leads.

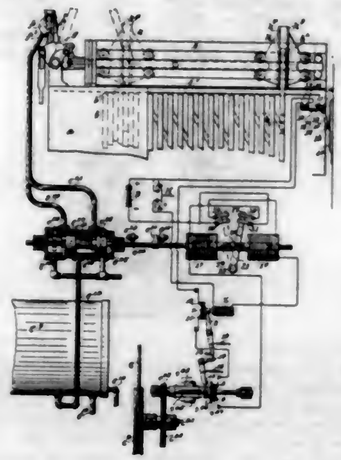
1,635,262. BOX-FILLING MACHINE. JOSEPH C. DONNELLY, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed May 12, 1925. Serial No. 29,801. 2 Claims. (Cl. 198—24.)



1. In a box-filling machine having an intermittently movable carrier for match trays, a tray supply trough located laterally and extending longitudinally of the carrier and having a curved delivery portion of sufficient radius and length leading to the path of the carrier, a push pawl adjacent the receiving end of the trough, a reciprocating support for said pawl, means for guiding said member parallel with the body of the trough, a push pawl adjacent the curved delivery portion of the trough, a radius arm carrying the latter pawl and movable in an arc substantially concentric with that of the said delivery portion of the trough, a rod flexibly connecting said arm with the said support, and means for oscillating said arm in timed relation to the travel of the carrier.

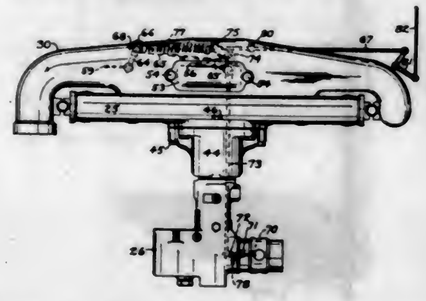
1,635,263. CANE-GRINDING MILL. FRANKLIN FARREL, JR., New Haven, Conn., assignor to Farrel Foundry & Machine Company, Ansonia, Conn. Filed May 2, 1921. Serial No. 465,958. 3 Claims. (Cl. 100—47.)

1. A cane mill having a top roll, a cane roll and a bagasse roll, all of said rolls being provided with annular grooves, the grooves of the top and bagasse rolls being of the same pitch but offset so that the ribs of one of said two rolls extend into the grooves of the other, and the grooves of the cane roll being finer than the grooves of the top and bagasse rolls, the top roll and bagasse roll being set closer to each other than to the cane roll, and means for driving the top roll and the bagasse roll at substantially greater surface speed than that of the cane roll, thereby effecting a frictional shredding action upon the cane passing between the top roll and the cane roll.



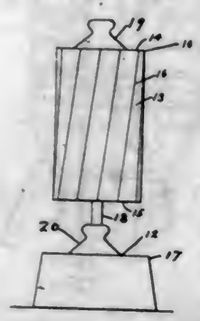
1,635,264. ELEVATOR. JOHN DARBY, Philadelphia, Pa., assignor to Shur Loc Elevator Safety Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 24, 1925. Serial No. 77,441. 12 Claims. (Cl. 187—52.)

5. In an elevator, the combination of a door, a traveller, a swinging spring retracted jaw carried by the traveller and adapted to engage the door, said jaw hav-



ing an operating arm, a movable bar mounted in proximity to the path of the movement of the traveller and having a slot for co-operation with said arm, means to operate the traveller, and devices actuated in the initial movement of said means to move the bar thereby to move the jaw into operative position.

1,635,265. ELEVATOR. JOHN DARBY, Philadelphia, Pa., assignor to Shur Loc Elevator Safety Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 5, 1926. Serial No. 92,425. 19 Claims. (Cl. 187—52.)



16. In an elevator, the combination of a car, a door, a door operating motor and intermediate connections to effect movement of the door, a source of power to supply motor fluid under pressure to the motor, a valve to determine the transmission of pressure to the motor, electromagnetic devices to shift said valve, circuit connections and contacts actuated as the car comes to rest at any point to control the operation of said electromagnetic devices to effect the opening movement of the door, and circuit connections and contacts actuated by the positioning of the car at a floor to permit the operation of said electromagnetic devices only when the car is positioned at a floor.

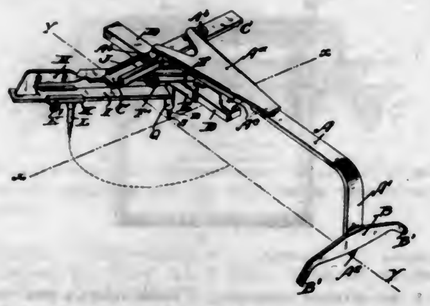
1,635,266. INTERNAL-COMBUSTION ENGINE. GEORGE R. DAVENPORT, Royal Oak, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Aug. 28, 1926. Serial No. 132,198. 14 Claims. (Cl. 123—122.)

1. In a manifolding system for an internal combustion engine, a valve for directing exhaust gases into contact with the intake manifold, longitudinally movable means for regulating the position of said valve, and a carbureter choke valve co-operatively associated with said means and controlled thereby, said valve being movable from open to closed position in advance of movement of said choke valve.

1,635,267. REFLECTING SIGNAL. ADOLF FEINBERG, Hartford, Conn. Filed Sept. 19, 1925, Serial No. 57,476. Renewed Nov. 20, 1926. 1 Claim. (Cl. 88—1.)

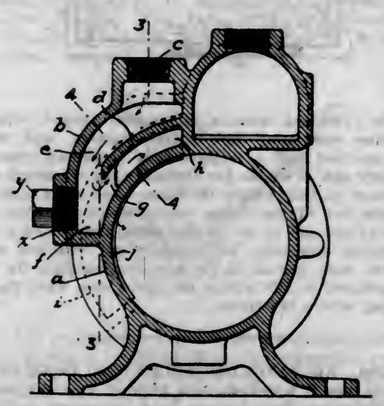
A reflecting signal in the form of a column of vertically elongated form and having a periphery of reflective character, said column having the cross-section from top to bottom of equilateral polygonal form, involving a plurality of facets that extend from said top to said bottom, and the lateral edges of said facets in extending from said top to said bottom following along helical lines.

1,635,268. LAMP-SHADE HOLDER. ERNEST FURST and SAMUEL TAVE, New York, N. Y. Filed Feb. 21, 1925. Serial No. 10,809. 5 Claims. (Cl. 240—128.)



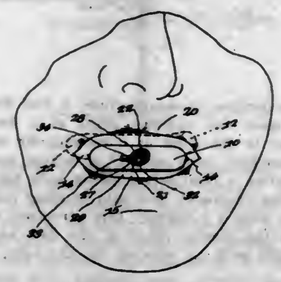
1. The combination of a frame, a clamping bar with its ends fastened to the frame, said bar having a central portion with an opening, and said central portion having a clearance opening extending therethrough, a cam extending from said bar, and a lamp socket having a sleeve located in the opening of said central portion, said bar adapted to be locked in place by said cam.

1,635,269. FLEXIBLE CHAIN, BRACELET, OR THE LIKE. ROBERT S. GRANT, Providence, R. I., assignor to R. S. Grant Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 25, 1927. Serial No. 170,997. 5 Claims. (Cl. 59—78.)



1. A chain, band, bracelet or linkage comprising a plurality of link-elements constructed of celluloid or similar composition and metal hinge-members having portions embedded in the material of the link elements to connect them together.

1,635,270. DRAFTING ELLIPSOGRAPH. DAVID GRIEVE, Detroit, Mich. Filed Jan. 31, 1927. Serial No. 164,719. 2 Claims. (Cl. 33—31.)

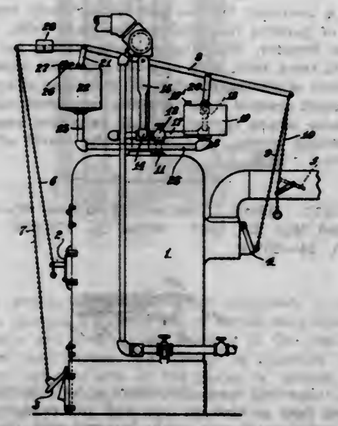


1. In an instrument of the class described, a supporting bracket having means adapted to register with a line representing one axis of an ellipse; a transverse bar secured to the projecting end of said supporting bracket; a bar parallel with and rigidly secured to the supporting bracket in spaced relation to the latter; a slidable element adapted to traverse the transverse bar; a swinging beam provided with a bracket arm parallel to and spaced from the beam; means for pivoting the slidable element carried by the transverse bar to the bracket of the swinging beam; a pair of elements pivoted to each other and respectively slidably mounted upon the bar rigidly secured to the supporting bracket and the bracket arm of the swinging beam, said slidable element carried by the bracket arm of the swinging beam having means for securing it to said arm when adjusted; a post rigidly secured to the bar carried by and parallel with said supporting bracket; and an adjustable slidable element fitted with a scribing point mounted upon the swinging beam including means for securing said fitting when adjusted to the swinging beam.

1,635,271. VACUUM PUMP. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 12, 1925. Serial No. 49,688. 3 Claims. (Cl. 230—30.)

1. In a vacuum pump, the combination with a pump housing and a casing interior thereto and spaced therefrom and providing an arcuate air space between them, the casing having an air inlet at one end of said space, the other end of said space being closed, of a web extending between the housing and casing from the end of said space adjacent the air inlet toward but terminating short of the closed end of said space, there being lateral outlets, communicating with the interior of the pump housing, from that part of said space between said web and the housing, thereby providing a confined and tortuous passage for air through said space back and forth in opposite direction and laterally from between the web and the pump housing.

1,635,272. DEVICE FOR CORRECTING RESPIRATION. KARL HÄRTL, Chicago, Ill. Filed May 14, 1926. Serial No. 109,194. 2 Claims. (Cl. 128—136.)



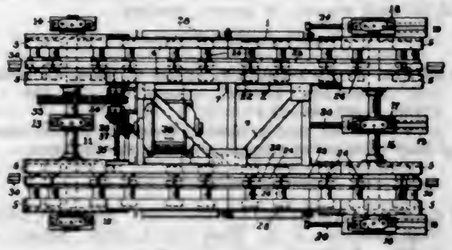
1. A device for correcting respiration including a body having portions shaped to accommodate portions of the mouth, and a check valve, said body having a transversely extending bore formed centrally therein for the accommodation of the check valve, said check valve including a slotted head, and a valve disc confined in the head and adapted to obstruct passage through the slots of the head whereby to prevent inhaling.

1,635,273. FOOD PRODUCT. ELAM G. HESS, Manheim, Pa. Filed Aug. 5, 1926. Serial No. 127,484. 2 Claims. (Cl. 99—11.)

2. A pecan-nut food product composed of a loose mass of flaky particles of substantially uniform thickness.

1,635,274. PRESSURE REGULATOR. MOSES G. HUBBARD, Chatham, N. J. Filed Jan. 8, 1926. Serial No. 80,035. 9 Claims. (Cl. 236—26.)

1. Damper controlling means for boiler furnaces comprising a water supply tank, a steam connection from the boiler to said tank, a second tank connected to said sup-

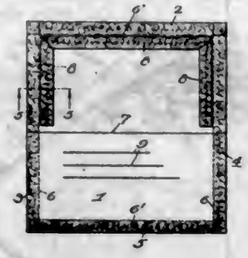


ply tank to permit water to flow from one tank to the other, a lever to which said tanks are pivotally connected on opposite sides of the fulcrum, and connections between said lever and the dampers for opening or closing the latter according to the pressure of the steam.

1,635,275. PAD FOR DENTAL USE. ALBERT BAXTER JOHNSON, New Britain, Conn. Filed Feb. 23, 1922. Serial No. 538,703. 1 Claim. (Cl. 128—1.)

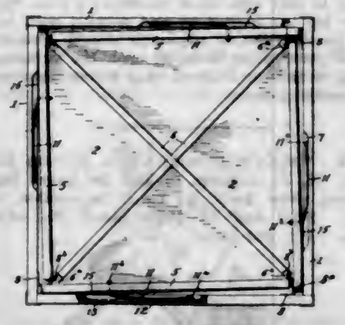
As a new article of manufacture, a pad for use as a packing between the end-face edges of a dental nozzle and the face in the form of a rectangular structure of plain flat material, being entirely of cotton, comprising in the cross-section a relatively yielding body for the major portion of the thickness, and said yielding body merging at one face with a relatively firm structure that serves to maintain the general shape of the pad, and said pad being provided with an opening for the nose.

1,635,276. CHAIN RAIL-CAR CONVEYER. GEORGE M. JOHNSON, Jeannette, Pa., assignor to Fort Pitt Mine Equipment Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Aug. 22, 1924. Serial No. 733,528. 11 Claims. (Cl. 104—137.)



1. A conveyer for the purpose set forth comprising a pair of parallel disposed endless track rails, supporting means therefor, operating means providing for the travel of said track rails, each of said track rails consisting of a plurality of alternately disposed elongated bifurcated links and short tenoned links pivotally connected together, and rotatable means carried by said rails and engaging said supporting means to facilitate the travel of said rail therein.

1,635,277. HOOK. PERCIVAL W. JONES, Warwick, R. I. Filed Mar. 26, 1927. Serial No. 178,677. 8 Claims. (Cl. 24—233.)

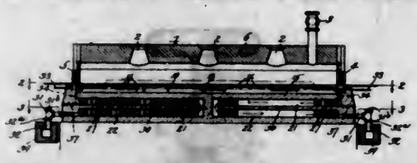


1. A bracelet hook comprising a body having a shank formed into a hook at one end for engaging the bail of a wrist watch and means integral with the shank for extending a substantial distance beyond the bail engaging portion of said hook to close the opening between the watch and the hook.

1,635,278. ENVELOPE. HARRY E. KAPLAN, Chicago, Ill. Filed Sept. 8, 1925. Serial No. 54,862. 4 Claims. (Cl. 229—73.)

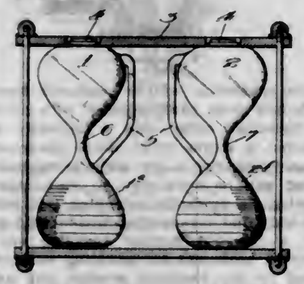
1. An envelope comprising a blank foldable into front and back half sections and provided with weakened lines parallel with the respective edges of the blank, said blank being gummed between the weakened lines and the respective edges of the blank, and foldable gummed resealing flaps carried by one of the sections of the blank and extending along the weakened lines thereof at the inner sides of said lines.

1,635,279. FOLDING TABLE. WILLIAM J. KING, Portland, Me., assignor to The E. T. Burrowes Company, Portland, Me., a Corporation of Maine. Filed Feb. 16, 1922. Serial No. 537,008. 3 Claims. (Cl. 45—11.)



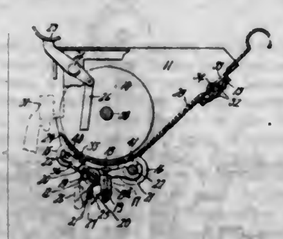
1. In a folding table, a rectangular shaped supporting frame comprising bars secured together, said frame being provided with a longitudinally extending recess in the under side of a side bar thereof, a leg connected with the frame to fold within the same close along side the said side bar of the frame, and a brace pivotally connected at one end to one of said parts and having a sliding pivotal connection at its other end with the other part, the main portion of the brace intermediate its ends being adapted to fold within the said recess when the leg is folded within the frame.

1,635,280. RECTANGULAR SOLE-FIRED COKE OVEN. ALEXANDER S. KNOWLES, New York, N. Y., and CHARLES V. MCINTIRE, East Orange, N. J., assignors to Tar & Petroleum Process Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 1, 1925. Serial No. 53,888. 5 Claims. (Cl. 202—9.)



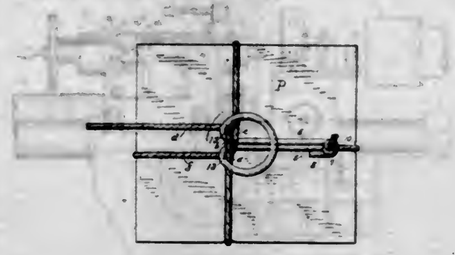
1. In a horizontally elongated, rectangular, sole-fired coke oven with an oven chamber adapted to be sealed against the admission of air, the combination of a plurality of combustion flues arranged side by side under-

neath the sole of the oven for heating it, a regenerator connected with each end of each of said flues, for supplying preheated air to opposite ends of each of said flues



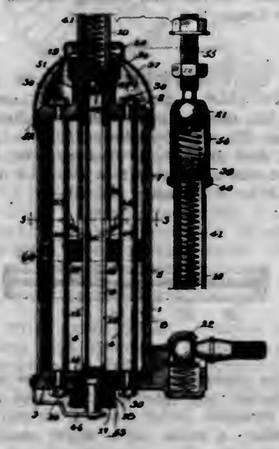
and a gas supplying means at each end of each of said flues, for supplying each flue with gas at opposite ends thereof.

1,635,281. VISCOSOMETER. CLIFFORD M. LARSON, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 629,399. 1 Claim. (Cl. 265—11.)



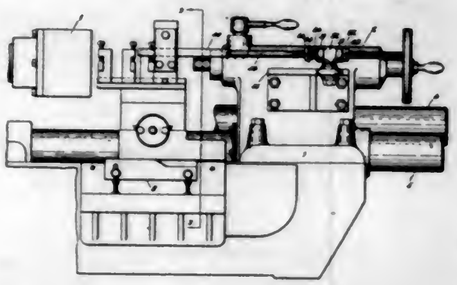
A device for ascertaining relative fluid viscosity, comprising separated upright containers of similar configuration means whereby the containers are mounted so that the whole structure may be manipulated as a unit each container having upper and lower bulbous portions connected by a constricted orifice, each being also provided with an opening for receiving or discharging liquid, and pressure equalizing communicating means between the upper and lower bulbous portions.

1,635,282. TYPEWRITING MACHINE. JOSEPH LINDAUER, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 9, 1925. Serial No. 61,404. 7 Claims. (Cl. 197—127.)



1. The combination with a front-strike typewriting machine having a revoluble platen and releasable feed-rolls therefor, of a chute or table at the introductory side of the platen for conducting a work-sheet to the feed-rolls, said table being slidably mounted upon a stationary member and extending forwardly and downwardly, and then under the platen in close proximity thereto, and terminating with a flared-out edge below the printing line, means controlled by the feed-rolls to concomitantly move the underlying portion of the table away from the platen when the feed-rolls are released, so as to form an opening between the flared-out edge of the table and the periphery of the platen, and means for restoring the position of the table when the feed-rolls are moved to their effective positions.

1,635,283. STRING FASTENER. CHARLES J. LIPPOLD, Washington, D. C. Filed Oct. 11, 1924. Serial No. 743,089. 2 Claims. (Cl. 24—18.)



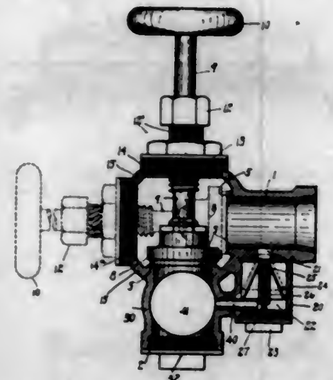
1. In a device of the character described, a length of wire including two substantially straight and parallel sections, a horse-shoe-shaped loop at one end of said sections and having its main bight portion overlying and spaced from these sections, a string-attaching loop formed on one of said sections and embracing the other of said sections, the said straight and parallel sections lying against one another, the end of one of these sections terminating a distance from the end of the loop formed by the end of the other of said sections, thus providing an opening through which a string can be passed longitudinally, and from which the string cannot pass laterally.

1,635,284. SHOCK ABSORBER. LOUIS L. LOMAX, Houston, Tex. Filed Aug. 26, 1926. Serial No. 131,683. 13 Claims. (Cl. 188—88.)

1. In a device of the character described, a casing adapted to contain a fluid, a piston within said casing, a hollow piston rod open to the interior of the casing on one side of said piston and having an aperture in its wall on the opposite side of the piston, a tubular valve mounted in said casing and extending into said hollow piston rod, said valve having a slot in its wall adapted to register with the aperture in said piston rod, said casing and said piston rod being adapted to be connected to relatively movable parts of a vehicle.

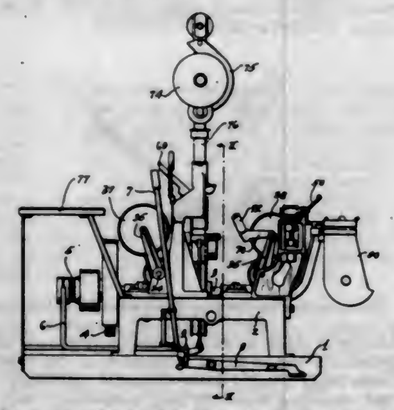
1,635,285. TAPER-TURNING ATTACHMENT. JOHN E. LOVELY, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed Oct. 16, 1922. Serial No. 594,910. 18 Claims. (Cl. 82—17.)

1. A device of the class described, comprising a tool movable axially of and from and toward work, a second tool movable with said first tool axially of the work and from and toward the work independently of said first tool, and means for moving said tools toward and from the work as both tools move axially of the work.



10. A device of the class described, comprising an axially movable and rockable bar, a tool carriage fixed to said bar to be traversed relative to work by the axial movement of said bar and to be moved toward and from the work by the rocking of said bar, a tool fixed to said carriage, a ram slidable transversely of said carriage toward and from the work, a tool carried by said ram, a former bar against which the outer end of said ram bears and along which it rides as the carriage is traversed, a spring urging said ram against said bar, and a member carried by said carriage and bearing against the opposite face of said former bar.

1,635,286. HEAT-DISTRIBUTING PLATE FOR COOKING UTENSILS. ELMER P. MCCLURE, Western Springs, Ill., assignor to Aluminum Products Company, La Grange, Ill., a Corporation of Illinois. Original application filed Jan. 28, 1926, Serial No. 84,271. Divided and this application filed Sept. 15, 1926. Serial No. 135,502. 4 Claims. (Cl. 53—1.)

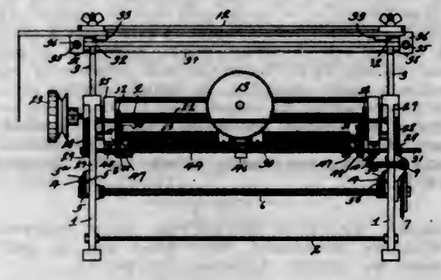


1. A valve connection of the character described including a hollow body part provided with an upwardly extending threaded collar and a laterally extending threaded collar, a steam outlet sleeve connected to the body, arranged opposite to the laterally extending collar and provided with a valve seat, a cross-shaped hollow member having its upwardly extending leg connected to the hollow body and terminating within said body in a valve seat, a threaded member engaging one of said collars, a valve head and an operating member for the same carried by the threaded member and adapted to engage one of said valve seats, the laterally extending arms and the depending leg of the cross-shaped member being provided with openings to permit steam to be fed into the cross-shaped member, and caps closing certain of said openings.

1,635,287. VALVE. JOSEPH F. PARKER, Cincinnati, Ohio; John Robert Burgamy administrator of said Joseph F. Parker, deceased. Filed Mar. 14, 1921. Serial No. 452,384. 2 Claims. (Cl. 277—54.)

2. A valve connection of the character described including a hollow body part provided with an upwardly extending threaded collar and a laterally extending threaded collar, a steam outlet sleeve connected to the body, arranged opposite to the laterally extending collar and provided with a valve seat, a cross-shaped hollow member having its upwardly extending leg connected to the hollow body and terminating within said body in a valve seat, a threaded member engaging one of said collars, a valve head and an operating member for the same carried by the threaded member and adapted to engage one of said valve seats, the laterally extending arms and the depending leg of the cross-shaped member being provided with openings to permit steam to be fed into the cross-shaped members, caps closing certain of said openings, an auxiliary pipe communicating with the steam outlet sleeve and the cross-shaped member, and a check valve arranged in the auxiliary pipe for closing said communication.

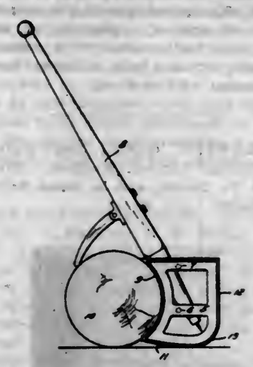
1,635,288. WRAPPING MACHINE. PAUL PIERCE, Chicago, Ill., assignor to Pierce Wrapping Machine Company, a Corporation of Illinois. Filed Mar. 25, 1926. Serial No. 97,190. 9 Claims. (Cl. 242—6.)



1. In a wrapping machine for annular articles, a pair of article supporting and driving rolls, means for driving said rolls, and supporting means for said rolls permitting the same to be freely rotated in one direction independently of said driving means.

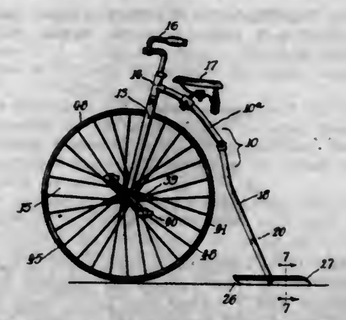
1,635,289. COLLAPSIBLE DRILL PIPE. DAN J. SCOTT, Long Beach, Calif. Filed May 15, 1924. Serial No. 713,544. 7 Claims. (Cl. 255—28.)

1. A collapsible drill pipe for wells, comprising a plurality of concentric pipes adapted to be locked together in collapsed and extended positions, and slidable locking members resiliently supported in certain of said pipes.



1,635,290. SAWING MACHINE. LEONARD B. SKOGLUND, Fremont, Nebr. Filed June 9, 1926. Serial No. 114,697. 3 Claims. (Cl. 143—6.)

1. The combination with a sawing machine comprising a frame, a rockable auxiliary frame mounted in the first mentioned frame, a drive shaft rotatably mounted in the auxiliary frame, a saw mandrel, a gear carried by the saw mandrel, a gear slidably keyed on the drive shaft and meshing with the mandrel gear, a rotatable feed screw carried by the auxiliary frame, driving connections between the ends of the feed screw and the drive shaft, clutch elements cooperating with said driving connections, and reversing mechanism cooperating with said clutch elements whereby when the mandrel reaches a predetermined position in its movement in either direction, the direction of rotation of the feed screw will be reversed.



1,635,291. POLE-FRAMING JACK. ARTHUR M. SMITH, Alhambra, and ALMER W. RHOADES, Los Angeles, Calif. Filed Aug. 2, 1926. Serial No. 126,596. 8 Claims. (Cl. 254—94.)

1. A pole framing pack comprising a cradle having a straight peripheral portion adapted for a base, a concave peripheral portion opposite the base adapted for a pole seat, a convex peripheral portion extending from the base adapted for a rocker, and associated means including laterally extending spaced projections whereby the cradle

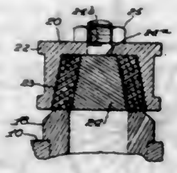
may be engaged and rolled upon its rocker to an upright position on its base by a cant-hook while holding a pole against the pole seat by said means.

1,635,292. ICE CYCLE. ETHEL M. SMITH and SAMUEL BREESE SMITH, Chicago, Ill. Filed Dec. 10, 1925. Serial No. 74,428. 3 Claims. (Cl. 208—161.)

1. A wheel having an arcuate channel member secured to its periphery, said channel member having its sides projecting outwardly, said sides being cut to form ice gripping teeth therein, and having an arcuate T-shaped member on its periphery at the end of the channel member, the leg of the T extending outwardly in the plane of the wheel to form an ice runner, said runner extending circumferentially a short distance between the ice-engaging sides of the channel member.

1,635,293. WIRE CONNECTER. WILLIAM R. SOMMER, ROELOF REE, and CORNELUS KERKHOF, Hackensack, N. J., assignors to Jiffy Wire Connector Company, Hackensack, N. J., a Corporation of New Jersey. Filed Oct. 8, 1923. Serial No. 667,408. 1 Claim. (Cl. 173—263.)

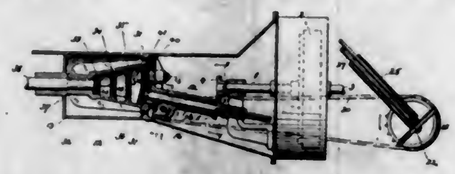
A connecter comprising a continuous cylindrical member having an internally threaded straight bore extending therethrough, a collar formed on the exterior of said



member intermediate its ends, and a hollow body of insulating material having an open end, the inner wall adjacent said end being beveled, said member being embedded in said body and terminating at said beveled wall, whereby the bare ends of a plurality of wires may be bunched and electrically connected together upon their insertion in said threaded bore and upon rotation of the device with respect to the wires.

1,635,294. TRAWLING GEAR. JOHN FRANCIS HARVEY TEMPLER, Ealing, London, England. Filed Apr. 20, 1925, Serial No. 24,649, and in Great Britain Apr. 29, 1924. 4 Claims. (Cl. 43—9.)

1. An otter board having a protuberant surface on that side to which the towing warp is attached and a concavity on the other side in the neighborhood of the tail.



1,635,295. VALVE DEVICE. EMIL TYDEN, Evanston, Ill. Filed Feb. 3, 1926. Serial No. 85,655. 8 Claims. (Cl. 251—27.)

1. A valve device comprising a valve and a co-operating valve seat, one of said co-operating elements being a rigid annulus with a central port to be closed by the seating of one of said elements on the other, and the other co-operating element comprising an annular member of yieldingly compressible elastically reacting substance as rubber, and two rigid members respectively within and encompassing said annular member, and means for compressing the compressible member between the inner and the encompassing rigid members for rendering it substantially incompressible further by the seating pressure, the compressible member being approximately flush with the rigid members at the end exposed between them for seating after being compressed between them: whereby the extent of said compressed element which is susceptible to compression and capable of elastic reaction in the direction of impact of valve and seat is negligible and such yielding and reaction is prevented.

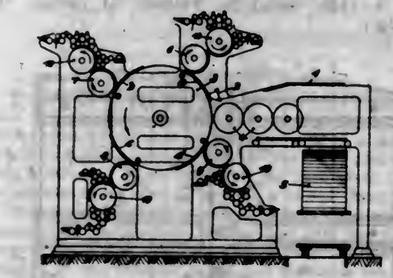
1,635,296. CHANGE-SPEED GEAR FOR AUTOMOBILES AND THE LIKE. HUGO VON DOEMMING, Hildesheim, Germany. Filed May 28, 1925. Serial No. 33,341. 3 Claims. (Cl. 74—58.)

1. In a change-speed gear for automobiles, and the like, the combination with the steering column, the driving shaft, the driven shaft and bearings for the said shafts, of a conical hollow member secured to the said driven shaft and having a series of internal gears of progressively increasing diameter cut therein, a casing enclosing the said hollow member and having a tubular extension, a longitudinally movable shaft rotatably journalled in said extension, a means for longitudinally moving the said last-named shaft, a toothed wheel carried thereby adapted to mesh with any of the said internal gears, a means intermediate the said driving and longitudinally movable shafts for rotating the latter, a means positively operated from the said steering column for causing the longitudinal to and fro movements of the said movable shaft, an idler gear in mesh with one of the said

internal gears to reverse the rotation of the said conical member, a non-rotatable sleeve slidably arranged in the said tubular extension and enclosing the said movable shaft being operatively connected therewith, the said sleeve having rack-teeth provided thereon, a pinion in mesh with the said rack teeth, and a transverse shaft carrying the said pinion.

1,635,297. TRANSFER-PRINTING APPARATUS. RUDOLF WEIDE, Berlin, Germany, assignor to the Firm Hermann Hurwitz and Co., Berlin, Germany. Filed Aug. 31, 1925, Serial No. 53,695, and in France Sept. 8, 1924. 1 Claim. (Cl. 101—146.)

Transfer printing apparatus comprising a printing set, a frame adapted to be reciprocated over the printing set, rockably supported arms mounted on said frame, a printing cylinder and an inking cylinder journalled in said arms, toothed wheels connecting said cylinders to one another, a handle secured to the cylinder-carrying arms, said handle serving for reciprocating the frame, and for bringing the printing and inking cylinders alternately into their operative positions and a spring constantly tending to keep the printing cylinder in its operative position.



1,635,298. STOCKING PROTECTOR. HAZEL CRAWFORD WILLETTE, Rhinelander, Wis. Filed May 18, 1927. Serial No. 192,295. 4 Claims. (Cl. 36—2.)

4. In a stocking protector of the class described, a tubular body formed of thin transparent elastic rubber adapted to snugly fit the leg of the wearer, the lower

portion of the body being shaped to fit snugly around the upper of a shoe, a flap formed on the upper portion of the body and turned downwardly for disposition on the outside of the body, the major portion of the tubular body adapted to be rolled up on the leg of the wearer for disposition within the slot, and means for detachably securing the free edge portion of the flap to the adjacent portion of the body to retain the rolled portion of the body within the flap.

1,635,299. MULTICOLOR ROTARY OFFSET-PRINTING PRESS. OTTO WOHLRABE, Plauen, Germany, assignor to the Firm, Vogtlandische-Maschinenfabrik (vorm. J. C. & H. Dietrich) A.-G., Plauen, Germany. Filed Oct. 19, 1926, Serial No. 142,629, and in Germany May 11, 1925. 3 Claims. (Cl. 101—137.)

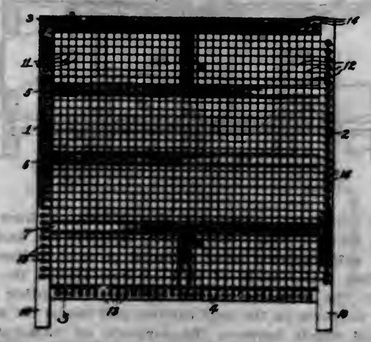
1. A multi-color rotary offset printing press consisting of an impression cylinder with several printing sections, several offset cylinders covered with offset blankets and being arranged symmetrically in equal distances from one another around said common impression cylinder, several plate cylinders covered with printing plates, each of them co-operating with one of said offset cylinders, inking and damping devices arranged to cooperate with said plate cylinders and feeding and delivery appliances co-operating with said impression cylinder.

1,635,300. MASTER TEMPLATE FOR LAYING OUT PATTERNS. SAMUEL ABRAMS and JOSEPH NEFF, Chicago, Ill. Filed Apr. 2, 1924. Serial No. 703,616. 1 Claim. (Cl. 33—12.)

A master pattern comprising a plurality of template parts consisting of top and bottom parts for a coat back, shoulder, body and back seam parts for a coat front and top end and seam outline parts for a coat sleeve, said top and bottom back parts and shoulder and body front parts being laid out from a common base line adapting them for registration with a line to be drawn on a pattern sheet representing the chest measure, each of the template parts having one or more outline edges of the standard outline of a complete pattern to be made, some of said template parts having corresponding scale marks in the margins thereof graded according to different sizes of waist measure, said scale marks providing for the convenient marking off of points on the pattern sheet in positions correlated to the base line and corresponding to the outline of said template parts, and the said edges of the template parts when positioned on the marked off points on the pattern sheet providing a guide for the drawing of pattern lines upon said pattern sheet.

1,635,301. ART OF CURING MEATS. JULIUS ALSBERG, New York, N. Y., assignor to B. Heller & Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1925. Serial No. 36,752. 13 Claims. (Cl. 99—1.)

1. The herein described method of curing meats which consists in enveloping the same with a dry curing medium including a predetermined amount of nitrite as an added element, substantially as specified.

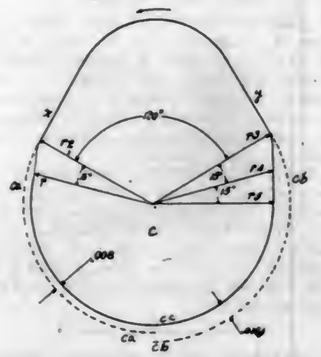


10. The herein described method of curing meats which consists in charging the same with a curing liquid composed of sodium chloride, a nitrate, and a salt of nitrous acid, completely enveloping the charged meat with a dry curing medium containing nitrite, and subjecting the charged, enveloped meat to the action of said dry, curing medium for a period ranging from forty to sixty days, substantially as specified.

1,635,302. SAUSAGE MEAT AND METHOD OF PRODUCING SAME. JULIUS ALSBERG, New York, N. Y., assignor to B. Heller & Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1925. Serial No. 36,751. 7 Claims. (Cl. 99—1.)

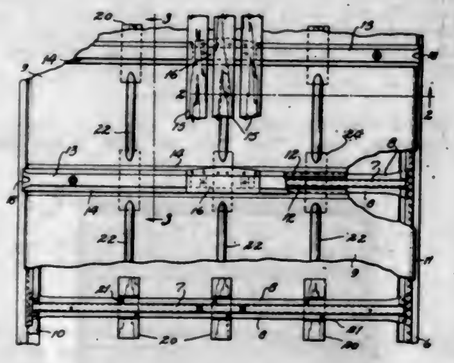
1. The method of producing sausage meat and the like which consists in reducing the meat to small pieces and incorporating therewith a dry curing medium including a predetermined amount of nitrite as an added element, substantially as specified.

5. The method of producing sausage meat and the like which consists in separating the meat into small pieces, adding thereto a dry curing medium composed of sodium chloride, sodium nitrate, and sodium nitrite, mixing the meat with said curing medium, passing the mass through a grinder to reduce the meat to comminuted form and simultaneously more intimately mixing said comminuted meat with said curing medium, and finally packing the thus-treated meat in a container between top and bottom layers of the same dry curing medium, and permitting the mass to cure, substantially as specified.



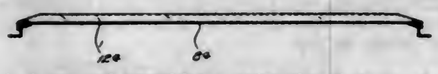
1,635,303. SOUND AMPLIFIER. FRANK D. ARNOLD, Humboldt, Iowa. Filed July 26, 1922. Serial No. 577,531. 6 Claims. (Cl. 181—27.)

1. The combination with a megaphone or tone amplifier having entrance and exit openings at its ends, and a resonator including a frame and filamentous resonating



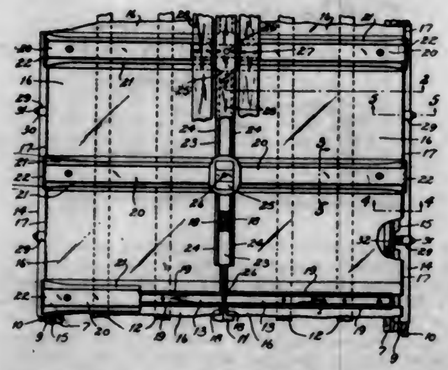
elements extending thereacross, said frame being located within said megaphone or amplifier transversely to the path of sound waves passing from end to end thereof, and the filaments extending transversely of the length of the amplifier.

1,635,304. VALVE GEARING. FORREST S. BAXTER, Detroit, Mich. Filed Dec. 15, 1924. Serial No. 755,882. 3 Claims. (Cl. 74—1.)



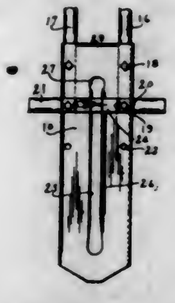
1. The combination with an internal-combustion engine poppet valve of an actuating cam therefor having a contour as described, so constructed as to effect a slow return motion of the valve actuating parts from a position materially higher than that at which the valve seats.

1,635,305. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1926. Serial No. 105,101. 9 Claims. (Cl. 108—5.4.)



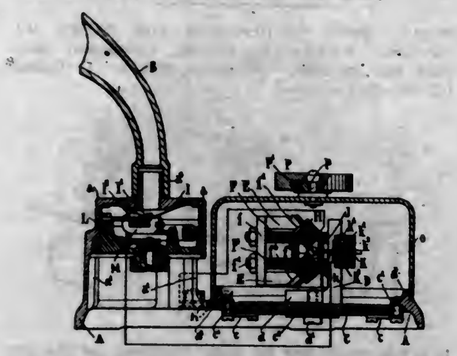
1. A car roof comprising side plates, carlines supported thereby, metal roof sheets, supports for said roof sheets, said supports being mounted on said carlines and extending transversely of said carlines beyond the sides thereof, the supports on one carline terminating short of the supports on the next carline, and means for stiffening said sheets between the supports on adjacent carlines, said stiffening means extending between the supports of adjacent carlines and overlapping the ends thereof.

1,635,306. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1926. Serial No. 127,782. 7 Claims. (Cl. 108—5.4.)



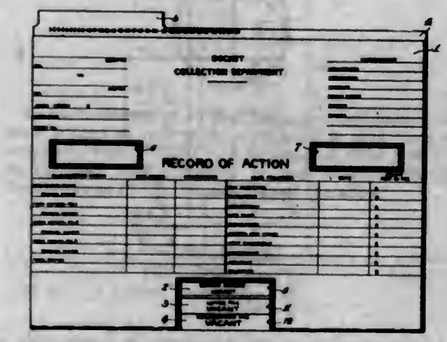
1. A car roof comprising a series of roof sheets whose body portions extend substantially straight from side to side of the car.

1,635,307. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1926. Serial No. 145,963. 11 Claims. (Cl. 108—5.)



1. A flexible car roof comprising roof sheets whose eaves end portions are rebent, and means cooperating with the rebent eaves end portions of said sheets for securing a sluing movement of said sheets about points located at their eaves ends.

1,635,308. TRENCH SPADE. ROBERT C. BOTSFORD, East Haven, Conn. Filed Aug. 10, 1926. Serial No. 128,457. 9 Claims. (Cl. 294—49.)



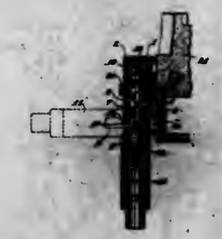
1. In a spade of the type described, handle means, a blade secured thereto and operable thereby, means secured to said blade to limit the effective length thereof, said blade having a slot substantially in the center and extending longitudinally thereof from a point adjacent one end to a point beyond said limiting means, the material of said blade along the edges of the slot being flared outwardly to provide blade reinforcing ribs.

1,635,309. TELEPHONE RECEIVING APPARATUS. SIDNEY GEORGE BROWN, North Acton, England. Filed Oct. 9, 1924, Serial No. 742,716, and in Great Britain Nov. 30, 1923. 3 Claims. (Cl. 179—171.)

1. A mounting for loud speaker apparatus comprising a base plate having an opening in one end thereof, a telephone receiver mounted on the other end of said plate, a sound insulating mat secured to the base plate within said opening, a cover seated on the base plate over the sound insulating mat to provide a closed chamber, and a microphone amplifier mounted in said chamber on the mat and having electrical connections with the telephone receiver and also electrical connections leading to the exterior of the chamber to contact terminals for the circuit of the weak current that is to be amplified.

1,635,310. PAPER FILE. EARL C. BURDIC, Herman, Nebr. Filed Oct. 17, 1923. Serial No. 669,003. 8 Claims. (Cl. 129—16.7.)

8. A folder of the type disclosed comprising a plurality of connected leaves having information thereon, marks on an underlying leaf to indicate where papers are to be secured, and windows in an overlying leaf to disclose information carried by the papers secured to the underlying leaf.

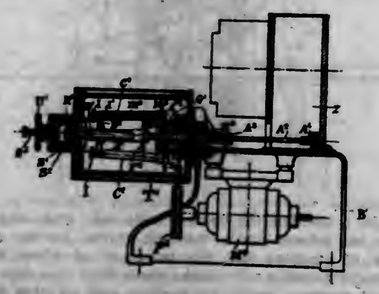


1,635,311. SINK, WASHBASIN, AND THE LIKE. FREDERICK S. CORRIGAN, Toronto, Ontario, Canada, assignor to The Sheet Metal Products Co. of Canada Limited, Toronto, Canada. Filed Oct. 30, 1926, Serial No. 145,286, and in Canada Oct. 29, 1926. 4 Claims. (Cl. 113—116.)

1. A process of forming sinks, wash basins and the like which consists in drawing down an integral sheet of metal in a plurality of operations to form the fluid receiving bowl, leaving at one side sufficient metal to form the back; bending the edges of the sheet downwardly to form a roll for the bowl and back; cutting the sheet at opposite sides to permit of the bending of the roll where back and bowl meet; bending the sheet to cause the back to occupy a position at substantially right angles to the

main part of the article; bringing the cut edges of the front of the roll into juxtaposition; and welding together the edges.

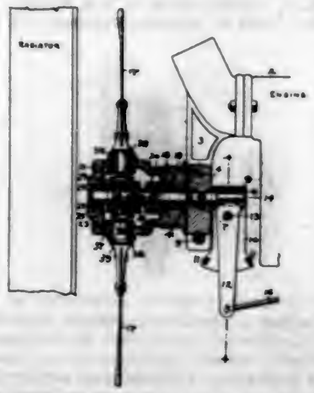
1,635,312. ELECTRICAL CONNECTER AND TERMINAL BLOCK. FREDERICK DIEHL, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 19, 1921. Serial No. 470,751. 8 Claims. (Cl. 173—338.)



1. An electrical connecter comprising an insulating housing having a passageway adapted to receive a conductor, characterized by this that the housing is formed with distinct angularly related apertures communicating with said passageway, a suitable plug member being fitted to a selected one of said apertures and fixed within said housing, the other aperture being unoccupied.

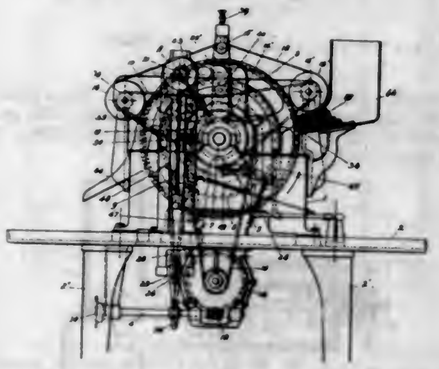
1,635,313. NUT-LOCKING DEVICE. LUDWIG M. DIETRICH, New Brunswick, N. J., assignor of one-fourth to Frederick S. Dickinson and one-fourth to Lindley Vinton, New York, N. Y. Filed Mar. 2, 1921. Serial No. 448,960. 12 Claims. (Cl. 151—38.)

1. A precompressed cork nut lock washer.



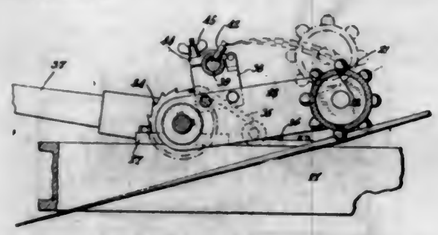
1,635,314. CENTRIFUGAL REGULATOR. LOUIS ABEL DOIGNON, Malakoff, France. Filed Aug. 29, 1925. Serial No. 53,366, and in France Sept. 6, 1924. 5 Claims. (Cl. 192—104.)

1. The combination, with a shaft to be constantly driven at a predetermined speed, a pulley loosely mounted thereon, and a driving device connected with the pulley,



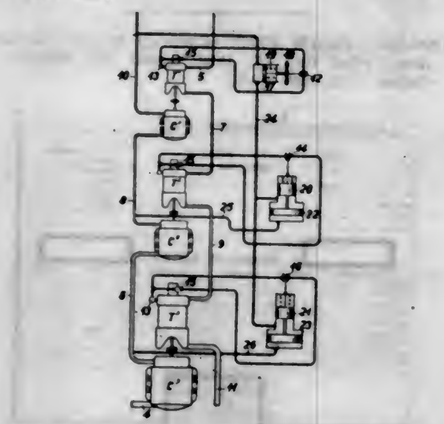
of a centrifugal regulator for maintaining such speed, said regulator embodying: a sleeve mounted on said shaft to rotate in unison therewith, a set of swinging arms pivotally connected at one end with the sleeve and provided at the other end with fixed weights having rubbers attached thereto for frictional engagement with the loose pulley, springs connected to said arms to move them inward toward said sleeve so as to press the rubbers against the said pulley, and manually-operated means for varying the pressure of the rubbers against the pulley while the regulator is rotating and thereby changing its speed.

1,635,315. AUTOMOBILE FAN. CARL F. EHINGER, Cleveland, Ohio. Filed Oct. 19, 1925. Serial No. 63,343. 14 Claims. (Cl. 170—163.)



1. A revoluble fan body having a set of fan blades provided with spindles, means within said body for turning said spindles, and means including spring tension devices for securing said spindles rotatably upon said body, said spring devices being arranged to exert a tension axially of said spindles.

1,635,316. MACHINE FOR MAKING RADIO TUBE AND LAMP PARTS. CHARLES EISLER, Newark, N. J. Filed June 26, 1925. Serial No. 39,709. 12 Claims. (Cl. 49—7.)

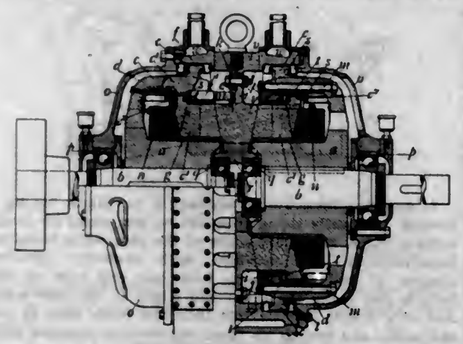


1. In a machine for making radio tube and lamp glass parts, an intermittently rotating carrier having a plurality of recesses for the reception of glass blanks, means for rotating said blanks about their own axes within said recesses, means for heating said rotating blanks, a blank forming tool mechanism including a rotating tool and means for advancing the same to engage the heated rotating blanks, at the stationary periods of said rotating carrier, means for positively rotating said tool, and means for intermittently driving said carrier and advancing said reciprocating mechanism in time relation therewith.

1,635,317. FELT CONDITIONER FOR PAPER MACHINES. WILLIAM P. FEENEY, Cheboygan, Mich. Filed Mar. 3, 1926. Serial No. 91,916. 12 Claims. (Cl. 92—50.)

1. A felt conditioner for paper machines and the like, comprising means having a metallic surface with a plurality of threaded apertures therein and metallic dome like projections with threaded shanks adapted to be secured in said apertures to engage and press upon the felt.

1,635,318. COMPRESSOR APPARATUS. KARL FREY, Ennetbaden, Switzerland, assignor to A. G. Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Mar. 20, 1926, Serial No. 96,137, and in Switzerland Apr. 6, 1925. 5 Claims. (Cl. 230—24.)

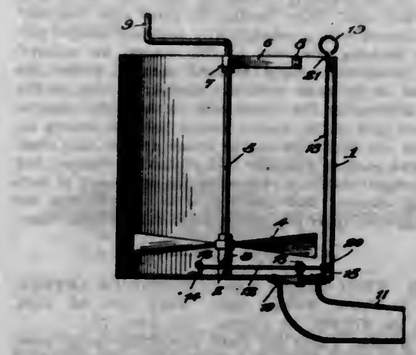


1. Compressor apparatus comprising, in combination, a plurality of compressors connected in series, a plurality of turbines connected for passage of operating fluid therethrough in series, the high pressure turbine connected to drive the high pressure compressor and lower pressure turbines connected to drive respectively the lower pressure compressors, means for regulating the fluid supplied to the high pressure turbine, and means responsive to the end compression pressure and intermediate compression pressures for regulating the fluid supplied to the lower pressure turbines.

1,635,319. ELECTRODYNAMIC POWER-TRANSMITTING MECHANISM. JAMES FRANCIS GILL and JOHN NICHOLAS CHAVIARA, Liverpool, England. Filed Jan. 25, 1923, Serial No. 614,922, and in Great Britain Feb. 11, 1922. 3 Claims. (Cl. 172—239.)

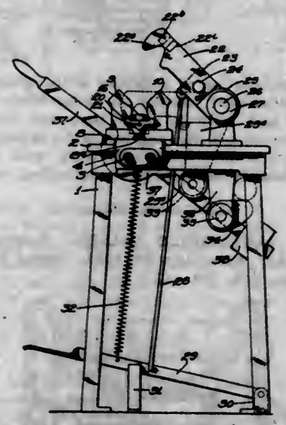
1. In a dynamic-electric machine of the homopolar type, a rotor element carrying both flux and current, a stator element concentric to the rotor and carrying both flux

and current, and a substantially frictionless conductor element in the gap between the rotor and stator and forming a current conductor therebetween, each of said



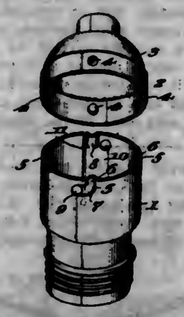
elements comprising a magnetic and conductive body of substantially annular form and having an annular series of slots parallel to its axes, and conductive bars in said slots.

1,635,320. INCANDESCENT ELECTRIC LAMP. JOHN ALLEN HEANY, New Haven, Conn. Filed June 28, 1918. Serial No. 242,481½. 1 Claim. (Cl. 176—36.)



In an incandescent electric lamp, the combination of a stem formed of lead glass, a filament in said lamp and leading-in wires formed of a copper-lead alloy positioned in the stem and connected to said filament, the lead forming from five to ten per cent of the alloy.

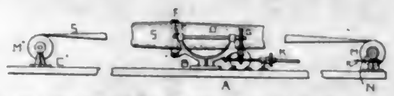
1,635,321. WET-FEED MIXER. GEORGE F. HINKLEY, Brookings, S. Dak. Filed July 13, 1925. Serial No. 43,190. 1 Claim. (Cl. 137—21.)



In a feed mixer, a tank having a discharge opening in its bottom, the wall defined by the opening being bent downwardly and tapering inwardly, a discharge pipe having a flanged end engaged over and closely with the exterior of the tapering wall and secured to the bottom of the tank, a valve engageable with said tapered wall, a bar hinged at one end to and above the bottom of the tank and having an opening in its opposite end, a bolt securing the valve to the bar at a point intermediate the ends of the bar, a clip on the top of the tank having an opening adjacent a side of the tank, and an operating rod on the interior of the tank having its lower end bent to form an eye and engaged through said opening in the opposite end of the bar, the upper end of the rod being extended through the clip opening and bent to form an eye-like handle which latter overlies the clip and is adjacent thereto.

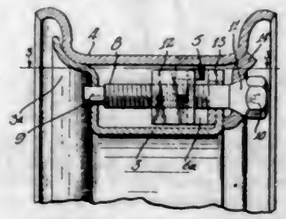
1,635,322. MOP MACHINE. JOE C. HUGULEY and CARL M. HUGULEY, San Diego, Calif. Filed Sept. 18, 1924. Serial No. 738,384. 13 Claims. (Cl. 300—16.)

6. In a machine of the class described, a frame, a pair of pivotally mounted, mutually contractible, yarn clamp member contracting arms, and a rack and gear means for rotating said arms about their pivotal mountings.



1,635,323. CAP AND SHELL FASTENING FOR LAMP-SOCKET CASINGS. WILLIAM ILE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed July 2, 1925. Serial No. 41,208. 1 Claim. (Cl. 173—362.)

A cap and shell fastening for lamp socket casings comprising a shell provided at the upper end with a plurality of equally spaced grooves, one of the grooves being substantially vertical and enclosed at the lower end and the other grooves being approximately L-shaped and consisting of a vertical entrance branch and a horizontal branch, said shell being also provided with perforations spaced equally from the vertical entrance branches and the vertical grooves, the perforations of the L-shaped

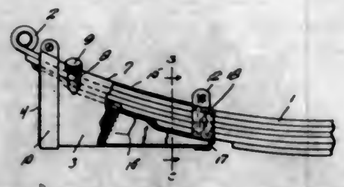


grooves being arranged at the extremity of the horizontal branches and forming extensions thereof, and providing openings at the terminals of the horizontal branches, and a cap provided with interior projections slidable in the grooves by telescopic movement of the cap over the shell and adapted to be carried into the perforations by relative rotary movement of the cap and shell, said projections being of a diameter equal to the width of the grooves and to the diameter of the openings and the projection engaging the perforation adjacent the vertical groove forming a positive lock for holding the cap and shell against relative rotary movement.

1,635,324. WEB MESSAGE RADIO. CHARLES FRANCIS JENKINS, Washington, D. C. Filed May 5, 1925. Serial No. 28,225. 7 Claims. (Cl. 178—14.)

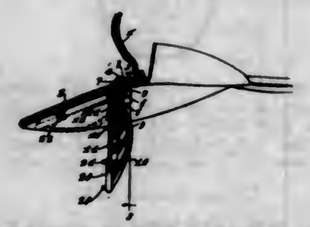
1. The combination of a flexible strip, means for moving it longitudinally, means for transversely curving a portion of said strip to more than one hundred and eighty degrees of a circle, and means for laterally traversing the curved portion of said strip with a marking means a plurality of times per longitudinal inch of said strip.

1,635,325. AUTOMOBILE WHEEL. SAMUEL KAPLAN, Monroe, La. Filed Apr. 28, 1924. Serial No. 709,589. 2 Claims. (Cl. 301—17.)



1. The combination with a fixed rim having a U-shaped cross section and a series of cam surfaces on the inner face of one side, of a demountable rim arranged to slip over said fixed rim and to engage the opposite side of said fixed rim, said demountable rim having inwardly projecting pins arranged to engage said cam surfaces when said demountable rim is rotated with respect to said fixed rim, a screw shaft carried by said fixed rim, a traveling locking member carried by said screw shaft and arranged to engage one of said pins, whereby said demountable rim is rotated to force said pins into engagement with said cam surfaces and to prevent a relative movement of said rims in the opposite direction.

1,635,326. VANITY CASE. NATHAN KASDAN, New York, and DANIEL POLLACK, Brooklyn, N. Y., assignors to Majestic Metal Specialties, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 4, 1926. Serial No. 85,836. 8 Claims. (Cl. 132—83.)

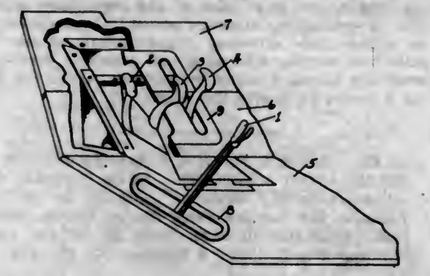


1. In a vanity case, means for confining powder, comprising a movable downwardly dished spring wall and an opposing fixed wall having an aperture normally closed by said spring wall, said aperture being of ample size to permit pressure of a powder puff through it onto the spring wall whereby to admit powder into the aperture.

1,635,327. SPRING LUBRICATOR. GEORGE KELNER, Cleveland, Ohio. Filed Feb. 17, 1926. Serial No. 88,862. 3 Claims. (Cl. 184—1.)

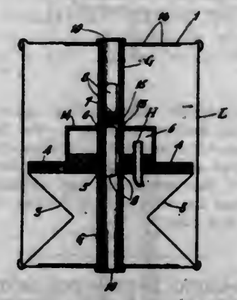
1. A spring lubricator comprising a receptacle having a bottom, side walls rising from the bottom along its longitudinal edges, the upper edges of the side walls inclining longitudinally and provided with inwardly directed flanges, an end wall rising from one end edge of the bottom and along the taller end edges of the side walls and of a height slightly less than the taller ends of the side walls and having its upper extremities provided with an outwardly and upwardly directed flange, an end wall rising from the other end edge of the bottom along the shorter end edges of the side walls and being less in height than said shorter ends of the side walls and having its upper extremity provided with an outwardly and downwardly directed flange, a capillary element having its ends disposed over the outwardly directed flanges and its side edges disposed under the inwardly directed flanges, and means for suspending the receptacle below a leaf spring to supply the capillary element to the under-surface thereof so that lubricant in the receptacle will splash against the capillary element to maintain the same saturated with the lubricant.

1,635,328. EYESHIELD AND FACE PROTECTOR. EARL EDWARD KINTZ, Bucyrus, Ohio. Filed Jan. 20. 1926. Serial No. 82,545. 1 Claim. (Cl. 2—10.)



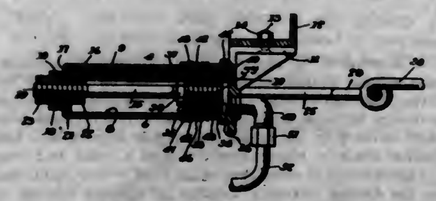
A combined eye shield and face protector comprising a substantially elliptical shaped, spring controlled frame adapted to be pivotally connected with the lower face of the visor, said frame having its outer side, centrally thereof, formed with a substantially semi-oval shaped portion for bridging the nose of the wearer, an uninterrupted, transparent shield element secured within the frame and of the same area and contour as that of the opening formed by the latter and further of a size to shield both eyes of the wearer, spaced holdfast devices arranged on the outer side of the frame and on said semi-oval shaped portion, a flexible face protecting element, and spaced fastener members carried by the upper end of such protecting element and coacting with said devices for connecting said upper end to the outer side of said frame.

1,635,329. WIND GUARD FOR AUTOMOBILE LEVERS. ULUS S. KLOTZ, Toledo, Ohio. Filed Nov. 30, 1923. Serial No. 677,892. 3 Claims. (Cl. 180—77.)



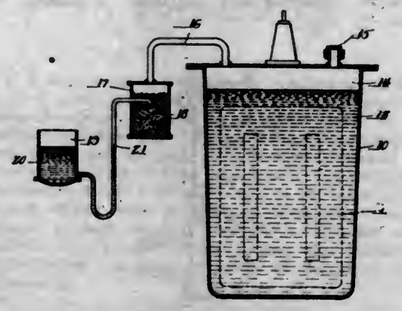
1. In a wind guard for Ford automobile pedal lever slots, a sheet metal member having thereon sides that slope relative to each other and so as to cover the lower ends of the pedals on three sides, two of the sides flaring outward, the forward side formed substantially V-shaped,

the said guard having a flange extending around the upper edge thereof and located in the plane of the surface of the under side of the sloping upper floor board,



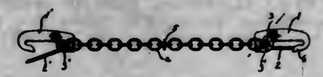
and means extending through the said flange for securing the wind guard to the under side of the upper floor board.

1,635,330. POST STRUCTURE FOR VOICE DEVICES. ALEXANDER KONOFF, New York, N. Y., assignor to Voices Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Dec. 30, 1922. Serial No. 609,929. 4 Claims. (Cl. 46—46.)



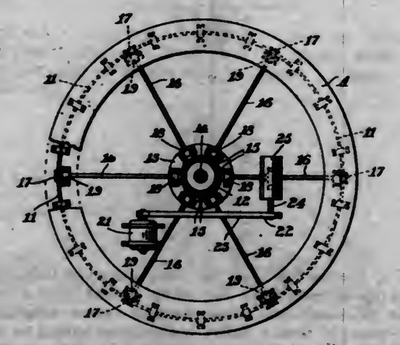
3. A sound producing device comprising a casing having an air chamber therein, a sound producing reed, a weighty member movable by gravity in said casing to expel air from the chamber through said reed, a hollow guide post for said weighty member extending axially through the casing and the air chamber and provided with longitudinally spaced openings in the wall thereof, means preventing communication between said spaced openings interiorly of the post, and said weighty member having a sound receiving chamber provided with a wall coacting with the wall of said post and with the spaced openings therein to control the emission of sound from said chamber in the gravity movement of said head in one direction.

1,635,331. HYDRAULIC BRAKE MECHANISM. FRANK KRISCH, Los Angeles, Calif. Filed Sept. 21, 1925. Serial No. 57,612. 2 Claims. (Cl. 188—152.)



1. In a hydraulic brake mechanism for automobiles, a hydraulic unit comprising a cylinder made in two telescopic hollow sections, the head of the outer section enclosing the inner end of the inner section, a piston reciprocally mounted in the inner section, a piston rod connecting said piston with the head of the outer section, a cross member secured to the head of the outer section, a yoke secured to said cross member and extending around the head end of said inner section, and means for operating said yoke.

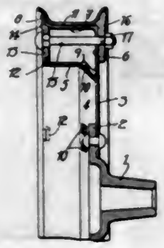
1,635,332. DEVICE FOR PREVENTING OXIDATION OF OIL IN TRANSFORMERS. JOHANNES KUBLER, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company. Filed Sept 2, 1926, Serial No. 133,172, and in Germany Sept. 24, 1925. 4 Claims. (Cl. 220—85.)



1. Protective apparatus comprising, in combination with a vessel having a closed expansion space, a gas generator comunicating with the expansion space, a reagent container, materials in the generator and container for generating an inert gas, there being a connection between the generator and container permitting flow of material from the latter into the former under a predetermined suction from the expansion space.

1,635,333. LINGERIE-FASTENING DEVICE. MAY E. MICKLEBOROUGH, Brooklyn, N. Y. Filed Oct. 17, 1925. Serial No. 62,968. 2 Claims. (Cl. 24—73.)

1. Clasping devices for lingerie, comprising a plurality of spaced chain members and clasp members adapted to space said chain members secured to the adjacent ends of said chain members.

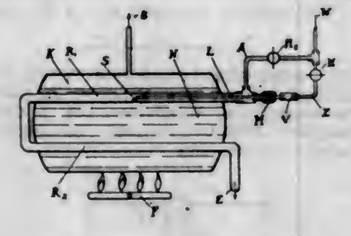


1,635,334. REVOLVING STORE FIXTURE. FRANK BICKNELL MITCHELL, Regina, Saskatchewan, Canada. Filed Jan. 26, 1925. Serial No. 4,850. 2 Claims. (Cl. 74—26.)

1. In a revolving store fixture, actuating mechanism comprising a prime mover, a drive shaft, a worm on the drive shaft, a rotatably mounted crown gear, a plurality

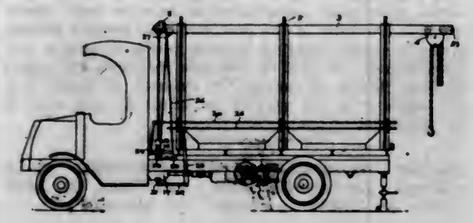
of radiating shafts provided with pinions adapted to engage with the crown gear, a worm gear keyed on one of the radiating shafts adapted to engage with the worm on the drive shaft, whereby, on the prime mover being operated, the crown gear and the radiating shafts are simultaneously operated, a guideway on the fixture and means carried by the radiating shafts adapted to engage with said guideway to rotate the fixture.

1,635,335. WHEEL WITH DRUM. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Mar. 11, 1924, Serial No. 698,399. Renewed May 25, 1927. 3 Claims. (Cl. 301—6.)



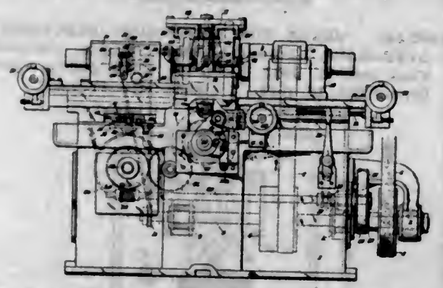
3. A vehicle wheel comprising a disc formed with a laterally extending integral brake drum flange which is united to the body of the disc by an inclined portion and a felloe having a part shaped for wedged engagement with said inclined portion and a tongue struck up from said disc, and a projection on said felloe co-acting with said tongue arranged to lock the felloe and disc against relative circumferential movement.

1,635,336. ALL-METAL WINDOW SASH. OSCAR VENDAL NELSON, Racine, Wis. Filed Nov. 26, 1926. Serial No. 150,918. 4 Claims. (Cl. 189—76.)



1. A window sash of the class described including a plurality of rails, each rail being formed from a single sheet of metal bent along parallel spaced longitudinal dimensions to form a hollow construction having an outer plate merging at its inner edge into a right angularly extending inside plate which merges into an overlapping portion that is bent over upon itself and merges into an inner plate disposed in parallelism with the outer plate and at right angles to the inside plate, said inner plate merging into an inwardly directed right angular extension merging into an outwardly disposed acutely extending tongue, the outer edge of the outer plate merging into an overlapping extension which in turn merges into an outside plate extending perpendicularly to the outer plate and merging into an obtuse extension overlapping itself and having a spaced overlapping portion for forming a pocket to receive the tongue.

1,635,337. SAFETY DEVICE FOR ABSORPTION REFRIGERATING MACHINES. ERICH NIEMANN, Charlottenburg-Berlin, Germany, assignor to A.-G. für Handels- und Industriewerte Glarus, Glarus, Switzerland. Filed Dec. 10, 1924, Serial No. 755,034, and in Germany May 3, 1924. 4 Claims. (Cl. 62—118.)

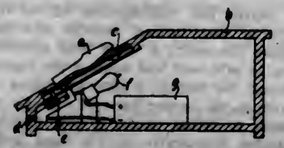


1. In an absorption refrigerating apparatus a boiler having a cooling medium passage, a tube inserted in said passage and spaced therefrom, a fusible element melting at a temperature exceeding the highest normal working-temperature of the apparatus and closing one end of said tube, means for supplying a cooling medium to the other end of said tube.

1,635,338. LOADING DEVICE FOR MOTOR TRUCKS. GEORGE W. OTTERSON, Toronto, Ontario, Canada, assignor, by direct and mesne assignments, of four-fifths to Lissa A. Otterson, Seattle, Wash., and one-fifth to Joseph F. Brandenburg, New York, N. Y. Filed Feb. 18, 1922. Serial No. 537,649. 8 Claims. (Cl. 212—74.)

1. A machine of the character described comprising a road vehicle having an overhead frame on its body with a track on said frame extending lengthwise of the body, a trolley movable along said track, a longitudinal rotary shaft carried by the frame, means for driving said longitudinal shaft in either direction, and a hoist and means for operating the same carried by said trolley, said means on the trolley having a member in slidable driving connection with said shaft and comprising a lock of self-holding meshing gears through which the hoist is operated from said shaft to raise and lower the load and whereby to hold the load at any height or point lengthwise of the vehicle body.

1,635,339. CENTERLESS GRINDING MACHINE. WILBUR J. PEETS, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 28, 1922. Serial No. 571,457. 19 Claims. (Cl. 51—117.)

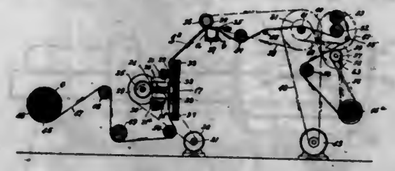


1. In a centerless grinding machine, the combination with work controlling and grinding wheels having opposed work-engaging faces, of a work-holder including an element sustaining the work between said wheels during the grinding operation for rotation about an axis coincident with the axis of said element.

1,635,340. FORMATION THIEF. LEROY H. PERRY, Gardena, and WALTER F. WOODMAN, Long Beach, Calif. Filed June 21, 1926. Serial No. 117,629. 8 Claims. (Cl. 255—1.)

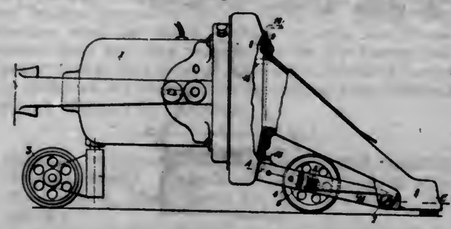
1. A device of the character described comprising; a tubular housing having lateral apertures; sampling thieves resiliently mounted within the housing; and means for pressing said thieves outwardly through said apertures.

1,635,341. DEVICE FOR TRYING ON SHOES OR BOOTS. CHRISTIAN PFERSDORF, Elberfeld, Germany. Filed Dec. 2, 1925, Serial No. 72,849, and in Germany Dec. 5, 1924. 1 Claim. (Cl. 33—3.)



A device for trying on shoes or boots comprising a transparent shoe model having an integrally formed sole or bottom and provided with a toe cap and a heel end and a number or symbol indicated on the shoe model corresponding to the size of boots or shoes suitable for the foot upon which the shoe model is tried.

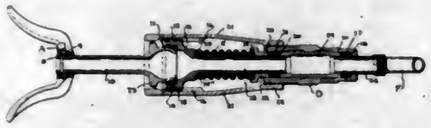
1,635,342. SAFETY RAZOR WITH ROLLING BLADE. RAFFAELE PISO, Naples, Italy. Filed Nov. 13, 1923, Serial No. 674,570, and in Italy Nov. 14, 1922. 5 Claims. (Cl. 30—12.)



1. A safety razor comprising in combination a handle, a guard member and a cooperating member adapted to clamp therebetween a resilient blade, and means for maintaining said clamping members in clamping position on said handle and for preventing movement of said blade relatively to said handle, said guard member and the cooperating member being adapted to be adjusted transversely of the blade whereby the blade may always be gripped by said clamping members in the same relative position with respect to the cutting edge thereof, notwithstanding reduction in width of the blade due to sharpening.

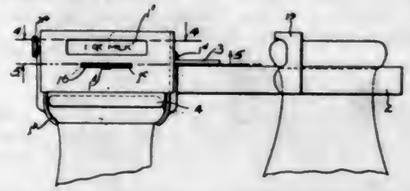
1,635,343. FABRIC-TRIMMING APPARATUS. ZDENKO PODHRADSKY, Astoria, N. Y., assignor to H. R. Mallinson Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 57,990. 9 Claims. (Cl. 26—16.)

1. A trimming machine comprising a bed, feeding mechanism for feeding a web of fabric over said bed, said fabric including a design the outlines of which are bounded by loose thread ends, brushes moving to and from said fabric and transversely thereof effective upon said fabric to raise said loose ends to upright positions thereon and cutting mechanism in the path of said fabric for cutting away said upright loose ends to closely trim the aforesaid design along its outlines.



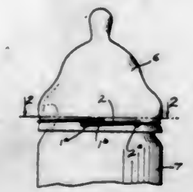
1,635,344. VACUUM CLEANER. EDMOND RAGONOT, Malakoff, France. Filed Mar. 7, 1925, Serial No. 13,685, and in France Mar. 19, 1924. 4 Claims. (Cl. 15—16.)

1. In an electrically operated vacuum cleaner, the combination with a wheel supported body casing and a suction inlet portion, of a frame pivoted to said suction inlet portion for vertical movement relatively thereto



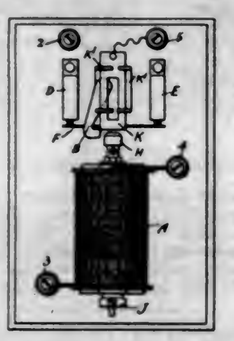
and carrying wheels, means comprising a cylindrical member connecting said body casing and suction inlet portion together and a cam embracing said cylindrical member and acting on said frame for controlling the position thereof.

1,635,345. AUTOMATIC TRAIN-PIPE COUPLING. JOSEPH ROBINSON, New York, N. Y. Filed Nov. 22, 1920, Serial No. 425,765. Renewed Nov. 12, 1925. 22 Claims. (Cl. 285—58.)



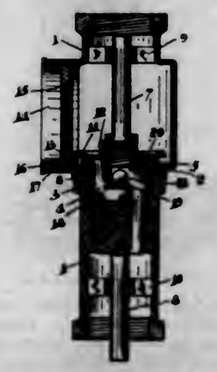
17. In an automatic train pipe coupling, in combination, a bracket, a coupling head, a fluid conduit connected to said head and extending rearwardly past said bracket, a second conduit connected to said first conduit, said first conduit being movable universally relative to the second conduit, said conduits being shiftable rearwardly relative to said bracket when said head is coupled with a mating head, and a spring for yieldingly resisting such shifting of said conduits.

1,635,346. MILK-BOTTLE SUPPORTING AND LOCKING DEVICE. JOHN ROGGINGER, San Diego, Calif., assignor to Norco Mfg. Co., Norco, Calif., a Corporation of California. Filed July 6, 1925. Serial No. 41,618. 13 Claims. (Cl. 194—4.)



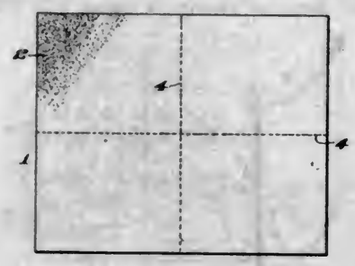
1. In a milk bottle supporting and locking device, a frame provided at its lower portion with bottle supporting means and in one of its sides with a coin receiving means, a bottle retaining member shiftably mounted in said frame and provided with means to prevent the withdrawal of said bottle from the one end of said frame, and lever means mounted in said frame engageable and shiftable by the upper end of said bottle for releasing a coin positioned in said coin receiving means.

1,635,347. CLAMPING RING. JOHN ROGGINGER, San Diego, Calif., assignor to Norco Mfg. Co., Norco, Calif., a Corporation of California. Filed Nov. 4, 1925. Serial No. 66,708. 9 Claims. (Cl. 24—10.)



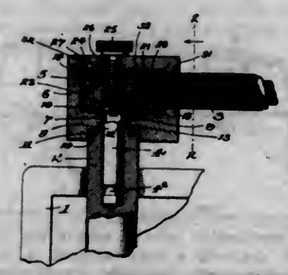
1. In a device of the class described, a ring member open at one side with its ends overlapping, and a locking lever pivotally connected at its one end with the one end of said ring member and pivotally connected intermediate its ends with the other end of said ring member, said lever being laterally distortable and provided with a locking lug adapted to be laterally shifted and inserted into an outwardly extended loop in said ring member.

1,635,348. MEANS FOR INDICATING ELECTRICAL OVERLOADS. JOAQUIN SAMPER, Bogota, Colombia. Filed Jan. 17, 1925, Serial No. 3,121, and in Great Britain Oct. 13, 1924. 3 Claims. (Cl. 177—311.)



1. In a device for indicating electrical overloads, a supporting base, a normally contacting fixed contact and a movable contact carried by the base, additional fixed contacts to be bridged by the movable contact when displaced from the normal position, one of said additional contacts being in circuit with an electrical source through a signal, overload operated electromagnetic means for moving said movable contact from its normal position to its contact bridging position, the first mentioned fixed contact, the movable contact, and the electromagnetic means being in series with the electrical load.

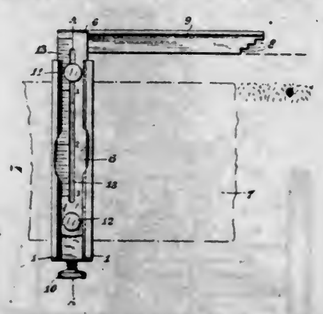
1,635,349. INDICATING VALVE. JAMES SANDILANDS, Toronto, Ontario, Canada. Filed Oct. 25, 1924. Serial No. 745,782. 2 Claims. (Cl. 116—128.)



2. In a valve, the combination of a valve casing having a valve seat formed therein and an indicator chamber above the seat; a valve plug movable, more or less, relative to said seat and against the force of gravity by flow through the casing; a stem extending up from the valve; a guide in the casing for said stem; a ledge on the casing forming a datum mark; a disk forming an indicator adjustable lengthwise of the stem and extending adjacent to said ledge; and a window in the wall of the indicator chamber through which the said disk and datum mark are visible.

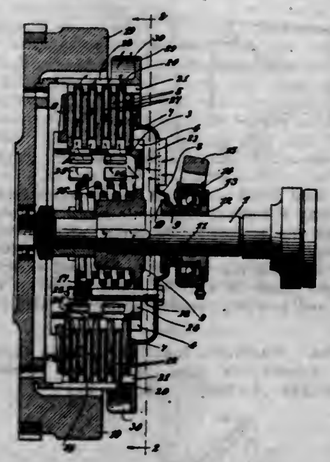
1,635,350. SAND, EMERY, OR OTHER ABRASIVE PAPER, CLOTH, OR THE LIKE. HARRY C. SIMONS, Philadelphia, Pa. Filed Oct. 16, 1923. Serial No. 668,794. 1 Claim. (Cl. 51—185.)

An article of the character stated comprising a sheet of paper or cloth provided upon one entire surface with a coating of abrasive material and provided upon its opposite surface with a plurality of longitudinally and transversely extended strips of abrasive material which intersect one another and are arranged cross-shaped from edge to edge of said sheet to provide a backing presenting a checkered appearance, said article being provided with weakened lines which bi-sect one another whereby the article may be readily folded to conceal the coated face of the article and to further provide sections which may be readily detached as required.



1,635,351. STORAGE-BATTERY TERMINAL CONNECTION. GLENN SPURGEON, Hillsburg, Ind. Filed June 30, 1922. Serial No. 571,871. 6 Claims. (Cl. 136—163.)

5. A terminal connection for storage batteries comprising, in combination, an open-top casing body; a battery terminal having an extension projecting into said casing body; an electrical conductor projecting into said casing body and connected to the terminal; and a cover for said casing connected to said terminal extension, the cover serving to close the casing body and effect a fluid-tight joint between the body and said battery terminal.

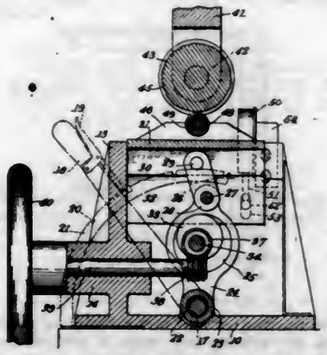


1,635,352. GUIDE FOR STRAIGHTEDGES. ROBERT C. WILLIAMS, San Francisco, Calif. Filed Oct. 19, 1925. Serial No. 63,483. 1 Claim. (Cl. 33—42.)

The combination, in a guide for a straight edge, of an elongated clamp having an arm at each end, with a set screw through one arm to engage one edge of said straight-edge, and having two grooves running lengthwise to receive an adjustable scale, a scale having a guide arm at one end, mounted in said grooves and by

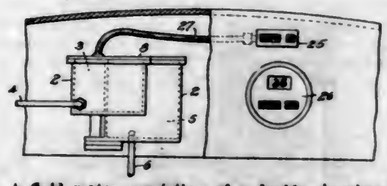
which the position of the straight-edge is determined, a set screw for holding said scale in a fixed position on said clamp.

1,635,353. AIR-COOLED CLUTCH. JOHN H. ALLEY, Philadelphia, Pa., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 30, 1925. Serial No. 59,443. 2 Claims. (Cl. 192—113.)



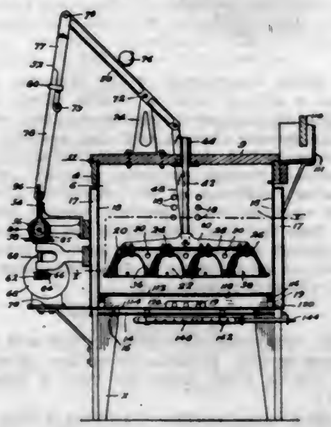
1. A clutch construction of the character described, including a driving drum, a coaxial driven drum, an assembly of friction clutch rings intermediate said drums, radial air passages through said ring assembly, air passages through said drums communicating freely with said passages through the ring assembly, and means for causing circulation of air outwardly through said passages when the clutch revolves, whereby heat is dissipated from said ring assembly by the air flowing outwardly through said passages, said means including curved fan blades on the periphery of the driving drum adjacent said air passages therethrough.

1,635,354. PROCESS AND APPARATUS FOR MAKING FINGER RINGS. CLIFFORD W. ALLSOPP, Newark, N. J. Filed Jan. 6, 1925. Serial No. 775. 3 Claims. (Cl. 80—5.)



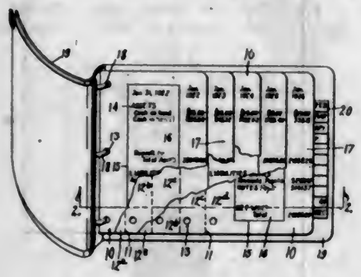
2. A ring rolling machine comprising a fixed frame, a table adjustable vertically therein, said table having a pair of recessed brackets on its top, a ring arbor removably engageable in the recesses of the brackets, a master roll rotatably supported above the table in regis-

ter with said arbor, a link and lever device for raising the table, an eccentric on which the lever is fulcrumed, a hand lever to adjust the eccentric, an eccentric oper-



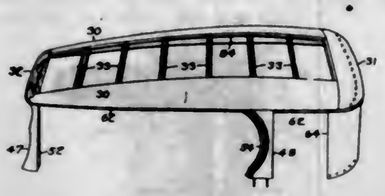
able in an opening of said lever, and hand operated means to actuate the last named eccentric whereby the lever may be turned upon its pivot.

1,635,355. FLUID METER. ROY B. AMBROSE and JOHN W. PATTERSON, Pittsburgh, Pa. Filed June 4, 1925. Serial No. 34,858. 7 Claims. (Cl. 73—28.)



1. A fluid meter consisting of a double chambered casing having a common upper air space and providing a receiving and a distributing cavity with an intervening valve controlled port, a valve therefor, a tilting frame having an actuating float in one of said cavities, a pivoted lever connected with the valve, an arm on the tilting frame, and a spring connecting the arm with said lever.

1,635,356. WASHING MACHINE. ROSS CLARK BENKMAN, Kansas City, Kans. Filed June 1, 1925. Serial No. 34,148. 5 Claims. (Cl. 62—19.)

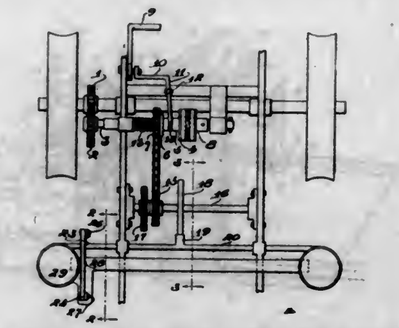


4. A washing machine consisting of a tub, a lid hinged to said tub and provided with slots, a reciprocatory plunger arranged within said tub, a guide stem on said plunger extending through the lid, links connected to the plunger and extending through the slots in the lid, and means for reciprocating said links.

1,635,357. COMPARATIVE VISIBLE RECORD BOOK. JOHN E. BEMIS, Des Moines, Iowa. Filed Aug. 23, 1926. Serial No. 130,919. 4 Claims. (Cl. 129—1.)

1. In a structure of the class described, a series of sheets, each having adjacent to one edge a plurality of sections separated by weakened lines, each of said sections being provided with holes for mounting the sheets on supporting members, whereby it is possible to tear from the members of a series of sheets, a successively increasing number of said sections and to arrange the sections with their left-hand edges flush with each other and with their right-hand ends successively projecting from the superposed sheets for making visible upon the exposed portions of the sheets data for comparison.

1,635,358. TOP CONSTRUCTION. JOSEPH H. BOURGON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Oct. 30, 1924. Serial No. 746,876. 12 Claims. (Cl. 296—137.)

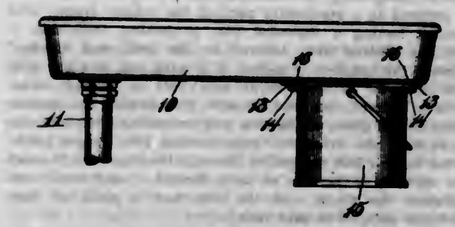


12. In combination with a vehicle top having sheet metal side quarters, a brace secured to each of said quarters intermediate the ends thereof, members connecting the front and rear ends of said side quarters, a bracket supported by each of said side quarters, a bracket supported at the front of each of said side quarters, and a block secured to each side quarter, said block and said second named bracket being adapted to support a curtain therebetween, and said brace and said first named bracket supporting a second curtain in overlapping relation with said first named curtain.

1,635,359. CHECKROW PLANTER. ROSS DHUMS and ROY DHUMS, Columbus, Ohio, assignors of one-third to George W. Walker, Columbus, Ohio. Filed Apr. 30, 1925. Serial No. 27,035. 1 Claim. (Cl. 111—30.)

A planting and marking machine including a supporting frame having a hopper mounted thereon, a member pivoted intermediate its ends on said hopper, a hod mounted for oscillation on said frame, an arm extending radially from and fixed to said rod, a link pivoted at

one of its ends to said arm and having its other end pivoted to the other end of said member and of such length as to maintain said arm and said member sub-



stantially parallel to each other in their various positions and a marking rod parallel to said link and slidable vertically in said frame and pivoted at one of its ends to other end of said member.

1,635,360. VEHICLE SPRING. DANIEL E. DUNCAN, Far Rockaway, N. Y., assignor of one-half to Michael J. McDonnell, Far Rockaway, N. Y. Filed May 20, 1924. Serial No. 714,634. Renewed June 2, 1927. 2 Claims. (Cl. 267—47.)

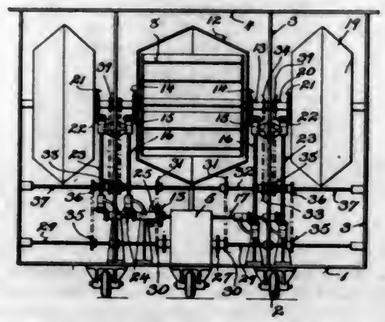
1. A vehicle spring of the semi-elliptic type, comprising a leaf having shackle bolt eyes in its ends, an underlying leaf having one end bent to encircle the shackle bolt eye, the other end bent to partially encircle the other shackle bolt eye, and an overlying leaf terminating short of each shackle bolt eye.

1,635,361. SINK STRUCTURE. IRA FUSON, Long Beach, Calif. Filed Mar. 24, 1925. Serial No. 18,025. 8 Claims. (Cl. 4—190.)

1. In combination with a receptacle adapted for the reception of articles to be cleansed by or treated with liquids, the receptacle having a drain opening and a further opening in spaced relation to the drain opening, a second receptacle adapted for the reception of solids, said first and second receptacles having coacting flanges engaging to support the second receptacle from the first named receptacle and beneath the second opening and means for sealing said second opening against the passage of liquids the receptacle being removable without disturbing the sealing means.

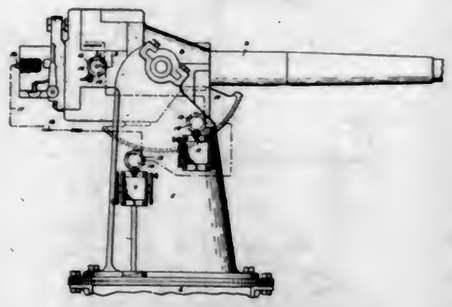
1,635,362. WHEEL FOR DETACHABLE TIRES. JOHN HENRY GILDERSLEEVE and HENRY JAMES FAINT, Corono, N. Y. Filed May 6, 1925. Serial No. 28,328. 1 Claim. (Cl. 152—21.)

In a wheel for detachable tires, the combination of a felly having a flange collar at one of its side faces and having a tread extending across its outer circumferential face from said flange collar, said felly having a circumferential locking groove in its other side face, said groove having locking cavities formed therewith, a detachable flange collar with a locking rim extending therefrom, locking lugs integral with said rim, said rim normally engaging said circumferential locking groove and said locking lugs normally locking with said cavities and means to maintain said detachable flange collar with its ring and locking lugs in locked position with said felly.



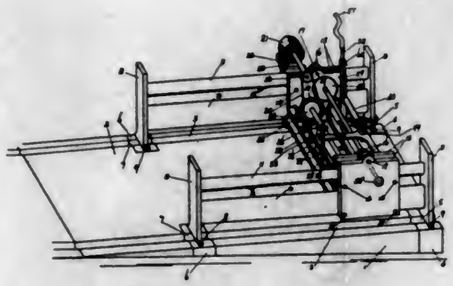
1,635,363. ENDLESS CONE BELT. GEORGE BERNARD HANDLEY and EDGAR GEOFFREY HANDLEY, Bradford, England. Filed May 6, 1926, Serial No. 107,188, and in Great Britain Jan. 9, 1926. 1 Claim. (Cl. 74—63.)

An endless belt for cone pulleys comprising an inside ply of soft resilient leather adapted to be compressed when passing over the surfaces of the pulleys and to extend when passing between said pulleys, an outside ply of firm stretched leather and of wider section than said inside ply adapted to support the inside ply and to resist the tension and fork action to which the belt is



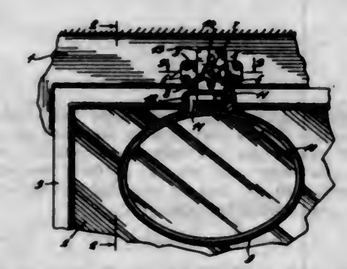
subjected and an air escape in the form of a closely pitched series of elongated longitudinal slots cut about the central axis of the inside ply adapted to reduce the running temperature of the belt and the fork pressure necessary to move it.

1,635,364. FLYING MACHINE. JOHN F. HAUSSMANN, Milwaukee, Wis., assignor of one-fourth to Christ A. Rusch and one-fourth to Daniel W. Hoan, Milwaukee, Wis. Filed Aug. 25, 1926. Serial No. 131,385. 2 Claims. (Cl. 244—16.)



1. A flying machine comprising a central impeller and a pair of outer impellers, shafts for said impellers, sleeves mounted upon said shafts and carrying substantially semicircular housings covering approximately half of their respective impellers, a main frame work supporting said shafts, a motor mounted adjacent the lower portion of said frame-work and operatively connected to said central and outer impellers for rotating the outer impellers in one direction and the central impeller in the opposite direction, and manually controlled mechanism operatively coupled to said sleeves for rotating said sleeves to thereby alter the position of said housing.

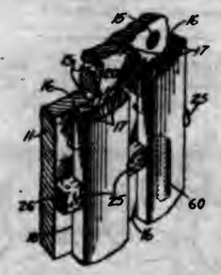
1,635,365. FIRE-CONTROL SYSTEM FOR GUNS. JAMES C. KARNES, Buffalo, N. Y. Filed Feb. 26, 1927. Serial No. 171,353. 2 Claims. (Cl. 89—41.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



2. In a gun including an electrically operated firing device, means for traversing the gun, means for elevating the gun, means for setting the fuse of a round within the gun, an index associated with each of said means, a member associated with each index and movable proportionate to data to be applied, and electrical connections establishing a circuit between the firing device, and the indexes and the members.

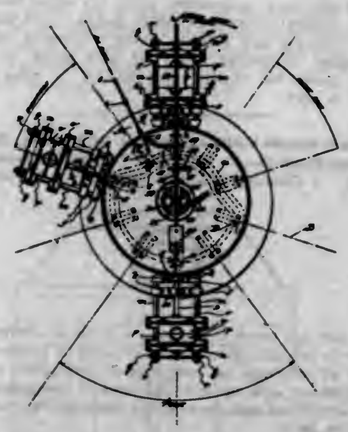
1,635,366. RUG-CLEANING MACHINE. AVEDIS S. KHANZADIAN, Binghamton, N. Y. Filed Feb. 11, 1926. Serial No. 87,602. 20 Claims. (Cl. 15—40.)

1. A rug cleaning machine comprising an inclined rug supporting platform, supporting blocks in said platform, posts secured to said blocks, rails mounted on said posts, a carriage movable on said rails, and rug washing mechanism on said carriage adapted for engagement with a rug on said platform.



1,635,367. LIGHT-RAY-FILTERING SCREEN. WILLETT J. LA TOURRETTE, Denver, Colo. Filed Aug. 30, 1926. Serial No. 132,493. 1 Claim. (Cl. 296—97.)

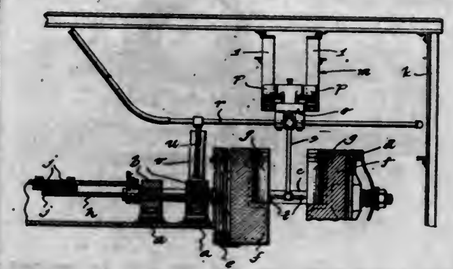
A glare shield and ray filter for use on automotive vehicles, comprising, in combination, a bracket adapted to be secured to a stationary part of the vehicle frame, said bracket having a threaded bolt projecting therefrom, a straight slotted arm secured to the bolt and clamped against the bracket by means of a wing nut whereby said arm may be rotated about said bolt or moved transversely thereof, one end of said arm having an opening lying in the plane of the arm and extending from one side thereof to the other, a frame having two spaced perforated lugs, a bolt extending through the lugs and through the opening in the arm so as to form a hinged connection between the frame and the arm and a plate of filter material secured in said frame.



1,635,368. GUARDED OPENING SCREEN. MAHLON E. LAYNE, South Pasadena, Calif., assignor to Layne & Bowler Corporation, Los Angeles, Calif., a Corporation of California. Filed Mar. 7, 1927. Serial No. 173,403. 15 Claims. (Cl. 166—5.)

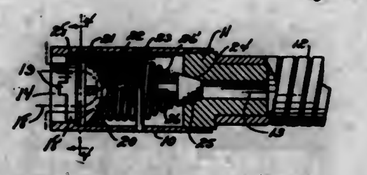
2. In a well screen; a pipe having inlet openings therethrough in a selected alignment; and guard strip means on said pipe aligned over said openings, said strip means being held away from the surface of the pipe to provide screen slots between the edges of said strip means and the surface of said pipe.

3. A well screen as in claim 2, in which said guard strip means are hollowed on the under face to form an enlarged space between said strip means and the face of said pipe in which fluid may flow.



1,635,369. MOLDING APPARATUS. HARRY S. LEE, Plymouth, Mich. Filed Jan. 26, 1925. Serial No. 4,744. 7 Claims. (Cl. 22—88.)

1. In a molding apparatus, the combination of a conveyor for supporting mold sections, a pipe line provided with means at its end for affording a carbon-generating flame, and means for dropping the pipe into the mold sections when the conveyor brings the same to the pipe and for gradually withdrawing the end of the pipe therefrom, including a bar for affording a support for the pipe but permitting a limited relative movement thereto, said bar and pipe being carried along in a limited movement by the conveyor, cam means for raising the pipe gradually to distribute the carbon evenly over the mold, and cam means for also causing the bar to raise to disestablish the connection between the conveyor and the bar.

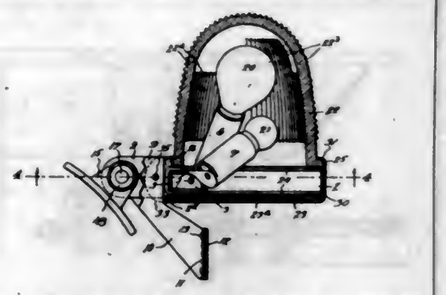


1,635,370. APPARATUS AND METHOD OF COATING MOLDS WITH CARBON. HARRY S. LEE, Plymouth, Mich. Filed Feb. 16, 1925. Serial No. 9,528. 5 Claims. (Cl. 22—188.)

5. In an apparatus for coating molds with carbon, the combination of a burner provided with means for projecting a fan-shaped sheet flame, said means located at a point substantially equi-distant from all points in the mold surface in the plane of the flame, and means for

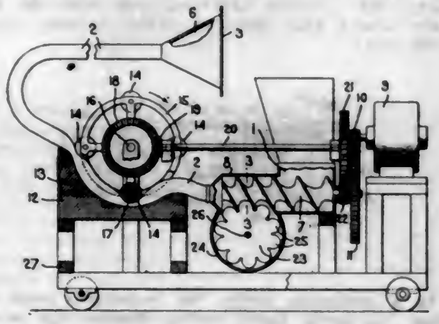
moving said burner parallel to the surface of the mold and at right angles to the plane of the fan-shaped sheet flame.

1,635,371. COUPLING MEMBER FOR LUBRICATING DEVICES. ADOLPH LEVENSON, New York, N. Y. Filed Apr. 1, 1925. Serial No. 19,955. 1 Claim. (Cl. 285—176.)



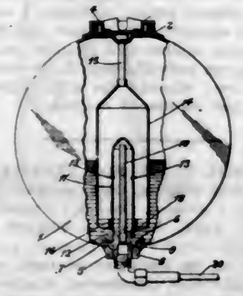
In a lubricating device, the combination with a grease cup having spaced radially disposed lugs, of a coupling member open at its outer end to receive said cup, a plug projecting from the other end of said member and having a longitudinal bore, a transverse pin arranged within said member, a valve, a spring interposed between the pin and valve and normally holding the latter seated to close said bore, an inwardly extending flange at the open end of the member and having spaced notches for the passage of said lugs, and notches to receive the lugs to prevent relative rotary movement between the coupling member and cup, a shoulder formed within the member above said flange, a concaved metallic plate slidably movable within said member, a packing at one side of said plate, said plate and packing having aligned central openings, a second spring arranged at the opposite side of said pin for normally holding the packing against said shoulder, said plate and packing being moved inwardly against the tension of said spring by said cup, whereby the plate holds said lugs engaged in the last mentioned notches.

1,635,372. SIGNAL LIGHT FOR VEHICLES. SAMUEL LIPPERT, Garfield Heights, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,190. 11 Claims. (Cl. 177—329.)



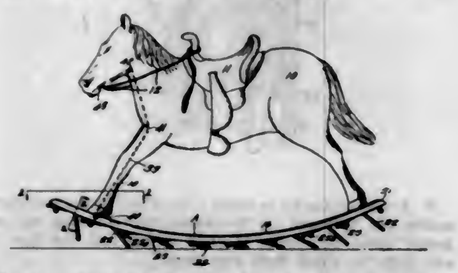
1. In a device of the character set forth, the combination of an annular base constructed of sheet metal and having an inwardly opening channel formation except at its ends where it terminates in ears, a fitting disposed within the portion of the base adjacent its ends and through which the ends are connected together with said ears engaging each other, said fitting incorporating

lamp sockets that project above the base, lamps supported by said sockets, a globe surmounting the base and enclosing said lamps, a split ring encircling the base and



having a part cooperating with the globe for securing it to the base, and means for connecting the ends of said ring to the aforesaid ears of the base.

1,635,373. PLASTERING MACHINE. JOHN LOFHOLM, East Braintree, Mass. Filed Sept. 21, 1926. Serial No. 136,750. 6 Claims. (Cl. 72—130.)

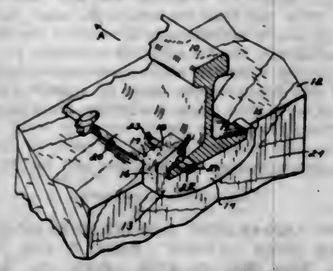


1. In a plastering machine the combination with a flexible pipe through which plaster or mortar is delivered to a wall, of means for feeding plaster to said pipe, and means acting on the exterior of the pipe to positively force the plaster therethrough.

1,635,374. LIQUID-LEVEL INDICATOR. LEWIS A. MAPEL, St. Louis, Mo., assignor to The Automatic Appliance Company, St. Louis, Mo., a Corporation of Missouri. Filed June 9, 1921. Serial No. 476,334. 9 Claims. (Cl. 73—54.)

1. The combination with a tank from which liquid is to be withdrawn and provided with a filling opening, of an element adapted for manipulation dependently and as an incident to the filling of the tank, a pressure chamber in which air is normally confined by said liquid, an indicating device communicating with said chamber and responsive to the varying head of said liquid, and means operatively connected with said element and cooperating with said chamber when the element is manipulated to expose said chamber to the atmosphere.

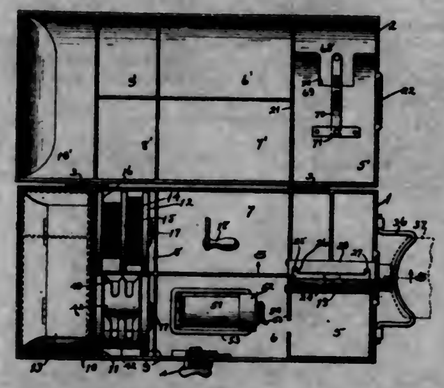
1,635,375. AMUSEMENT DEVICE. KENNETH ARNET MATHERS, Haskins, Iowa. Filed Oct. 13, 1924. Serial No. 743,383. 3 Claims. (Cl. 272—53.)



3. In a device of the class described, a rocker, a pair of series of feet pivoted thereto, stops for limiting the pivotal movement of one series of said feet in one direction and the other series in the other direction whereby one series depends from the rocker at an angle in one direction and the other series depends therefrom at an angle in the other direction, means for rendering one series of said feet inoperative while the other series is free for pivotal movement, said means comprising a slidably mounted rod, shifters slidably mounted thereon and adapted to engage either of said series of feet, resilient means for causing said shifters to move when said rod is slid.

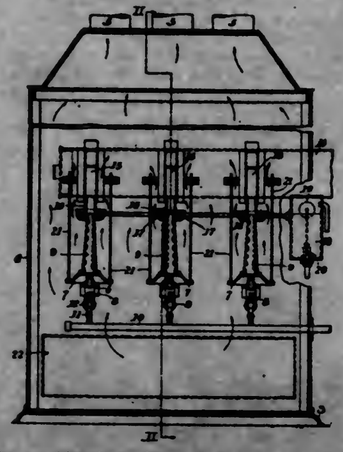
1,635,376. GOLF TEE. CLOYD A. MCILVAINE, Balboa Heights, Canal Zone. Filed Mar. 15, 1926. Serial No. 94,787. 2 Claims. (Cl. 273—33.)

1. A golf tee blank comprising a strip of flexible material with straight, downwardly tapered or pointed projections at intervals on one side to form legs, having a longitudinal slot in one end and a complementary tongue with head and neck in the opposite end for connecting its ends.



1,635,377. RAIL ANTICREEPER. EMERY M. MCVICKER, Milwaukee, Wis. Filed Apr. 3, 1926. Serial No. 99,476. 8 Claims. (Cl. 238—324.)

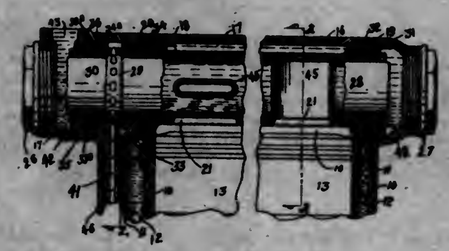
1. In an anti-creeper for railway rails the combination with a member having a portion engageable with a vertical face of a tie, a portion engageable with and beneath



a rail flange, and a portion overlying the rail flange, of a longitudinally tapered wedge interposed between said overlying portion and the top of the rail flange for effecting a positive gripping pressure vertically applied between said member and flange.

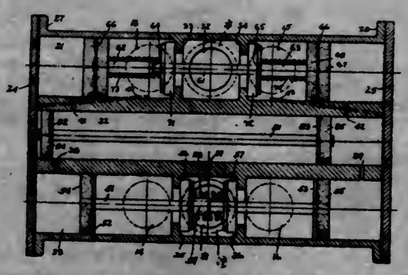
1,635,378. COMBINED FISHING-TACKLE BOX AND LINE WINDER AND DRIER. EDWARD C. MEAD, Elkhart, Ind. Filed Oct. 17, 1925. Serial No. 63,142. 18 Claims. (Cl. 43—31.)

1. In a tackle box a plurality of spaced spool bodies, a plurality of compartments each adapted to receive one of said spool bodies, and another compartment with which a spool support is rigidly associated, said spools being selectively mountable on said support.



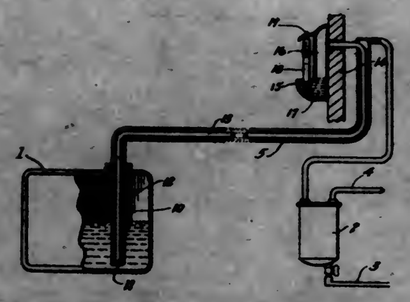
1,635,379. HEATING APPARATUS. WALLACE W. MILER, Steubenville, Ohio. Filed June 23, 1926. Serial No. 118,066. 6 Claims. (Cl. 126—116.)

1. The combination with a fuel burner radiant, of a plate for absorbing light rays therefrom and means for directing a current of air between said radiant and the plate.



1,635,380. ROTARY-VALVE STRUCTURE. ELDON H. MITCHAM, Charlton, Iowa. Filed Apr. 7, 1926. Serial No. 100,326. 2 Claims. (Cl. 123—177.)

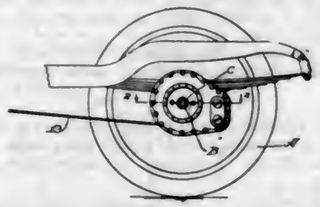
1. In a structure of the class described, an engine block having cylinders, a head supported on said block, a rotary tubular valve in said head, packing and packing glands in said head and surrounding said valve adjacent the ends thereof, one end of said valve projecting beyond its packing gland and having a sprocket secured thereon and having beyond said sprocket an extending portion, a housing secured to said head and covering said sprocket



and extending portion, an annular rib on the interior of said housing surrounding said extending portion, a packing and a packing gland in said annular rib, and water jacket spaces in said head and said housing at the ends of said valve whereby water may circulate through the valve from one of said spaces to the other.

1,635,381. PLURAL LIQUID-DISTRIBUTING SYSTEM. DWIGHT S. MORROW, Milan, Ohio. Filed Sept. 8, 1925. Serial No. 55,058. 8 Claims. (Cl. 137—79.)

1. A device of the character described, having in combination a distributing valve, means connecting said valve with two sources of fluid supply of different character, and automatic means for controlling the ports of said valve to change from one fluid supply to another, while preventing intermixture.



1,635,382. GASOLINE GAUGE. HENRY MOSSBACH, Seattle, Wash. Filed Mar. 1, 1923. Serial No. 621,982. 3 Claims. (Cl. 73—54.)

1. The combination with a fuel supply tank and a fuel feed system including a pipe that is extended into the said tank and has a restricted inlet, and means whereby suction is created intermittently in said pipe to effect a

withdrawal of fuel from the tank, of an indicating device comprising a closed receptacle containing an indicating liquid and a gauge tube open to atmosphere at its upper end and communicating at its lower end with the indicating liquid in the receptacle and in which the indicating liquid will rise and fall in accordance with variations of pressure within the receptacle, an air tube connected at one end with the top of the said receptacle and having its other end disposed within the suction pipe in such manner as to receive fuel therein from the fuel tank during inactive periods of the suction means to thereby effect a rise of the indicating liquid in the gauge tube, there being created during active periods of the suction means an inward flow of air through the gauge tube, indicating liquid and receptacle which removes liquid from the gauge tube and fuel from the air tube.

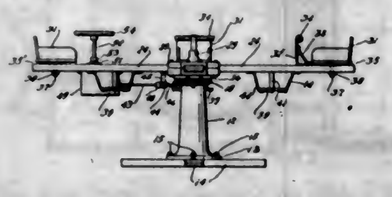
1,635,383. HYDRAULIC BRAKE. DAVID NETTENSTROM, Chicago, Ill. Filed June 1, 1925. Serial No. 33,868. 12 Claims. (Cl. 188—92.)

1. A brake for a vehicle wheel comprising a relatively fixed fluid-tight casing, a pair of intermeshing gears journaled therein operatively connected for rotation by the vehicle wheel, the casing wall being formed with non-adjacent portions fitted snugly around segments of said gears respectively and having an inlet and an outlet separated from each other by the intermeshing teeth of the gears and connected by a passage for fluid, together with a valve controlling the flow through said passage.

1,635,384. CASE-HARDENING PROCESS FOR STEEL ARTICLES. FRANZ PACHER, Dusseldorf-Rath, Germany. Filed Nov. 21, 1925, Serial No. 70,675, and in Germany Nov. 17, 1924. 2 Claims. (Cl. 148—13.)

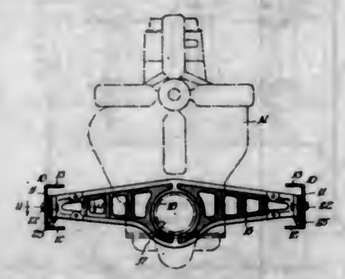
2. A process for treating a steel article which consists in carburizing an external layer of such article, heating the article throughout to a temperature which will relieve internal stresses but which is below hardening temperature, then heating said layer to such a temperature as will produce a glass-hard condition therein upon subsequent quenching from such temperature while not substantially raising the temperature of the remainder of the article, and then quenching the article.

1,635,385. CHAIN LINK. NORVIN PERAY, Tompkinsville, N. Y. Filed July 21, 1921. Serial No. 486,411. 12 Claims. (Cl. 59—92.)



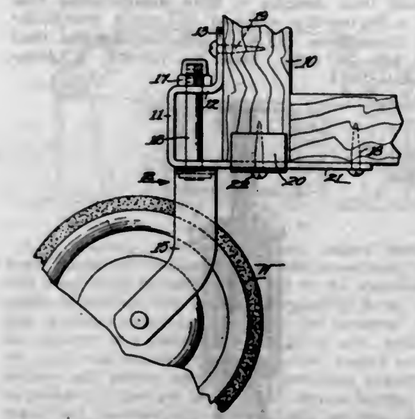
1. A chain link comprising a single continuous strand of material bent to form two-single-strand loops, the free end of one of said loops being threaded through the other of said loops and bent back on itself, and the free end of said other loop being coiled about said link adjacent the point of connection of said loops.

1,635,386. CLASP. EDWARD PIERSON, Calumet City, Ill. Filed Feb. 17, 1925. Serial No. 9,855. 1 Claim. (Cl. 24—222.)



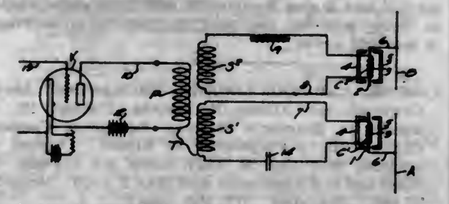
In combination; a pair of plates provided with sewing perforations peripherally disposed, one of the plates provided with a keyhole slot, the keyhole slot provided with a channel formed by bending the metal into opposing arcs the metal being pushed out in forming the keyhole slot, the other plate provided with a knob, the arcs adapted to receive and retain the knob when inserted from the side of the first plate opposite to that of the struck up portions.

1,635,387. MERRY-GO-ROUND. JOSEPH R. PULLEN, Chicago, and WILLIAM L. FIENE, Elmhurst, Ill. Filed July 2, 1923. Serial No. 649,126. 1 Claim. (Cl. 272—33.)



A merry-go-round comprising a stationary pedestal, a frame on said pedestal with a ball race on its under face, said frame including a radially extending beam, a gear fixed at the upper end of said pedestal and provided with a ball race on its upper face to correspond to the first said ball race and having antifriction bearings therein for rotatably mounting said frame with said bearings upon said gear, brackets beneath said beam, a shaft journaled in said brackets and having a pinion engaging said gear beneath said frame, a seat at the outer end of said beam, and crank means and hand levers thereon, mounted on said beam, at each side of said seat, and actuated by both hands or either hand from said seat for operating said shaft and rotating said frame on said pedestal.

1,635,388. MOTOR VEHICLE. JOHN RUSE, Doylestown, Ohio. Filed May 29, 1924. Serial No. 716,564. 3 Claims. (Cl. 180—64.)

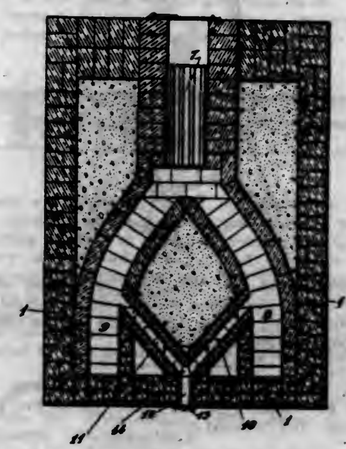


1. In a motor vehicle, the combination of a chassis having side members, a motor, and motor supporting means comprising but two members, both of which extend between said chassis side members, spacers secured to said side members for positioning said supporting means, said motor supporting members each having downwardly extending feet for sliding on one portion of said chassis side members and each having laterally extending portions for cooperating with another portion of said chassis side members for guiding the motor supporting members in their movements as they are being applied to and withdrawn from cooperative relationship with said spacers.

1,635,389. WHEEL-ATTACHING DEVICE. WILFORD P. SHUFFLETON, Gardner, Mass., assignor to Gem Crib & Cradle Company, Gardner, Mass., a Corporation of Massachusetts. Filed June 4, 1925. Serial No. 34,963. 2 Claims. (Cl. 16—20.)

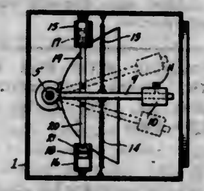
1. A wheel attaching device comprising a substantially U-shaped bearing member having one straight leg and having the end portion of the other leg bent outwardly, substantially at a right angle and having bearing openings in the two legs of said bearing member adjacent the closed end thereof, fastening elements extending through openings in the ends of said legs into supporting surfaces perpendicular to each other to secure said devices in position, and a U-shaped clip extending crosswise of the lower leg of said bearing member and frictionally engaging the frame to which it is attached and embracing said member.

1,635,390. ELECTRIC SOUND REPRODUCER. ADOLPH A. THOMAS, New York, N. Y. Filed Mar. 15, 1926. Serial No. 94,676. 9 Claims. (Cl. 179—1.)



1. A sound reproducer having a pair of diaphragms, electromagnetic mechanism for operating each diaphragm independently of the other, said mechanism being controlled by electric impulses representing transmitted sound, and means for so controlling said mechanism that said electric impulses cause said diaphragms to vibrate slightly out of unison.

1,635,391. METHOD OF AND PRODUCT FOR MAKING PLASTER. GEORGE B. WOOD, Rockland, Me., assignor to Rockland & Rockport Lime Corporation, Rockland, Me., a Corporation of Maine. Filed July 16, 1925. Serial No. 44,108. 5 Claims. (Cl. 106—24.)



5. As a new composition of matter, a mixture for making plaster, consisting of an unsoftened vegetable fibre and pulverised unslaked lime, the particles of lime being of a size and in quantity sufficient to render in slaking substantially the entire mass of fibres soft and flexible.

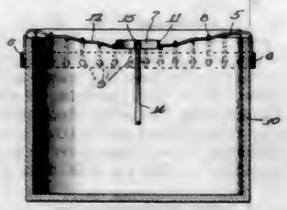
1,635,392. OVEN. CLARENCE WILLIAM AIRD, Brantford, Ontario, Canada, assignor to The Brantford Oven & Rack Co. Limited, Brantford, Ontario, Canada, a Corporation of Ontario. Filed May 22, 1924. Serial No. 715,211. 3 Claims. (Cl. 107—55.)

3. An oven comprising an oven bottom, a fire box beneath the oven bottom, vertical flues at the opposite end of the oven to the fire box, two horizontal flues beneath the oven bottom diverging from the fire box to the vertical flues, and a flue consisting of two converging arms connecting the horizontal flues interjacent the fire box and the vertical flues for creating a suction from one of the horizontal flues to the other and maintaining an even distribution of heat at both sides of the oven bottom.

1,635,393. DIRIGIBLE HEADLIGHT. ALEXANDER E. AMANS, Lacey, Wash. Filed Mar. 11, 1925. Serial No. 14,600. 1 Claim. (Cl. 240—62.)

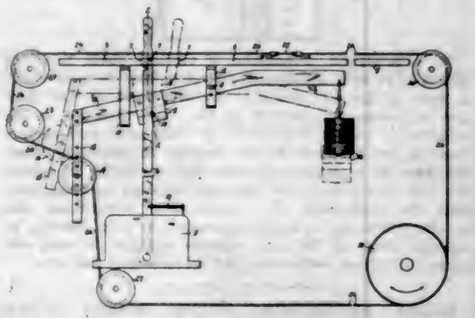
In a headlight, a housing, a vertical shaft rotatably mounted in said housing, a reflector fixed to said shaft, a lamp within the reflector, an arm fixed to the shaft and extending horizontally in the axial direction of the reflector, a weight adjustable on said arm, and springs fixed to the arm and to the housing to yieldably retain the arm at a neutral position but yieldable to permit the arm to swing to one side or the other in accordance with the inclination of the said shaft toward one side or the other, air cylinders mounted in said housing at opposite sides of the arm, pistons operable in said cylinders and links connecting the pistons with the arm.

1,635,394. ADVERTISING STAND. RUSSELL W. ANDERSON, Detroit, Mich. Filed Aug. 22, 1924. Serial No. 733,525. 1 Claim. (Cl. 40—125.)



An advertising stand comprising a rectangular frame-like base having angle iron sides with upstanding flanges, a display plate, a support therefor in the form of a one-piece inverted U-shaped frame constructed of T-iron with the web thereof extending inwardly of said frame, said plate having its upper edge conforming to the shape of the upper curved portion of the U-shaped frame and hav-

ing said edge secured closely in the angle of the T-iron, said support having its ends resting on the angle irons of said base and attached to the upstanding flanges

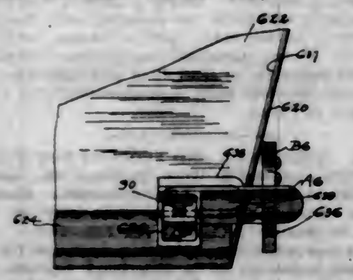


thereof intermediate the front and rear edges of said base, and braces connecting the ends of said angle irons to said support and bearing against the webs of said support at points below said plate.

1,635,395. ASH RECEIVER. CHARLES J. BOB, Pittsburgh, Pa. Filed Feb. 24, 1925. Serial No. 11,035. 3 Claims. (Cl. 131—51.)

1. In combination with an ash receiver having a top provided with an aperture for the passage of ashes, cigar butts or the like, a deflector comprising a member having a comparatively narrow edge disposed substantially centrally beneath said aperture.

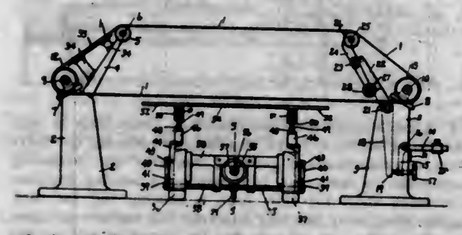
1,635,396. AUTOMATIC STOP FOR DOUBLE-PILE-FABRIC LOOMS. CHARLES A. BONDZIULIS, Waterbury, Conn. Filed Mar. 25, 1926. Serial No. 97,426. 2 Claims. (Cl. 139—336.)



1. In a double-pile fabric-loom, the combination with the power-control mechanism, pile-cutting knife-cord and reed-beam thereof, of a pivotal bar adapted to oscillate in a plane substantially parallel with the said reed-beam, a knife-cord pulley carried by the said bar, a bodily-movable spring-extended trip-plunger also carried by the said pivotal bar and normally held out of the path of the said reed-beam by the tension of the said knife-cord, means yieldingly tending to move the said trip-plunger bodily into the path of the said reed-beam, means for releasably holding the control-mechanism in its "on" position, and yielding means normally urging the power-control mechanism into its "off" position, whereby the trip-plunger is bodily moved into the path of the said reed-beam for engagement thereby to effect the stoppage of the loom when the knife-cord becomes slack.

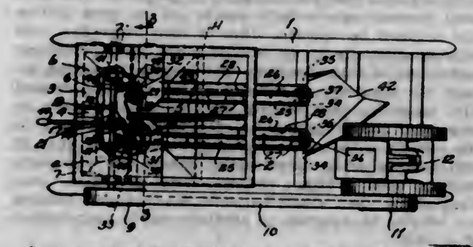
1,635,397. VEHICLE JACK. JOHN H. BURKHOLDER, Ashland, Ohio, assignor to Elite Manufacturing Company, a Partnership composed of John H. Burkholder, P. E. Countryman, and E. L. Kilhefner, Ashland, Ohio. Filed June 24, 1924. Serial No. 722,014. 2 Claims. (Cl. 254—102.)

1. A vehicle jack, comprising a standard, a rotatable main screw having screw connection with said standard, a secondary lift screw mounted within said main screw, a vertically-movable sleeve member suspended from said main screw having a channeled portion engaging said standard and adapted to prevent rotation of said secondary screw, means adapted to rotate said main screw, a bolt extending through the side of said standard and a supporting leaf spring for said bolt secured to the outer side of said standard opposite said channeled portion, and a stop shoulder on said main screw adapted to engage said bolt and limit the longitudinal movement of said lift screw.



1,635,398. CAR-DOOR-LOCKING MECHANISM. ARGYLE CAMPBELL and ALBERT E. ZIMMER, Chicago, Ill., assignors to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 26, 1921, Serial No. 495,665. Divided and this application filed May 2, 1925. Serial No. 27,363. 13 Claims. (Cl. 105—308.)

1. In a dump car, the combination with a dumping door; of a beam extending adjacent the free edge of the door and terminating adjacent a side edge of the door; a



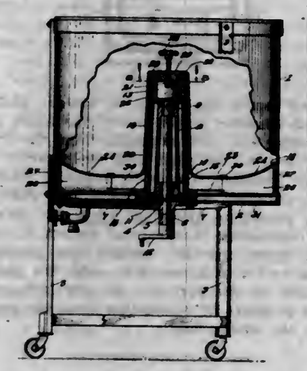
bar pivotally mounted on said beam, said bar extending continuously from the terminus of said beam beyond the side edge of the door and constituting a longitudinally disposed supporting extension of the beam; and a shouldered bracket on the car engagable with the bar on the door to maintain the door in closed position.

1,635,399. SANDING MACHINE. EDWARD J. FISCHER, Crescent Springs, Ky. Filed Apr. 15, 1924. Serial No. 706,665. 2 Claims. (Cl. 51—137.)

1. A sanding machine including spaced standards, arms projecting upwardly from said standards, one of said arms being pivotally connected to the standard from which it extends and having a depending lever, adjustable means bearing on said lever for normally forcing the pivoted arm away from the other arm, pulleys on the arms and standards, a sanding belt looped over said pulleys and having upper and lower runs spaced apart to permit an operator to force the central portion of the lower run downwardly, a work-table beneath the belt adapted to carry the article to be surfaced by the sanding belt, said pivoted arm consisting of upper and lower sections pivotally connected together to permit the upper section to be shifted laterally, and means for adjusting the upper section relatively to the lower section.

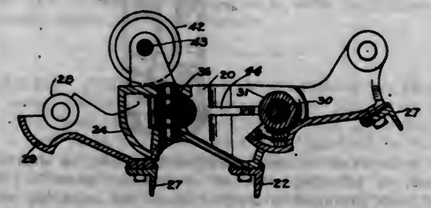
1,635,400. CORN-HUSKING MACHINE. HENRY F. FRERISE, Old Monroe, Mo. Filed Oct. 6, 1926. Serial No. 139,834. 3 Claims. (Cl. 130—5.)

1. A corn husking machine comprising a platform, said platform having a slot, provided with a flaring mouth, an abutment block fixed beneath the platform and adjacent to said slot, a crank-arm disposed below said block, and a roller vertically disposed on the free end of the crank-arm, means for revolving said roller about the block, the said slot in the platform being adapted to receive an ear of corn as the stalk is disposed on the platform, means for holding the stalk in place when the crank is rotated to lift the ear of corn to a position so that the roller will warp said ear over the abutment, thereby breaking the ear from the stalk.



1,635,401. WINDSHIELD-CLEANER MOTOR. FRED G. FOLBERTH, Cleveland, Ohio, assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Aug. 11, 1924. Serial No. 731,286. 8 Claims. (Cl. 121—164.)

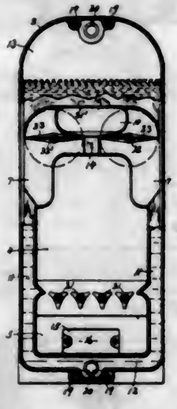
1. A windshield cleaner motor comprising a casing consisting of a central cylindrical section and cup-shaped end sections having their open ends fitting the opposite ends of the central section with an air tight joint, an air tight partition between each end section and the central section, a hollow piston rod slidably supported in each partition, a piston connected to each end of the rods, one piston operating in each end section and dividing the same into inner and outer chambers and two pistons operating in the central section and defining end chambers lying between the partitions and the respective pistons, each piston rod establishing communication between the



adjacent end chamber of the central section and the outer chamber of the adjacent end section, means for connecting a source of operating pressure first to one end chamber of the central section and the inner chamber of the remote end section and then to the opposite end chamber of the central section and the inner chamber of the opposite end section, and a connecting member joining the two pistons in the central section and operatively connected to said means for operating the same.

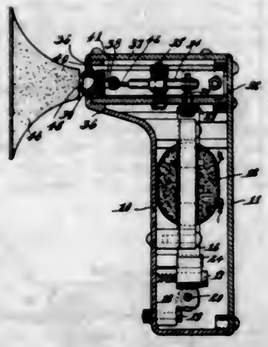
1,635,402. WASHING MACHINE. BENJAMIN E. GETZ, Morton, Ill. Filed May 7, 1925. Serial No. 28,550. 12 Claims. (Cl. 259—101.)

1. In a washing machine, a "dolly" provided with a plurality of radially arranged raised baffle members and substantially flat perforated portions therebetween, said baffle members having upwardly converging and concave side walls and with an upper surface curved upwardly to the outer ends of said baffles.



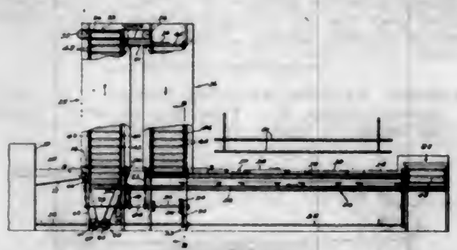
1,635,403. TREAD CHAIN FOR TRACTORS. ORRA L. GILLILAND, Minneapolis, Minn., assignor of one-fifth to E. Luther Melin, Minneapolis, Minn. Original application filed June 25, 1920, Serial No. 391,724. Divided and this application filed Nov. 12, 1921. Serial No. 514,618. 12 Claims. (Cl. 305—10.)

6. A traction belt for tractors comprising one set of links having at one end semi-spherical heads, said heads having oppositely disposed slots through the sides there-



of, a set of links respectively connected to said links, pivot pins connected to the connected links passing through said slots and having conical rollers thereon movable in said slits.

1,635,404. HOT-WATER AND STEAM HEATER. WALLACE F. GOODNOW, Greenwich, Conn., and GEORGE H. VICKERS, Eastwood, N. Y., assignors to Pierce, Butler & Pierce Manufacturing Corp., Syracuse, N. Y., a Corporation of New York. Filed Dec. 24, 1923. Serial No. 682,425. 2 Claims. (Cl. 122—225.)

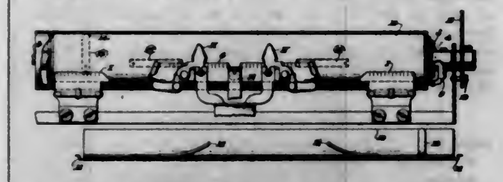


1. A water heater comprising an upright shell having a combustion chamber and a smoke flue above the combustion chamber and both extending from the front wall to the rear wall of the shell, said shell having separate uprights fire passages connecting opposite sides of the combustion chamber with corresponding sides of the smoke flue, partitions extending vertically between the top of the combustion chamber and bottom of the smoke flue and between opposite upright fire passages, and baffle plates rotatably mounted in said fire passages at opposite sides of the partition for regulating the passage of the products of combustion from the combustion chamber to the smoke flue.

1,635,405. ELECTRICAL VIBRATOR. WILLIAM E. GRAY, Chicago, Ill. Filed Sept. 21, 1925. Serial No. 57,563. 8 Claims. (Cl. 128—52.)

1. A device of the class described comprising an electromagnet; a vibrating armature cooperating therewith; a slide block arranged in guides; means for mounting various reciprocatory appliances on said block; and an operative connection between said block and said armature, substantially as described.

1,635,406. CONVEYER. JESSE W. GREER, Cambridge, Mass. Filed Jan. 26, 1925. Serial No. 4,762. 9 Claims. (Cl. 107—7.)

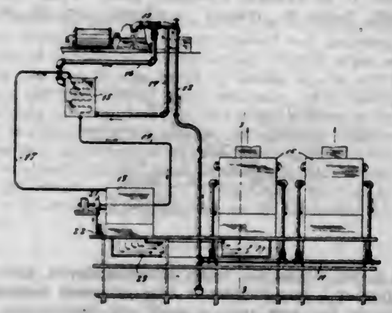


4. A machine of the class described, comprising in combination, a series of trays, means for advancing the trays along a predetermined path, a conveyer for delivering confections to each tray as it reaches a loading position, a covering sheet for each tray, a take-up roll for feeding the sheet over the tray to carry the confections upon the tray and a let-off roll for the opposite end of the sheet, means for rotating the take-up roll while the tray is in the loading position, and means for winding the sheet back upon the let-off roll before the tray again reaches the loading position.

1,635,407. PISTON RING. RAY GROVER, Milwaukee, Wis. Original application filed Feb. 27, 1922, Serial No. 539,487. Divided and this application filed July 27, 1925. Serial No. 46,290. 1 Claim. (Cl. 74—109.)

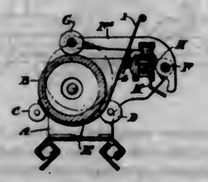
A piston ring comprising a split ring having square cut transverse shoulders adjacent its ends on its inner periphery and provided in its outer periphery with marginal recesses substantially square cut in cross section and disposed on opposite sides of their respective ends with substantially plane radially outer bearing surfaces continuous to said shoulders, and tongues projecting beyond the shoulders at the end of the ring and formed with laterally inner bearing surfaces complementary to each other and radially inner surfaces complementary to the radially outer surfaces of said recesses, the ends of said tongues being substantially square cut and their radially inner bearing surfaces being continuous substantially to their respective ends, whereby said tongues are adapted to maintain an effective seal in any position of overlap.

1,635,408. TYPEWRITING MACHINE. GEORGE F. HANDLEY, Glendale, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 24, 1926. Serial No. 150,448. 9 Claims. (Cl. 197—136.)



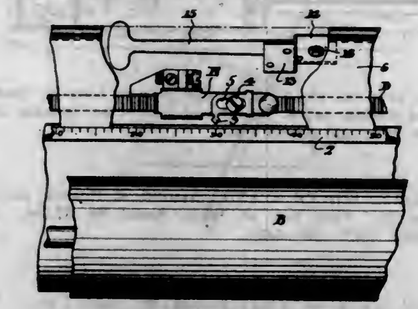
1. A card holding attachment for a platen comprising a plate curved similarly to the curvature of the platen, means at each end of the plate for attaching the same to the platen, and a plurality of flat springs attached to the inside of the plate and engaging the platen.

1,635,409. DRAFT-GEAR APPARATUS. SOREN HANSSON, Butler, Pa., assignor to John H. Allman, trustee, Butler, Pa. Filed Oct. 9, 1925. Serial No. 61,452. 4 Claims. (Cl. 213—71.)



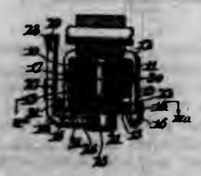
1. Draft gear structure comprising a yoke, a pair of head members disposed between the forward end portions of said yoke, a pivotal connection between said head members and said yoke, and means for connecting a draw bar to said head members.

1,635,410. STEAM-POWER SYSTEM. ISAAC HARTER, Dongan Hills, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Jan. 10, 1925. Serial No. 1,514. 4 Claims. (Cl. 60—73.)



1. In a steam power system, a multi-stage prime mover, a main steam generator to supply steam to said prime mover, an exhaust steam heater through which exhaust steam passes between stages in said prime mover, an auxiliary steam generator, connections between said auxiliary generator and said heater to deliver steam to said heater at a temperature higher than that of the exhaust steam passing therethrough, and a duct to lead the flue gases from said auxiliary generator to the steam generating surfaces of said main steam generator.

1,635,411. TYPEWRITING MACHINE. EDWARD B. HESS, Orlando, Fla., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed June 18, 1926. Serial No. 116,872. 10 Claims. (Cl. 197—63.)

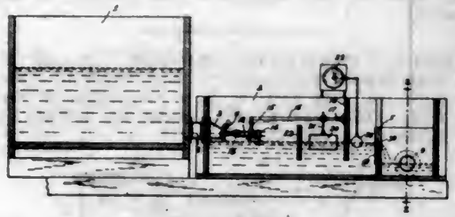


1. In a typewriting machine, the combination of a margin stop bar, stops adjustable thereon, a paper table lying in front of and close to said stop bar, a scale on the rear side of said table adjacent said stops, and a mounting for said paper table permitting its movement forwardly to bring said scale into view and expose said stops for ready adjustment from the front of the machine.

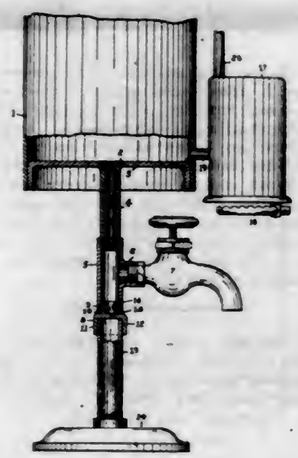
1,635,412. TYPEWRITING MACHINE. EDWARD B. HESS, Orlando, Fla., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 1, 1926. Serial No. 133,002. 6 Claims. (Cl. 197—63.)

1. In a typewriting machine, the combination of a paper apron, a scale extending across the front of said apron at its rear top edge, a pivoted paper table having its lower edge abutting the upper edge of the paper apron when the parts are in normal position, a stop bar immediately behind and closely adjacent the upper edge of the paper apron, a stop carried thereby and having an indicating portion registering with the scale, the relative position of the parts being such that when the paper table is swung to inoperative position the stop may be set at any desired point by direct comparison of the indicating portion with the scale.

1,635,413. LUBRICATION OF VEHICLE SPRINGS. FRANKLIN G. HIRST, Philadelphia, Pa. Continuation of application filed Apr. 4, 1921, Serial No. 458,380. This application filed Feb. 23, 1922. Serial No. 538,532. 9 Claims. (Cl. 267—50.)



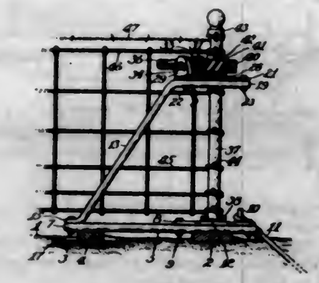
1. The combination with a leaf spring comprising a set of superposed leaves, a securing bolt extending through them with a channel along its exterior, and a head member against the spring; of an oil receptacle mounted about and internally engaging said head member, and thereby centered around it, with its interior in communication with said channel.



1,635,414. FLOW REGULATOR. FREDERICK W. HIRST, Ewing Township, Mercer County, N. J. Filed June 12, 1926. Serial No. 115,511. 1 Claim. (Cl. 137—68.)

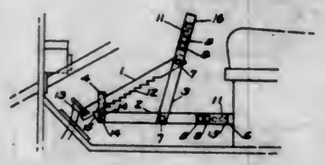
A flow regulator comprising a receiving tank to which liquid is irregularly admitted; a control tank; a conduit connecting said tanks; means for maintaining the liquid level in said control tank substantially constant, comprising a gate controlling the flow through said conduit, a pivoted actuating arm for said gate, a pair of spaced baffles in said control tank, a lever pivoted at one end to

one of said baffles and connected at its other end to said actuating arm, and a float in said control tank between said baffles and connected to said lever at a short distance from its pivoted end; and a weir normally positioned slightly below the level of said valve, forming an outlet from said control tank.



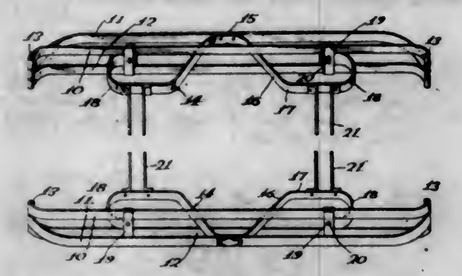
1,635,415. BOILER STAND. SAMUEL E. HOPPER, Crafton, Pa. Filed Feb. 10, 1926. Serial No. 87,280. 1 Claim. (Cl. 126—363.)

In a boiler stand, a nipple for attachment to a boiler, a pipe-fitting attached to the lower end of the nipple and having a lateral opening and a vertical opening throughout its length, a faucet connected to the lateral opening, a fitting closing the lower end of the pipe-fitting and having a downwardly-open socket, a leg having its upper end in the socket, and a base supporting the lower end of the leg.



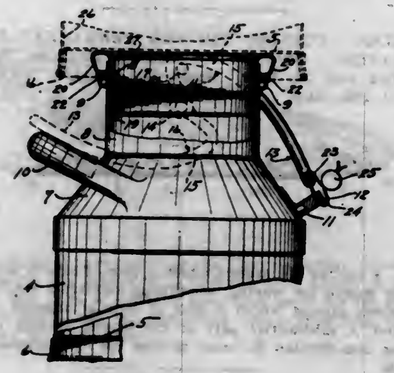
1,635,416. FENCE-TIGHTENING POST. NELSON F. HOWARD, La Fayette, Ind. Filed Jan. 19, 1923, Serial No. 613,573. Renewed June 12, 1926. 2 Claims. (Cl. 254—161.)

1. A fence-tightening post comprising an end sill, two side sills rigidly connected to the end sill, a base plate rigidly secured to the side sills and having a journal bearing in its top, two inclined angle-brace members secured to the end sill and having horizontal arms respectively on the upper ends thereof positioned separately on one and the same plane materially above the base plate, a top plate rigidly secured upon said arms and having two journal blocks fixed on the top thereof and adjacent to the upper ends of the inclined members, the top plate having also a journal bearing therein, a perforated winding-shaft rotatably supported in said journal bearings and extending higher than the top plate, a gear wheel secured to the winding-shaft upon the top plate, and a power worm arranged between said journal blocks in mesh with the gear wheel and having journal members



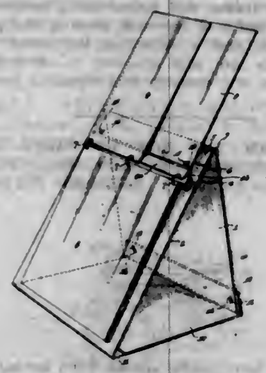
rotatably supported by the blocks, one of the journal members extending out beyond the top plate to be engaged for rotating the worm.

1,635,417. AUTOMOBILE BRAKE ADJUSTER. RAYMOND C. HUMPHREY, Pittsfield, Mass. Filed Dec. 10, 1926. Serial No. 154,015. 4 Claims. (Cl. 29—84.)



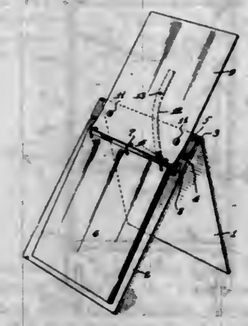
1. In an automobile brake adjusting device, the combination of a base member, a base extension member attached to the said base, a guide attached to the base member, a handle pivoted to the base member, a handle extension member attached to the handle, a depressing member pivoted to the said handle and in the same perpendicular plane with and above the base member.

1,635,418. AUTOMOBILE BUMPER. MIKE N. HURLEY, Whittier, Calif. Filed Oct. 5, 1925, Serial No. 60,666. Renewed May 25, 1927. 5 Claims. (Cl. 293—55.)



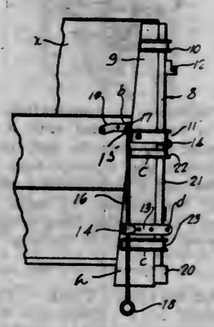
5. A vehicle bumper comprising three transverse bars, means connecting the ends of the bars together, a fourth bar having its central portion connected to the middle bar adjacent its middle, means connecting the fourth bar to a vehicle frame adjacent its ends, and means connecting the ends of the fourth bar to the top and bottom bars intermediate their ends.

1,635,419. MILK CAN. MARK ISAACS, Minneapolis, Minn. Filed Dec. 6, 1926. Serial No. 152,840. 3 Claims. (Cl. 220—56.)



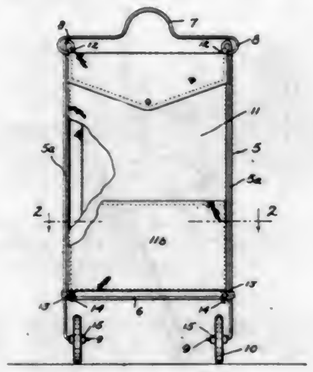
1. The combination with a milk can having a depressed cover telescoped into the neck thereof and provided with a pair of radially projecting axially aligned studs spaced below the top of the cover, a handle in the cover not above the top thereof, said can and cover having cooperating clamping surfaces, and a bail pivoted to the can and having cam-acting cranks arranged to engage said studs by a movement of the bail to press said cover onto the can and lock the same thereto, said bail, when locking the cover on the can, being below the top of said cover to permit a similar can to be supported on said cover.

1,635,420. DISPLAY BOOK. STANLEY G. JOHNSON, Detroit, Mich., assignor to The Burkhardt Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 13, 1926. Serial No. 154,601. 2 Claims. (Cl. 281—33.)



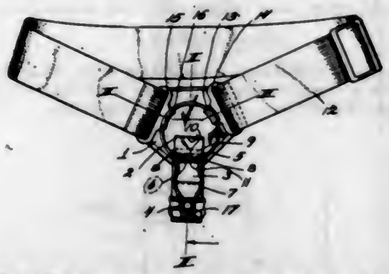
1. In a loose-leaf binder, a reversible cover comprising front and back boards, binder mechanism secured to one of said boards, a fly-leaf swingably mounted on said binder mechanism, and a tongue on said fly-leaf adapted to engage behind the binder mechanism when the fly-leaf is in its raised position.

1,635,421. DISPLAY BOOK. STANLEY G. JOHNSON, Detroit, Mich., assignor to The Burkhardt Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 13, 1926. Serial No. 154,602. 5 Claims. (Cl. 281—33.)



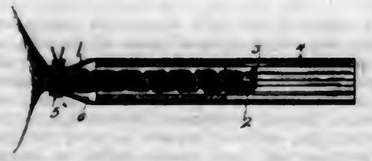
1. In a binder, a cover adapted to be reversed from a normal closed position to provide an inverted V-shaped easel, said cover comprising front and back boards hingedly connected to the edges of an intermediate member, a loose-leaf binder mechanism mounted on one of said boards proximate to said intermediate member, a fly-leaf of stiff material carried by said binder mechanism, and means for securing said fly-leaf in a raised position to the intermediate member of said cover whereby said fly-leaf is supported in a raised position and maintains said intermediate portion in practical alignment with the cover board forming the front of the easel.

1,635,422. COMBINED END GATE AND PLATFORM. JOHN H. KEESEE, Griswold, Iowa. Filed Dec. 27, 1926. Serial No. 157,024. 1 Claim. (Cl. 296—51.)



In a closure device for a vehicle box open at its end and provided with apertured guides at its sides, a platform provided with staples, a gate provided with reinforced strips having angularly disposed terminal portions and mounted on the platform to permit swinging movements thereof to dispose the terminal portions of the reinforcing strips at opposed parts of the platform, said platform and gate being adapted to engage the open end of the box, its staples engaging in the apertures of said guides, and a pair of links each provided with a hook removably mounted in a staple.

1,635,423. PARCEL CARRIER FOR SHOPPERS. ANNA M. LAPHAM, St. Paul, Minn. Filed June 13, 1924. Serial No. 719,802. 3 Claims. (Cl. 280—51.)



3. A parcel carrier for shoppers comprising a flat skeleton frame having a handle at its upper end and having its longitudinal sides projected and bent inwardly to form a pair of stub axles, a wheel rotatably secured to each of said axles so formed, and a parcel receptacle secured to said frame.

1,635,424. GARMENT SUPPORTER. ROCKWELL M. MACCORMAC, Kansas City, Mo. Filed Mar. 10, 1924. Serial No. 698,102. 3 Claims. (Cl. 241—6.)

1. In a hose supporter, in combination, a pad having a pendent loop of tape provided with a knob near its lower end, a circular ring over the pad, having a straight side forming a bridge, and a metal loop through which the knob may pass and a constricted portion adapted to engage said knob and having its upper etremities encircling the bridge; said bridge being secured to the pad by the tape, between the arms of the loop.

1,635,425. HAIR-WAVING TUBE. FRANÇOIS RENÉ MARCEL, Brooklyn, N. Y. Filed Nov. 8, 1924. Serial No. 748,541. 2 Claims. (Cl. 132—36.2.)

1. A device for use in producing permanent waves in hair, including a cylindrical body, of absorbent material, adapted to enclose a lock of hair, and an inner, cylindrical body of compressible, absorbent material within said first body, said inner body having corrugations extending lengthwise thereof to form spaces between said inner and outer body.

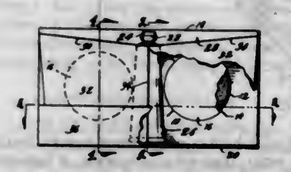
1,635,426. CURLING PIN FOR PERMANENT HAIR WAVING. FRANÇOIS R. MARCEL, Brooklyn, N. Y. Filed July 22, 1926. Serial No. 124,141. 7 Claims. (Cl. 132—34.)

1. A curling pin around which a lock of hair is adapted to be wound for waving, comprising relatively revolvable members around which a lock of hair is adapted to be wound, a substantial part of the length of said curler being non-circular in cross section for the purpose set forth.

1,635,427. DIRECTION SIGNAL FOR MOTOR VEHICLES. JAMES MCENTEE, Rochester, N. Y. Filed Feb. 23, 1927. Serial No. 170,142. 5 Claims. (Cl. 116—52.)

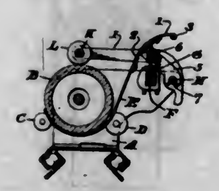
1. The combination with a frame having a sash opening and a sash slidable in the frame, of means fixed relatively to the frame and in the sash opening between the upper edge of the sash and the lower face of the upper sill of the frame, said means being coextensive in length with the width of the sash opening and provided with a chamber, and a direction indicating member mounted to move into said chamber to an inoperative position and from said chamber to a signaling position.

1,635,428. FORM TIE FOR CONCRETE FORMS. HOWARD O. MCMILLAN, Minneapolis, Minn. Filed Nov. 19, 1925. Serial No. 70,018. 14 Claims. (Cl. 25—131.)



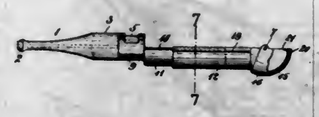
1. A tie for a form having spaced walls having in combination, a strip adapted to extend through and between said walls and having elongated spaced slots therein, members adapted, respectively, to engage the outer sides of the form adapted to receive said strip, one of said members having slots extending transversely thereof, spaced a different distance apart than the slots in said strip, and wedges adapted to pass through the slots in said last mentioned member and the slots in said strip and draw and hold the strip in tight position.

1,635,429. VIOLIN MANDOLIN. HENRY MILLER, Grafton, W. Va. Filed Aug. 8, 1925. Serial No. 49,083. 3 Claims. (Cl. 84—274.)



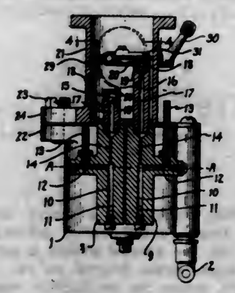
1. A musical instrument of the class described, including a sound box formed of a cocoanut shell closed at its bottom and sides, a centrally apertured cover for the top of said shell, and a reinforcing band encircling the periphery of said cover.

1,635,430. HOLDING AND SHIPPING INSERT. GEORGE S. MURPHY, Des Moines, Iowa, assignor to The Armand Company, Des Moines, Iowa. Filed Sept. 13, 1926. Serial No. 135,100. 7 Claims. (Cl. 206—65.)



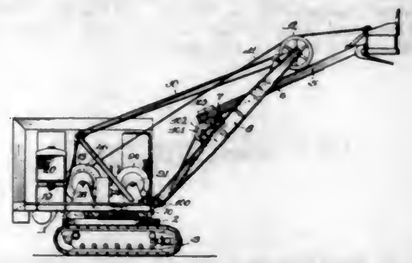
6. A holder and shipping insert comprising a substantially flat bottom member, a triangular top member inclined at an acute angle from the bottom member, cover sections inclined from two sides of the top member toward the ends and opposite edge respectively of the bottom member, said parts being connected together along weakened lines.

1,635,431. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 2, 1926. Serial No. 126,526. 6 Claims. (Cl. 197—127.)



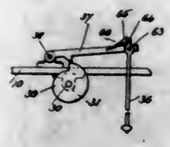
1. In a typewriting machine having the usual platen and paper apron, the combination of a card holding bail mounted to swing to and from operative position about an axis in the rear of the platen, with a paper table at the rear of the platen connected to said card holding bail intermediate its ends to swing in unison therewith.

1,635,432. ATTACHMENT FOR CIGARETTE HOLDERS. WILLIAM A. PERVIER, Watertown, Mass., assignor, by mesne assignments, to William A. Pervier, trustee, Watertown, Mass. Filed July 28, 1926. Serial No. 125,432. 5 Claims. (Cl. 131—51.)



2. An attachment for a cigarette holder comprising an attachable member by which the attachment is secured to the holder, a primary troughlike casing member extending from said attaching member, a secondary troughlike casing member, and means for telescopically attaching the secondary casing member to the primary member whereby it will form either an extension thereof or be convertible to co-operate therewith and form a housing for the holder when not in use.

1,635,433. CARBURETOR. MORETON F. PURVEY, Detroit, Mich., assignor to The Pur-Vey Carburetor Corporation, a Corporation of Delaware. Filed July 17, 1922. Serial No. 575,506. 1 Claim. (Cl. 261—41.)

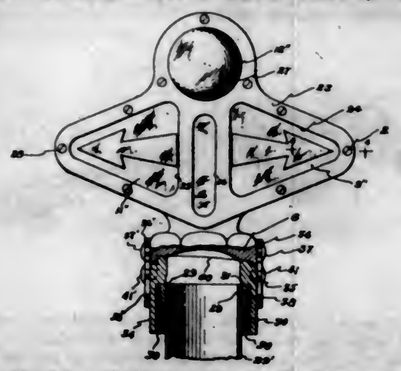


In a carburetor, a main air conduit, a pair of fuel feed lines extending into the conduit and terminating at different heights therein, the fuel conduit of greatest height having a recessed end portion terminating in a plane at a right angle to the axis of the conduit, a ball in the recess of less diameter than the said recess and normally closing said conduit, a throttle valve in the air conduit adapted when open to subject both fuel feed lines to influence of air passing therethrough, said throttle valve being adapted to be turned to closed position to lie in contact with the end of the fuel conduit of greatest height, said valve having an opening of less diameter than the said recess at the conduit end and providing when the valve is closed a discharge opening for the said highest fuel feed conduit into the main air conduit above the valve, the throttle valve otherwise practically closing the conduit to flow of air therethrough, each fuel feed conduit being connected with a source of fuel supply and each having a second conduit connected therewith opening to atmosphere, and an air inlet conduit for the said main air conduit provided with a restricted opening thereinto.

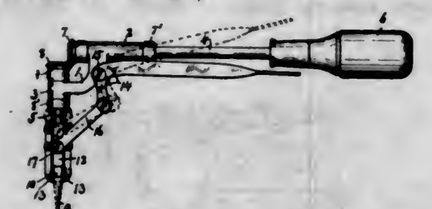
1,635,434. POWER SHOVEL. JOHN D. RAUCH, Lima, Ohio, assignor to The Ohio Steam Shovel Company, Lima, Ohio, a Corporation of Ohio. Original application filed Mar. 2, 1925, Serial No. 12,476, Patent No. 1,569,031, dated Jan. 12, 1926. Divided and this application filed July 29, 1925. Serial No. 46,708. 4 Claims. (Cl. 214—135.)

1. In a device of the class described, a frame having a boom mounted thereon, a dipper provided with a handle, means on said boom for reciprocably moving said handle relative to said boom, a shaft having operative connection with said handle moving means, two drums mounted concentrically with said shaft, flexible cable actuating means including two cable portions each connected with one of said drums, means for independently rotating both of said drums with respect to said shaft, and locking means for connecting said drums in various adjusted positions.

1,635,435. MARKING MECHANISM FOR PLANTERS. EZRA N. RICHARDSON, Detroit, Mich. Filed May 14, 1926. Serial No. 109,103. 2 Claims. (Cl. 111—30.)



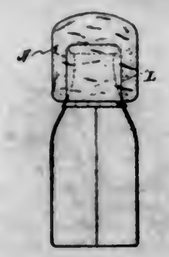
1. In a marking mechanism, a frame, ground wheels supporting the frame, a differential gearing operatively connected with the two ground wheels, a cam shaft journaled in the frame, cams secured on the end portions of the cam shaft, means for driving the cam shaft from the differential gearing, marker levers pivoted to the frame at one end and bearing on the said cams between their ends and oscillated by the cams, and ground markers arranged vertically and pivoted at their upper ends to the marker levers and reciprocated by them and the cams.



2. A marking mechanism as set forth in claim 1, each marker lever having a lug on its upper side, each ground marker having a lug which overlaps the marker lever, and springs normally holding the said lugs in engagement with each other and permitting the ground markers to move pivotally in one direction to a limited extent.

1,635,436. VEHICLE SIGNAL. FRANK ROMANOWSKI, Detroit, Mich. Filed Nov. 24, 1924. Serial No. 751,811. 4 Claims. (Cl. 220—61.)

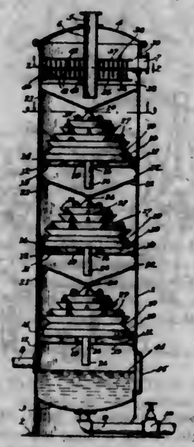
1. In a vehicle signal adapted for use with a vehicle having a radiator provided with a radiator spout, a mechanism for attaching the signal housing to said spout, comprising a pair of super-imposed collars adapted for mounting on said spout, said collars being wedge shaped and oppositely faced, one of said collars being exteriorly threaded; and supporting means adapted for threading on said exteriorly threaded collar, said exteriorly threaded collar being adapted for clamping the inner collar, in close engagement with said spout, upon the threading of said means thereon.



1,635,437. OFFSET TOOL HOLDER. JEREMIAH RYAN, Syracuse, N. Y. Filed Dec. 8, 1925. Serial No. 74,009. 1 Claim. (Cl. 145—66.)

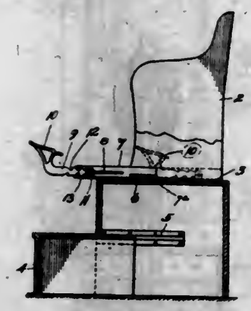
An offset tool holder comprising a yoke having journal bearings at right angles to each other, a spindle journaled in one of said bearings and having at one end a coaxial handle by which it may be turned and at its opposite end a gear, a tool spindle journaled in the other bearing and having at one end a gear meshing with the first-named gear and at its opposite end an axial movable sleeve provided with spring jaws normally tensioned for yieldingly holding the work, a bell-crank lever pivoted to the yoke and provided with a relatively long arm extending along the first-named spindle and handle, and a link connecting the other arm of the lever with the sleeve for transmitting motion from the lever to the sleeve.

1,635,438. ICE CAP. EMIL SCHMID, Washington, D. C. Filed Feb. 1, 1926. Serial No. 85,372. 5 Claims. (Cl. 215—38.)



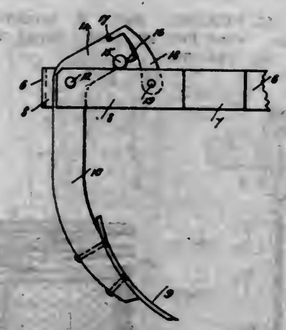
1. A refrigerating device consisting of a piece of ice having a cavity therein, said cavity being provided with a liner adapted to fit over the mouth of the receptacle and forming a protective cover for the same after the ice has melted.

1,635,439. REENFORCED PLUNGER AND METHOD OF MAKING SAME. ALEXANDER L. SCHRAM, Hillsboro, Ill., assignor to Ball Brothers Company, Muncie, Ind., a Corporation of Indiana. Filed June 14, 1926. Serial No. 115,871. 3 Claims. (Cl. 49—14.)



1. A plunger for glass furnaces comprising a reenforcing member, a destructible coating surrounding said reenforcing member, and a relatively thick clay body entirely surrounding said reenforcing member and coating.

1,635,440. BUBBLE-ABSORPTION TOWER. HARRY E. SHAY, Los Angeles, Calif., assignor of one-third to W. A. Masters and one-third to J. L. Murray, Los Angeles, Calif. Filed Apr. 6, 1926. Serial No. 100,056. 17 Claims. (Cl. 261—114.)

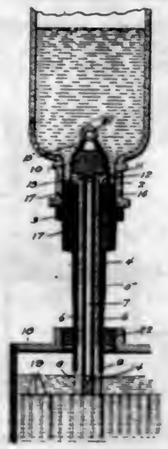


8. A bubble tower comprising in combination a tower structure having a pan with an outer and inner rim, the inner rim forming a central opening, a conical gas chamber having a substantially flat base with a recess, the recess fitting over the inner rim, a gas inlet pipe extending downwardly from the recess, through the opening in the pan, means on the exterior conical surface to retard the flow of oil thereover, and means leading from the gas chamber to pass gas through the said oil.

1,635,441. ADJUSTABLE FOOT REST FOR SHOE-SHINING STANDS. MAX SHEAR, Kansas City, Mo. Filed July 9, 1926. Serial No. 121,879. 3 Claims. (Cl. 15—265.)

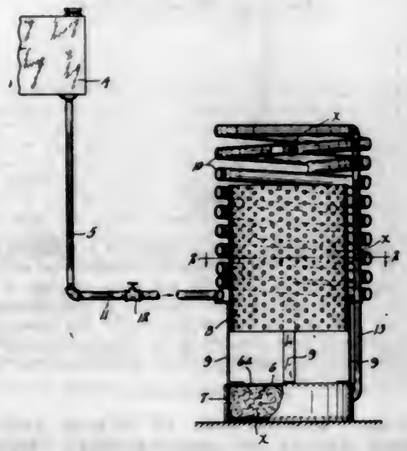
1. In a shoe shining stand, a chair supporting platform, a guide secured to the platform, a slide structure comprising telescopically extensible sections mounted for longitudinal movement within the guide and transversely of the stand, a stop for preventing undue forward movement of the slide sections, and a foot rest carried by the forward end of one of the slide sections.

1,635,442. BREAK-PIN DEVICE FOR CULTIVATORS. CARL G. SIGURD, San Jose, Calif. Filed July 6, 1926. Serial No. 120,636. 2 Claims. (Cl. 97—185.)



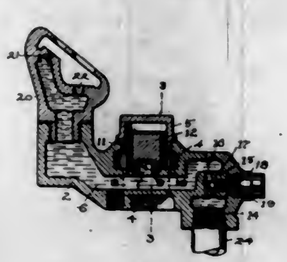
1. The combination, with a frame, of a standard pivoted to the frame and provided at its upper end with an arm which projects forwardly and above the top of the frame, a break pin arranged crosswise of and supporting the said arm and resting on the top of the frame, and a hook-shaped pawl pivoted to the frame and normally engaging with the said arm and preventing it from rising.

1,635,443. MANUFACTURE OF CABLES LOADED WITH ALLOYS OF HIGH-MAGNETIC PERMEABILITY. WILLOUGHBY STATHAM SMITH, Newton Poppleford, and HENRY JOSEPH GARNETT, Sevenoaks, England. Filed Jan. 8, 1926, Serial No. 80,100, and in Great Britain June 17, 1925. 3 Claims. (Cl. 178—45.)



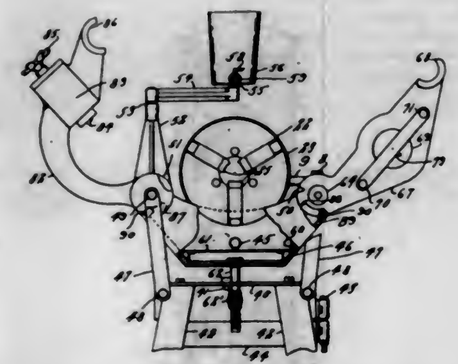
2. The process of annealing a tightly wound loaded conductor which comprises a heat treatment at a temperature between about 500° and 650° C. followed, after cooling, by a heat treatment at a temperature between about 880° and 920° C.

1,635,444. LIQUID-BATTERY FILLING DEVICE. DOUGLAS C. SOWELL, Baltimore, Md. Filed June 12, 1926. Serial No. 115,650. 3 Claims. (Cl. 226—39.)



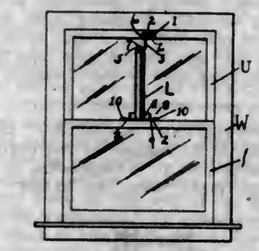
1. A liquid filler for receptacles comprising in combination, a container, a filling tube leading from the container, a valve at the inner end of the tube, a valve stem extending through the tube adapted when the filler is inverted, to come into contact with an object to open the valve and close and protect the outer end of the tube, and means at the outer end of the tube for controlling the flow of liquid through the tube.

1,635,445. OIL BURNER. ERVIN E. SPLETTER, Montevideo, Minn. Filed Feb. 23, 1926. Serial No. 89,841. 1 Claim. (Cl. 158—79.)



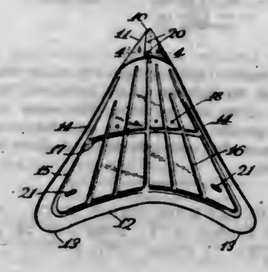
A liquid fuel burner comprising a hollow burner head having a discharge passage through one side thereof, a perforated tubular combustion chamber mounted concentrically with said burner head and spaced therefrom, a vaporizing coil closely encircling said combustion chamber, the convolutions of said coil being provided with vertically alined outwardly extending bulges affording arcuate recesses between said chamber and said coil, a vertical conduit connecting the uppermost convolution of said coil with said burner head extending through said recesses, and means for connecting the lowermost convolution of said coil with a source of fuel supply.

1,635,446. DRINKING FOUNTAIN. HALSEY W. TAYLOR, Warren, Ohio. Filed Aug. 25, 1924. Serial No. 733,870. 4 Claims. (Cl. 299—15.)



1. In a drinking fountain, a single unit comprising a hollow head of elongated form having a central integral enlargement containing a drainage chamber open at its top and bottom and formed with a horizontal supply passage extending through said chamber, an overflow valve exposed to the flow of water through said supply passage, a valve seating member removably mounted within said chamber in constant open communication with said supply passage, and a cap closing the top of said chamber and detachably connected with the wall of said head.

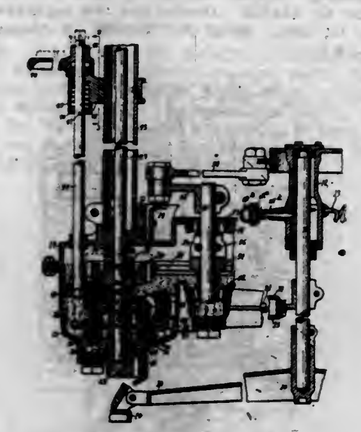
1,635,447. CUTTING-TOOL MOUNTING AND CONTROLLER. WILLIAM W. VOSPER, Toledo, Ohio, assignor to The Toledo Pipe Threading & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1925. Serial No. 65,626. 8 Claims. (Cl. 10—105.)



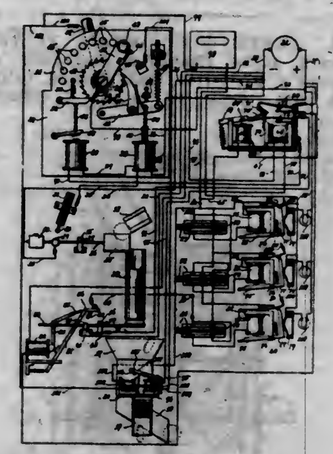
2. A rotary work holder, a pair of parallel guides parallel to the axis of the holder, and one side of a plane through the axis of said rotary work holder, a tool carrier slidably mounted on one side of said guides and swingable through said plane to rest on the other guide, a threading tool mounted in the tool carrier, means for rotating one of said holders for thereby causing progressing of the other holder along said guide toward the one, and a plurality of chasers in sequence establishing a pitch and mounted in the tool carrier.

1,635,448. SASH LIFTER AND LATCH. THOMAS C. WILLIAMS, East Bakersfield, Calif. Filed Jan. 13, 1926. Serial No. 80,931. 4 Claims. (Cl. 292—338.)

1. A combined sash lifter and latch for windows comprising an anchoring device positioned on said sash, a sash lifting device, a swinging member associated with said anchoring device and said lifting device whereby said lifting device may be swung toward said sash so that said sash may be raised or lowered, and a keeper associated with said window for receiving one end of said lifting device for fastening said window.



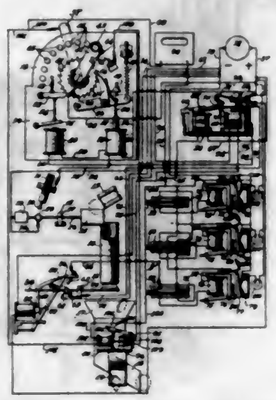
1,635,449. PLANT PROTECTOR. THOMAS H. WILSON, Brawley, Calif. Filed Feb. 11, 1926. Serial No. 87,574. 2 Claims. (Cl. 47—28.)



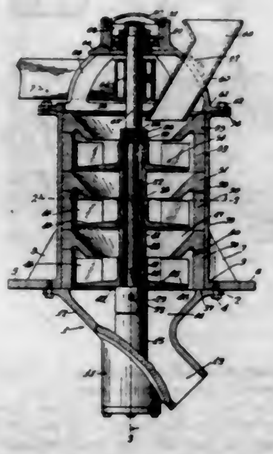
1. A plant protector comprising a blank of bendable sheet material bent to form a cone, the meeting edges of the blank being cut away providing an opening in the cone extending from its bottom to a point some distance below the apex of the cone, and means for securing the meeting edges of the blank together from the mentioned point to the apex so as to provide a heat retaining air space as and for the purpose described, said blank having embossed portions providing reinforcing ribs, some of which extend downwardly from the apex and others extending horizontally about the cone.

1,635,450. DRIVING MECHANISM FOR WASHING MACHINES. OLIVER B. WOODROW, Newton, Iowa. Filed Apr. 13, 1925. Serial No. 22,797. 2 Claims. (Cl. 74—14.)

1. In a gearing mechanism for washing machines, the combination of a stationary frame member, a two part gearing case designed to contain oil and gear mechanisms, the lower part thereof being fixed to the frame and the upper part thereof being detachably connected to the lower part and also detachably connected to said frame, a member mounted for oscillatory rotary movement, a pitman connected therewith, a shaft mounted in the upper and lower portions of said gear case, a crank connecting said shaft with said pitman, a prime mover, a shaft driven by the prime mover and inserted in the lower portion of said gear casing, a pinion thereon, and a gear mechanism driven by said pinion for driving said first shaft, for the purposes stated.

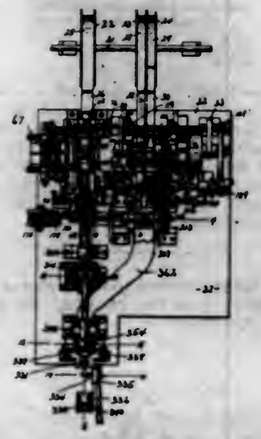


1,635,451. VENDING MACHINE. JULIUS ZSOLDOS, Brooklyn, N. Y., assignor, by mesne assignments, to Automat Equipment Corporation, a Corporation of Delaware. Filed Dec. 15, 1919. Serial No. 344,828. 11 Claims. (Cl. 194—9.)



1. A vending machine embodying a plurality of dispensing compartments, a single coin slot, a master coin device operable by a plurality of coins passed successively through the slot and adapted to permit the removal of the contents of any of said compartments, manually operable means for adjusting the master coin device to render it responsive to the desired number of coins, and a selective push button system cooperable with the master coin device and embodying a push button for each compartment for selectively rendering any one compartment responsive to the operations of the master device.

1,635,452. VENDING MACHINE. JULIUS ZSOLDOS, Brooklyn, N. Y., assignor, by mesne assignments, to Automat Equipment Corporation, a Corporation of Delaware. Original application filed Dec. 15, 1919, Serial No. 344,828. Divided and this application filed Oct. 11, 1922. Serial No. 593,802. 9 Claims. (Cl. 194—9.)



1. A vending machine embodying a plurality of dispensing compartments, a coin controlled master device for unlocking any of said compartments, means associated with the coin controlled master device for rendering it operable only when a predetermined number of coins have been deposited in the machine, selective push button mechanism for selectively rendering any one of the compartments responsive to the operations of the master coin device, and means for automatically returning an incorrect number of coins deposited in the machine to the depositor.

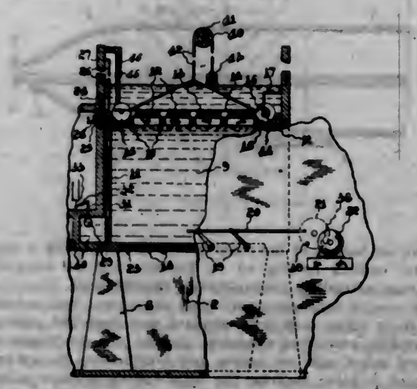
1,635,453. CENTRIFUGAL IMPACT PULVERIZER. FRANCIS E. AGNEW, Huntington Park, Calif., assignor to Minerva A. Brotherton, Santa Barbara, Calif. Filed Dec. 9, 1925. Serial No. 74,291. 7 Claims. (Cl. 83—11.)

1. A centrifugal impact pulverizer comprising a discharge hopper having a central bearing block and a discharge opening at one side of the bearing block, a vertical impeller shaft mounted in a thrust bearing in the bearing block, a vertical shell mounted upon the hopper, a cylindrical impact plate mounted in the shell, an impeller having a horizontal disc with radial, vertical blades at its outer edge spaced from the shaft mounted upon the shaft to discharge against the impact plate, a funnel mounted in the shell upon the impact plate discharging near the center of the disc, said impact plate, impeller and funnel forming a pulverizing unit, there being a plurality of said pulverizing units in the shell above the lowest unit, and a discharge spout leading to the top unit so that material will pass from one impeller unit to the next and then to the discharge hopper.

1,635,454. BOTTLE-CAP MACHINE. ANTHONY C. ARTZ, Lowville, N. Y., assignor to The Beaverland Corporation, Lowville, N. Y., a Corporation of New York. Filed Aug. 25, 1925. Serial No. 52,300. 15 Claims. (Cl. 93—1.)

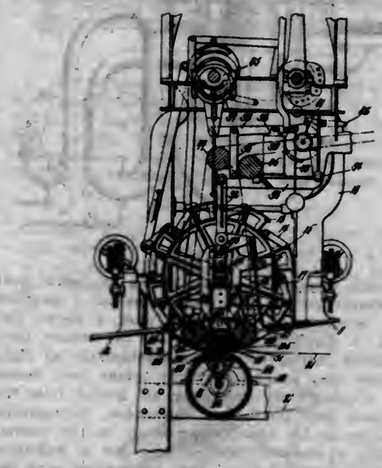
1. The combination with means for advancing suitable blanks, of means for cutting a disk from one thereof, and conveying said disk and securing the same to another blank, and means for cutting from said last-named blank a disk and means for maintaining said disks in concentric arrangement.

1,635,455. TUBULAR-KNIT UNION SUIT. ANDREW J. BELANO, Port Leyden, N. Y. Filed Aug. 24, 1926. Serial No. 131,227. 1 Claim. (Cl. 2—78.)



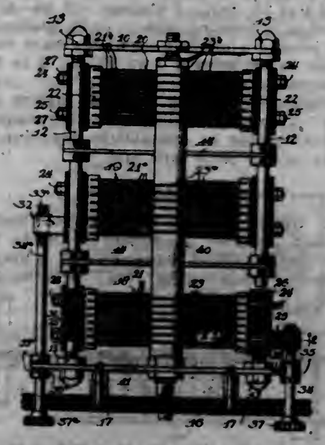
A union suit comprising a one-piece tubular-knit section of sufficient length to form a body portion, a thigh portion and leg portions, said section having deltaic openings in the front and back thereof, the rear opening being considerably larger than the front opening and having its top wall disposed at substantially right angles to its longitudinal center and its side walls converging downwardly from opposite ends of the top wall, the front opening having its top wall disposed at substantially right angles to the longitudinal center of the section and its side walls converging downwardly from opposite ends thereof, the top wall of the larger opening being located at approximately the junction of the body portion and thigh portion while the top wall of the smaller opening is disposed approximately at the junction of the thigh portion and leg portions, and a combined gusset and flap section having portions of its opposite longitudinal edges tapered downwardly from points intermediate the length thereof and stitched to the downwardly converging walls of the larger opening, the transverse width of the second-named section between said points being slightly greater than the top wall of the larger opening, the width of the lower end of the gusset section being approximately equal to the combined lengths of the downwardly converging side walls and top wall of the smaller opening and stitched thereto, the portion of the gusset section above said points being unattached to the first-named section and free to fold to and from a position across the back of the body portion of said first-named section.

1,635,456. HAT. JAMES H. BOWDITCH, Brookline, Mass. Filed Dec. 10, 1925. Serial No. 74,483. 3 Claims. (Cl. 2—181.)



1. A hat embracing a body of suitable form for the head and an interior band secured around the inside edge portion of the hat body, said band being provided with closely arranged short spines of mohair inclined toward the crown and forming a yielding gripping engagement with the head of the wearer to resist accidental removal of the hat from the head.

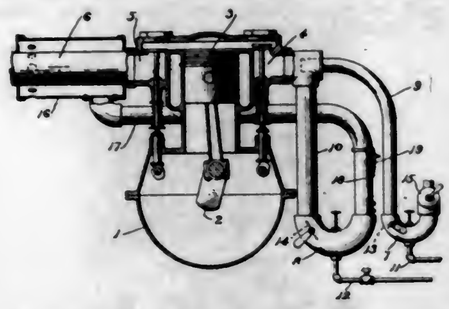
1,635,457. HYDRAULIC POWER APPARATUS. BRUCE ALFRED BRISTOW, Toronto, Ontario, Canada. Filed Dec. 19, 1924. Serial No. 757,000. 9 Claims. (Cl. 253—18.)



1. A hydraulic power device comprising a reservoir having sides and a bottom; a chamber communicating with said reservoir; a power member vertically movable in said chamber, said power member having a passage therethrough, said chamber having an outlet in its bottom; gates controlling said passage; and a plurality of gate members pivoted in the bottom and controlling said outlet.

1,635,458. MACHINE FOR MAKING FIBER TUBES. ORTON B. BROWN and HOWARD PARKER, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Original application filed July 11, 1924, Serial No. 725,403, and in Canada July 8, 1925. Divided and this application filed Sept. 3, 1926. Serial No. 133,392. 5 Claims. (Cl. 92—66.)

1. In a machine for making fiber tubular bodies, a mandrel, a plurality of forming rolls comprising a base roll and press rolls, a felt traveling between the mandrel and the press rolls, bearings engaging the surface between the ends of each of the press rolls on more than half its circumference, and means for guiding said felt clear of said bearings.



1,635,459. RADIOCONDENSER. PAUL A. CHAMBERLAIN, Chicago, Ill., assignor to Mohawk Electric Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1925. Serial No. 57,050. 6 Claims. (Cl. 175—41.5.)

1. A condenser comprising a frame, a plurality of stator units insulated from each other and spaced longitudinally of said frame, a rotor electrically common with

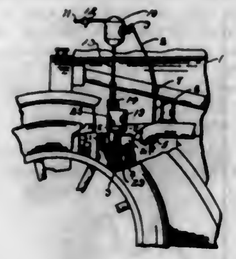
said frame, means for independently shifting said stator units on said frame longitudinally of the axis of said rotor, and manual control means projecting beyond said frame and operatively connected to said last named means.

1,635,460. BIFUEL SYSTEM FOR GAS ENGINES. CARL CORNWELL, Oakland, Calif. Filed May 13, 1925. Serial No. 29,909. 1 Claim. (Cl. 123—127.)

An internal combustion engine having an intake port and an exhaust port, a light fuel carburetor, a manifold from the carburetor to the intake port, a heavy fuel carburetor, a manifold therefrom to the intake port, said manifolds joining each other substantially at right angles where they connect with the intake port, means providing a conduit for conducting air heated from the exhaust gases into the second carburetor, thermostatic controlled means for admitting cool air to the conduit to maintain a constant temperature, and a relatively large manually-controlled air valve cooperating with the first carburetor and adapted to admit outside atmospheric air thereinto, this air being conducted through the first manifold into the intake port wherein it mixes with the heavy fuel vapor from the second carburetor to form an explosive mixture of the proper proportions.

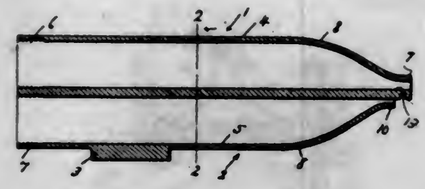
1,635,461. METHOD OF TREATING FRUIT AND SOLUTION THEREFOR. THOMAS M. CRAMER, Long Beach, and GEORGE A. CONNELL, Wilmington, Calif., assignors to Pacific Coast Borax Company, a Corporation of Nevada. Filed Mar. 18, 1925, Serial No. 16,566. Renewed May 25, 1927. 3 Claims. (Cl. 99—1.)

1. A method of treating fruit to check spoilage which comprises forming a solution containing Na_2O and B_2O_3 in molecular ratios between 1 to 10 and 3 to 10, and wetting the fruit therewith.



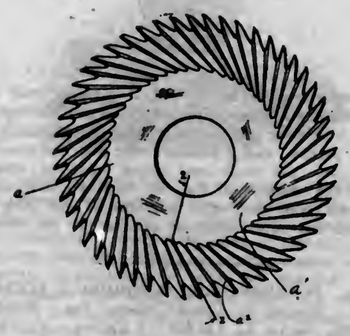
3. A solution for treating fruits to prevent spoilage comprising: a product obtainable by the admixture of boric acid and borax in substantially the ratio of five parts borax to four parts boric acid.

1,635,462. HINGE. EARLE W. CUMMINGS, Santa Barbara, Calif., assignor of one-half to Santa Barbara Lumber Company, Santa Barbara, Calif., a Corporation of California. Filed Dec. 18, 1924. Serial No. 756,640. 3 Claims. (Cl. 16—165.)



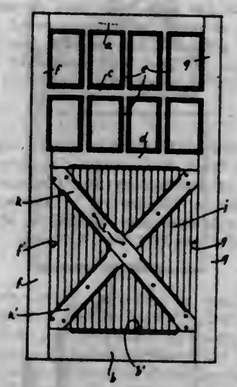
1. A hinge for the side edge of a folding board comprising two elongated leaves adapted for screwing to the edge of the board at the end of the folding joint and at right angles thereto, a link member, pintles between each end of said link and one end of said leaves respectively, said leaves being recessed on their ends for said link and having extended side portions on both sides of the link adapted to contact one another at substantially the center of the link on one side thereof and off center at a bevel angle on the other side of the link when the hinge is opened with its leaves extended in alignment.

1,635,463. POWER TOOL. CLAUD A. DAVIS, Toledo, Ohio, assignor, by mesne assignments, to The Hall Mfg. Company, Toledo, Ohio. Filed Dec. 8, 1922. Serial No. 605,690. 3 Claims. (Cl. 51—241.)



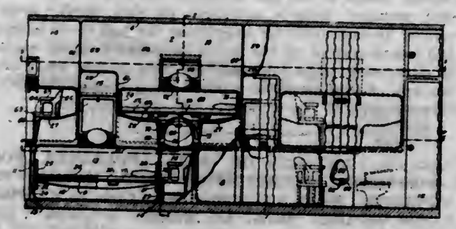
1. A grinder device embodying a rotary grinder, a shaft therefor, a sleeve for the shaft, a pair of bearings mounting the shaft in the sleeve, a holder for the sleeve, a set up mounting for the holder, a motor, a motor sustaining bracket carried by the mounting, a drive connection between the motor and grinder shaft, and a valve mounting carried by this set up mounting for positioning the valve transversely of the axis of the grinder.

1,635,464. OIL BURNER. GEORGE J. DELFELD and BRITTON W. SWAIN, Sapulpa, Okla. Filed Aug. 17, 1926. Serial No. 129,770. 1 Claim. (Cl. 299—141.)



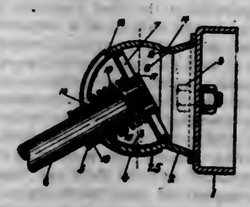
An oil burner of the class described comprising a single metal casting having an oil passage and an atomizing passage extending longitudinally therethrough, the major portions of said passages being cylindrical and merging at their outer ends into widened and flattened passages providing restricted discharge nozzles, the air nozzle disposed below said oil nozzle and terminating in inwardly spaced relation thereto, the overhanging portion of said oil nozzle being formed in its under side with a transversely disposed oil collecting groove and the discharge openings of said nozzle being of oblong configuration, the oil discharge opening being wider and shorter than the complemental air discharge opening.

1,635,465. SAW. JOHN C. DE PENNING, Portland, Oreg., assignor to Central Door and Lumber Company, Portland, Oreg., a Corporation. Filed July 19, 1926. Serial No. 123,571. 8 Claims. (Cl. 144—240.)



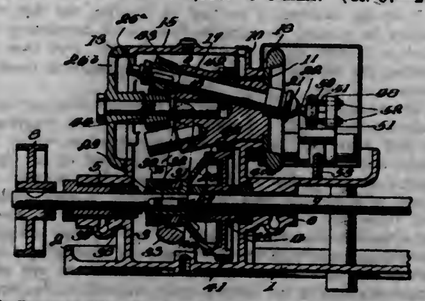
1. A circular wood-cutting saw of the character described having peripheral teeth, the cutting edges of which extend inwardly of the saw a distance substantially greater than the thickness of such saw, the cutting edges of each tooth being in registration with those of the remainder, meeting at the periphery to form a sharp point, such saw teeth thus being arranged to form a kerf of uniform, wedge-shaped cross-section.

1,635,466. WOODEN PANEL DOOR. JOHN C. DE PENNING, Portland, Oreg., assignor to Central Door and Lumber Company, Portland, Oreg., a Corporation. Filed Nov. 4, 1926. Serial No. 146,148. 8 Claims. (Cl. 20—35.)



1. In a wooden door, a frame defining a rectangular panel opening constituting a large portion of such door, the faces of such frame bounding said opening having a continuous groove formed therein, a panel mounted in said opening, its edge portions seated in said groove, and slidably engaging the sides of the latter, but spaced a predetermined distance from the bottom thereof, when such panel is centrally located in its opening, a transverse bracing member fastened to and supporting such panel in central position in its opening and bearing against the opposed faces of such frame, adjacent such groove.

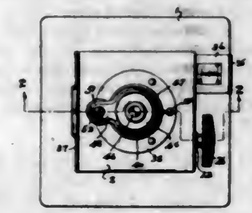
1,635,467. CAR. TRIMALE DE ROODE, New York, N. Y. Filed June 13, 1924. Serial No. 719,773. 49 Claims. (Cl. 105—315.)



3. In a sleeping car, the combination with a center passage-way, permanently independent upper and lower compartments extending longitudinally of the car in staggered relation to one another, each upper compartment overlapping a lower compartment and separately and individually communicating with said passage-way.

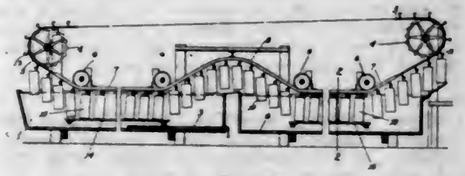
1,635,468. BALL JOINT. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1924. Serial No. 695,566. 15 Claims. (Cl. 308—72.)

1. In a device of the class described, a body portion having mounting means and a part which is spherically shaped, a support for said body portion, said body portion having an opening away from the support for a movable operating shaft, a hemispherically shaped member positioned within the spherically shaped part, a sleeve on which said hemispherically shaped member is mounted, a brace member on the sleeve and engaging the hemispherically shaped member adjacent its edge, a spring positioned between the brace member on the sleeve and the hemispherically shaped member, a cap carried by the sleeve for closing the said opening in the body portion, and a shaft movably positioned in said sleeve.



1,635,469. LAPPING MACHINE. ARVID ERICSSON, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1924. Serial No. 747,558. 8 Claims. (Cl. 57—26.)

8. In a machine for lapping ball and socket joints, the combination of a supporting frame, a rotatable member carried by said frame, means for rotating said member



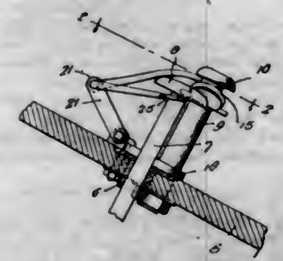
including a clutch, a shaft carried by said member and disposed at an acute angle to the axis of said member, whereby as said member is rotated, said shaft will be carried bodily therewith, means whereby the rotation of said member imparts rotations to said shaft, means carried by said shaft for supporting the ball to be lapped, and means carried by the frame for supporting the socket in engagement with said ball, the axis of said shaft and the axis of said rotatable member being so disposed as to intersect at the center of the ball being lapped.

1,635,470. METHOD OF AND APPARATUS FOR MEASURING TURBIDITIES AND COLOR OF FLUIDS. WILLIAM G. EXTON, New York, N. Y. Filed June 23, 1922. Serial No. 570,459. 2 Claims. (Cl. 88—14.)

1. In an apparatus of the kind described, the combination with an enclosing casing of a fluid cup having a transparent bottom, a transparent plunger entered in the upper end of said fluid cup, said plunger having substantially the same index of refraction as the fluid with which the fluid cup is charged for examination, means for raising and lowering said plunger to vary the depth of fluid in said fluid cup, means cooperating with said plunger actuating means for indicating the adjusted depth of the content of said fluid cup, means for illuminating the content of said fluid cup, a target, and means for supporting said target intermediate the fluid cup and illuminating means whereby said target is rendered visible through the content of said fluid cup.

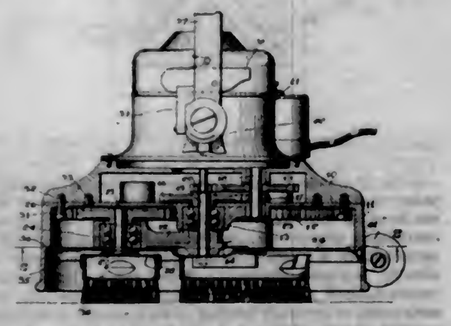
1,635,471. METHOD OF AND APPARATUS FOR CANNING FIGS. ALBERT T. GAHAN, Fresno, Calif. Filed July 7, 1926. Serial No. 120,969. 17 Claims. (Cl. 99—8.)

1. In fig canning, a method of treating the figs consisting in placing the figs in open cans, immersing the cans in heated water to precook the figs, and then removing the cans from the water and immersing them in syrup.



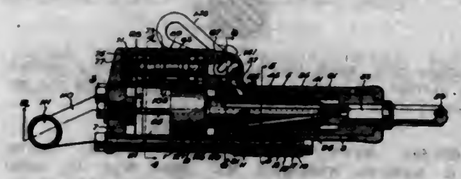
13. An apparatus for treating figs including an open-topped water tank, a movable chain disposed lengthwise of and above the tank, a sprocket wheel to which the chain slopes upwardly at the forward end of the tank, means at the other end of the tank for causing the chain to slope upwardly from the tank, a hook projecting outwardly from the chain, a container to receive cans in a horizontal position, an eye on the container for engagement with the hook, the cans being open and facing the forward end of the tank; and the eye being disposed ahead of the vertical center line of the container, and runner in the tank to support the weight of the container when the latter is lowered into the tank by the movement of the chain.

1,635,472. BOWLING PIN. GEORGE PHILIP GEISSE, Chicago, Ill. Filed June 11, 1926. Serial No. 115,268. 1 Claim. (Cl. 273—82.)



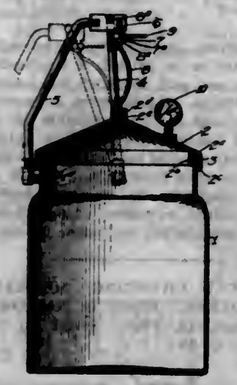
A bowling pin having a central integral core at its bottom, said core being of relatively large diameter at its end and uniformly tapered to a smaller diameter toward the body portion, and a resilient ring disposed about said tapered core, the inner and upper edges of said ring abutting the surfaces of the core and the body portion, respectively, and the outer portions of the ring being flush with the outer abutting surfaces of the body and the core.

1,635,473. FOOTREST FOR AUTOMOBILE ACCELERATORS. ERNEST L. GIBSON, Dora, Tex. Filed Nov. 17, 1926. Serial No. 148,907. 7 Claims. (Cl. 74—81.)



1. In a foot rest for automobile accelerators, a post secured to the automobile foot board at the side of the accelerator pedal, a foot button disposed for vertical sliding movement upon the post and operable for binding engagement with the post when foot pressure is applied thereto, means operable by the downward movement of the accelerator pedal for forcing said foot resting pedal downwardly upon the post, and means for automatically raising the button when pressure thereon is released.

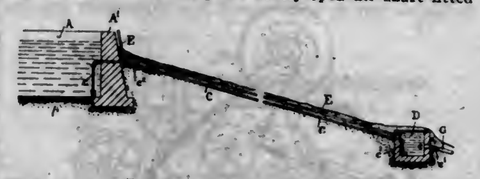
1,635,474. FLOOR-POLISHING MACHINE. LYLE N. GILLIS, Rose Crest, Va., assignor, by direct and mesne assignments, of one-half to The Floorola Corporation, Baltimore, Md., a Corporation of Delaware, and one-half to Ernest J. Newcomer, Baltimore, Md. Filed Feb. 12, 1924. Serial No. 692,296. 8 Claims. (Cl. 15—49.)



1. In a machine of the character described, the combination of a casing, rubbing means connected with said casing, driving means for said rubbing means, a guard interposed between said rubbing means and said driving means, and a trap lip on the interior of the casing adjacent the guard.

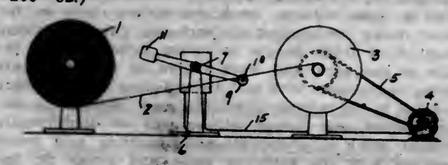
1,635,475. DRILLING MACHINE. GEORGE H. GILMAN, Belmont, Mass. Filed June 29, 1921. Serial No. 481,417. 37 Claims. (Cl. 121—6.)

1. In a fluid pressure motor, a cylinder, a piston therein having opposed working surfaces, an imperforate tubular valve having open ends in substantially unobstructed fluid communication with each other, a source of motive fluid supply, conduit means placing said source of supply in constant communication with the interior of said valve, passages controlled by said valve for admitting motive fluid to said cylinder for acting alternately on said opposed working surfaces for actuation of said piston, one of said passages including the interior of said valve, said valve being provided with separate surfaces facing in the same direction, a motive fluid conducting passage for conducting fluid for action on one of said surfaces for creating a pressure condition thereon to move said valve, a port controlled by said piston for admitting motive fluid to said passage, and means for admitting motive fluid to the other of said surfaces to lock said valve when so moved.



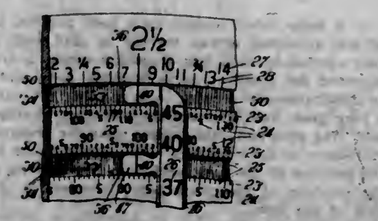
1,635,476. PRESSURE COOKER. SCOTT S. GRAVES, San Diego, Calif. Filed June 2, 1923. Serial No. 643,133. 11 Claims. (Cl. 53—1.)

1. A pressure cooker, including a container, a cover for said container, a handle member pivotally connected to said container and extending upwardly therefrom, a resilient compression member removably positioned between the middle upper portion of the handle member and said cover, and compression adjusting means provided at one end of said resilient compression member.



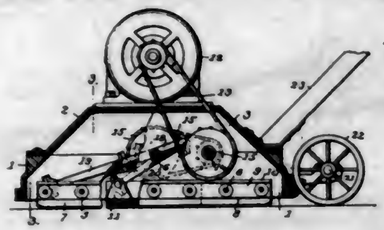
1,635,477. SIPHON. CHARLES RUSSELL HALL, Congleton, England. Filed Oct. 6, 1924, Serial No. 742,028, and in Great Britain Oct. 25, 1923. 2 Claims. (Cl. 137—20.)

1. Siphon apparatus for drawing off water from a reservoir into supply mains comprising a siphon the short leg of which is extended into the reservoir, a sealed tank disposed at a lower level than the bottom of the reservoir with which the long leg of the siphon connects and into which it discharges, a draw off main from the sealed tank the level of the said draw off main being higher than the level of the discharge end of said long leg of the siphon and a permanently open air shaft fitted



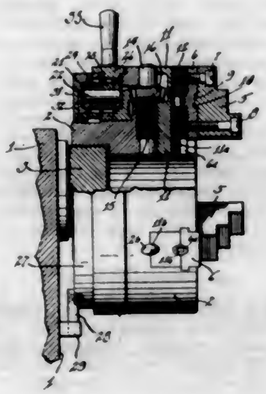
to the top of the sealed tank and extending above the water level of the reservoir to permit of the escape of air and maintain a pressure or head in the tank equal to that in the reservoir.

1,635,478. AUTOMATIC SWITCH FOR FILM REWINDERS. JAMES A. HUDSON, Borger, Tex. Filed Mar. 1, 1926. Serial No. 91,374. 5 Claims. (Cl. 200—52.)



1. In combination with a film delivering reel and an electrically driven film receiving reel, an automatic switch mounted between the two reels and in alignment therewith, the said switch comprising a pedestal; a shaft journaled through the top of the pedestal; a trip arm rigidly mounted at one end of the shaft, the shaft connecting with the arm at a medial point on the arm; a roller journaled at one end of the arm and adapted to be disposed beneath the strip of film running between the two reels; a counterweight at the opposite end of the arm adapted to normally swing the arm to a vertical position; a drum of insulation upon the opposite end of the said shaft; an electrical contact element mounted upon the said drum of insulation; the terminals of the electrical conductors leading to the said motor being so mounted relative to the said contact element as to bear against the said drum and contact element so that the circuit through the conductors will remain closed with the said trip arm standing in an approximate horizontal position, but will be broken upon the arm assuming its normal vertical position.

1,635,479. INDICATOR DEVICE FOR INSTRUMENTS. GEORGE HUTCHINSON, Sheboygan, Wis., assignor to Hutchinson Scale Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Sept. 14, 1925. Serial No. 56,372. 33 Claims. (Cl. 116—129.)



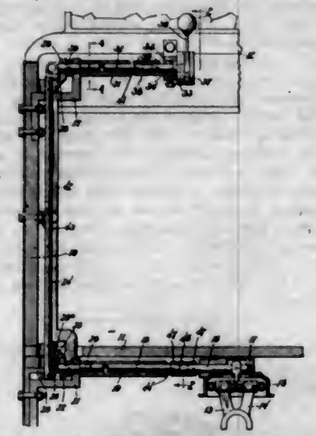
13. In combination, a chart having a plurality of rows of graduations, a bar, fingers projecting transversely from the bar, and indicating elements carried by the fingers and extending transversely of the same, each indicating element being in operative relation to two of said rows of graduations.

1,635,480. FLOOR-SURFACING MACHINE. OMAND B. JACOBSON, Waukegan, Ill. Filed July 18, 1925. Serial No. 44,565. 1 Claim. (Cl. 51—175.)

In a floor surfacing machine, the combination of a main casing open at bottom and formed by upper and lower sections with the abutting faces of such sections formed with complementary portions of a plurality of bearing recesses, and a central longitudinal partition in said casing, a pair of surfacing slabs having side by side relation, track connections between the lower casing section and the surfacing slabs comprising longitudinal track flanges extending laterally from the sides of one part, and track rollers on the other part having engagement with said track flanges, a crank shaft mounted in the bearing recesses in seam between the casing sections and formed with a pair of diametrically opposed crank members, pitmen connecting said crank members with the surfacing slabs, and means for imparting rotation to the crank shaft.

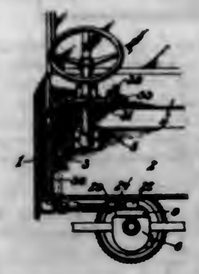
1,635,481. LATHE CHUCK. VICTOR G. JORNER, Chicago, Ill. Filed Oct. 26, 1925. Serial No. 65,020. 2 Claims. (Cl. 279—113.)

1. A lathe chuck comprising a body portion, a plurality of jaw actuating screws carried by said body portion, a gear carried by each jaw actuating screw, a driving gear mounted for rotation on said chuck body and arranged to simultaneously actuate each of said first named gears, a ring gear, and intermediate planetary gearing between said ring gear and said driving gear for transmitting the movement of the ring gear to the driving gear to regulate the position of the jaws, said planetary gearing permitting the rotation of the chuck body, irrespective of the position of the jaws.



1,635,482. PACKING. BRYAN P. JOYCE, Washington, D. C. Filed July 11, 1922. Serial No. 574,329. 2 Claims. (Cl. 288—1.)

1. A packing ring, embodying a filler ring having soft metal upon a sealing contact surface, and annular channel-shaped retaining rings of relatively harder metal embracing the filler ring laterally, the circumferential flanges of said retaining rings being adapted to bear against the

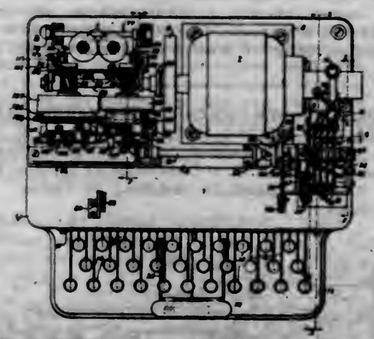


surface with which the soft metal has sealing contact to prevent any escape of the soft metal beyond the retaining rings.

1,635,483. SPEED-CHANGING MECHANISM. ELMER G. KESLING, Bloomfield, Mo. Filed Sept. 14, 1926. Serial No. 135,400. 8 Claims. (Cl. 74—39.)

1. A gear shifting mechanism comprising a housing adjacent the gears to be shifted, a longitudinally extensible shaft with one end mounted for longitudinal and rotative movement in said housing, a bearing in which the other end of said shaft is rotatable but not movable longitudinally, a second longitudinally extensible shaft similarly mounted, gearing connecting the shaft sections which are not movable longitudinally, and other means connecting the longitudinally movable shaft sections to cause the longitudinal movement of one to be controlled directly by the longitudinal movement of the other.

1,635,484. SPEED-CHANGING MECHANISM FOR MOTOR VEHICLES. ELMER G. KESLING, Bloomfield, Mo. Filed Sept. 14, 1926. Serial No. 135,401. 15 Claims. (Cl. 74—39.)



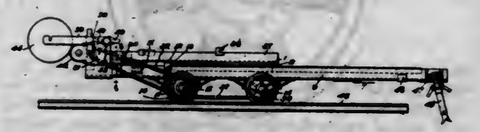
1. A device of the character described comprising a rockable and longitudinally slidable spindle, gear shifting mechanism having a pin and slot connection with said spindle, a shaft made up of a series of elements composed of rigid material and connected in end to end relation by pivot pins arranged transversely thereof and transversely to each other, one end of said shaft being connected to said spindle, a second spindle connected to the other end of the shaft, actuating means for selectively rocking said second spindle or moving it longitudinally, and a rigid curved tube in which said shaft is guided, so as to positively transmit the movement of the second spindle to the first-mentioned spindle.

1,635,485. ORNAMENT FOR PERSONAL WEAR. JOHN J. KEVILLE, Leominster, Mass. Filed June 30, 1926. Serial No. 119,722. 3 Claims. (Cl. 132—48.)

1. As an article of manufacture, an ornament for personal wear comprising a plate having its front surface ornamented, provided at opposite points on the back with a projection having a passage all the way through it and a post having a groove on its outer side, said groove and opening being located substantially at the same level as the surface of the back, and a ring of yielding material pivoted in said perforation and of such width that it will have to be distorted a little to bring its opposite edge over the post and into the groove, whereby it will be held in contact with the back throughout its length and it will hold the hair or garment on which it is placed on two lines on opposite sides of the diameter connecting the projection and post.

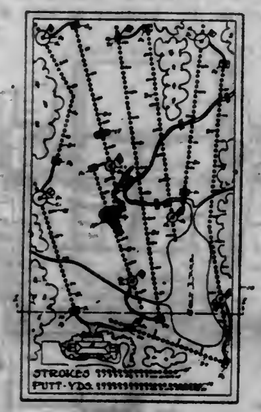
1,635,486. PRINTING OR SELECTING TELEGRAPHS. CHARLES L. KRUM and HOWARD L. KRUM, Chicago, Ill., assignors, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1919, Serial No. 346,948. Renewed Oct. 30, 1926. 79 Claims. (Cl. 178—27.)

1. In a receiving apparatus for selecting telegraphs, a set of selectors, a unitary rotatable actuator common to all of said selectors movable at an angle to its rotary path to effect the operation of selectors, a start and stop clutch for initiating and arresting the rotary movement of said actuator at the beginning and end respectively of each signal, and a single magnet responsive to the received signals for tripping said clutch and variably controlling the angular movement of said actuator.



1,635,487. PIPE. FRED J. LEACH, Louisville, Ky. Filed Sept. 8, 1926. Serial No. 134,202. 3 Claims. (Cl. 131—12.)

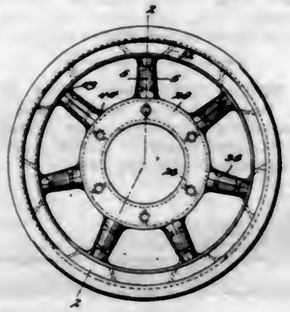
1. An attachment for pipes including an upper tubular part and a lower tubular part detachably connected, said lower part comprising a vertical well closed at its bottom, and a laterally extending inlet tube communicating with the well between its ends, said tube having its free end arranged to fit into the stem opening of a pipe bowl, said upper part having a vertical leg extending into the well and terminating in a frusto-conical portion extending



below the inlet tube and provided with a small hole affording communication with the lower part of the well, said hole being of less diameter than the bore of the upper tubular part, said upper part also having a lateral leg at its upper end adapted to receive a pipe stem.

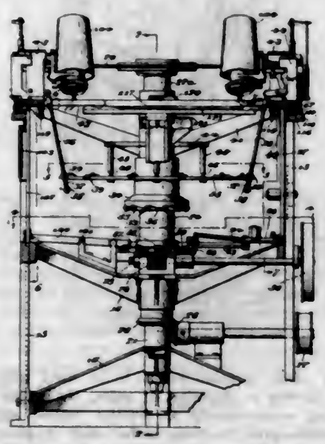
1,635,488. MINING MACHINE. JACOB M. LONDON, Tunnelton, Pa., assignor to Sullivan Machinery Company, Claremont, N. H., a Corporation of Massachusetts. Filed May 15, 1915, Serial No. 28,449. Renewed Mar. 3, 1924. 92 Claims. (Cl. 262—28.)

22. Mining apparatus comprising wheeled guiding means, mining machine receiving means adapted to receive and wholly support a mining machine adjustably mounted on said guiding means for movement longitudinally and angularly relative to said guiding means, and wheel driving means adapted to be driven from a mining machine on said receiving means in a predetermined position of the latter.



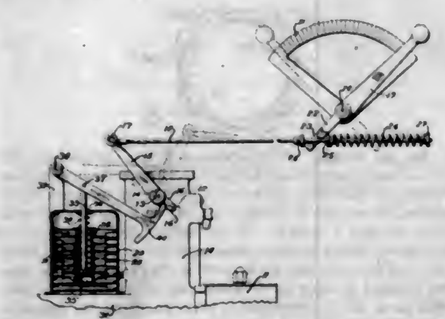
1,635,489. GAME. MILTON J. MCCOLM, Sioux City, Iowa. Filed Jan. 25, 1926. Serial No. 83,608. 2 Claims. (Cl. 273—87.)

1. In a game, a game board to be used with a deck of cards having a plurality of suits, the cards of each suit having consecutively increasing values, said board having represented thereon, a fair-way, a green and a hole within said green, the fair-way comprising a line of spaced indicating elements, some of which are labelled to indicate their distance from the begining of the fair-way, said indicating elements being terminated at one



edge of the green and continued beyond the green from the other edge thereof, and an indicating character determining the width of the green whereby said cards may be played, one by one, to indicate drives on a fair-way, the length of which may be recorded by means of said indicating elements and whereby the cards may serve by playing either into or entirely across the green to indicate putts or over-drives, until a card may be played from one side or the other of the green, which will correspond exactly to the distance from the point last attained to the hole within the green.

1,635,490. CAST-METAL VEHICLE WHEEL. ALEXANDER MELDRUM, Syracuse, N. Y. Filed May 21, 1925. Serial No. 31,899. 13 Claims. (Cl. 301—65.)

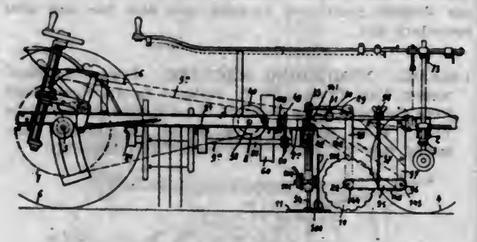


9. In a metal vehicle wheel in combination, a hub having a substantially cylindrical periphery, a felloe having an inner periphery, spokes joining said hub periphery and felloe periphery and being cast integral therewith, each spoke being cast as a channel open on one side and having a curved bottom the ends of which bottom join the hub and felloe, straight sides on said spokes initially free from said hub and felloe, and transverse webs cast integral with the curved bottoms of said spokes and having outer edges serving as formers about which the straight sides of said spokes may be bent.

1,635,491. GLASS-GRINDING MACHINE. JOHN A. MILLIKEN, Ambler, Pa., assignor to John E. Marsden, Philadelphia, Pa. Filed Nov. 1, 1922. Serial No. 598,315. 42 Claims. (Cl. 51—107.)

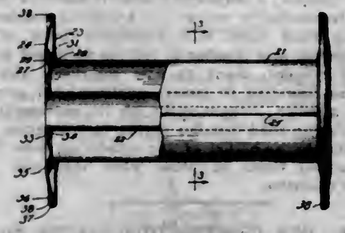
1. A glass grinding machine comprising a grinder, a plurality of holders for supporting the articles to be ground, a carrier for supporting the holders and for moving them with respect to the grinder, and means for varying the angular position of the holders with respect to the grinder as the carrier is moved, preliminary to another operation by said grinder.

1,635,492. ALTITUDE CONTROL FOR AIRPLANE ENGINE THROTTLES. FRANK C. MOCK, CHARLES J. GUSTAFSON, and MILTON E. CHANDLER, Chicago, Ill., assignors to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1920. Serial No. 388,478. 5 Claims. (Cl. 123—75.)



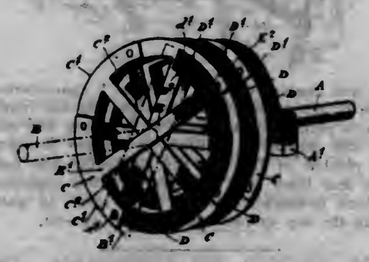
1. In combination, a carbureter adapted for connection with an intake manifold, a throttle valve controlling the flow through said manifold, manual means for manipulating said throttle valve, an expansible barometric chamber sealed to contain a substantially fixed pressure therein, said barometric chamber being responsive only to pressure posterior to said throttle valve, a graduated stop member movable by said barometric chamber, a projection moving with said throttle valve adapted to engage said stop member, said barometric chamber operating through said graduated stop member to limit the open position of said throttle valve in opposition to the operation of said manual means, whereby a sub-atmospheric pressure is maintained in said manifold by the restricted position of said throttle valve at predetermined atmospheric pressures.

1,635,493. LOOPER-THREAD-CONTROLLING MECHANISM FOR SEWING MACHINES. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1923. Serial No. 656,268. 20 Claims. (Cl. 112—243.)



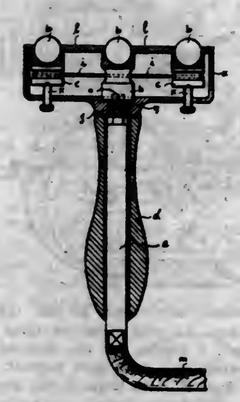
1. The combination with a feeding mechanism including a feed dog and means for varying the stroke of the feed dog; of a pull-off mechanism including thread guides, a pull-off member and means for giving said thread guides and pull-off member a relative movement of a fixed extent for pulling thread from the supply, and means for automatically shifting the relative path of movement of the guides and the pull-off member upon the varying of the length of the feed.

1,635,494. BEET HARVESTER. JEAN MOREAU, Noyelles-sur-Escaut-Nord, France. Filed June 6, 1924, Serial No. 718,299, and in France June 13, 1923. 5 Claims. (Cl. 55—107.)



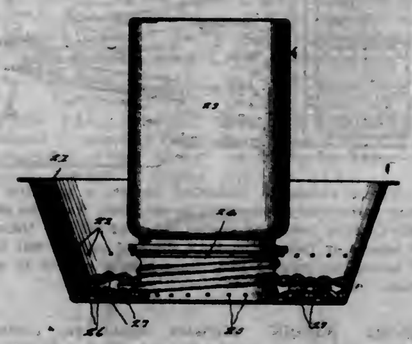
1. In a beet harvester, means to travel over the beets, a rotary knife lifted by said means to the crown of the beet, rotating means to remove the cut tops from the knife, a conveyor, and a guide between the conveyor and said rotating means to direct the tops to the conveyor from said rotating means.

1,635,495. METALLIC SPOOL. VICTOR ODQUIST, Yonkers, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 14, 1923. Serial No. 638,720. 2 Claims. (Cl. 242—123.)



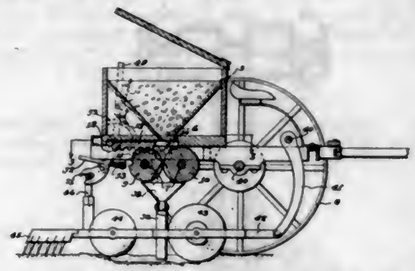
1. A metal spool comprising in combination an outer core having its end edges flanged outwardly, end walls encircling the core and interlocked with said flanged edges, reinforcing plates having their margins interengaged with the margins of said end walls, and bearing inwardly against the end flanges of the outer core, and an inner core fitting into said reinforcing plates and having end flanges engaging on the outer sides of the reinforcing plates.

1,635,496. FLEXIBLE COUPLING. HENRI PRIGNÉ, Billancourt, France. Filed Mar. 9, 1926, Serial No. 93,495, and in France Mar. 27, 1925. 11 Claims. (Cl. 64—26.)



1. A flexible coupling for conveying rotary motion comprising a coil spring and staying means adapted to hold the coils against radial compression and against excessive deformation, substantially as described.

1,635,497. MASSAGING APPARATUS. MARIA RÜTTORR-PELLI, Lucerne, Switzerland. Filed June 12, 1926, Serial No. 115,627, and in Switzerland July 6, 1925. 3 Claims. (Cl. 128—56.)

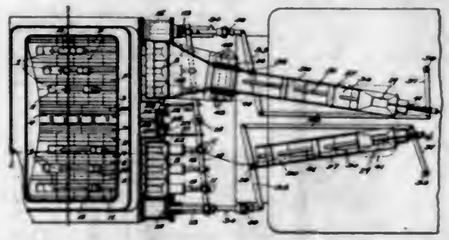


1. A massaging apparatus comprising a handle, a casing supported rotatably at one end of said handle, balls held in said casing so as to project through the front face thereof, means for imparting rotation either to the balls relative to the casing or to the casing relative to the handle, ball supports held rotatably in said casing, a gearing controlling said supports, and a driving shaft held rotatably and slidably in the handle, said shaft being formed with square heads which enable it by axial adjustment to be put into engagement either with the casing for rotating the latter or with one of the ball supports for rotating the balls.

1,635,498. SEED GERMINATOR. OLYNTHUS HOWARD PERSHING, Muncie, Ind. Filed May 12, 1926. Serial No. 108,703. 1 Claim. (Cl. 47—14.)

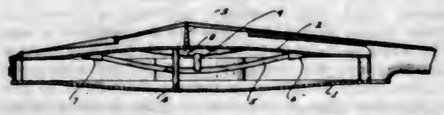
A device of the character described comprising a container filled with permeable material, a barometric fountain means within the container for constantly supplying water to the material therein at the lower portion of said material, said container being provided with upper and lower series of holes, the lower series acting to prevent excessive rise of the level of free water entering the material and the upper series providing ventilating means.

1,635,499. AGRICULTURAL IMPLEMENT. ALFRED THEADORE PETERSON, Crooked Rivers, Saskatchewan, Canada, assignor of one-tenth to Gunnar Carlson and one-tenth to Stewart W. Carlson, Minneapolis, Minn. Filed Dec. 28, 1926. Serial No. 157,541. 2 Claims. (Cl. 111—51.)



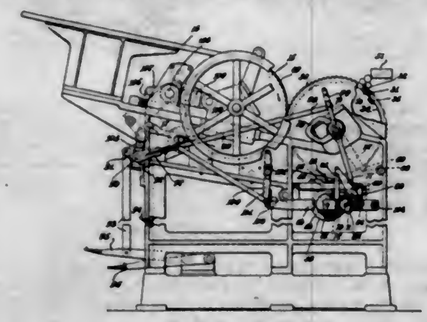
1. An agricultural implement of the type described comprising a frame, an axle mounted upon wheels carried by the frame, a hopper for the distribution of material to be planted, and feed rolls beneath the hopper, with a shut off door slidable beneath the hopper bottom, one of said feed rolls having teeth to engage said door and move the same.

1,635,500. PROCESS OF CEMENTATION IN THE GROUND. HAROLD EDWIN POTTS, Liverpool, England, assignor to Thomas Blandford and Alfred Gee, Doncaster, England. Filed Mar. 30, 1926. Serial No. 98,622, and in Great Britain Oct. 14, 1925. 3 Claims. (Cl. 61—36.)



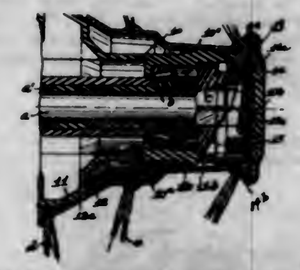
1. The process of sealing fissures in water-bearing strata which comprises injecting a solution of caustic alkali into the strata and then injecting a cement suspension into the strata.

1,635,501. AUTOMATIC STOKER. MAURICE RATEL, New York, N. Y. Filed Feb. 20, 1922, Serial No. 538,004, and in France Feb. 25, 1921. 51 Claims. (Cl. 110—44.)



1. In an automatic underfeed stoker, a plurality of twyers successively decreasing in elevation from the sides of the furnace toward a medial fore and aft line thereof, fuel retorts or troughs on both sides of said medial line, and means for feeding fuel through said retorts to said twyers.

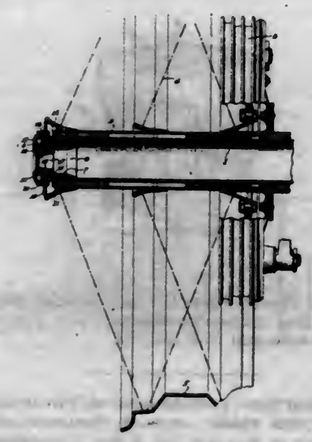
1,635,502. VIOLIN. MICHAEL REDLINGER, Portland Oreg. Filed Oct. 20, 1925. Serial No. 63,655. 2 Claims. (Cl. 84—274.)



1. A base bar for a violin, in combination with the upper wall of a violin, of a base bar secured by its ends to the underside of said wall, and having that portion thereof intermediate its ends spaced apart therefrom, a secondary bar mounted to the under surface of said upper wall and spaced apart from said base bar, and a tension bar slidably positioned between said base bar and said secondary bar.

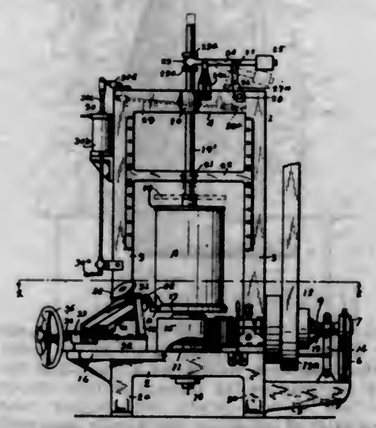
1,635,503. NUMBERING MACHINE. JAMES H. REINHARDT, East Orange, N. J., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed May 14, 1924, Serial No. 713,149. Renewed Oct. 15, 1926. 27 Claims. (Cl. 101—77.)

1. A numbering machine embodying therein an impression cylinder, a numbering head cylinder, a member adapted to constantly engage the actuating member of a numbering head upon said numbering head cylinder, means whereby said member is rotated with said numbering head cylinder, about an axis coincident therewith, and means operative to impart unidirectional movement to said member independently of its movement with said numbering head cylinder during each rotation of the latter, whereby actuation of the numbering head is prevented at all times excepting when said last named means is operative.



1,635,504. HUB CONSTRUCTION. CLAUDE SAUZEDDE, Detroit, Mich., assignor, by direct and mesne assignments, to Sauzedde Manufacturing Corporation, Mount Clemens, Mich., a Corporation of Delaware. Filed Jan. 24, 1920. Serial No. 353,808. 8 Claims. (Cl. 301—9.)

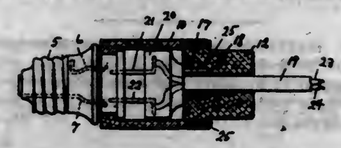
2. A hub construction as in claim 1 characterized in that the thread formation between the cap and inner hub member is positioned internally of the inner hub member in the hub assembly to produce a space between the thread portion of the cap and the outer hub member, the cap and inner hub members carrying complemental formations co-operative within such space to normally maintain the cap against retrograde movement.



1,635,505. HUB-LOCKING DEVICE FOR WHEELS. CLAUDE SAUZEDDE, Detroit, Mich. Filed June 14, 1926 Serial No. 115,778. 7 Claims. (Cl. 301—9.)

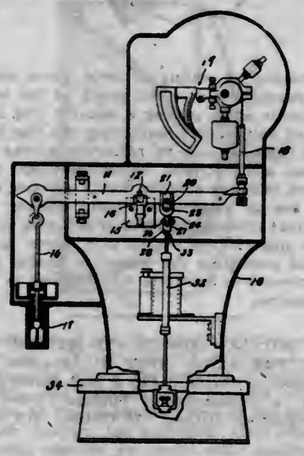
4. Means adapted for locking a wheel hub on an axle, said means comprising an inner member secured to the axle, a hub engaging intermediate member connected to said inner member, and an outer member connected to said inner member, said intermediate member bearing

against said outer member and the connections between all of said members being such that any movement of said intermediate member tends to bind the connection between said inner and outer members.



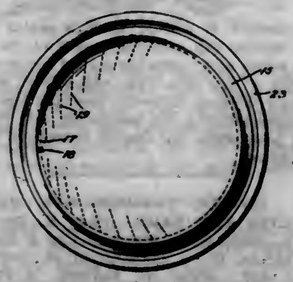
1,635,506. PROCESS OF AND MACHINE FOR MAKING CONTAINERS. ANTHONY SCHROEDER, Cleveland, Ohio, assignor of one-half to James Merle Finney, Cleveland, Ohio. Filed May 20, 1925. Serial No. 31,530. 53 Claims. (Cl. 113—22.)

1. In apparatus of the class described, the combination of a support for a flanged body and a flanged head, means for rotating said support, a seaming mechanism having flange engaging means disposed inwardly of the body end and movable radially and then in a lateral direction, and means for operating said mechanism.



1,635,507. ATTACHMENT FOR ELECTRIC EXTENSION PLUGS. EDWARD T. SEABOCK, Wall, Pa. Filed Nov. 4, 1926. Serial No. 146,224. 3 Claims. (Cl. 173—359.)

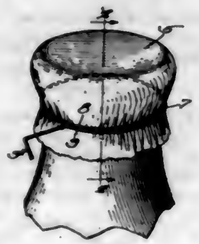
1. In a device of the class described, an attachment plug having free contacts, a casing engaged with the plug, a slide in the casing having spring contacts engageable with the first-mentioned contacts, spring means for normally urging the slide in an engageable position, and an



extension cord attached to the slide so that when the extension cord is pulled the spring is compressed and the contacts are separated.

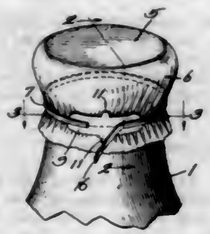
1,635,508. FLEXIBLE BEAM CONNECTION FOR STEELYARDS. LOUIS S. SHIVELY, University City, Mo., assignor to The Weightograph Company, St. Louis, Mo., a Corporation of Missouri. Filed June 16, 1925. Serial No. 37,475. 7 Claims. (Cl. 265—49.)

1. In a scale, the combination of a scale beam, a pivot bearing carried by the scale beam, a yoke member, a connection between the yoke member and the bearing, said connection being movable on a pivot axis parallel with the beam, a steelyard, and a pivot connection intermediate the steelyard and the yoke member.



1,635,509. CAN. JAMES A. STEWART, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 15, 1921. Serial No. 492,235. 7 Claims. (Cl. 220—27.)

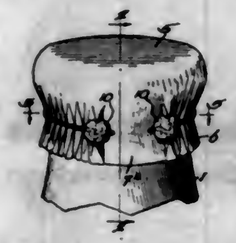
1. A can end having a circular score line and a point in said line at which an opening instrument is to be inserted, and directing score lines on said end arranged at



intervals away from said point and inward from said circular score line and inclined towards said insertion point at successively greater angles to said circular line.

1,635,510. BOTTLE CLOSURE AND METHOD OF PRODUCING THE SAME. OLOF N. TEVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 20, 1926. Serial No. 110,447. 13 Claims. (Cl. 215—96.)

1. The method of sealing a bottle which consists in placing a skirted cap over the mouth of the bottle and about the bottle neck; placing a metallic ring about the cap skirt and bottle neck; contracting the ring into tight engagement with the cap by relatively moving adjacent ring portions oppositely and circumferentially; placing a bond between said ring portions that is inclusive of cement that will flux in response to heat; passing sufficient electric current through a portion of said ring to heat the ring where adjacent the cement to a degree to flux the cement; and permitting the cement to harden while the ring is contracted to hold said ring portions in ring contracting relation.



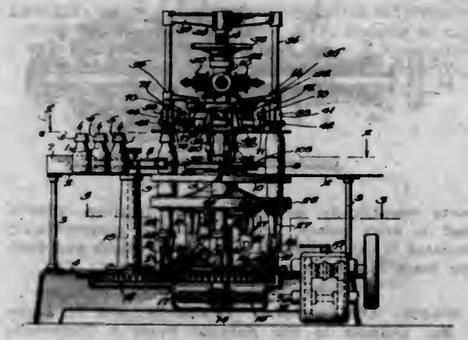
1,635,511. BOTTLE CLOSURE AND METHOD OF PRODUCING THE SAME. OLOF N. TEVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 20, 1926. Serial No. 110,448. 16 Claims. (Cl. 215—96.)

1. The method of sealing a bottle which consists in placing a skirted cap over the mouth of the bottle and about the bottle neck; securing a bond to the skirt of the cap; placing a ring into tight engagement with the cap by relatively moving adjacent ring portions oppositely and circumferentially; and assembling said ring portions with said bond while the ring is contracted to hold the ring contracted.

1,635,512. BOTTLE CLOSURE AND METHOD OF PRODUCING THE SAME. OLOF N. TEVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 9, 1926. Serial No. 153,600. 8 Claims. (Cl. 215—96.)

1. The method of sealing a bottle which consists in placing a skirted cap over the mouth of the bottle and about the bottle neck; contracting a ring about the cap skirt by relatively moving adjacent portions thereof oppositely and circumferentially; and holding said ring portions in ring contracting relation by a part of the cap skirt between said ring portions.

1,635,513. BOTTLE CLOSURE AND METHOD OF PRODUCING THE SAME. OLOF N. TEVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 8, 1927. Serial No. 172,402. 13 Claims. (Cl. 215—96.)



1. The method of sealing a bottle which consists in placing a skirted cap over the mouth of the bottle and about the bottle neck, contracting a ring about the cap skirt by relatively moving adjacent portions thereof oppositely and circumferentially into lapping relation; placing a patch of hot sealing wax directly upon said ring portions and directly upon the portion of the cap skirt at these ring portions; and holding the ring portions in ring contracting relation while the patch of sealing wax cools to enable it to hold said ring portions in ring contracting relation.

1,635,514. CLOSURE-APPLYING MACHINE. OLOF N. TEVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 21, 1926. Serial No. 123,936. 47 Claims. (Cl. 140—94.)

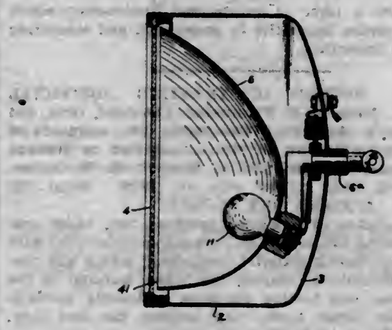
1. The combination with two strand holders having arms upon which the holders are carried; of a support upon which said arms are pivoted to enable interchange

in the positions of the holders with reference to the support; gears upon and coaxial with said arms; and a

reciprocable rack member meshing with said gears to interchange the positions of the holders with reference to said support.

1,635,515. CLOSURE-APPLYING MACHINE. OLOF N. TEVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 21, 1926. Serial No. 123,937. 43 Claims. (Cl. 140—94.)

1. The combination with a positioner for a bottle having a skirted closure cap; of mechanism constructed to contract a strand about the skirt of the cap; and mechanism constructed to flux cementitious material upon adjacent portions of the strand to hold the strand taut, said positioner and mechanisms being relatively adjustable into cooperative relation.



1,635,516. CINEMATOGRAPH FILM MATERIAL. JOHN EDWARD THORNTON, London, England. Original application filed Dec. 13, 1923, Serial No. 680,511, and in Great Britain Dec. 27, 1922. Divided and this application filed June 8, 1925. Serial No. 35,761. 6 Claims. (Cl. 95—2.)

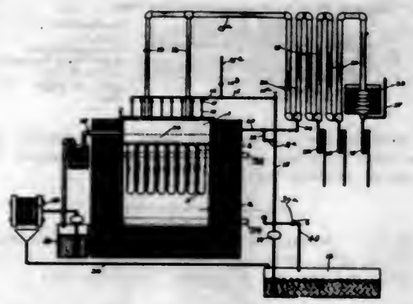
1. A complete section film material of double standard width and half standard thickness comprising three main layers, a transparent base support, a sensitive colloid with color incorporated therein in two longitudinal stripes

of complementary colors and paper reinforcement with fine teeth or grain on the surface in combination with layers of adhesive material.

1,635,517. AUTOMOBILE HEADLIGHT. RUSSELL P. TYLER, San Francisco, Calif. Filed Nov. 1, 1926. Serial No. 145,449. 5 Claims. (Cl. 240—48.)

5. A head-light of the character described, comprising a substantially cylindrical-shaped housing, a parabolic reflector mounted within the housing, a rotatable support therefor, said reflector being disposed on an angle with relation to the longitudinal axis of the housing and the rotatable support, the peripheral front edge of said reflector being cut on an angle with relation to the longitudinal axis of the reflector so as to present a peripheral surface parallel to the front end of the housing.

1,635,518. ARTIFICIAL BAIT. JACK T. WELCH, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed May 29, 1926. Serial No. 112,582. 4 Claims. (Cl. 43—42.)

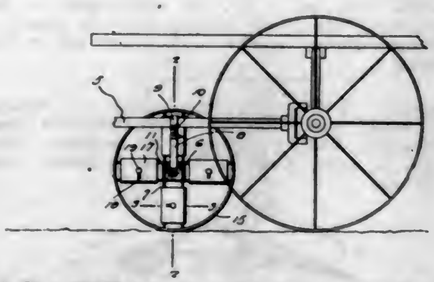


1. A bait consisting of a body portion of non-buoyant material divided longitudinally into upper and lower sections joined together and cored on its interior to increase the buoyancy of the forward end of the bait to the extent required to cause the bait to assume an oblique position when resting in the water, substantially as described.

1,635,519. PROCESS OF AND APPARATUS FOR BREAKING UP THE COMPONENTS OF PETROLEUM AND THE LIKE INTO MORE VOLATILE PRODUCTS. WILLET C. WELLS and FRANK E. WELLS, Columbus, Ohio. Filed Aug. 10, 1920. Serial No. 402,536. 18 Claims. (Cl. 196—70.)

14. The process of cracking hydrocarbon oils, consisting in passing the hydrocarbon oil before substantial

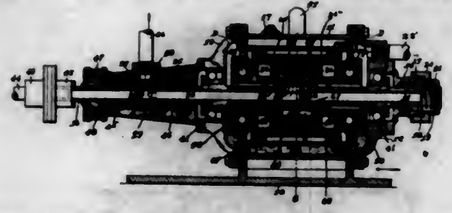
evaporation or dissociation through a molten metal bath in a retort, continuously supplying directly to the upper surface of such bath and continuously withdrawing from



said surface, a layer of unvaporized hydrocarbon which holds the carbon impurities in suspension, and separating the carbon impurities.

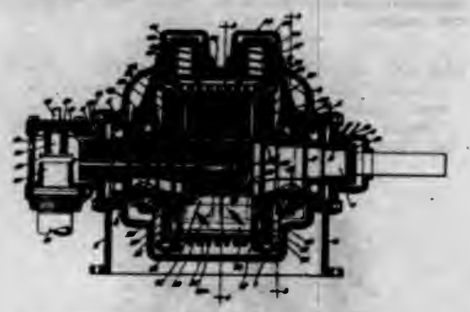
1,635,520. METHOD OF TREATING ARTIFICIAL FUELS. HERBERT E. WETHERBEE, Cleveland, Ohio, and WILLIAM L. JACOBUS, Wilkes-Barre, Pa., assignors of one-third to Richard F. Grant, one-third to Howard M. Hanna, and one-third to Herbert E. Wetherbee, Cleveland, Ohio. Filed July 10, 1926. Serial No. 121,732. 12 Claims. (Cl. 44—23.)

6. The method of producing artificial fuel, which consists in filming the subdivided carbonaceous material with a composite binding material, comprising coking and non-coking hydrocarbons, shaping the filmed material in the desired sizes, and heating the same sufficiently partially to coke the filmed binder and coalesce the fuel body, substantially as set forth.



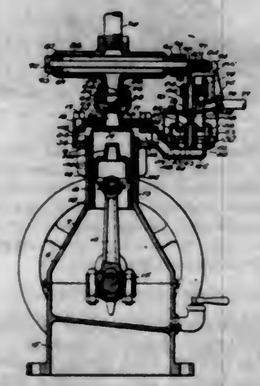
1,635,521. COTTON BLOCKER. JOHN ELISHA WILLIAMS, Longworth, Tex. Filed July 27, 1926. Serial No. 125,262. 2 Claims. (Cl. 97—22.)

1. In a blocking device of the character described, a hub member, spokes radiating from the hub member and arranged in pairs, a plurality of fenders having curved edges slidable on the spokes, one fender associated with each pair of spokes, rim rings on the outer ends of the spokes, a pair of plates associated with each fender, means for attaching the plates to the fenders so that they may be spread apart to increase the effective width of the fenders.



1,635,522. FLUID COMPRESSOR. EDWARD WILSON, St. Louis, Mo., assignor, by direct and mesne assignments, to National Pump and Compressor Company, St. Louis, Mo., a Corporation of Delaware. Filed May 7, 1918. Serial No. 233,040. 83 Claims. (Cl. 230—30.)

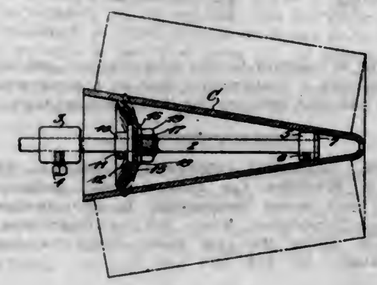
1. An air compressor comprising a stationary housing, a shaft mounted therein, a casing eccentrically mounted in said housing, means for adjusting said casing, a rotating cylinder provided with fixed and floating heads eccentrically mounted in said casing, ball bearings carried by the fixed heads, a rotor provided with inlet and outlet



ports eccentrically mounted in said rotating cylinder, and a rotor piston tangentially and reciprocatingly mounted in said rotor, the said rotor, cylinder and floating heads forming a compression chamber.

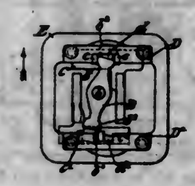
1,635,523. COMPRESSOR. EDWARD WILSON, St. Louis, Mo., assignor to The National Pump & Compressor Company, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 22, 1926. Serial No. 96,371. 46 Claims. (Cl. 230—30.)

1. A compressor comprising a rotor, a cylinder enclosing and supported by the rotor, a yoke supported by the cylinder, and devices exerting pressure upon the yoke in a direction to press the cylinder against the rotor.



1,635,524. METHOD OF AND MEANS FOR COOLING COMPRESSORS. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake and Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 9, 1925. Serial No. 67,724. 13 Claims. (Cl. 230—6.)

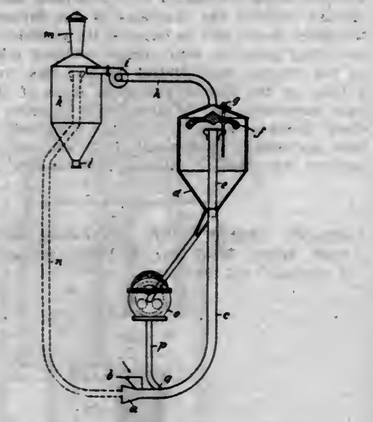
1. In a compressor having an intake valve, an intake passageway leading thereto, water introducing means actuated by a drop in pressure in said intake passageway



to spray water into the current of air drawn through said intake passageway upon the suction stroke only of the compressor.

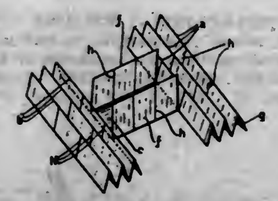
1,635,525. COP HOLDER FOR TEXTILE MACHINES. JOHAN A. ANDERSON, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1925. Serial No 63,005. 6 Claims. (Cl. 242—130.)

1. A cop-holder for textile apparatus comprising means on which the cop-tube is supported and a resilient concavo-convex disk adapted to grip the interior of the tube to secure it to the supporting-means while holding it concentrically thereof and to flex to permit its removal therefrom.



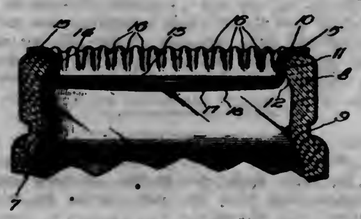
1,635,526. CHANGE-SPEED GEAR. HERBERT AUSTIN, Bromsgrove, England, assignor to The Austin Motor Company Limited, Northfield, near Birmingham, England. Filed July 18, 1923, Serial No. 652,244, and in Great Britain July 18, 1922. 6 Claims. (Cl. 74—39.)

1. In change speed gear, a gear operating device, a transverse lever, at a point intermediate the ends of which the gear operating device engages in a manner to move the transverse lever lengthwise and laterally at will, a part at each side of the gear box into pivotal engagement with which the corresponding end of the lever may be moved, the lever then being adapted to be rocked by the gear operating device about such part as a pivot, and means whereby the free end of the lever moves a selector device for changing the gear.



1,635,527. PNEUMATICALLY-FED CRUSHING AND SIFTING DEVICE. EMIL BARTHELMESS, Dusseldorf-Oberkassel, Germany. Filed Aug. 15, 1925, Serial No. 50,481, and in Germany Aug. 22, 1924. 2 Claims. (Cl. 83—73.)

1. A separating and crushing device comprising a pneumatic separator, a feeding duct having a horizontal portion and a vertical portion which latter rises into said separator, a feeding hopper opening into the horizontal portion of said feeding duct, an exhauster communicating with the upper part of the separator so as to draw the materials through the feeding duct into the separator and extract the finer particles from the latter, a crusher, and a return pipe for leading the coarser particles from the lower part of the separator to the crusher and thence back to the horizontal portion of the feeding duct, the



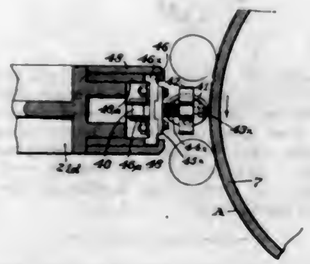
return pipe being arranged so as to open obliquely into the feeding duct in the direction in which the materials travel, substantially as and for the purpose set forth.

1,635,528. PACKING PRISMATIC ARTICLES. JAKOB BILD, Vienna, Austria. Filed Jan. 11, 1926, Serial No. 80,536, and in Austria Apr. 10, 1925. 4 Claims. (Cl. 229—87.)

1. A packing for prismatic articles such as lumps of sugar and the like, comprising an I-shaped sheet of flexible material the bar or stem portion of which is dimensioned to cover three faces of the article to be wrapped and the two wings capable of being superposed on the fourth face of said article and extending over the ends of the latter to overlap one another on the face opposite said fourth face.

1,635,529. SEAL FOR VESSELS AND THE LIKE. HERBERT J. BRAODON, Chicago, Ill. Filed Mar. 18, 1926. Serial No. 95,671. 3 Claims. (Cl. 215—39.)

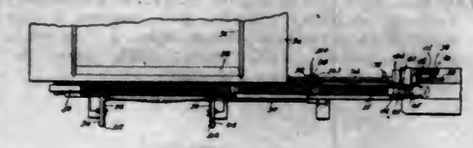
1. As a new article of manufacture, a seal for the purpose specified comprising a resilient sheet-metal disk, the marginal portion of said disk being flanged upwardly at



substantially right angles to the central floor portion of the disk and then flared outwardly at substantially right angles to said flanged portion, both the flanged and flared portions being corrugated with relatively small crimps to thereby increase the flexibility of the flanged portion of the sheet metal and to improve its yieldability under an encircling pressure, said crimps reaching relatively close to the central floor portion of the disk, together with a liner on the bottom and outer faces of the seal, said liner comprising one or more layers of paper with a combined thickness suitable to insure compressibility of said liner against the sheet metal of the seal and substantially without distortion of the seal, substantially as described.

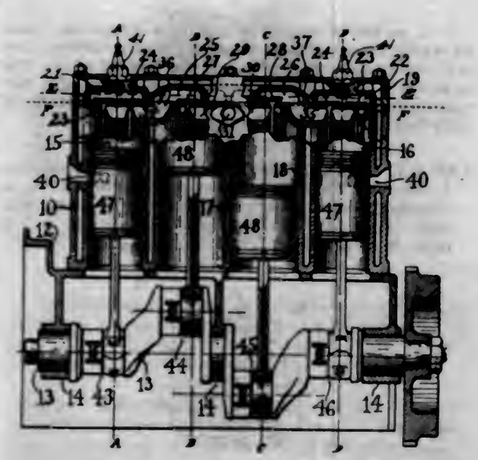
1,635,530. PISTON RING. ERNEST N. BRODERICK, Detroit, Mich. Filed Nov. 5, 1920. Serial No. 421,893. 9 Claims. (Cl. 74—109.)

9. A piston ring blank comprising a body of greater width in cross-section at its outer than at its inner periphery, said blank being cast with a chilled surface, a portion of which surface is removed in finishing the blank to bring it to proper cross-section configuration.



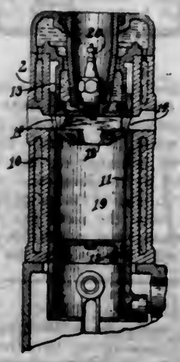
1,635,531. BIAS-CUTTING MACHINE. JAMES W. BRUNDAGE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 21, 1926. Serial No. 117,454. 8 Claims. (Cl. 164—77.)

1. In a machine of the class described, a platen roll, means for driving the same, a carrier mounted to move towards and from the roll in a horizontal plane substantially coincident with the axis of the roll, an endless chain guided by said carrier and having spaced apart cutters, and means for driving said chain in unison with the roll.



1,635,532. BOX-MAKING MACHINE. CHARLES BURNHAM, Washington, D. C. Original application filed Nov. 18, 1925, Serial No. 69,835. Divided and this application filed June 18, 1926. Serial No. 116,882. 9 Claims. (Cl. 93—93.)

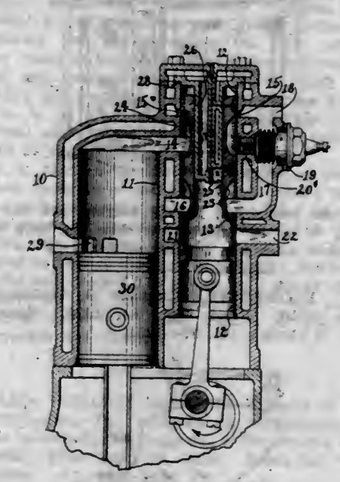
1. In a box-making machine having an ejector mechanism, means for receiving the boxes from the ejector mechanism embodying a pair of nesting-belts and means for intermittently actuating the same, a main conveyor for receiving the nested boxes from said nesting-belts, means whereby the feeding operation of the nesting-



belts will be imparted to said main conveyor, and means for imparting a supplemental feed at a predetermined time to said main conveyor, for the purpose set forth.

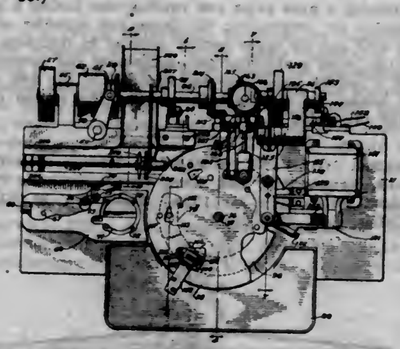
1,635,533. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Corporation, Reno, Nev., a Corporation of Nevada. Filed Mar. 13, 1926. Serial No. 94,867. 4 Claims. (Cl. 123—59.)

2. In an eight cylinder V type two stroke cycle internal combustion engine, two rows of cylinders spaced relatively 90° apart, four cylinders in each row, the bores of the eight cylinders being of one diameter, two cylinders of each row being adapted to combustion, two cylinders of each row being adapted to charge pumping, pistons arranged for reciprocatory movement within the eight cylinders, a four crank pin crank shaft, the four crank pins of the crank shaft being spaced equally apart around the rotative circle of the crank shaft, one crank pin positioned axially each 90° of the rotative plane of the crank shaft, inlet ports formed in the clearance chamber space of each of the eight cylinders, and outlet ports formed in the clearance space chambers of the four charge pumping cylinders, poppet type inlet ports formed in the said chambers of each of the eight cylinders, mechanical means of actuating each of the said poppet type inlet valves in cycle one to one with the crankshaft of the engine, a fresh charge supply duct leading from the exterior of each block of four cylinder to each of the inlet ports occupied by the said poppet type valves seated in the clearance chambers of the two charge pumping cylinders of each row of four cylinders, the two end cylinders of each row of four cylinders being adapted to a like function and the two center cylinders of each of the two rows of four cylinders being adapted to a like function, four separate fresh charge volume transfer ducts, one fresh charge transfer duct extending from the said outlet port formed in the clearance space chamber of each of the four charge pumping cylinders to the inlet port formed in the clearance space chamber of each of the four combustion chambers, each of the said four transfer ducts establishing passage communication between the chambers of the first and second cylinders from each end of the two rows cylinders and each of the four transfer ducts joining the first and second cylinders from any given end of the four ends of the two rows of cylinders in to a pair of functionally related adjacent pair of cylinders and the crank pin of the crankshaft to which the piston of any given charge pump cylinder is connected being 90° in advance rotatively of the crank pin of the crank shaft to which the piston within the combustion cylinder related to the given charge pumping cylinder by a transfer duct.



1,635,534. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Corporation, Reno, Nev., a Corporation of Nevada. Filed Apr. 20, 1926. Serial No. 103,328. 2 Claims. (Cl. 123—65.)

1. In an internal combustion engine, a sleeve valve, a depending cylinder head, a transverse passage in the abutment of the said cylinder head, the said transverse passage extending centrally through the said head with openings through the periphery of the said head at oppositely disposed points, two oppositely disposed recesses formed at the end edge of the abutment of the cylinder head, the said recess being in substantially the same plane as the plane of the said transverse passage, the said recesses being formed at points equally disposed circumferentially between the said openings of the transverse passage through the periphery of the said cylinder head; a venturi formed throat formed at the center of the said cylinder head, said throat providing a central opening crankwardly from the said transverse passage, the root of the said recesses being formed as a semicircular contour extending headwardly and radially, and ignition means located in the cylinder head with the sparking terminals extending into the transverse passage in the said cylinder head.

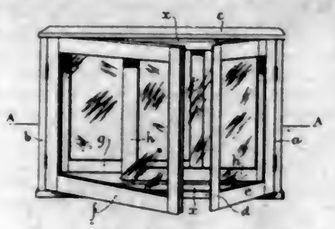


1,635,535. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Corporation, Reno, Nev., a Corporation. Filed May 15, 1926. Serial No. 109,248. 4 Claims. (Cl. 123—188.)

1. An internal combustion engine provided with a combustion chamber and with a fresh charge inlet valve cylinder chamber, an inlet valve arranged for reciprocatory movement within the valve cylinder chamber, the periphery of the valve being cylindrical in form, two annular grooves formed in the said cylindrical periphery of the valve, one of the said two annular grooves providing

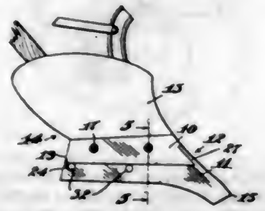
fresh charge inlet passage communication from the source of fresh charge supply, the other one of the said two annular grooves providing fresh charge transfer passage communication to the combustion chamber.

1,635,536. MACHINE FOR FASTENING KEYS TO CAN COVERS. WILLIAM F. BUTLER, Hillside, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1923, Serial No. 680,379. Renewed Nov. 27, 1925. 30 Claims. (Cl. 20—33.)



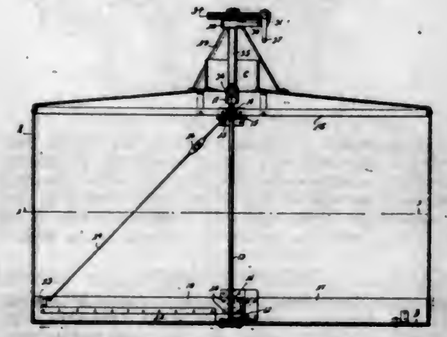
1. A machine for attaching keys to can covers, comprising in combination a turret, means for positioning can covers in pockets of said turret, means for depositing keys upon the top of said covers at a station in the rotation of the turret, means for welding the keys to the covers, and means for testing the strength of the weld.

1,635,537. CASEMENT WINDOW. CHARLES SAMUEL CLARKE, Wick, near Bristol, England. Filed Nov. 15, 1926, Serial No. 148,506, and in Great Britain Aug. 14, 1926. 2 Claims. (Cl. 20—53.)



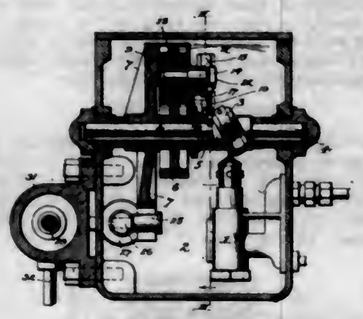
1. A casement window comprising a rectangular frame and four sashes, hinged at their sides to the front and

the back of the two sides of the frame respectively, one pair of sashes when closed being adapted to close the



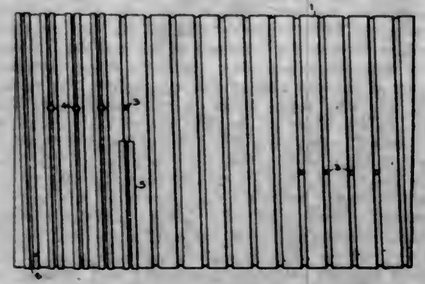
front of the frame and not to overlap and the other pair being of a size adapted to close the back of the frame and to overlap to a substantial degree.

1,635,538. PLOWPOINT. CHARLES S. COLEMAN, Los Angeles, Calif. Filed Sept. 14, 1925. Serial No. 56,167. 1 Claim. (Cl. 97—125.)



In a plow of the class described, a renewable plow share and point comprising a unit for attachment to an unaltered fixed share of a plow, the lower edge of said unit being reduced in thickness for a portion of its length only to provide both longitudinal and lateral shoulders, a flange formed at the forward end of the member extending toward the land side and a shoulder formed on said flange whose forward end terminates short of the forward margin of the flange, a second unit comprising a plow point and cutting edge having a point extension for overlapping the flange and shoulder of the first unit and its upper portion reduced in thickness and provided with a shoulder for engagement and connection with a recited lower edge and shoulder of the first unit, and means for detachably connecting the recited edges of the two units.

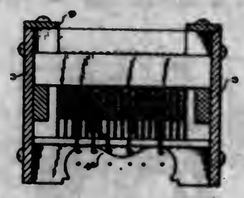
1,635,539. OIL-TANK CLEANER. METCALFE C. COLEMAN, Drumwright, and EARL D. SHOEMAKER, Tulsa, Okla. Filed May 18, 1925. Serial No. 31,167. 4 Claims. (Cl. 210—209.)



1. In combination with a tank, a clean out device comprising a vertical shaft rotatably mounted within the tank at the center thereof, a rigid sweep arm carried by the shaft, a member of flexible material carried by the sweep arm and bearing upon the bottom and against the inside wall of the tank, the tank having its lower portion provided with a discharge opening, a movable deflecting member disposable automatically at either side of the opening, and means for rotating the shaft carrying the sweep.

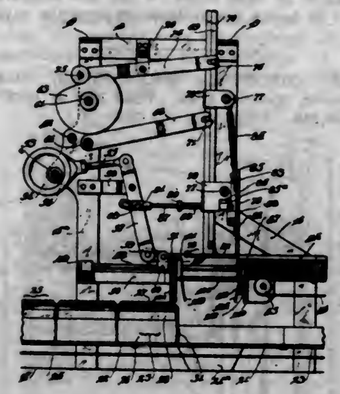
1,635,540. LUBRICATOR. WILFRED GEORGE COLES, Madison, Wis., assignor to Madison Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed Apr. 19, 1924. Serial No. 707,780. 2 Claims. (Cl. 184—27.)

1. In a force feed lubricator the combination of a motor; means for feeding fluid pressure thereto from the machine to be lubricated to actuate the same; an oil pump; a ratchet wheel in operative relation therewith; an oscillating lever actuated by the motor; a spring pressed pawl carried by the lever and normally engaging the ratchet wheel to drive the same in one direction; lifters adapted to move the pawl out of engagement at both ends of the stroke; and means for adjusting at least one of the lifters with reference to the wheel.



1,635,541. INDUCTANCE DEVICE. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 24, 1925. Serial No. 45,779. 5 Claims. (Cl. 175—359.)

1. In a coil, a support, a flat conductive strip having a longitudinally depressed portion wound along said support, and means extending along said support in juxtaposition to a portion of said strip between the edges thereof for positioning said strip upon said support.

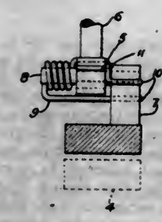


1,635,542. PLAYING ATTACHMENT FOR STRINGED INSTRUMENTS. JAMES S. CONNER, Roanoke, Ala. Filed Oct. 18, 1922. Serial No. 595,387. 2 Claims. (Cl. 84—317.)

1. A playing attachment for a stringed musical instrument comprising a plurality of bars disposed in side by side parallelism, a mounting adapted to be attached to the stringed neck of the musical instrument, said mounting being adapted for disposition over the strings, said bars being pivotally connected to the mounting, a string pressing pin depending from each bar, the various pins being disposed for cooperation with predetermined strings and frets, a plurality of separately operable finger bars

disposed over said first named bars, means carried by said finger bars and cooperable with the pin carrying bars, whereby when one finger bar is depressed, a predetermined group of the first named bars will be operated, and means for maintaining the finger bars normally in an inoperative position.

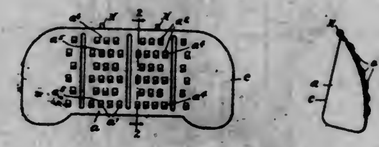
1,635,543. PACKAGE-FILLING MACHINE. JOHN D. CONTI, Philadelphia, Pa. Filed Nov. 17, 1926. Serial No. 148,790. 31 Claims. (Cl. 226—14.)



1. A machine for packing cakes and biscuits into cartons including a conveyor for supplying material to the machine, a conveyor for carrying empty cartons to and filled cartons from the machine, a measuring unit adapted to receive a predetermined quantity of material, means for stopping an empty carton in position to be filled, means for intermittently stopping the flow of material to the measuring unit, means controlled by a driving member for lowering said unit toward an empty carton, and a filling plunger under the control of said member for guiding said material through the carton.

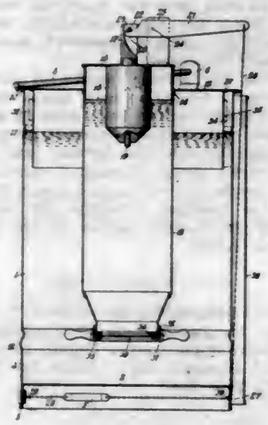
4. A machine for packing cakes and biscuits into cartons including a conveyor for supplying material to the machine, a conveyor for carrying empty cartons to and filled cartons from the machine, a measuring unit adapted to receive a predetermined quantity of material, means for stopping an empty carton in position to be filled, means for intermittently stopping the flow of material to the measuring units, means for lowering the material from the measuring unit into the carton to be filled, said last three means being operatively controlled by the same member, means for frictionally holding said material against too rapid a downward movement, and means to actuate the conveyors.

5. A machine for packing cakes and biscuits into cartons including a conveyor for supplying material to the machine, a conveyor for carrying empty paper lined cartons to and filled cartons from the machine, a measuring unit adapted to receive a predetermined quantity of material, means for stopping an empty carton in position to be filled, means for intermittently stopping the flow of material to the measuring unit, means controlled by the measuring unit for spreading the outer edges of the paper lining of the carton, means for lowering the measuring unit toward the carton to be filled, means for lowering the material from the measuring unit into the carton to be filled, means for frictionally holding said material against too rapid a downward movement, and means to actuate the conveyors.



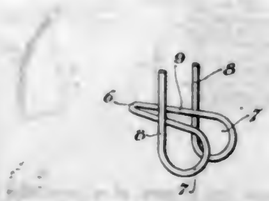
31. A machine for packing biscuits or the like into cartons including a measuring unit, means for positioning a series of empty cartons to be filled by said unit, a filling means for contacting with material in the unit and guiding the material into the cartons, said unit being adapted to receive a charge of material, means for lowering the unit toward the carton, and means operative responsive to the lowering movement for automatically swinging open the bottom portion of the unit as it approaches the carton.

1,635,544. CIRCUIT BREAKER. LESLIE N. CRICHTON, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,767. 4 Claims. (Cl. 200—144.)



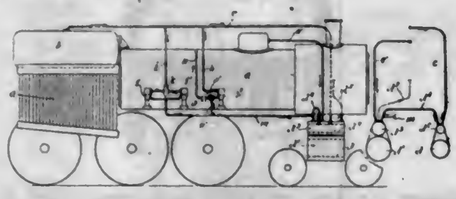
2. In a circuit interrupter, an arcing tip comprising a finger member, a shaft at an angle thereto, a spiral spring mounted on said shaft, means for tensioning and limiting the rotation of said spring, the end portions of said spring being bent to engage the opposite sides of said finger, whereby movement of said finger is controlled during the opening and closing of said circuit interrupter.

1,635,545. PROTECTIVE COVER FOR BREATHING APPARATUS. ALEXANDER BERNHARD DRAGER, Lubeck, Germany. Filed Nov. 30, 1925, Serial No. 72,144, and in Germany Dec. 1, 1924. 1 Claim. (Cl. 128—191.)



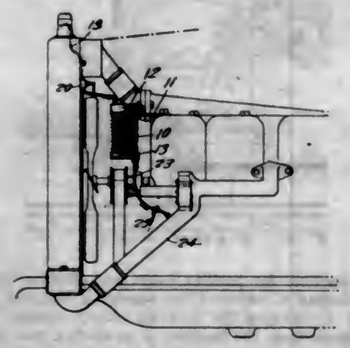
A protective shield for a part of a breathing apparatus, comprising a metallic sheet forming a hinged cover adapted to fit over said part and having a plurality of parallel slits arranged in pairs, the portion of metal between each pair of slits being bulged outwardly to form ventilating apertures in planes perpendicular to the plane of the sheet.

1,635,546. FIRE EXTINGUISHER. GEORGE ENNIS FERGUSON, Spring Valley, N. Y., and LEWIS GOUVERNEUR MORRIS TIMPSON, Plainfield, N. J., assignors to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed Sept. 1, 1925. Serial No. 53,828. 2 Claims. (Cl. 169—27.)



1. In a fire extinguishing device of the foam type, an outer receptacle adapted to hold a liquid and having a plurality of unobstructed openings in its wall near the top thereof, a cover for said receptacle, an inner receptacle having its wall spaced from the wall of the first named receptacle and adapted to carry a liquid which when mixed with the first named liquid will produce a foam, means for causing the two liquids to commingle whereby a gas is generated and a foam is produced, and a depending wall within said outer receptacle near the wall thereof and extending below said openings to a point slightly below the normal liquid level of the first liquid, whereby the surface of the liquid in the outer receptacle from which evaporation takes place through said openings is reduced to a small part of the total area of the surface of the liquid in said outer receptacle, and whereby upon generation of gas only the upper portion of the liquid within the outer receptacle is ejected through said openings and the remaining liquid within the outer receptacle is prevented from escaping except as a foam.

1,635,547. KNITTING DEVICE. WILLIAM J. GOURIE, Philadelphia, Pa. Filed Sept. 15, 1926. Serial No. 135,535. 4 Claims. (Cl. 66—4.)



1. A hand knitting device having an open V-shaped body portion, loops formed below and integral with the body portion, and yarn engaging pins extending upwardly from and integral with the said loops.

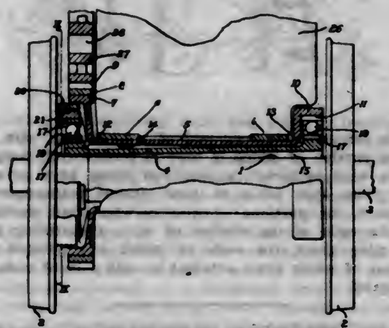
1,635,548. PORTABLE POWER PLANT UTILIZING STEAM AT DIFFERENT PRESSURES. OTTO H. HARTMANN and FRIEDRICH WEMPE, Cassel-Wilhelmshohe, Germany, assignors to Schmidt'sche Heissdampf G. m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed May 2, 1925, Serial No. 27,407, and in Germany May 14, 1924. 2 Claims. (Cl. 60—47.)

1. A locomotive comprising a high-pressure steam generator, a low-pressure steam generator, a main engine having two stages receiving steam from said generators respectively, an air pump and an engine therefor, a conduit leading from said high-pressure generator to the air pump engine, a conduit leading exhaust steam from said air pump engine to said low-pressure steam generator, a connection from the air pump engine to the low-pressure stage of the main engine, and a selecting arrangement for permitting exhaust steam from the air pump engine to pass either to the low pressure steam generator or to the low-pressure stage of the engine.

1,635,549. CONDENSER AND COOLER. HARVEY F. HOLLISTER, Spencer, Iowa. Filed Feb. 4, 1924. Serial No. 690,466. 3 Claims. (Cl. 257—25.)

1. In combination with an internal combustion engine radiator having water circulating pipes, a condenser, comprising an upper and lower compartment, condensing means, interposed therebetween, an overflow tube leading from the radiator, a three-way valve connected thereto, a feeding tube leading from the three-way valve and communicating with the upper compartment, a second tube diametrically opposite said feeding tube, a condensate tube leading from the lower compartment to one of said water circulating pipes and a check valve located in said condensate tube.

1,635,550. FIGURE TOY. WILLIAM H. JOHNSON, Haverhill, Mass. Filed Feb. 17, 1927. Serial No. 168,958. 1 Claim. (Cl. 46—40.)

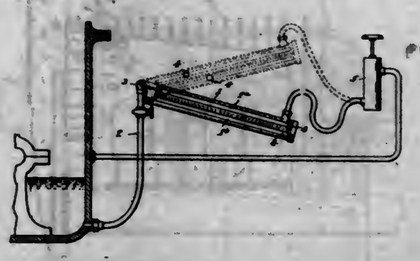


A figure toy comprising a card having the figure of a person and of an open receptacle represented thereon in adjacent relation, said card having finger holes therethru in the position in which the limbs of the figure represented would normally appear joined, and a slit

adjacent thereto and in a position in which the said opening in the receptacle is represented, to permit the fingers of the exhibitor to be inserted thru the holes

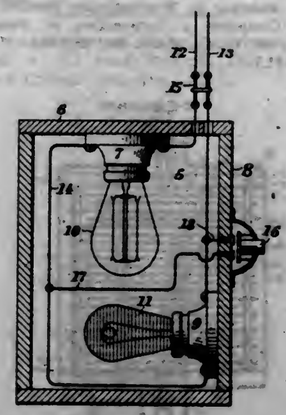
from the back of the card and passed thru the slit to conceal the tips thereof and represent the limbs of the figure as inserted in the receptacle.

1,635,551. QUILL DRIVE. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 1, 1923. Serial No. 622,061. 3 Claims. (Cl. 105—131.)



1. A flexible drive element comprising a wheeled axle, a plurality of tapered quills disposed around said axle and journaled independently thereof, the large end of one quill being movably joined to the small end of another, and means for movably joining said last-named quill with said axle.

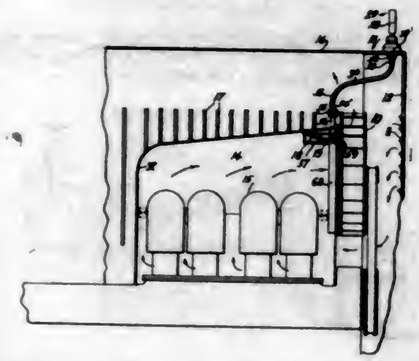
1,635,552. CHAIN GUIDE. CLAUDE P. LA SHELLE and WALTER A. BEHRENS, New York, N. Y. Filed Sept. 2, 1921. Serial No. 498,105. 1 Claim. (Cl. 173—354.)



A pull socket comprising an insulating body having a lug integral therewith and projecting outwardly therefrom near its upper edge, a chain guide having a base plate loosely fitting against the outer wall of the body and having an opening through which said lug extends and a cross bar overstanding the upper edge of said lug and a shell enclosing said body and base plate, said shell consisting of a body having a slot into which said lug extends to prevent relative rotation of the body and shell and a cap covering the outer end of said lug, said lug and base plate being so interlocked as to prevent the chain guide from shifting on said body in any direction except in a direction at right angles to said body when said shell is removed, said chain guide being readily removable in a direction at right angles to the surface of the body at said lug when the shell is removed.

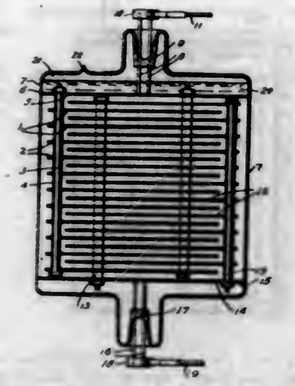
1,635,553. DILUTOMETER. CLIFFORD M. LARSON and CARL L. KNOPP, Chicago, Ill. Filed Apr. 4, 1921. Serial No. 458,340. 3 Claims. (Cl. 265—11.)

1. In a device of the character described, the combination with parallel tubes, one of said tubes being sealed and having a liquid of known fluidity and viscosity therein, means for introducing an extraneous liquid to the other tube or tubes and movable means positioned in the respective tubes of greater density than the liquids therein and operable with the inclination of the tubes to any angle to accurately register their comparative fluidity, regardless of speed of inclination.



1,635,554. PHOTOGRAPHIC-PRINTING APPARATUS. STATES LEE LEBBY, Corning, N. Y. Filed Dec. 19, 1922. Serial No. 607,845. 1 Claim. (Cl. 176—10.)

A device of the class described comprising an electric circuit having two lamps, one of said lamps being clear and the other lamp being ruby, said ruby lamp having relatively greater resistance than the clear lamp and being capable of carrying sufficient current to cause subdued illumination of the clear lamp, a switch, and circuit



connections for connecting the source of current, and the switch in parallel with the ruby lamp, whereby the ruby lamp can be short circuited to allow the full line voltage to pass through the clear lamp and the clear lamp can function as an automatic heat rheostat when the ruby lamp is lighted.

1,635,555. INDICATING DEVICE. PETER GRAHAM MACGREGOR, Pequannock, N. J., assignor to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed Aug. 18, 1923. Serial No. 658,126. 3 Claims. (Cl. 73—118.)

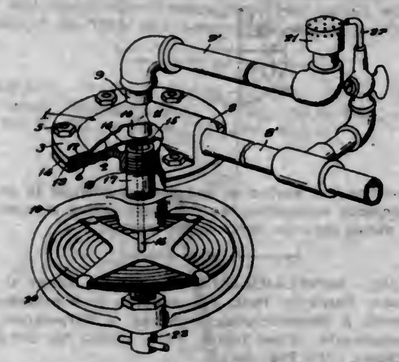
1. A device of the class described, comprising an inner casing adapted to receive a dial plate, said dial plate and walls of said inner casing forming a chamber, an indicator operating means contained within said chamber, an outer casing enclosing said inner casing and having an extension enclosing a portion of the indicator operating means, a thermal expansion member, and a flexible connecting means adapted for attachment to said extension and operatively connected at one end to said indicator operating means and at the other end to said thermal expansion member.

1,635,556. CONDENSER. RALPH E. MARBURY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1924. Serial No. 686,543. 12 Claims. (Cl. 175—41.)

1. A low-loss condenser comprising a group of a plurality of condenser plates, conducting connecting means rigidly connecting said group of plates together in parallel spaced relation, a second group of the same number of condenser plates, conducting connecting means rigidly connecting said second group of plates together in parallel spaced relation, a container comprising a tubular insulating wall, said groups of plates being assembled with the plates of one group interspersed between the plates of another group, whereby one end plate belongs to one group and the other end plate belongs to the other group, means for rigidly supporting said groups from said end plates, respectively, and a liquid dielectric in said container.

1,635,557. FUR-PELT STRETCHER. MARCELLUS W. MEEK, Arcadia, Calif. Filed Dec. 31, 1925. Serial No. 78,527. 2 Claims. (Cl. 149—21.)

1. A fur stretcher composed of a section of wire, the central portion of which is bent to form a coil, portions of the wire adjacent to said coil being bent outward away from each other to form abrupt pelt-supporting shoulders, the portions of wire between said shoulders and the ends of the section of wire constituting pelt-supporting arms, the ends of which are pointed and portions of which arms adjacent to said pointed ends are corrugated.

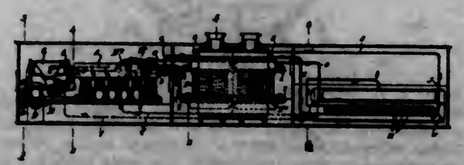


1,635,558. TELEPHONE CONSTRUCTION. ALEXANDER NYMAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 27, 1922. Serial No. 556,856. 1 Claim. (Cl. 181—32.)

In combination, a vibratory diaphragm for a sound-translating device and a member riveted thereto and provided with a threaded perforation.

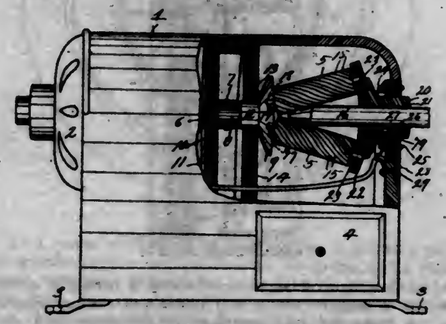
1,635,559. THERMOSTATIC GAS REGULATOR. HARRY J. ROCKWELL, Bellflower, Calif. Filed July 31, 1922. Serial No. 578,780. 7 Claims. (Cl. 236—99.)

1. A thermostatic gas regulator comprising a cup, a cap therefor, a diaphragm between said cup and cap and extending over the cavity of the cup, said cup being provided with a gas inlet and a gas outlet, the orifice of said gas outlet being adjacent to the plane of the diaphragm, and sufficiently spaced therefrom to allow free flow of gas to the outlet, and thermostatic means



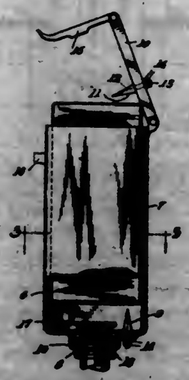
responsive to change in temperature of the surrounding atmosphere for pressing the diaphragm toward the outlet to diminish the flow of gas from the cup.

1,635,560. THREE-WHEEL RIDING CULTIVATOR, KAY B. RUBINS, Morral, Ohio. Filed Apr. 29, 1925. Serial No. 26,712. 1 Claim. (Cl. 97—153.)



A cultivator comprising main and forward frames of which the latter is pivotally connected with the former, a supporting wheel rotatably mounted in the forward frame, an axle extending through the supporting wheel and protruding laterally therefrom on opposite sides, shovel-carrying beams comprising two sections of which the forward section is pivotally connected with said axle for swinging movement in a vertical plane and the rear section pivotally connected to the forward section for swinging movement in a horizontal plane, eye bolts constituting said pivotal connections between the beam sections, springs tensioned between the forward frame and the eyes of the eye bolts, and handle members carried by the rear sections of the shovel-carrying beams.

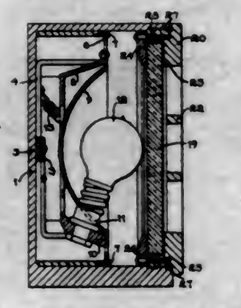
1,635,561. STEAM-POWER PLANT FOR SUBMARINES. WILHELM SCHMIDT, Cassel-Wilhelmshohe, Germany; Simon Hoffmann, Cassel-Wilhelmshohe, Germany, executor of Wilhelm Schmidt, deceased, assignor to Schmidt'sche Heissdampf G. m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed May 11, 1922, Serial No. 560,019, and in Germany May 23, 1921. 3 Claims. (Cl. 60—65.)



1. A power plant for submarines, comprising a multiple stage steam engine, a receiver connected with successive stages of said engine so that steam will pass through said receiver on its way from one stage to a lower pressure stage, a storage receptacle having connections to receive live steam during surface travel of the submarine, and to supply steam to the engine during submerged travel, another storage receptacle having a connection to store heat during surface travel, a heating coil located within said receiver and having a connection to receive stored heat from said second-named receptacle, during submerged travel, and thereby superheat the steam which passes through said receiver on its way from one stage to another, and a conduit for conveying the condensation product from said coil to the lower portion of the first-named receptacle.

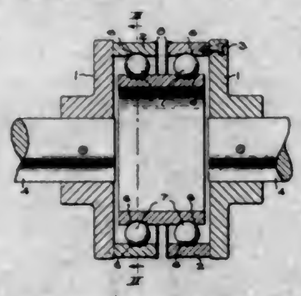
1,635,562. PENCIL SHARPENER. JULIUS SLUNICKO and JOHN A. NIXON, Omaha, Nebr. Filed Oct. 23, 1925. Serial No. 64,382. 2 Claims. (Cl. 120—95.)

1. A pencil sharpener comprising a casing, a motor disposed in said casing, a drive shaft carried by said motor, a disc detachably connected to the drive shaft, diverging cutter rollers carried by said disc, an apertured pencil receiving head rotatably mounted in a bearing of the casing axially in relation to the motor shaft and to which the diverging rollers are connected, a conductor ring disposed within the casing and surrounding the pencil receiving head, a spring contact member within the pencil receiving aperture of the head and positioned whereby when a pencil is inserted in the head the circuit will be closed through said contact member and the conductor ring.



1,635,563. LUBRICATING DEVICE. HENRY SANFORD, New York, N. Y. Filed May 19, 1924. Serial No. 714,211. 6 Claims. (Cl. 184—105.)

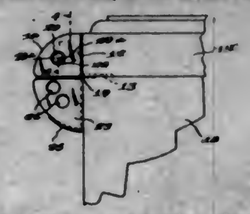
1. An oil can holder adapted to be connected to the oil intake of a motor, comprising a tank of non-circular cross-section having a bottom, a cutter mounted above



said bottom, a hinged cover of non-circular cross-section for said tank provided with a cutter positioned between the center and the hinge side of said cover, said cutter being adapted to puncture a permanently sealed container of a cross-section corresponding to that of said tank and inserted in said holder when said cover is closed, and a spring follower in said tank for lifting said container when said cover is opened to permit grasping said container by the fingers to remove it from said tank.

1,635,564. MINE-LOCOMOTIVE HEADLIGHT. JOHN R. TOWNSEND, South Bend, Ind., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 2, 1922. Serial No. 591,795. 3 Claims. (Cl. 240—90.)

1. A headlight structure comprising a casing, a spider therein, a support within said spider and springs secured to the front and rear portions of said spider and converging to points of attachment in said support lying in a plane intermediate said front and rear portions.

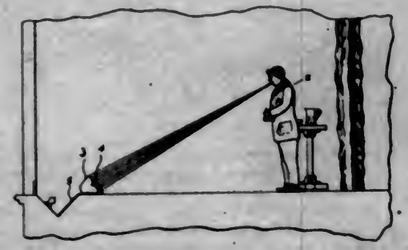


1,635,565. FLEXIBLE COUPLING. WILLIAM E. TRUMPLER, Wilkinsburg, and CARL RICHARD SODERBERG, Edgewood, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1924. Serial No. 716,327. 13 Claims. (Cl. 64—91.)

1. A flexible coupling comprising a pair of complementary hub members having rings axially disposed and secured thereto, a ring member disposed between said hub rings, and balls contained within apertures provided in said rings.

1,635,566. CLOSURE CHECK AND ADJUSTER. MORRIS VICTORSOHN, Brooklyn, N. Y., assignor to Victorson Manufacturing Corporation, New York, N. Y. Filed May 9, 1925. Serial No. 29,064. 1 Claim. (Cl. 292—74.)

A closure check structure comprising a pair of casing members mounted for relative swinging movement and whereby one casing member may be received within the other, the outer member having a side wall provided with openings the centers of which are located upon an arc structure from the axis of the hinge as a center and a spring pressed detent slidably mounted in the inner cas-



ing member and having an end portion adapted to enter the openings successively as the inner casing member is being swung into the outer casing member.

1,635,567. NONFLAMMABLE VARNISH. HENRY C. P. WEBER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1922. Serial No. 572,960. 4 Claims. (Cl. 134—26.)

1. A varnish solution comprising a varnish base, a solvent containing monochlorbenzol and carbon tetrachloride and a small amount of restraining agent.

1,635,568. SOUND-RECEPTION SYSTEM. JOSEPH E. AIKEN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1924. Serial No. 688,391. 1 Claim. (Cl. 179—1.)

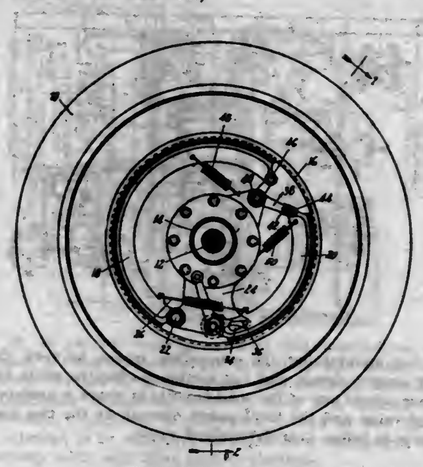
A sound-collecting system for use upon a rostrum to collect the sound of a speaker's voice but to shut out the sounds set up by an audience, comprising a reflector having a focus disposed between the audience and the speaker sufficiently spaced from the speaker to provide an unobstructed view of him and directed toward the speaker, a microphone at the focus of the reflector, and a loose fabric supported behind the speaker, said fabric being an efficient sound absorber and poor reflector, thereby reflecting no sounds from the audience upon the reflector.

1,635,569. VEGETABLE-TOPPING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Aug. 30, 1926. Serial No. 132,331. 5 Claims. (Cl. 146—83.)

1. A pair of vegetable topping rolls comprising a roll having a cross-sectional outline corresponding substantially to a polygon with the sides of the polygon depressed,

and a roll of substantially circular cross section having projections formed on its surface, said projections being adapted to register with the depressions in the companion roll in a spaced relation therefrom, the corners of said companion roll being adapted to contact with the walls of the other roll between the projections thereon.

1,635,570. WINDOW-GLASS GUIDE. EDWIN W. M. BAILEY, Amesbury, Mass. Filed June 9, 1926. Serial No. 114,711. 1 Claim. (Cl. 296—44.5.)



In a casing having a window opening, and a vertically slidable window glass sheet, for closing said opening, adapted to be lowered to open the same, a pair of vertically disposed guides for the side edge portions of the sheet, each guide comprising two normally aligned channel metal strip sections arranged with their adjacent ends in abutment with the lower section terminating at its upper end adjacent the bottom of the opening and a flexible cushioning lining secured within said strip sections and extending continuously from one section to the other to provide guiding surfaces between said sections, said lining being adapted to permit the upper section to be swung out of line with the lower section so that the sheet may be inserted at the upper end thereof.

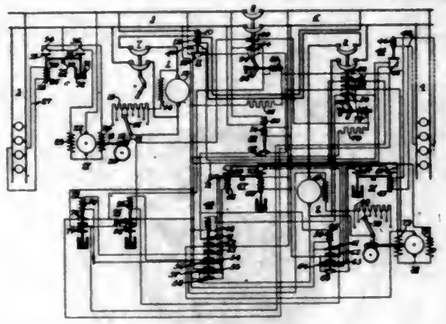
1,635,571. BRAKE. PAUL BASTIEN, Cleveland, Ohio, assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1923. Serial No. 666,514. 17 Claims. (Cl. 188—78.)

3. In brake mechanism, the combination of a brake drum, a plurality of brake shoes arranged end to end and engageable with the drum, torque-taking means anchoring one of the shoes, a brake-applying device acting in the other shoe, and power-multiplying means separate from the brake-applying device and positively connecting the shoes and through which said other shoe acts to apply the anchored shoe.

1,635,572. BRAKE. PAUL BASTIEN, Indianapolis, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 4, 1923, Serial No. 666,514. Divided and this application filed Mar. 8, 1926. Serial No. 93,028. 15 Claims. (Cl. 188—78.)

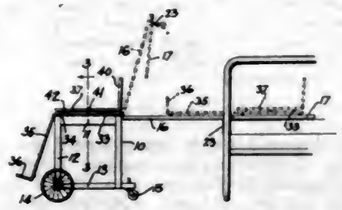
1. A brake comprising, in combination, a drum, a pair of friction devices engageable with the drum, and a rigid lever fulcrumed between its ends between the center of the drum and its circumference, one friction device being directly pivoted to the lever and arranged to act on one end of the lever to rock the lever about its fulcrum, and the other end of the lever being directly pivoted to the other device and arranged to force the other friction device against the drum.

1,635,573. METAL SCREEN FOR FIREPLACES. FRANK BERTRAM, Roslindale, Mass., assignor to The S. M. Howes Company, Boston, Mass. Filed Oct. 13, 1926. Serial No. 141,389. 2 Claims. (Cl. 126—202.)



1. A fire-place screen, composed of a plurality of screen units each equipped with pivot studs adjacent its corners, connector members fitted over said pivot studs and having tie rods holding said members assembled with said studs, flanged cover plates at the top of the screen units fitted over said connector members and said studs to completely house and enclose the same, and caps secured to projecting ends of said tie rods and engage with said cover plates to hold them against displacement.

1,635,574. AUTOMATIC STATION. CHARLES E. CAREY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,718. 13 Claims. (Cl. 171—118.)

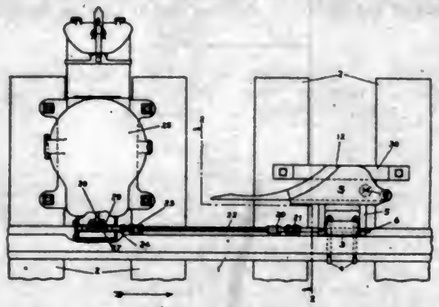


1. In an electrical system, the combination with two bus sections, connecting means therebetween, a load circuit connected to each bus section, a supply circuit for

each bus section, and connecting means between each supply circuit and the corresponding bus section, of means for maintaining the connecting means between the two bus sections and the connecting means between one of the supply circuits and the corresponding bus section effective,

and for maintaining the connecting means between the other supply circuit and bus section ineffective while the voltage across one of the load circuits is above a predetermined value and the total power demand of the two load circuits is below a predetermined value.

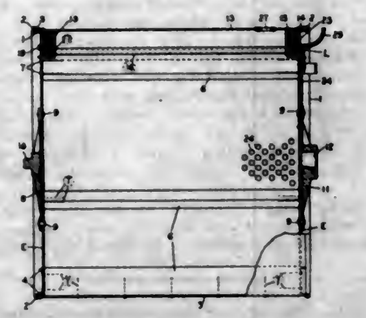
1,635,575. TRANSFER DEVICE FOR INVALIDS. EDWIN COLE, Jamaica, N. Y. Filed Oct. 28, 1926. Serial No. 144,835. 4 Claims. (Cl. 5—81.)



1. In combination with an invalid chair, a pair of track members adapted to extend from the said chair to a bed, a platform slidably engaging the said track members, and an auxiliary seat rotatably mounted upon the said platform.

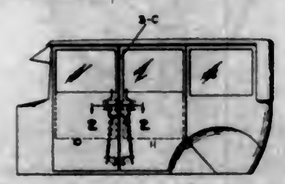
1,635,576. METHOD OF MAKING DIPPED RUBBER ARTICLES. JOHN HADFIELD, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Jan. 12, 1927. Serial No. 160,777. 10 Claims. (Cl. 18—58.)

1. A method for making rubber articles by dipping which comprises providing a solution of concentrated latex containing a vulcanizing agent and an accelerator of vulcanization, immersing a glazed form heated to a vulcanizing temperature in the solution for sufficient time to vulcanize a film of rubber thereon, removing the form from the solution, reducing the temperature of the form, heating the exterior of the deposited rubber on the form to dry the same, repeating the four last-named steps of the method to obtain an article of the desired thickness, and further vulcanizing the article by application of heat and pressure to the exterior thereof.



1,635,577. SKATE MACHINE. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Nov. 20, 1925. Serial No. 70,337. 6 Claims. (Cl. 246—257.)

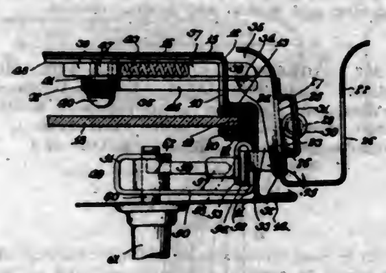
1. In an emergency train stop device, the combination with a railway rail, of a support fixedly secured to said rail, a skate placing mechanism pivotally connected to said support having one element of a slidable non-rotatable detachable connecting means associated therewith, a skate adapted to fit on the rail and skid the first wheels and axle of a passing car and having the counter



part portion of said slidable non-rotatable detachable connecting means associated therewith, and power operated means for operating said skate placing mechanism to move said skate from one to the other of its active and inactive positions.

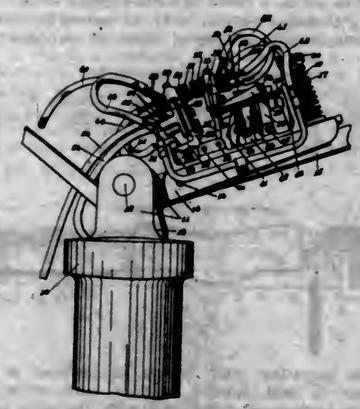
1,635,578. WASHING-MACHINE CYLINDER. WINTHROP K. HOWE, Rochester, N. Y., assignor, by mesne assignments, to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Original application filed May 4, 1922, Serial No. 558,418. Divided and this application filed Mar. 31, 1926. Serial No. 98,831. 5 Claims. (Cl. 220—55.)

1. In a cover for washing machine cylinders, a pair of reinforcing members having their ends connected by rods, and a curved metallic wall connected to said reinforcing members and rods.



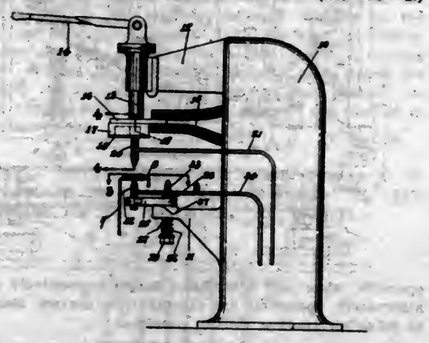
1,635,579. LATCH MECHANISM. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1925. Serial No. 5,423. 16 Claims. (Cl. 292—167.)

1. A door latch mechanism comprising inside and outside latch-operating devices adapted to be mounted on opposite sides of the door with free space between them,



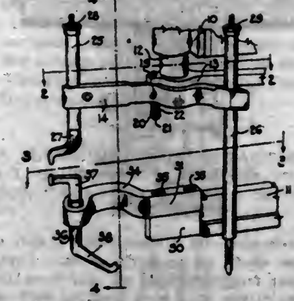
and a reciprocable interlock between said operating devices which circumvents the free space between the operating devices, said interlock comprising two circumventing branches, one on each side of the plane of said free space, one of which is operated always in tension and the other of which is operated always in compression.

1,635,580. LATCH MECHANISM. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1925. Serial No. 69,244. 11 Claims. (Cl. 292—164.)



1. A latch mechanism for an automobile door adapted to have an extensible portion of substantially the full width of the body of the door arranged for slidable movement therein with the side edge thereof in close proximity to the jamb face of the door, comprising inside and outside latch operating devices on opposite sides of the projected path of movement of said extensible member, an interlocking device extending from one latch operating device to the other adapted to be carried by the door post, and partaking of movement in the vertical plane in its interlocking function.

1,635,581. ELECTRIC SWITCH. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 18, 1922. Serial No. 530,070. 10 Claims. (Cl. 219—4.)

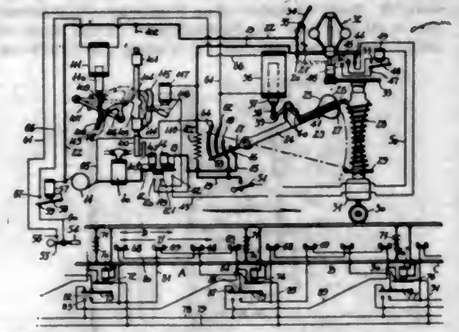


1. An electric switch comprising a plurality of pairs of contact members movable into and out of contact with each other, means for moving said members, and means for continuously circulating a cooling fluid in heat transferring relation to and through said contact members in series.

1,635,582. ELECTRIC WELDING MACHINE. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 30, 1923. Serial No. 648,680. 9 Claims. (Cl. 219—4.)

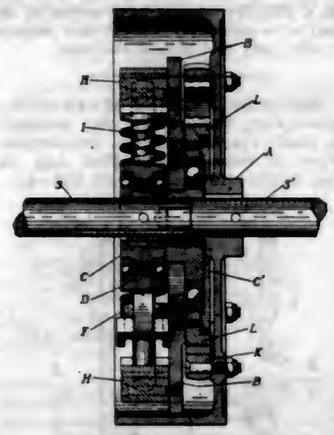
8. In an electric welding machine, the combination of a frame, a reciprocable plunger carried by said frame, an electrode carried by said plunger and shiftable laterally independently thereof, a relatively fixed arm carried by said frame, a plurality of electrodes carried by said fixed arm adapted to be selectively brought into cooperative relationship with said first named electrode.

1,635,583. ELECTRIC WELDING APPARATUS. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1925. Serial No. 50,376. 19 Claims. (Cl. 219—4.)



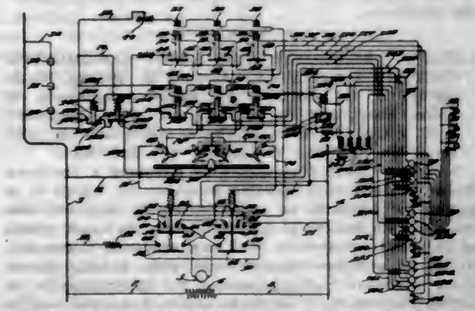
1. In an electric welding machine, in combination, a reciprocable carrier for a plurality of electrodes, a fixed carrier for a plurality of electrodes corresponding to said first mentioned electrodes, and means to effect a cooperative relationship between corresponding reciprocable and fixed electrodes simultaneously with the destruction of a similar relationship between any of the other corresponding electrodes.

1,635,584. RUN-DOWN AND RESET LOCOMOTIVE-CONTROL APPARATUS. MONROE E. MILLER, Washington, D. C., assignor, by mesne assignments, to Union Simplex Train Control Co., Inc., Rochester, N. Y., a Corporation of Delaware. Filed Jan. 15, 1923. Serial No. 612,760. 12 Claims. (Cl. 246—63.)



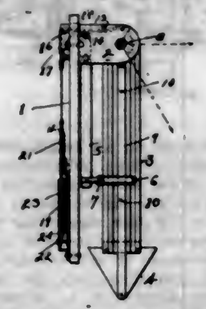
5. Vehicle controlling apparatus including a run-down device on the vehicle operable whenever the vehicle is in motion for obtaining an ultimate vehicle condition, control elements located at intervals along the track, means on the vehicle cooperable with said elements, means controlled by said first-named means when passing successively operative control elements for intermittently resetting the run-down device to maintain another vehicle condition, means controlling said elements and arranged

for rendering alternate control elements operative and others inoperative for one track condition, and means



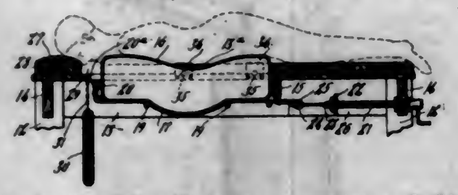
operable, when said first-named means successively passes alternately operative and inoperative control elements, to establish another vehicle condition.

1,635,585. DEVICE FOR TRANSMITTING POWER. JOHN R. ROGERS, Brooklyn, N. Y. Filed Oct. 30, 1920. Serial No. 420,668. 8 Claims. (Cl. 74—35.)



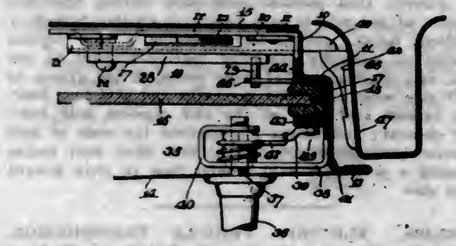
1. In a mechanism for transmitting power, a driving shaft, a driven shaft, an eccentric on said driving shaft, a gyratory gear freely mounted on said eccentric, a gear secured to the driven shaft and meshing with said gyratory gear and yieldable means operatively connecting said gyratory gear with said driving shaft.

1,635,586. SIGNALING SYSTEM FOR ELEVATORS. WILLIAM S. SMITH, Cambridge, Mass. Filed Nov. 23, 1922. Serial No. 602,759. 1 Claim. (Cl. 177—336.)



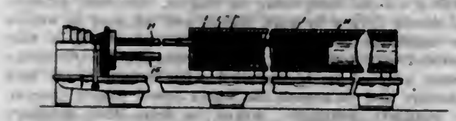
The combination with an electrically controlled elevator system including parallel control circuits and a plurality of stations, of a signal at each station for indicating the destination of the car, a door at each station, a plurality of parallel circuits each of which includes one of said signals, all of said signal circuits being normally open, a magnet operated switch for each of said signal circuits for closing the same, a control circuit for each station including the magnet of the magnet operated switch for the signal corresponding to that station, means for opening the control circuit upon the arrival of the car at the station controlling the car, a means for holding said switch in closed position when moved to this position, a door contact circuit common to said parallel control circuits and to said holding circuit including means operated upon opening of any of said doors for opening said control and holding circuits.

1,635,587. DIRECTION INDICATOR FOR MOTOR TRUCKS AND THE LIKE. JOSEPH D. STASSART, Berkeley, Calif., assignor of one-fourth to William A. Harter, San Francisco, Calif. Filed June 1, 1925. Serial No. 34,118. 5 Claims. (Cl. 116—52.)



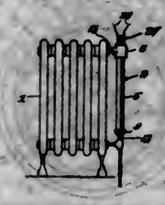
1. A device of the character indicated, having a baseboard, plates spaced apart, fastened at right angle to said baseboard, a corrugated blade swung on a pin or bolt between said plates, an arrow arranged at opposite end of said blade, a strip lengthwise fastened in center of said blade, a metal strip fastened to the inside of one of said plates, extending parallel and adjacent to baseboard, a bracket fastened to lower end of said strip, said bracket also fastened to base board, said bracket having divided forked prongs, a suitable material on said prongs, said bracket to act as a brace and non-rattling means to said blade; a U-shaped piece of metal of desired thickness and size, fastened to said strip in center of corrugated blade.

1,635,588. OPERATING TABLE. GEORGE C. TAPLIN, Boston, Mass. Filed June 26, 1925. Serial No. 39,851. 3 Claims. (Cl. 128—72.)



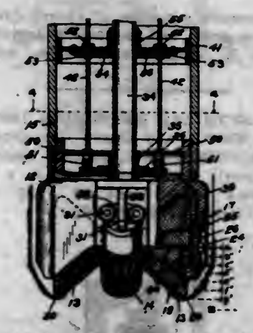
1. An operating table having an opening, a flexible mattress in said opening, and a mattress-supporting structure permanently connected with the table and supporting the mattress in the opening, said structure including spaced apart grid bars extending across the opening, a flexible bottom bearing on the grid bars, an anchoring cross bar fixed to the table and engaged with one end of the bottom, and bottom-tensioning and relaxing means embodied in a manually rotatable screw threaded shaft journalled to rotate without endwise movement in a bearing on the table, a nut engaged with said shaft, and a yoke fixed to the nut and including a cross bar engaged with the opposite end of the bottom, the arrangement being such that rotation of the shaft in one direction tensions the bottom and causes it to support the mattress substantially flat, while rotation of the shaft in the opposite direction relaxes the bottom and permits a portion thereof and a portion of the mattress to sag.

1,635,589. LATCH MECHANISM. JOHN P. TARBOX, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1925. Serial No. 68,958. 7 Claims. (Cl. 292—173.)



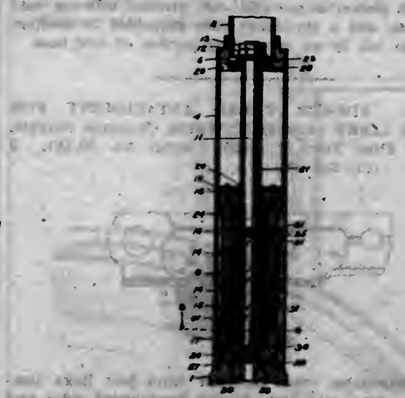
1. In combination with an automobile door of the type adapted to have an extensible member of substantially the full width of the door arranged for slidable movement therein with its side edge in close proximity to the jamb face of the door, inside and outside latch operating device on opposite sides of the projected path of movement of said extensible member, and an interlocking device extending around the side edge of said extensible portion and partaking of a movement in the vertical plane in its interlocking function.

1,635,590. PIPE-PERFORATING MACHINE. BERTRAM C. TRAVIS, Los Angeles, Calif. Filed Aug. 27, 1923. Serial No. 659,497. 8 Claims. (Cl. 77—22.)



1. In a pipe perforating machine, a body member of cylindrical form, a drill chuck movably mounted in said body member transversely thereof, a drill bit carried by said drill chuck, a rotatable drive shaft and a rotatable feed shaft extended through said body member in parallel relationship to the axis of said body member, gear connections from said drive shaft to said drill chuck for driving the latter and the drill bit, and gear connections from the feed shaft to said drill chuck for moving the latter and said drill bit longitudinally to and from the work.

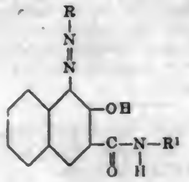
1,635,591. ELECTRIC HEATER FOR FLUIDS. JOSEPH HENRY VALIQUETTE, Springfield, Mass. Filed Mar. 1, 1926. Serial No. 91,515. 1 Claim. (Cl. 219—38.)



An electric heater for fluids, comprising a header, an elongated main outer casing removably connected at one end with the header, a heater casing mounted at one end in the header and having a closed free end of conoidal form, said header being formed with an opening registering with the heater casing, an insulating body adapted for removable insertion through the opening in the header into the heater casing, said body having a conical end adapted to seat in the conoidal closed end of the heater casing, a cap mounted in said opening in the header and having engagement with the body for removably retaining said body in the heater casing, a heating element carried by the insulating body, and means for centering the heating body in the cap, said conical end on the heating body centering the opposite end thereof in the heater casing.

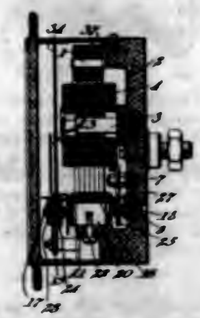
1,635,592. ROTARY DRILLING TOOL. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Mar. 10, 1921. Serial No. 451,223. 11 Claims. (Cl. 255—71.)

1. In a rotary boring tool, the combination of two sets of mutually complementary cutting members, one of which is provided with a toothed surface adapted to engage and remove material from the entire bottom of the bore hole, and the other one of which traverses and removes material from an annular steeply inclined zone, between the bottom and the side wall of the hole, which zone is traversed by a portion of the toothed surface of said first-mentioned member.



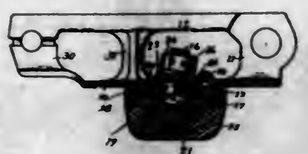
1,635,593. LUBRICATION OF ROTARY MECHANISM. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Oct. 16, 1922. Serial No. 594,791. 22 Claims. (Cl. 255—71.)

1. The method of supplying lubricant to bearings on a train of revolving members which consists in interposing a fluid mass of unguent between the driving and driven elements of the said train and subjecting the said mass to a component part of the driving torque, exerted by the driving elements.



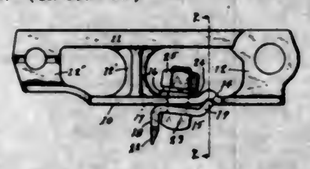
1,635,594. AZO DYE AND PROCESS OF PRODUCING SAME. HERMANN WAGNER, Soden-on-the-Taunus, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1925, Serial No. 77,098, and in Germany June 11, 1923. 9 Claims. (Cl. 260—83.)

4. As new products, the azo dyes of the following formula:



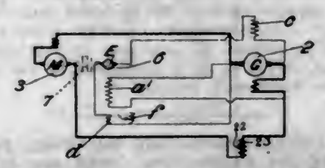
wherein R represents a residue of an azo dye containing at least one azo group and one free hydroxyl group, but no sulfo group, R^1 being an aryl residue, substituted or not.

1,635,595. ELECTRICAL MEASURING INSTRUMENT. EDWARD F. WESTON and GRANT CARPENTER, Newark, N. J., assignors to Weston Electrical Instrument Corporation, Waverly Park, Newark, N. J., a Corporation of New Jersey. Filed June 24, 1925. Serial No. 39,362. 10 Claims. (Cl. 171—95.)



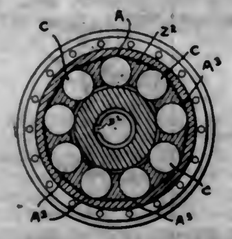
1. In an electrical measuring instrument, a base of insulating material, a permanent magnet having adjacent pole pieces, a movable coil pivoted between said pole pieces, and a stationary core supported in position within the coil by an upstanding portion of said base.

1,635,596. RUBBER TREAD ATTACHMENT FOR TRACK LINKS. ROLLIN H. WHITE, Cleveland Heights, Ohio. Filed Nov. 14, 1925. Serial No. 69,181. 3 Claims. (Cl. 305—10.)



2. A detachable tread unit for track belt links comprising a plate, said plate having downturned sides and an aperture adjacent each side, bolts extending through said apertures with the bases of their heads bearing against said plate, said bolt heads having flat sides bearing against said downturned sides to prevent rotation thereof, and a rubber pad vulcanized to said plate intermediate its downturned sides and over said bolt heads.

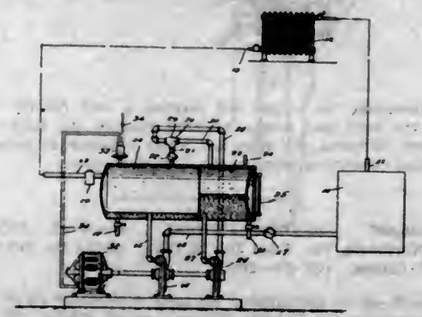
1,635,597. GROUTER ATTACHMENT FOR TRACK BELT LINKS. ROLLIN H. WHITE, Cleveland Heights, Ohio. Filed Nov. 14, 1925. Serial No. 69,182. 3 Claims. (Cl. 305—10.)



2. The combination of a track link having a transversely grooved shoe portion, said shoe having apertures therein at one side of said groove; a grouter formed of resilient metal, said grouter including a base portion having an upwardly extending bearing element at one end, said bearing element being seated in the groove in said shoe when assembled therewith and said base bearing against said shoe at the end opposite said bearing element; and means intermediate the ends of said grouter base for securing it to said shoe, said means causing a portion of said grouter base to yield toward said shoe.

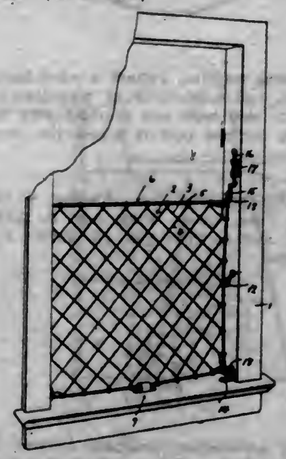
1,635,598. ELECTRIC VEHICLE TRANSMISSION. HAROLD KENNETH WHITEHORN, Maidstone, England, assignor to Tilling-Stevens Motors Limited, Maidstone, Kent, England. Filed Mar. 29, 1923, Serial No. 628,582, and in Great Britain Mar. 31, 1922. 7 Claims. (Cl. 290—14.)

1. In an electric transmission system of the kind set forth a vehicle comprising an engine, electrical generating means driven by said engine and adapted to absorb the maximum power output thereof and having a field provided with a winding, and an armature, electric motor means adapted to be supplied with current from said armature and to absorb the whole power output thereof, an auxiliary generator, means to drive said auxiliary generator at a speed dependent upon that of the vehicle, means to supply current from said auxiliary generator to said winding, said auxiliary generator being so connected and arranged that it varies the electromotive force of the generator inversely with the torque demand of the motor together with means under the control of the driver to control the power-output of the engine for the purpose of regulating the motor speed.



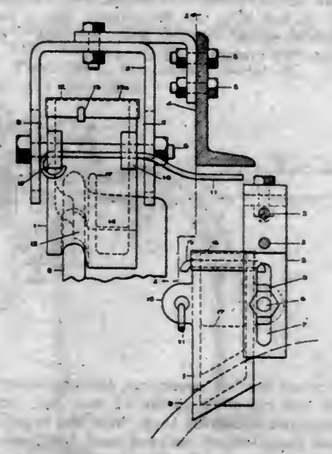
1,635,599. CONTROL ELEMENT FOR CLUTCHES. CIPRIANO ANDRADE, Jr., New York, N. Y. Filed May 25, 1923. Serial No. 641,498. 8 Claims. (Cl. 192—44.)

1. A clutch comprising driving and driven members, a control element and rollers between the driving and



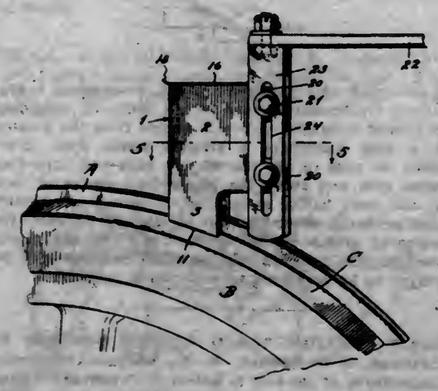
driven members, said rollers being freely movable circumferentially in relation to the driven member, said rollers having a limited circumferential movement in relation to the driving member, the control element having connections with the rollers to compel said rollers to maintain a constant circumferential distance from one another, while permitting said limited circumferential movement of the rollers relative to the driving member, the connections of said control member between the radially intermediate side surfaces of said rollers having a thickness considerably less than the diameter of the rollers, said driving member being provided with arcs permitting the rollers to clutch in either a forward or reverse movement of the driving member.

1,635,600. VACUUM RETURN BOILER FEED. LOUIS K. ASCHER, Indianapolis, Ind., assignor, by mesne assignments, to The Humidity Control Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 12, 1920. Serial No. 373,177. 5 Claims. (Cl. 103—6.)



1. A vacuum producer, comprising a vacuum tank for connection to a device in which the vacuum is to be produced, an injector having a suction connection to the vacuum tank to produce and maintain a vacuum in the latter, a pump for forcing water through said injector, and a vacuum-responsive device responsive to the vacuum in said vacuum tank for controlling the operation of said pump.

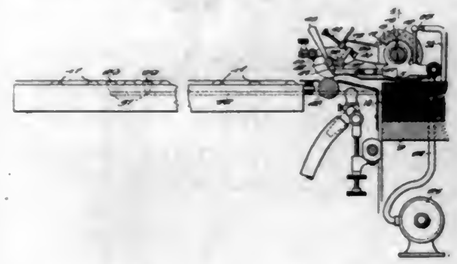
1,635,601. WINDOW GUARD. FERDINAND BENCA, Chicago, Ill. Filed Nov. 18, 1926. Serial No. 149,177. 3 Claims. (Cl. 20—71.)



1. In a structure of the class described, a rope net work including marginal rings, a marginal retaining rope upon which said rings are slidably mounted, a special fixture adapted to be secured upon the window frame, said fixture including a casing having end openings, the ends of said marginal rope being disconnected and passing through said opening into the interior of the casing and being tied together, and additional means for removably connecting said marginal rope with a window frame.

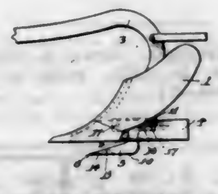
1,635,602. LUBRICATOR. ROBERT L. BLACK, Roanoke, Va. Filed Feb. 9, 1925. Serial No. 7,881. 9 Claims. (Cl. 184—3.)

1. The combination of a wheel having a flanged tread, a lubricator comprising a stationary guide bracket, a reservoir member mounted for vertical and lateral sliding movement within the guide and resting on and supported by the flange of said wheel, said reservoir member having limited rocking movement in the plane of the wheel, means carried by said reservoir member for limiting its rocking movement, and lubricating means within the reservoir.



1,635,603. LUBRICATOR. ROBERT L. BLACK, Roanoke, Va. Filed May 24, 1926. Serial No. 111,321. 6 Claims. (Cl. 184—3.)

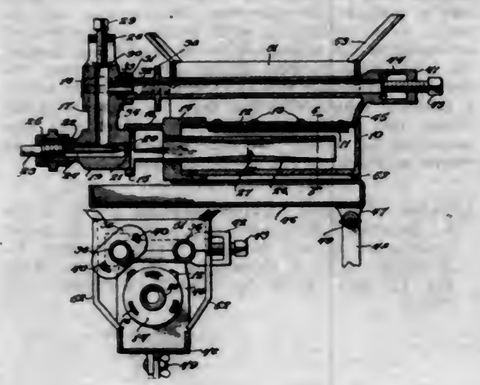
1. In a wheel flange lubricator, a rigid supporting arm, a depending inverted U-shaped bracket carried by said arm and having its opposite sides formed with elongated



slots, a reservoir member containing lubricant and absorbent material and resting upon the flange to be lubricated, and transverse elements carried by the reservoir member and extending through said slots to permit vertical movement of the reservoir member with respect to the flange, the reservoir member having a width less than the space within the bracket to permit lateral movement of the reservoir member.

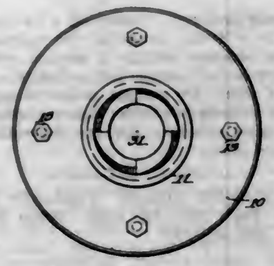
1,635,604. SHEET-FEED-CONTROL APPARATUS. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Mfg. Co., Harrisburg, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1924. Serial No. 747,564. 12 Claims. (Cl. 271—56.)

1. In sheet feeding apparatus, the combination with a conveyor for receiving sheets at one end, transporting the sheets and delivering them from the opposite end, of a suction head located between said ends and traversed by the sheets carried by the conveyor, and means for creating suction through the head to cause the sheets to adhere thereto and be held from movement by the conveyor.



1,635,605. PLOW ATTACHMENT. WILLIAM H. CHANCEY, Grand Saline, Tex., assignor of one-half to W. H. Roberson, Grand Saline, Tex. Filed June 22, 1925. Serial No. 38,761. 1 Claim. (Cl. 97—79.)

A sub-soiler attachment for plows, comprising a substantially triangularly shaped foot, a vertically extending neck formed integrally therewith remote from the pointed end, a head comprising a straight beam, fixed intermediate its ends to the top of said neck and extending parallel with and above the longitudinal center of said foot, said head having a longitudinal extending laterally projecting flange along the top of one side thereof, for engagement over a rudder beam of a plow, and means formed in said head whereby securing elements may be employed to fix said head to said rudder beam.



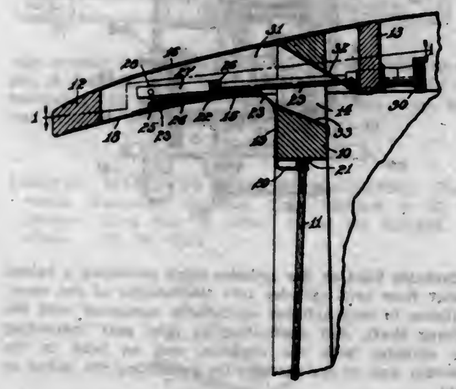
1,635,606. WELDING-TORCH BURNER. CHARLES E. CHAPMAN, Fort Edward, N. Y., assignor, by mesne assignments, of one-half to Robert C. Carter and George S. Jamison, Glens Falls, N. Y. Filed Oct. 16, 1923, Serial No. 668,833. Renewed May 25, 1927. 4 Claims. (Cl. 158—32.)

3. A burner including a mixing chamber, a fuel valve controlling flow of fuel into said chamber, and provided with a socket, a gas generating tube fitting in said socket, a nipple fixed to the valve to project within said socket and fitting in the adjacent end of said tube, a packing

surrounding the nipple and forming a seat for the end of the tube, and means coacting between the tube and valve clamping the tube and valve together to form a sealed connection between the tube and valve.

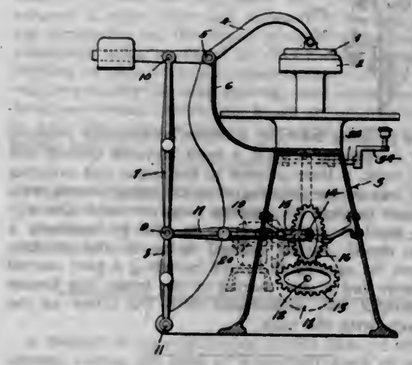
1,635,607. GRINDING WHEEL. ELROY A. CHASE, Northfield, Vt. Filed July 2, 1923. Serial No. 648,870. 7 Claims. (Cl. 51—209.)

1. In a grinding machine, a shaft, a wheel head rigidly secured thereto, and a plurality of concentric grinding rings secured to said head and provided with upwardly and rearwardly inclined pockets across the inner faces of said rings.



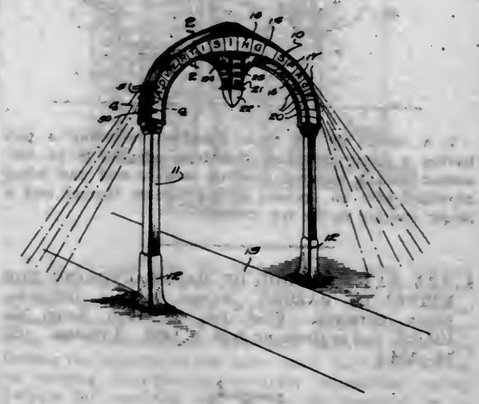
1,635,608. AWNING. MANUEL BRETOS Y CLAVERIA, Santiago de Cuba, Cuba. Filed Apr. 5, 1924, Serial No. 704,435, and in Cuba Feb. 28, 1924. 6 Claims. (Cl. 242—109.)

1. An operating means for awnings and the like, comprising, a standard, a shaft fixed in the standard, a drum rotatably mounted on the shaft, a reel rotatably



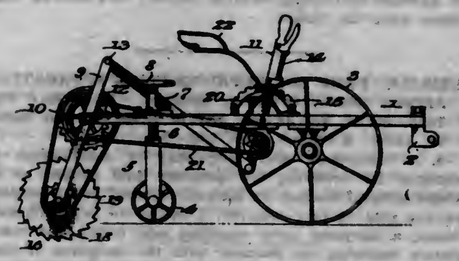
carried by the drum, matching notches on the drum and reel, a detent receivable in the notches to fix the reel to the drum, and a spiral spring housed in the drum, one end of the spring being fixed to the shaft and the other end to the drum.

1,635,609. CLOSED-BODY VENTILATOR. JAMES M. CRAWFORD, Auburn, Ind., assignor to Auburn Automobile Company, Auburn, Ind., a Corporation of Indiana. Filed Sept. 11, 1924. Serial No. 737,070. 3 Claims. (Cl. 296—94.)



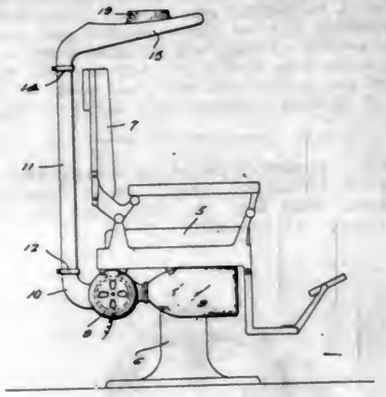
1. In an automobile body, the combination of the front wall, the canopy frame, a canopy sheet covering for said canopy frame forward of the front wall and perforated in its under portion adjacent the front wall, and having a depending portion facing the upper portion of the front wall and forming a seat for the glass of said front wall, and an adjustable valve arranged to co-operate with said perforation.

1,635,610. PRESSING-MACHINE MECHANISM. ERNEST DAVIS, Chicago, Ill., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 5, 1924. Serial No. 730,822. 2 Claims. (Cl. 68—9.)



1. In a pressing machine, cooperating pressing elements, one movable toward and from the other, and means for actuating the movable element, comprising a shaft, having a crank and a connecting rod mounted on the crank, the connecting rod and crank being arranged substantially in radial alinement when the press is open and when the press is closed, an intermittently rotatable drive shaft, an elliptical gear mounted on the crank shaft with its major axis at an angle to the radius of the crank, an elliptical gear mounted on the drive shaft and meshing with the former elliptical gear, the gears being normally arranged with the minor diameter of the gear on the drive shaft in line with the major diameter of the gear on the crank shaft, and means for causing the driving shaft to intermittently make half revolutions.

1,635,611. HIGHWAY LIGHTING SYSTEM AND APPARATUS THEREFOR. RAOUL DE LA LAMA, Mexico, Mexico. Filed Sept. 22, 1926. Serial No. 137,130. 9 Claims. (Cl. 240—25.)



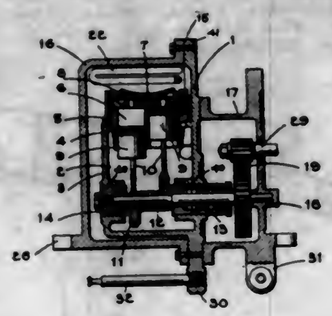
1. Apparatus of the character described comprising a casing adapted to be arranged above a highway transversely thereof, light transmitting media arranged at the sides of said casing, light transmitting media arranged at the end portions of said casing substantially above the edges of the highway to transmit light outwardly thereof substantially at right angles thereto, and a plurality of lighting units arranged in said casing, the majority of said units being arranged above a line through the centers of said first named light transmitting media.

1,635,612. AGRICULTURAL MACHINE. ARTHUR DICK and JACOB AUGUST DIRSCHAUER, Evansville, Ind. Filed June 1, 1926. Serial No. 112,906. 3 Claims. (Cl. 97—212.)

1. In an agricultural machine, a gang of soil treating disks having serrated or sawtooth peripheries having a common axis of revolution and arranged in pairs which converge in each instance.

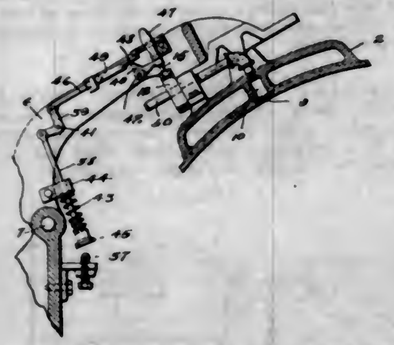
1,635,613. BARBER'S VACUUM HAIR RECEIVER. WALTER ELLERHORST, Cincinnati, Ohio. Filed Sept. 4, 1926. Serial No. 133,672. 3 Claims. (Cl. 132—9.)

1. A device of the class described including a pan having a spout extending therefrom adapted to be connected with a vacuum creating means, said pan being provided with an opening in the bottom thereof and a larger opening in the top thereof.



1,635,614. METHOD OF MANUFACTURING THE KNIVES OF RAZORS. ERNST GERLING, Ohligs-Solingen, Germany. Filed July 30, 1926, Serial No. 126,025, and in Germany Sept. 5, 1925. 4 Claims. (Cl. 76—104.)

1. A method of manufacturing razor knives, consisting in: manufacturing the blades proper separately out of a continuous steel ribbon of conical or triangular cross section with double concave sides, in which the blades are arranged lengthwise the one after the other; and manufacturing the metallic stems of the blades out of another continuous metallic ribbon; and uniting the stems with the blades.

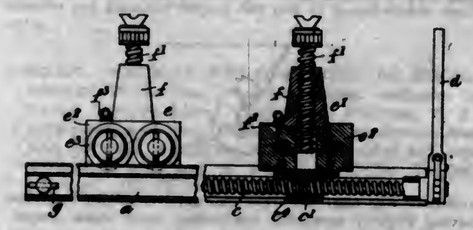


1,635,615. PUMP FOR REFRIGERATING APPARATUS. ARTHUR GREEN, Coventry, England. Filed May 26, 1925, Serial No. 33,027, and in Great Britain Sept. 22, 1924. 2 Claims. (Cl. 230—6.)

1. A compressor unit comprising in combination a chamber for receiving low pressure fluid formed as a single integral casting, an integral external flange formed on one side of said chamber, a facing on said external flange, a one-piece cover engaging said facing and completely enclosing the chamber with the exception of one wall thereof, said one external wall forming together with the flange a disc like plate, said chamber having a pair of minor openings extending through opposite walls thereof, bearings in said through openings which are each capable of being placed in position from the exterior of the chamber, one of said bearings being disposed in the external wall and incorporating a stuffing box, the other of said bearings being disposed in an internal wall, a driving shaft mounted in said bearings and projecting externally of the chamber by way of the stuffing box, a cylinder block detachably mounted in a major opening in an internal wall of the chamber, a

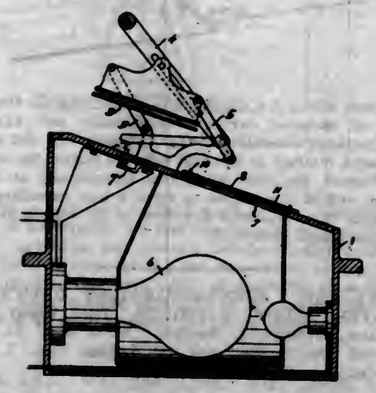
detachable head on the cylinder block providing a valved outlet from each cylinder into the interior of the cover, a piston in each cylinder operatively connected with the driving shaft, and controlling an inlet port connecting the cylinder with the chamber, and an inlet in the external wall of the chamber for permitting the inflow of fluid.

1,635,616. PRESSING MACHINE. WILLIAM F. HAACKE, Chicago, Ill., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 13, 1925. Serial No. 62,249. 5 Claims. (Cl. 68—9.)



1. In a pressing machine, a frame, cooperating pressing elements comprising a buck, a head movable toward and from the buck, a lever pivoted to the frame and carrying the head, one of the pressing elements being formed with perforations through its pressing face, a conduit for supplying a medium under pressure to said perforations, a normally closed, spring pressed valve in the conduit, and means for opening the valve including a part carried by the lever and a part carried by the frame, the former being movable into engagement with the latter as the head coacts with the buck.

1,635,617. RAISING AND TRAVERSING GEAR. THOMAS HALL, Middlesbrough, England. Filed July 27, 1926, Serial No. 125,250, and in Great Britain July 25, 1925. 5 Claims. (Cl. 254—85.)

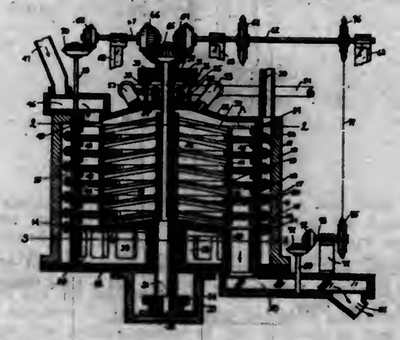


1. Raising and lowering gear comprising in combination a trackway, a carriage movable along the trackway and

freely liftable bodily off the same, a jack on the carriage, a threaded shaft mounted longitudinally in the trackway, a nut adapted to travel on said shaft, and a

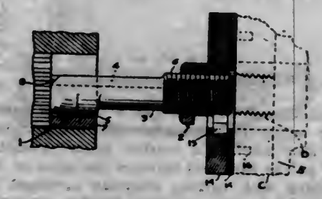
cage secured to the base of the carriage and wherein the nut is disposed when said carriage is in place on the trackway, but which is withdrawn directly from said nut when the carriage is lifted.

1,635,618. MASK FOR PRINTING MACHINES. FREDERICK HAMMOND, Houston, Tex., assignor to H. F. Cohen. Filed May 6, 1924. Serial No. 711,495. 1 Claim. (Cl. 95—79.)



The combination with a printing machine having a printing table formed with a transparent portion, said machine also being provided with hooks, of a mask adapted to rest on said table and having an opening adapted to align with said transparent portion, upstanding abutments on the upper surface of the mask, said abutments being arranged in substantially right angular relation to each other and spaced from one side and one end respectively of said opening, said mask having perforations through which said hooks are adapted to engage to hold the mask in proper alignment with said transparent portion.

1,635,619. METHOD OF MANUFACTURING CLOTHES PEGS OF WIRE. WILHELM HAFFEL, Oppenheim, Germany. Filed Oct. 30, 1926, Serial No. 145,283, and in Germany Nov. 17, 1925. 1 Claim. (Cl. 140—83.)

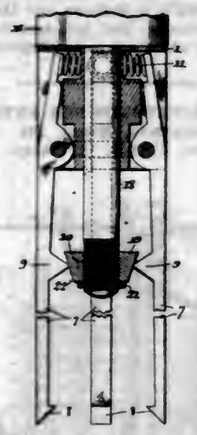


A method of manufacturing clothes pegs of wire, comprising rolling the ends of a straight piece of wire into eyes turned in opposite direction, bending said wire at right angles to form two straight arms, in bending the outer end portion of one of said arms outwardly at an obtuse angle, bending the outer end portion of the straight arm to form an arm parallel to the web, bending said parallel arm toward said web and slightly out of the plane in which said web is situated, winding said web to form two spirals so that the bends at which the arms begin touch one another, and bending said straight arm at half its length in U-shape over the bend at which the other arm begins, so that said eyes form the handles of the clothes peg which are to be compressed to open the clothes peg.

1,635,620. APPARATUS FOR EXTRACTING GAS. EMANUEL W. HARTMAN, Miami, Fla. Filed June 16, 1921. Serial No. 478,140. 2 Claims. (Cl. 202—14.)

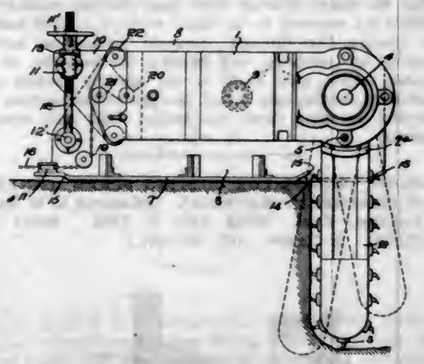
1. In an apparatus for extracting gas from bitumen containing material, a retort having a series of parallel annular shelves vertically arranged to form a vertical passage through the center of said retort, said passage being in communication with said shelves, means for feeding the material to the upper shelf, each shelf having an opening therethrough, conveyor mechanism having pockets for receiving and moving the material to be treated, along each shelf to the opening therein and means for heating said retort, the gas extracted from the material escaping from the shelves into said vertical passage.

1,635,621. MEANS FOR CUTTING SCREW THREADS IN CHANNELED MATERIAL. THADDEUS L. E. HAUG, Berkeley, Calif. Filed July 5, 1922. Serial No. 572,761. 2 Claims. (Cl. 10—107.)



1. Means for forming screw threads upon axially channeled stock, which means comprises thread forming apparatus and a work holder surrounding the stock, said work holder having an internally projecting lug or finger to engage the channel of said stock and an external surface adapted to engage with the thread forming apparatus, to prevent lateral movement of the stock during the thread forming operation.

1,635,622. FISHING TOOL. RALPH IRWIN HENDERSON, Charleston, W. Va. Filed Sept. 24, 1926. Serial No. 137,547. 2 Claims. (Cl. 294—106.)



1. In a device of the class described, a body, spring-closed grips carried by the body, a plunger slidable in the

body and provided with mechanism for opening the grips when the plunger moves downwardly independently of

the body, and means for retarding the movement of the body to permit the plunger to move for a time independently of the body.

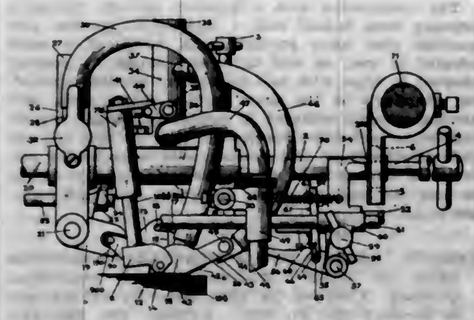
1,635,623. MINING APPARATUS. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, Claremont, N. H., a Corporation of Massachusetts. Filed Dec. 16, 1915, Serial No. 67,097. Renewed Feb. 10, 1925. 114 Claims. (Cl. 262—28.)

1. A mining machine having a portable base and an angularly adjustable elongated cutter bar mounted for swinging movement in a vertical plane extending longitudinally of the base and between the sides of the latter and provided with cutting elements arranged to cut a kerf to admit said bar, and means to increase the cutting range of said machine in the plane of swinging movement of said cutter bar comprising an adjustable pivotal mounting for said machine on its base.

1,635,624. WRITING IMPLEMENT. OTTO IMSET, Oslo, Norway. Filed June 26, 1925. Serial No. 39,804. 13 Claims. (Cl. 120—43.)

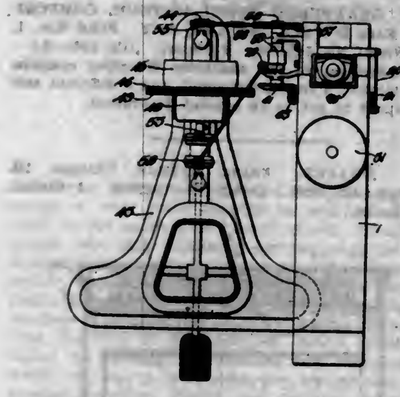
1. As an article of manufacture, a shiftable writing implement consisting of a separate and thin plate having a central hole adapted to fit releasably to a combined holder and writing fluid supplier and to feed writing fluid to the plate underside and circumferential edge.

12. A writing implement, consisting of a springy bow having nearly parallel branches spaced slightly apart by the spring action and forming between them a narrow space for feeding writing fluid to the branch ends an upwardly converging plate with a continuous edge and a central hole for feeding writing fluid to its



underside and edge the lower end portions of the branches having slightly upwardly converging outer sides cooperating with the central hole of the plate for the purpose of clamping fast said plate to the branches.

1,635,625. STUB HOLDER FOR CHECK BOOKS. FORD JOHNSON, Helena, Mont. Filed Aug. 31, 1926. Serial No. 132,787. 1 Claim. (Cl. 281—42.)

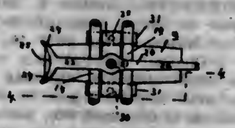


A stub holder for check books comprising an elongated strip of material curved longitudinally and having a longitudinally extending tongue cut from one end portion in spaced relation to the said end and facing the opposite end thereof, the strip being bent transversely at the attached end of the tongue to form a foot extending from the strip in an opposite direction to the tongue and in a common plane therewith.

1,635,626. SHEET-SEPARATING DEVICE FOR PAPER-FEEDING MACHINES. ERIC HARRY LILJEBLADH, Gottenborg, Sweden. Filed Jan. 21, 1926, Serial No. 82,806, and in Sweden Dec. 7, 1925. 9 Claims. (Cl. 271—26.)

1. A sheet separating apparatus in paper feeding machines for the seizing of single sheets from a paper pile comprising a main body, an up and down movable suction foot, forwardly inclined guides for said suction foot attached to said main body, said suction foot provided with an angular broken operative face, the front portion of which is substantially parallel to the feeding direction and the rear portion directed upwardly and continued by rearwardly projecting lugs, and means to move the suction foot straightlined up and down, said main body also provided with a distributor for compressed air, connected with an air compressor, and with pairs of nozzles, one pair of which is pivotally mounted on the suction foot at the rear side thereof and the other pair of said nozzles mounted so far abaft said suction foot, that the nozzles are disposed behind the pile of paper under operation.

1,635,627. MACHINE FOR OPERATING ON SHOES. STANLEY P. LOVELL, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Aug. 29, 1923, Serial No. 659,922. Divided and this application filed Apr. 4, 1924. Serial No. 704,206. 8 Claims. (Cl. 12—1.)



1. The combination with a machine for operating on shoes, of mechanism for treating shoe parts preparatory to said operation, and devices associated with said machine for delivering at a point convenient to the hand of the operator for each cycle of operation of said machine a single treated shoe part to be used by the operator on a subsequent operation of the machine.

1,635,628. DYE SOLUTION. KARL LÜTTIN, Basel, Switzerland, assignor to The Society T. R. Geigy A. G., Basel, Switzerland, a Corporation of Switzerland. Original application filed June 26, 1922, Serial No. 571,098, and in Germany July 29, 1921. Divided and this application filed June 8, 1923, Serial No. 644,244. 4 Claims. (Cl. 8—6.)

1. As a new article of manufacture, a new dye solution having a content of about 10 to 20 per cent of glycolic acid and containing at least one dyestuff, which needs no subsequent oxidation after the application of the dye solution to dyeing, printing, painting or the like purposes.

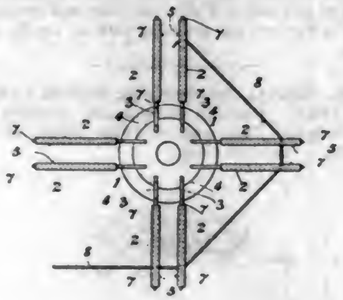
1,635,629. LINE DISTRIBUTOR FOR FISHING REELS. HENRY W. MARCY, Utica, N. Y. Filed Nov. 20, 1925. Serial No. 70,263. 1 Claim. (Cl. 242—84.4.)

In combination a fishing reel having a base plate, spaced side plates and two lower spaced bracing spindles connecting the side plates and the base plate and a line distributor attachably and detachably connected to said reel and consisting of a block between said spindles and extending beyond the sides of said base plate, clips detachably secured to the extended ends of said blocks and engaging the lower side of said spindles and a lever pivoted intermediate its ends on the upper side of said block with its rear end adapted to be manually swung laterally of the reel and with its front end extending up in front of the reel and provided with an eye for guiding the line.

1,635,630. SIGNAL DEVICE FOR MOTOR CARS AND THE LIKE. DOUGLAS MCWILLIAM, Dunedin Otago, New Zealand. Filed Apr. 24, 1925. Serial No. 25,656. 1 Claim. (Cl. 177—329.)

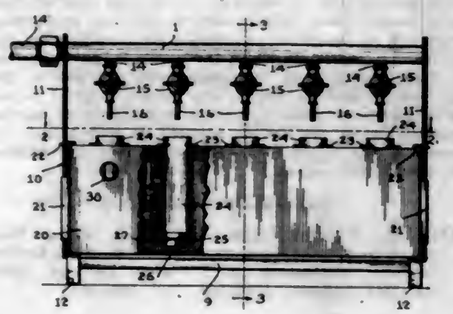
A signal, a signal operator comprising a base plate having an aperture and having circuit controlling elements, a grooved semi-circular member mounted to turn on the said base plate and provided with a locking recess in its bottom surface, a flexible connection between said signal and the said member, a locking element seated in said aperture in the base plate having a projection to engage the locking recess of the member to lock the member in a predetermined position, the bottom of the member serving through contact with the locking element to hold the latter in inoperative locking relation in all other positions of the member, a push-button on said base member to disengage the locking element from said member, said locking element directly cooperating with one of the circuit controlling elements to move the latter to a position in which the circuit is open while the locking member is in engagement with the bottom surface of the grooved semi-circular member and to permit said circuit controlling element to move to circuit making position when the locking element is moved into the recess of the member, and means to turn the member to operate the signal.

1,635,631. VANITY CASE. ARTHUR H. NOBLE, Pawtucket, R. I., assignor to Theodore W. Foster & Brother Company, Providence, R. I. Filed Dec. 10, 1926. Serial No. 153,816. 3 Claims. (Cl. 132—83.)



2. In a loose powder container, having a powder compartment encompassed by a shouldered ledge, a cover for the compartment having a felt pad, a ring seated on the ledge and against the shoulder and forming a seat for the pad, and a flange depending from the inner circumference of the ring and spaced from the adjacent side of the compartment to form a trap.

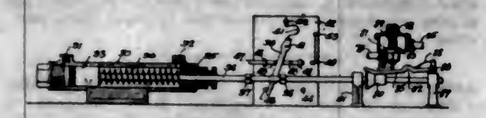
1,635,632. APPARATUS FOR PRODUCING KNOTTED PILE FABRICS. FRANCIS HERBERT OLDROYD, Radcliffe, England. Filed May 5, 1927, Serial No. 189,065, and in Great Britain Oct. 20, 1925. 5 Claims. (Cl. 139—4.)



1. In apparatus for producing knotted pile fabrics a measuring means comprising a movable member provided with pairs of holding devices spaced distances apart sub-

stantially equal to the required length of the tuft piece, each device of each pair being spaced a distance from the other device of the pair, so arranged that on move-

ment of the said member a continuous length of yarn passes successively into each holding device and is gripped thereby both before and after separation of the yarn between the holding devices of each pair.

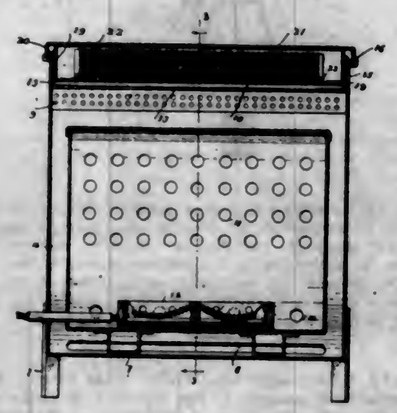


1,635,633. WASHING APPARATUS FOR LABORATORIES. JOHN B. PARKER, Washington, D. C. Filed Apr. 13, 1926. Serial No. 101,785. 9 Claims. (Cl. 141—1.)

1. A tube having inlet and outlet openings of substantially the same cross sectional area, a strainer for the outlet opening, and means having a downwardly directed leg portion for removably securing the strainer exteriorly on the tube.

1,635,634. LIQUID-FUEL BURNER. JOSEPH J. H. POHL, Haddon Heights, N. J., assignor, by direct and mesne assignments, to The Phoenix Burner Corporation, Camden, N. J., a Corporation of Delaware. Filed Nov. 23, 1923. Serial No. 676,553. 4 Claims. (Cl. 158—28.)

1. In a liquid fuel burner, the combination with a combustion chamber, of a pump for forcing liquid fuel into said chamber, means for actuating the pump, a blower for creating a draft of air through the combustion chamber, motor means for operating the blower, a cylinder connected with the pump, a piston adapted to be advanced in the cylinder by pressure developed by the pump, control means for the blower motor operatively connected with the piston and adapted when the piston advances in the cylinder to actuate the motor, a gas line comprising a nozzle adapted to project a flame into the combustion chamber, and a valve adapted when seated to permit a limited amount of gas to pass to the nozzle for a pilot light, said valve being operatively connected

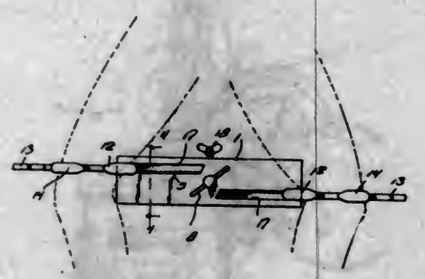


with the said piston whereby when the piston advances in the cylinder the valve is opened to permit a full flow of gas to the nozzle.

1,635,635. DENATURED ETHYL-ALCOHOL COMPOSITION. EARL B. PUTT, New York, N. Y. Filed Nov. 1, 1926. Serial No. 145,704. 4 Claims. (Cl. 195—6.)

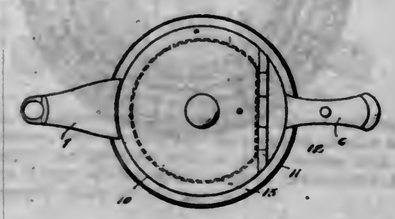
1. A composition of the character described comprising ethyl alcohol, a terpin compound, and a different substance adapted to act as an alcohol denaturant.

1,635,636. HEATER. FRANK RAYMAN, Chicago, Ill. Filed Apr. 22, 1926. Serial No. 103,963. 4 Claims. (Cl. 219—38.)



1. A device of the character specified, comprising similar spaced inner and outer shells, the inner shell terminating short of the top of the outer shell to leave a space thereabove in communication with the space formed between the two shells, there being openings in the lower portion of the two shells for the ingress of cool air and openings in the upper portion for egress of the warm air, a heater within the lower portion of the inner shell, a baffle within the upper portion of the outer shell and comprising upwardly and outwardly inclined portions, and a humidifier within the upper portion of the outer shell, spaced from the baffle and conforming thereto.

1,635,637. PROCESS OF PRODUCING WHITE PULP OF HIGH STRENGTH. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 11, 1925. Serial No. 42,977. 9 Claims. (Cl. 92—11.)

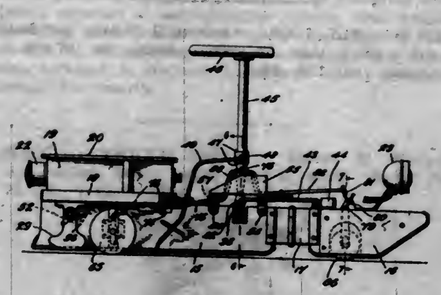


1. A process which comprises digesting raw cellulosic material in an acid sulphite liquor in which the free SO_2 is not in excess of combined SO_2, washing the resulting pulp substantially free from its digesting liquor, treating said washed pulp with a solution containing chlorine, washing said chlorine-treated pulp, and digesting said washed and treated pulp at an elevated temperature in an alkaline solution.

1,635,638. LEG HOLDER. CHESTER ROGERS, Goin, Tenn. Filed Mar. 23, 1927. Serial No. 177,667. 1 Claim. (Cl. 128—303.)

A device of the class described, comprising a U-shaped casing, a cover plate mounted on said casing and provided on the inside with a longitudinally extending guide tongue, said guide tongue cooperating with the casing to form guideways therein, a pair of leg holding members slidably mounted in the guideways in said casing, rack members formed on the inner ends of said leg holding members in opposed relation, an operating pinion engaged with the rack of said members, means carried by the casing for holding and rotating said operating pinion, means carried by the casing for locking said members against movement therein, and relatively adjustable leg engaging elements carried by said leg holding members.

1,635,639. TEAPOT CONSTRUCTION. ALBERT F. SAUNDERS, Syracuse, N. Y., assignor to T. N. Benedict Mfg. Co., East Syracuse, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 83,992. 1 Claim. (Cl. 53—3.)



A tea pot and the like comprising an inner receptacle and an outer shell, each comprising side walls and a bottom, the side walls and the bottom of the inner receptacle being spaced apart from the side walls and the bottom of the outer shell providing a heat insulating space, a spout mounted on the shell and an inner spout leading from the receptacle through the wall of the outer shell into the former spout, a handle carried by the outer shell, the inner shell being formed at its upper end with an outwardly and downwardly turned flange overlying the edge and upper margin of the outer shell and forming a reinforcing band therefor.

1,635,640. TOOL FOR SEPARATING ADHERING SHEETS. WILLIAM T. SCOTT, Youngstown, Ohio. Filed June 26, 1926. Serial No. 118,706. 12 Claims. (Cl. 29—17.)

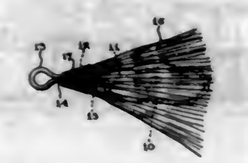
9. In a tool of the class described, the combination of a fluid actuated hammer having a grip at one end and a socket at the other, a shaft adapted to enter the socket and having a peripheral groove in its surface, a removable collar engaging said groove and clamped about the shaft and yielding means for holding said shaft seated in said socket and comprising a pair of rods extending from said collar on opposite sides of the shaft toward the grip, a coil spring surrounding each rod, means for connecting the end of each rod to that end of the adjacent spring remote from the collar, another pair of rods respectively extending through the springs and projecting therebeyond in the direction of the grip, means for securing the end of each of said rods to that end of the adjacent spring which is remote from the grip, and means connecting the other ends of each of said rods respectively with the grip to thereby maintain said springs under compression.

1,635,641. COASTER SLED. JACOB H. SMITH, Marion, Ohio. Filed Mar. 19, 1926. Serial No. 95,917. 8 Claims. (Cl. 208—158.)

1. In a coaster sled, a single central runner provided with a pivoted steering section at one end thereof; an arm pivoted to said runner; ground engaging rods at either side of said runner, pivoted to said arm; and means carried by said runner for guiding said rods.

1,635,642. SAFETY RAZOR. CHARLES L. SKELLEY, New York, N. Y. Filed July 3, 1925. Serial No. 41,370. 18 Claims. (Cl. 30—12.)

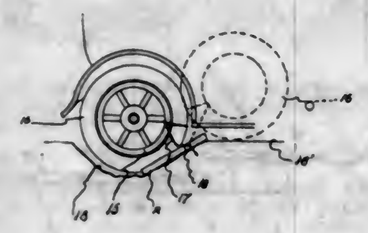
1. A safety razor comprising a handle, a blade mounted thereon to move from a hoe-like position to one substantially radial of the handle, a guard, and means to



hold the guard protectively or non-protectively associated with the blade in either of said positions, whereby the blade may be used for shaving or may be stropped as desired.

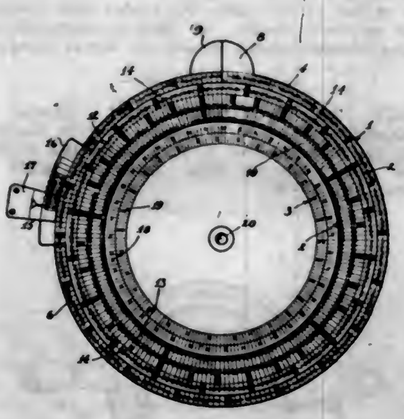
1,635,643. CAMP COOKSTOVE. ALEXANDER C. SLADKY and JOSEPH SLADKY, Milwaukee, Wis., assignors to National Enameling & Stamping Co., Inc., Milwaukee, Wis. Filed Mar. 14, 1927. Serial No. 175,124. 7 Claims. (Cl. 126—38.)

1. In a camp stove, the combination of a burner structure provided with a mixing tube, a fuel tank having a projecting generator tube provided with a flange for abutting engagement with said mixing tube, a hooked portion adjacent said mixing tube for hooking over said flange, and means for supporting the lower portion of said flange, whereby the weight of the fuel tank causes the flange to tightly abut against said mixing tube.



1,635,644. FLY HOOK. AMBROSE G. SLOAN, Fort Smith, Ark. Filed Mar. 27, 1926. Serial No. 97,926. 1 Claims. (Cl. 126—38.)

A fly hook having a straight shank semi-circular in cross section and bent at its rear end to form an eye, the material of the eye then extending parallel to the shank and being semi-circular in cross section to fit snugly against the same and being laterally bent at its end to form a barb, the barb being thin and tapering to a fine point, the hook being offset from the shank in the direction of said barb so as to bring the bill of the hook approximately in line with the shank, fly material disposed around the shank, and a wrapping extending around the fly material and the shank over each face of the barb and held from longitudinal movement by said barb.

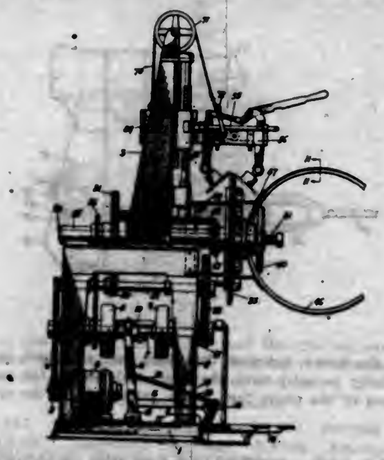


1,635,645. MUD PULLER FOR AUTOMOBILES. GUY W. SMITH, Detroit, Mich. Filed Aug. 10, 1925. Serial No. 49,257. 7 Claims. (Cl. 180—7.)

1. A device of the class described comprising a pair of parallel extending angle irons in spaced relation to each other, each provided on its upper edge adjacent the forward end thereof with a rearwardly inclined slot; a cross member for connecting said angle irons adjacent the forward end thereof, said cross member extending

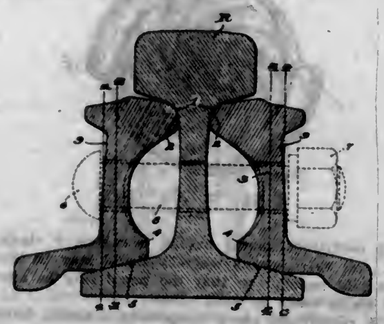
upwardly from the lower surface of said angle irons; and means engageable detachably at its opposite ends in said slots for attaching said device to a vehicle wheel with which used.

1,635,646. SLOPE-STAKE CALCULATOR. WENDELIN D. STARRETT, Oakland, Calif. Filed July 23, 1923. Serial No. 653,213. 6 Claims. (Cl. 235—85.)



1. In a calculator of the character described, a dial, and two discs presenting superimposed scales in adjacent relation to the dial, the two discs being interrelated to allow either of the scales to be brought into view for reading with the dial.

1,635,647. MACHINE FOR COVERING TIRE BEADS. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 26, 1924. Serial No. 686,587. 18 Claims. (Cl. 154—9.)

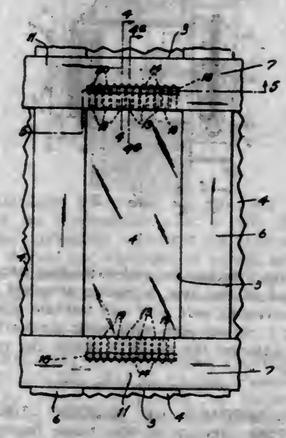


1. In an apparatus of the character described, the combination of an expansible chuck adapted to receive a ring of covering fabric, a bead carrier movable to place

a bead over the chuck in position to have the fabric applied to its inner surface by expansion of the chuck, shaping mechanisms on opposite sides of the bead, and

means to move said mechanism radially outward to stretch and apply the fabric progressively outward of the bead.

1,635,648. CONSTRUCTION FOR HEAD-FREE RAIL JOINTS. MCLEOD THOMSON, Chelsea, N. J., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1927. Serial No. 166,440. 6 Claims. (Cl. 238—243.)



1. A construction for head-free rail joints including in combination with the rails and the clamping bolts, a head-free splice bar provided with an outer bolting face presenting a nut bearing which inclines downwardly from the vertical plane of the bar.

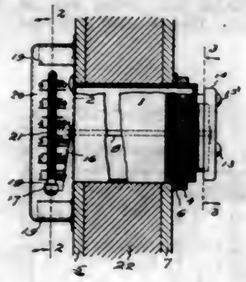
1,635,649. CAN OPENER. CARL W. TILLMANNS, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed July 28, 1924. Serial No. 728,639. 4 Claims. (Cl. 30—3.)

1. A can-opener comprising a blade and a back formed as separate elements said blade and back respectively comprising tangs adapted to be superposed, a pivot pin adapted to pass thru aligned openings in said superposed tangs, and means other than said pivot pin, associated with said tangs for securing said blade and back against relative displacement.

1,635,650. COMMUNICATION DEVICE. MICHAEL J. TRACY, St. Louis, Mo. Filed Feb. 18, 1927. Serial No. 169,216. 4 Claims. (Cl. 189—5.)

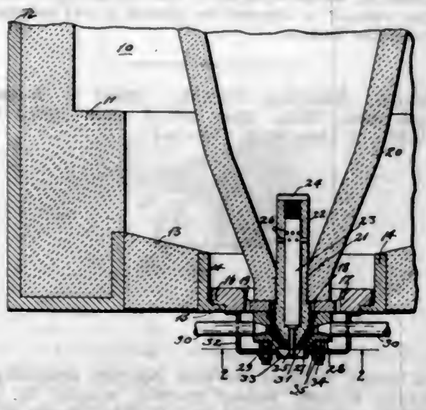
1. A partition composed principally of tool-proof steel plate, a plurality of window panels therein, steel muntins separating said panels, and means embodied in said muntins for transmitting sound therethrough, said means being arranged to obstruct the passage of any substance through the muntin.

1,635,651. VEHICLE SIGNAL. HENRY B. WATERS, Ann Arbor, Mich. Filed Apr. 9, 1925. Serial No. 21,877. 1 Claim. (Cl. 116—54.)



A vehicle signal of the class described comprising a housing; a signal member pivotedly mounted on said housing; a segment carried by said signal member at its mounted end; a U shaped member having teeth formed on one of its legs for engaging the teeth of said segment; teeth formed on the other leg of said U shaped member adjacent the end thereof; a rockably mounted segment for engaging the teeth on said other leg for effecting longitudinal movement of said U shaped member.

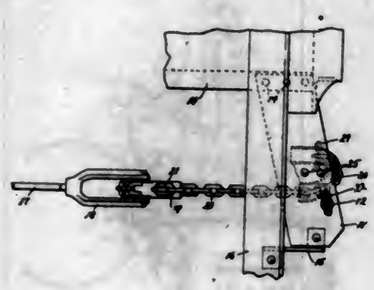
1,635,652. OVEN THERMOMETER. HORACE R. WHITTIER, Plymouth, Conn. Filed Feb. 15, 1924. Serial No. 693,101. 3 Claims. (Cl. 73—119.)



1. An oven thermometer comprising a cylindrical shell having a closed inner end and adapted to fit an opening in an oven wall, a face plate attached to the outer end of the shell, a nut threaded upon the inner end of the shell and adapted to clamp the parts to the oven wall,

a spindle extending through the closed end of the shell and the face plate, a thermo-responsive strip connected with the inner end of the spindle and adapted to turn it as the temperature changes, an arm fastened to and extending radially from the outer end of the spindle, a

tell-tale plate attached to and extending angularly from the free end of the arm, a casing attached to the face plate and enclosing said arm and tell-tale plate, said casing having a curved edge wall with graduations thereon and a slot adjacent the inside of which the tell-tale plate is movable.



1,635,653. METHOD OF MAKING LEAD-COPPER PARTICLES. HARRY M. WILLIAMS, Dayton, Ohio, assignor to General Motors Research Corporation, a Corporation of Delaware. Filed July 22, 1925. Serial No. 45,285. 4 Claims. (Cl. 83—91.)

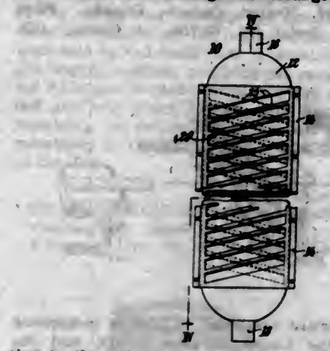
1. A method of making composite metal particles comprising a mixture of metals which do not alloy or only partially alloy, which consists in mixing said metals in a molten condition, and atomizing the molten mixture while it is at a temperature higher than that at which the metals tend to segregate.

1,635,654. BRAKE MECHANISM FOR RAILWAY CARS. HENRY I. WRIGLEY, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Jan. 28, 1924. Serial No. 689,034. 8 Claims. (Cl. 254—149.)

1. In a brake mechanism, for railway cars, the combination of a brake shaft, a brake rod, a sheave mounted in the brake rod, a chain looped about the sheave with one end in winding engagement with the shaft and means for anchoring the other end of the chain including a curved chain receiving trough, one end of which is aligned

with the brake rod and the other end of which is substantially parallel with the first, and means for making the end of the chain fast to the latter end of the trough.

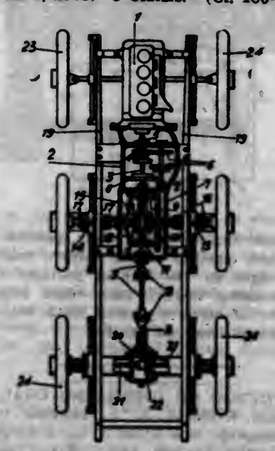
1,635,655. CONVERTIBLE-STAGE CENTRIFUGAL PUMP. DE WITT E. YATES, Battle Creek, Mich., assignor to American Steam Pump Company, Battle Creek, Mich., a Corporation of Michigan. Filed May 21, 1926. Serial No. 110,652. 11 Claims. (Cl. 103—106.)



1. A centrifugal pump having a casing, a single impeller, and valve means whereby liquid may be directed to the said impeller so that the pump may be operated either single stage or multi-stage.

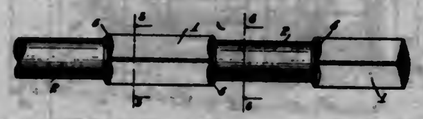
10. A centrifugal pump comprising a casing having a plurality of peripheral volutes, a plurality of water chambers respectively communicating with the volutes, and an inlet chamber; an impeller having a plurality of radial passages adapted to discharge fluid into the volutes; and valve means disposed axially to the impeller, whereby liquid may be directed simultaneously through the impeller to the volutes when operated as a single stage pump, or liquid may be directed from the impeller to one volute, and then back through the impeller to another volute when operated as a multi-stage pump.

1,635,656. COMPOSITE RADIATOR AND RADIATION-INCREASING DEVICE. OTTO S. BEYER, Brooklyn, N. Y., assignor, by mesne assignments, to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Feb. 27, 1925. Serial No. 12,055. 3 Claims. (Cl. 257—140.)



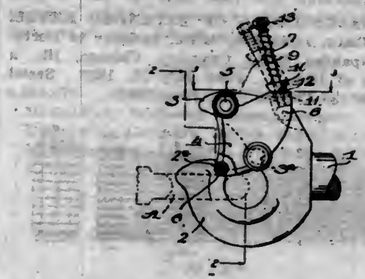
2. A radiator adapted for use with relatively high pressure heating fluids comprising composite sections, said sections each comprising a seamless light metal envelope deformable under the pressure of heating fluids used

therein, and a surrounding portion adapted to restrain said deformation of said light metal envelope, said surrounding portion having ribs arranged in inclined rela-



tion to the axis of the section, and the ribs on one surrounding portion engaging and crossing the ribs on the surrounding portion of an adjacent section.

1,635,657. DRIVE OF THREE-AXLED MOTOR VEHICLES. HEINRICH BLUMER, Zurich, Switzerland. Filed Dec. 9, 1926, Serial No. 153,689, and in Switzerland Dec. 12, 1925. 3 Claims. (Cl. 180—22.)

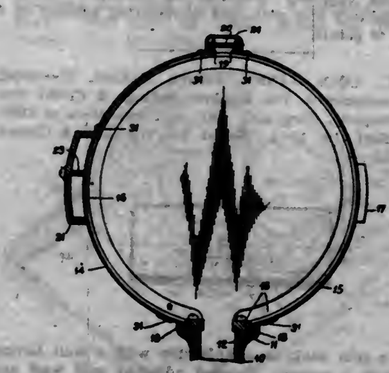


1. In a three-axled motor vehicle, a transmission mechanism for driving the two pairs of rear wheels, comprising in combination a shaft running from end to end longitudinally of the vehicle, two bevel wheel gearings for driving the middle axle, the driving wheels of said bevel wheel gearings being co-axial with said longitudinal shaft, and a bevel differential gear connecting said driving wheels to each other and to said longitudinal shaft.

1,635,658. REENFORCING BAR FOR CONCRETE. CHARLES S. BOARDMAN, Buffalo, N. Y. Filed Dec. 15, 1921, Serial No. 522,499. Renewed Dec. 8, 1926. 6 Claims. (Cl. 72—111.)

1. A multiple section reenforcing bar of the character described comprising a bar having alternating unit lengths of dissimilar cross-section and formed with bosses positioned at the junction of the respective unit lengths substantially as described.

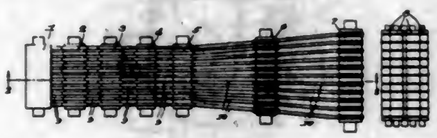
1,635,659. AUTOMATIC PINTLE HOOK. CHARLES G. CLEMENT, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Aug. 30, 1926. Serial No. 132,334. 5 Claims. (Cl. 280—33.15.)



1. A pintle hook comprising an upwardly open hook portion with an overhanging arm, a pair of swinging guard members pivotally supported on said arm on opposite sides thereof and arranged to engage said arm for limiting the movement of the members, and a spring yieldingly holding said guard members in position to close the hook.

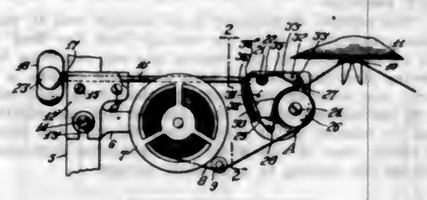
1,635,660. METHOD OF FINISHING CASTINGS SUCH AS INGOT MOLDS. RAY G. COATES, Pasadena, Calif., assignor, by mesne assignments, of one-half to the estate of H. G. Hamilton, deceased, Youngstown, Ohio. Filed July 18, 1924. Serial No. 726,756. 3 Claims. (Cl. 148—4.)

1. The method of finishing large castings cast in sand molds, comprising taking the casting from the flask as soon as the metal in the casting has set, removing the adhering sand throughout a zone where the casting is to be cut, and severing undesirable portions from said casting by cutting through the sand cleaned zone immediately after the removal of the casting from the flask and before the initial heat of the metal has dissipated sufficiently to cause the casting to completely harden.



1,635,661. SCALE CASING. ROBERT CRAIG, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Aug. 25, 1923. Serial No. 659,415. 5 Claims. (Cl. 265—89.)

1. In a casing for a weighing scale, in combination, with a supporting pedestal, of a drum casing therefor comprising a pair of substantially semi-circular sheet metal plates having shoulders at one end to receive fastening devices for drawing said plates toward one an-

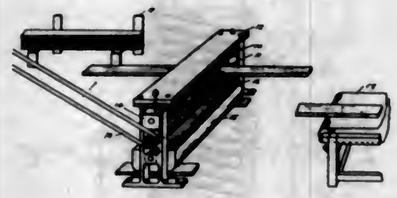


other, a channel like cover for said plate junction, said cover having projecting portions disposed substantially in the plane of said plates, and end caps having flanges engaged over the ends of said plates and projecting portions.

1,635,662. MANUFACTURE OF EXPANDED METAL. JAMES H. DEAN, Ludington, Mich., assignor to Northwestern Expanded Metal Company, Chicago, Ill., a Corporation of Illinois. Filed July 26, 1926. Serial No. 124,799. 33 Claims. (Cl. 164—6.6.)

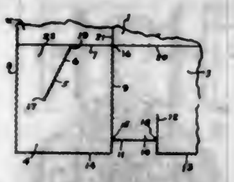
1. The method of expanding metal sheets having alternate slitted panels and unslitted strips which consists in progressively deflecting the portions of the strips at the sides of each panel in opposite directions from the general plane of the sheet while maintaining the central portions of the strips at substantially uniform distances apart.

1,635,663. FLUID FEEDING AND CONDUCTING MEANS. EMIL O. ECKLAND, Menominee Falls, Wis., and WALTER H. YOUNG, Chicago, Ill. Filed Oct. 9, 1922. Serial No. 593,473. 15 Claims. (Cl. 197—171.)



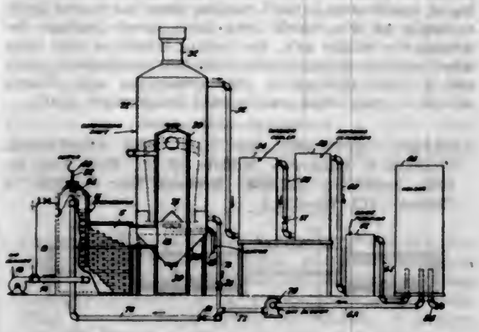
1. The combination with a typewriting machine, having an inking tape, of a reservoir containing ink, a distributing member in contact with said tape, a supply capillary conductor extending into said reservoir, and a distributing capillary conductor in contact with said supply capillary and with said distributing member at a plurality of points.

1,635,664. COIN BANK. JOSEPH HABART, Cleveland, Ohio, assignor to The Bankers Savings & Credit System Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 19, 1924. Serial No. 738,715. 4 Claims. (Cl. 232—4.)



1. In a coin bank, in combination with a wall having a coin slot, a support disposed adjacent said wall and comprising angularly disposed parts on each side of the coin slot, said parts having guide slots which are parallel to axes bisecting the angles between said parts, and tumblers having branches that are slidable within the guide slots, the tumblers being movable on the aforesaid oblique axes into and out of coin obstructing position.

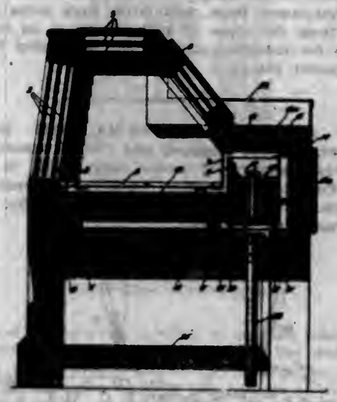
1,635,665. PROCESS FOR THE TREATMENT OF LUMBER. WILLIAM CECIL GARDINER, Toronto, Ontario, Canada, assignor to Satin Finish Hardwood Flooring Company, Limited, Weston, Ontario, Canada. Filed Oct. 29, 1925. Serial No. 65,706. 1 Claim. (Cl. 91—68.)



The herein described treatment of lumber comprising the drawing of the lumber between rollers, and the application of a mixture of denatured alcohol, turpentine and copal gum on its dressed or unfinished face.

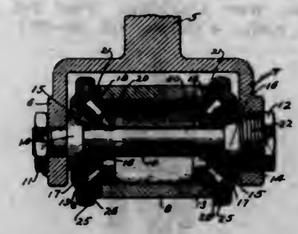
1,635,666. BOX. LOUIS H. GEBHART, Dayton, Ohio, assignor to The Gebhart Folding Box Company, Dayton, Ohio, a Corporation of Ohio. Filed June 10, 1926. Serial No. 115,112. 8 Claims. (Cl. 229—35.)

5. In a paper box having a body portion, end and side walls locked together at the corners constituting a corner lock, edges on the locking portions thereof to resist the unlocking thereof, such edges being formed into a plurality of relatively small teeth with the ends of the teeth spaced from one another.



1,635,667. METHOD OF DISTILLING COAL. ROBERT G. GAISWOLD, Westfield, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 29, 1922. Serial No. 557,464. 10 Claims. (Cl. 202—8.)

1. The method of utilising high sulphur coal for the production of metallurgical coke which comprises distilling the coal by direct heat transfer with a hot low

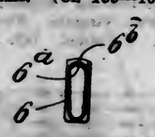


B. t. u. gas so as to produce a rich gas having a high sulphur content and coke, burning a portion of the hot coke thus produced and passing the hot gaseous products of the combustion through the remaining coke so as to raise its temperature to incandescence, contacting steam with said incandescent coke to generate the low B. t. u. gas heating medium, purifying the enriched gas by removing hydrogen sulphide therefrom, and returning the purified gas into direct contact with the incandescent coke remaining to decompose the other sulphur compounds remaining in the gas and to reduce the sulphur content of the coke.

1,635,668. REFRIGERATOR. GUSTAV J. GRUENDLER, Clayton, Mo. Filed May 22, 1926. Serial No. 110,929. 8 Claims. (Cl. 62—37.)

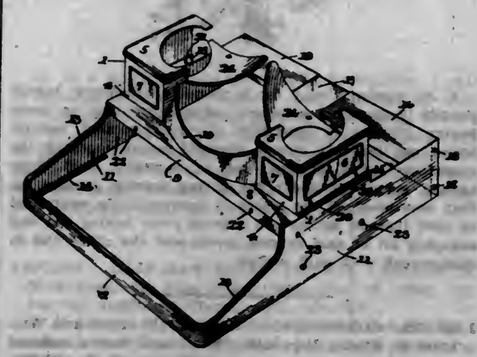
1. A show-case refrigerator having an elongated storage chamber therein, a container for ice positioned along the bottom wall of said storage chamber, the walls of said storage chamber having therein a substantially horizontally disposed opening through which said container may be charged with ice and a substantially vertically disposed opening through which said container may be moved from said refrigerator, and closures for said openings.

1,635,669. VEHICLE ANTIFRICTION SPRING BEARING. HOWARD C. HARRIS, Akron, Ohio, assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Original application filed Dec. 1, 1924, Serial No. 753,197. Divided and this application filed Aug. 27, 1925. Serial No. 52,747. 10 Claims. (Cl. 267—54.)



1. In a device of the character described, a frame member, a spring having an eye thereon, a connection between said spring and frame including a bolt carried by said frame member, outer race members for antifriction bearings carried by said spring eye at the opposite ends thereof and each comprising a pressed metal ring having a radially extending flange at one end, the periphery of which fits the interior of said eye, an axially extending flange at its other end, the end of the latter flange abutting against the end of said eye, inner race members carried by said bolt, and anti-friction bearings members interposed between said inner and outer race members at each side of said eye.

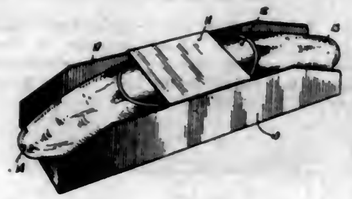
1,635,670. NIPPER FOR TUFT WEAVING. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 27, 1926. Serial No. 91,238. 8 Claims. (Cl. 139—2.)



1. A yarn-gripping device for tuft weaving, embracing in its construction a pair of flat sheet metal jaws pivotally jointed together to lie in the same plane by integrally formed interlocking portions forming circular dove-tailed engagement one with the other to prevent their separation.

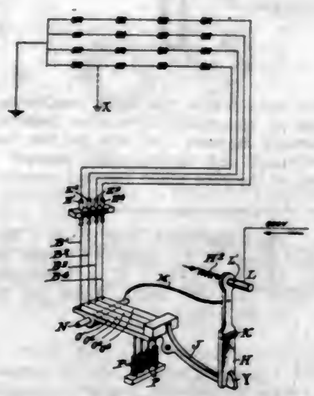
1,635,671. TUFT TUBE FOR TUBE FRAMES. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 27, 1926. Serial No. 91,239. 4 Claims. (Cl. 139—10.)

1. A tuft tube for a tube-frame comprising a sheet metal blank of appropriate form bent longitudinally to form a partially flattened tube with the two longitudinal edges overlapped and interlockingly engaged to resist the opening of the tube under internal pressure.



1,635,672. TYPEWRITING MACHINE. EDWARD B. HESS, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1925. Serial No. 19,085. 9 Claims. (Cl. 197—186.)

1. A protecting mask for typewriting machines comprising a lower portion adapted to encase the sides, rear and extreme front portion of the machine frame, and an

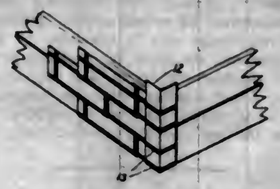


upper portion carrying ribbon housings, said parts being structurally independent of the frame of the machine but adapted to be attached thereto.

1,635,673. DISPLAY DEVICE FOR SLIPPERS. SAMUEL HOROWITZ, New York, N. Y. Filed Mar. 8, 1927. Serial No. 173,647. 1 Claim. (Cl. 12—128.)

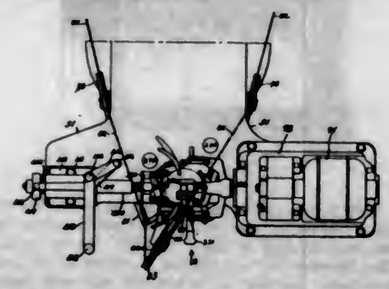
A display packing for a pair of slippers or the like comprising a box open at the ends thereof and having top portion, said box having a pair of slippers therein and having their toe portions outwardly directed, the said slippers being connected by a double-ended and transversely arched shoe tree made of thin flexible material which fits frictionally within the slippers and also bears frictionally against the top portion of the box.

1,635,674. OVERLOAD RELAY FOR ELECTRIC HEATERS. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Aug. 30, 1922. Serial No. 585,304. 5 Claims. (Cl. 200—116.)



1. An overload relay for a plurality of electric heater circuits comprising a supply switch for two or more heater circuits, a plurality of spring-pressed control levers, one for each circuit, thermal means engaging the respective levers at one end to normally hold them against movement under the spring tension thereon, so that movement of the levers is automatically controlled by said thermal means and a latch lever having one end engaging all of said control levers and the other end in engagement with said switch.

1,635,675. COMPOSITION. MATHEW P. IDING and WILLIAM A. NIMTZ, Milwaukee, Wis.; said Nimtz assignor to said Iding. Filed Apr. 1, 1925. Serial No. 19,973. 8 Claims. (Cl. 51—280.)



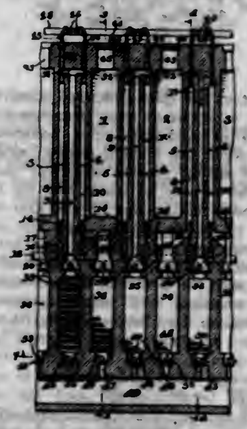
1. A new combination of matter comprising retort cement, carborundum, silica of soda and water.

1,635,676. BUILDING MATERIAL. LOUIS ISAACS, Louisville, Ky. Filed Jan. 12, 1925. Serial No. 1,918. 4 Claims. (Cl. 20—5.)

1. A building shingle having a plurality of mortar lines formed along the edges thereof and of a color to contrast with the color of the shingle, and additional lines parallel to said first-named lines, said latter lines being spaced inwardly from the edges of said shingle so as to form gage lines for indicating the amount of overlap thereon of an adjacent shingle.

1,635,677. ARMATURE-WINDING MACHINE. RUSSELL G. JONES, London, England, and CARL ZWISSEL, Dayton, Ohio, assignors, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 23, 1925. Serial No. 4,342. 21 Claims. (Cl. 242—13.)

1. A winding fixture for an armature winding machine comprising the combination of a frame adapted to be rotatably supported by a rotary member of the machine, means carried entirely by said frame for rotatably supporting an armature core with its axis transverse to the axis of rotation of the frame, and means movably supported by the frame and movable into engagement with the core for clamping the same in the desired winding position and retractable from the core to permit turning the core upon the frame into different winding positions while the core is supported by the frame.

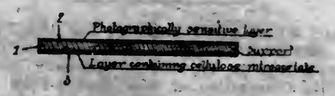


1,635,678. WINDOW STRUCTURE. THOMAS L. JURASINSKI, West Allis, Wis. Filed Feb. 9, 1925. Serial No. 8,081. 4 Claims. (Cl. 20—69.)

1. In a window structure, a frame including a sill, a sash associated therewith, a strip extending across the sill and adapted to serve as an abutment for said sash, a metallic member underlying said strip and including a

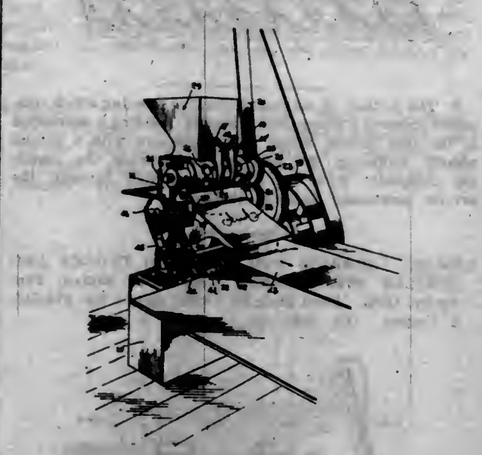
doubled portion disposed against the face of said strip and adapted to be compressed thereagainst during the closing movement of the sash, and said doubled portion being received within a cutout portion of said stile.

1,635,679. COKE OVEN. THOMAS G. KUS, Evanston, Ill., assignor to American Coke & Chemical Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 4, 1919. Serial No. 328,537. 11 Claims. (Cl. 202—9.)



1. In a coking oven, a series of parallel coking chambers, combustion chambers formed in the walls intermediate said coking chambers for heating the same, regenerators arranged beneath and parallel to the coking chambers, flues connecting alternate regenerators with the bottoms of said combustion chambers, flues connecting intermediate regenerators with the tops of said combustion chambers, burners in the tops and bottoms of the combustion chambers and means for supplying the burners with gas.

1,635,680. THERMOMETER. CHARLES J. MANUEL and WILLIAM H. LENTZ, Sellersville, Pa., assignors to United States Gauge Company, New York, N. Y., a Corporation of Pennsylvania. Filed Oct. 5, 1926. Serial No. 139,585. 4 Claims. (Cl. 73—52.)



1. A shell for thermometer comprising in combination, a metallic plate; a flange around the edge of said plate; a narrow groove along the middle of said plate to accommodate the stem of the thermometer, said groove being closed at one end and open at the other end to allow the stem of the thermometer to pass through the end of said groove; and a cylindrical thimble axially aligned with said groove; said plate, flange, groove, and thimble being of uniform thickness whereby the shell is rendered suitable for finishing by the vitreous enamel process.

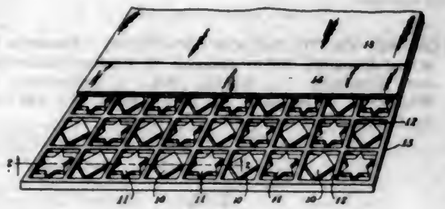
1,635,681. ANTISTATIC PHOTOGRAPHIC FILM. JACQUES MARETTE, Vincennes, France, assignor to Pathé Cinéma, Anciens Etablissements Pathé Frères, Paris, France. Filed June 30, 1925, Serial No. 40,690, and in France May 26, 1925. 2 Claims. (Cl. 95—9.)

1. An antistatic film comprising a film support, one face whereof is coated with sensitive emulsion, while its other face is coated with a coating comprising cellulose nitroacetate.

1,635,682. CANDY-FORMING MACHINE. ZACHEUS M. MARR, Fremont, Nebr., assignor to Racine Confectioners' Machinery Co., Racine, Wis., a Corporation of Wisconsin. Filed Mar. 10, 1922. Serial No. 542,705. 18 Claims. (Cl. 107—8.)

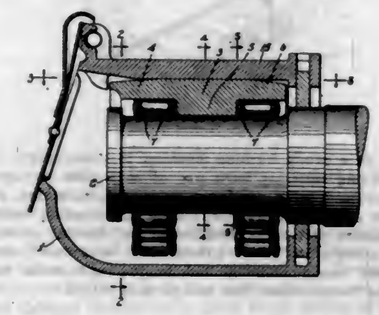
15. In a candy forming machine, in combination, a pair of molding rolls, at least one of said rolls having mold cavities and stick receiving grooves terminating at one end in said mold cavities, means for rotating said rolls in opposite directions, and means for feeding sticks into said grooves so as to extend into said mold cavities, whereby candy material fed to the said mold cavities will be formed upon the end of said sticks.

1,635,683. HAIR-MARCELING DEVICE. FLOSSIE M. MCMASTERS, San Jose, Calif. Filed Jan. 16, 1926. Serial No. 81,679. 2 Claims. (Cl. 132—32.)



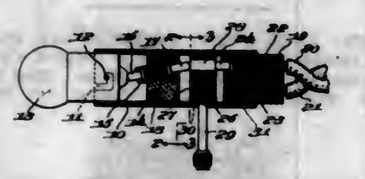
1. A device of the character described, comprising a handle, a sheet metal body having laterally undulating undulations formed therein and having its central portion mounted on said handle, the said body portion being bent upwardly a distance on each side of said handle, thence outwardly a distance, and thence downwardly a

distance to form flat bottomed grooves, an upstanding bracket mounted on the handle a distance from the said body portion, and a second handle part pivotally



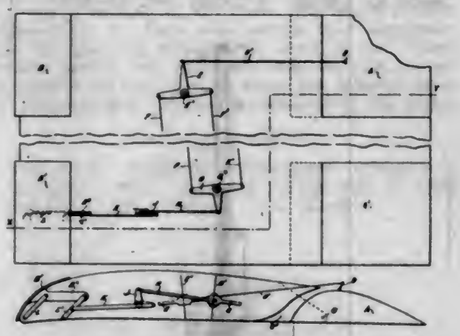
mounted on said bracket and provided with spaced flat prongs adapted to engage the flat bottomed grooves in said body portion.

1,635,684. METHOD OF MAKING DECORATIVE RUBBER SHEETING. TOD J. MELL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 18, 1924, Serial No. 756,684. Renewed May 11, 1927. 12 Claims. (Cl. 18—61.)



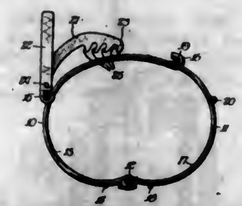
9. The method of making decorative sheeting which comprises pressing a plastic into a matrix, molding a depression in the said plastic, filling said depression with a second plastic, stiffening the plastics, and slicing the resulting composite mass by a cut extending through the several mentioned elements thereof.

1,635,685. BEARING FOR RAILROAD TRUCKS AND SIMILAR STRUCTURES. GEORGE R. MORAN, Sandusky, Ohio. Filed Dec. 10, 1923. Serial No. 679,515. 2 Claims. (Cl. 308—180.)



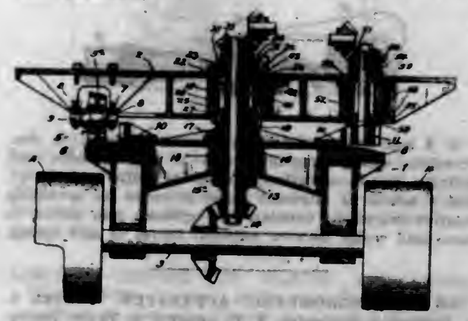
1. In a journal box the combination with an axle of a bearing piece composed of a central portion and two end portions, said central portion being of greater thickness than said end portions, said portions having their lower surfaces curved, and series of revoluble roller bearings flexibly connected together, said roller bearings being mounted between said axle and the end portions of said bearing piece and spaced apart by said central portion.

1,635,686. ELECTRIC-LAMP SOCKET. PETER E. MORRISON, Arlington, Mass., assignor to Henry Cole & Company, Boston, Mass. Filed Sept. 17, 1925. Serial No. 57,000. 1 Claim. (Cl. 173—346.)



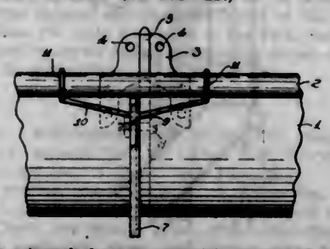
A lamp socket of the class described comprising a stationary casing; a terminal plug non-rotatably secured in the one end of said casing; a non-rotatable plug secured in the other end of said casing; said plug having two aligned spring pressed electrical contact members mounted therein one of which has its free end located approximately in the line of the axis of said casing, the other of which has its free end disposed eccentrically to said axis; a revoluble plug interposed between said terminal plug and last mentioned plug, and being provided with an electrical contact member which is eccentrically arranged with respect to said axis; said terminal plug having feed wires secured therein one of which is arranged to connect with a spring pressed electrical contact member which is eccentrically arranged with respect to said axis; and arranged to complete the electrical contact between itself and the eccentrically mounted contact member in said plug when said rotatable plug is rotated to position its contact member therebetween; the other of said feed wires being in electrical connection with said casing and means including a lever extending radially from said rotatable plug whereby said plug may be rotated to cause its contact member to be moved into and out of electrical contact with the contact member of said terminal plug and the eccentrically arranged contact member of the plug.

1,635,687. MEANS FOR LATERALLY CONTROLLING AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Nov. 29, 1926, Serial No. 151,483, and in Great Britain Dec. 9, 1925. 4 Claims. (Cl. 244—29.)



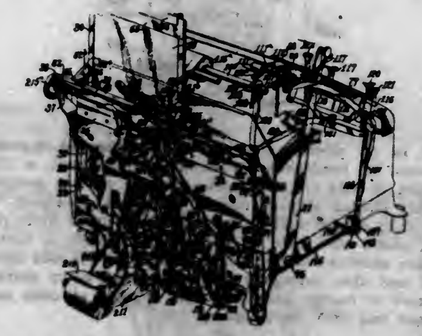
1. Aircraft having port and starboard wings, an aileron on each wing, and means for angularly adjusting said ailerons, each port and starboard wing also having slot openings and slot-operating means to adjustably open or close said slot openings, in combination with means connecting the aileron on said starboard wing with the slot-operating means on said port wing, and means connecting the aileron on said port wing with the slot-operating means on said starboard wing.

1,635,688. CONTAINER FOR HAMS AND THE LIKE. DAVID S. RALSTON, Chicago, Ill., assignor to Allied Packers, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 10, 1926. Serial No. 114,906. 5 Claims. (Cl. 100—57.)



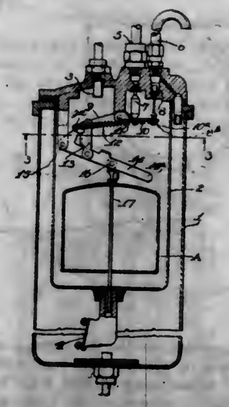
1. A container of the character described, consisting of two hinged sections, each of which is composed of a plurality of circumferentially extending wire ribs which lap opposite the hinging axis with the ribs of the other section when the container is either open or closed.

1,635,689. TURNTABLE BEARING DEVICE. JOHN D. RAUCH, Lima, Ohio, assignor to The Ohio Steam Shovel Company, Lima, Ohio, a Corporation of Ohio. Filed July 27, 1925. Serial No. 46,194. 3 Claims. (Cl. 308—231.)



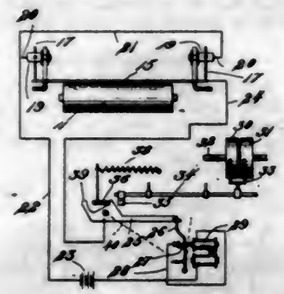
1. A bearing support for heavy machine parts comprising a frame member having an upright bore therethrough, a sleeve fitting in said bore and slidable axially therein, a spindle extending coaxially within said sleeve and rotatable with respect to said frame, a thrust bearing interposed between said spindle and sleeve, and means restraining rotation of said sleeve in said bore but permitting relatively free vertical movement thereof whereby said frame may be automatically readjusted by gravity to compensate for wear of said thrust bearing.

1,635,690. EAVES-TROUGH HANGER. FRED C. RICHNER, Rochester, N. Y. Filed June 17, 1926. Serial No. 116,754. 1 Claim. (Cl. 108—29.)



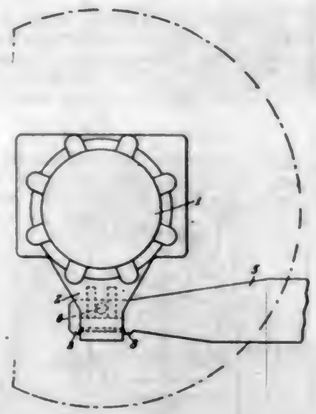
An eaves trough hanger comprising a supporting arm on which an eaves trough rests, and a securing device for the outer edge of the trough embodying a pair of spaced hooks for engaging the outer edge of the eaves trough in spaced relation to opposite sides of the supporting arm, and a resilient connecting portion between the hooks engaging the supporting arm at a point substantially midway between its ends in spaced relation to the hooks.

1,635,691. ADDING MACHINE. FRANK C. RINSCHE, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 29, 1921. Serial No. 511,341. 126 Claims. (Cl. 197—176.)



1. In a machine of the class described, the combination of type, means for moving the same against the work, a platen, line-spacing means for moving the work relative to the platen, and means for moving the platen against the work before the type are moved against the same.

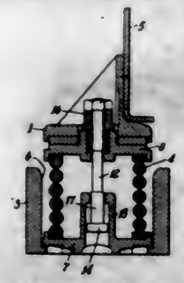
1,635,692. VALVE-SNAP ACTION. FRED G. SCHWEISTHAL, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 21, 1924. Serial No. 751,205. 6 Claims. (Cl. 103—236.)



1. In a device for the purpose indicated in combination with a chamber having liquid inlet and outlet and having a fluid pressure connection at the upper part, a valve controlling said fluid pressure connection; a float adapted to move with the change of level of the liquid; a snap action connection between the valve and the float comprising a pivoted lever pivotally connected with the float and extended from the float pivot in a plane for encounter of its extension with a valve-connected part in the snap movement whereby the snap action causes the lever extension to strike a blow for displacing the valve from its seat.

1,635,693. STOP MOTION FOR DRAWING FRAMES. WALTER J. SCOTT, Woonsocket, R. I. Filed June 12, 1926. Serial No. 115,432. 3 Claims. (Cl. 19—165.)

1. In an electric stop motion for worsted drawing frames, the combination with an electric circuit, a stop motion in said circuit, a pair of draft rolls, a movable circuit closing element normally lying in proximity to, but clear of the working surface of the upper draft roll and above the path of the roving whereby a roving broken under a drafting strain is wound about said upper roll and this roving is built upon the outer surface thereof to engage and move said element to close said circuit and stop the machine.

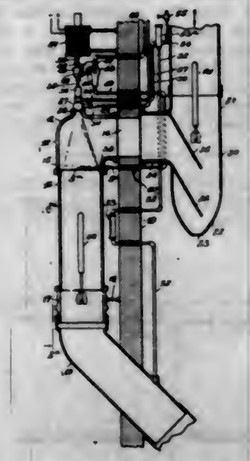


1,635,694. BOGIE FOR RAILWAY CARS AND THE LIKE. CARL ALFRED SVENSSON and THEODOR COLLIN, Falun, Sweden. Filed July 16, 1926, Serial No. 122,747, and in Sweden July 18, 1925. 5 Claims. (Cl. 105—194.)

1. A bogie suspension device for railway cars, comprising beams adapted to receive the load and transmit it to the boxes, the boxes being formed with projections below the axle centers allowing the beam end to be inserted from below, each of said beams being supported at its ends between the said projections.

1,635,695. BOGIE FOR RAILWAY CARS AND THE LIKE. CARL ALFRED SVENSSON and THEODOR COLLIN, Falun, Sweden. Filed July 16, 1926, Serial No. 122,748, and in Sweden July 20, 1925. 2 Claims. (Cl. 105—194.)

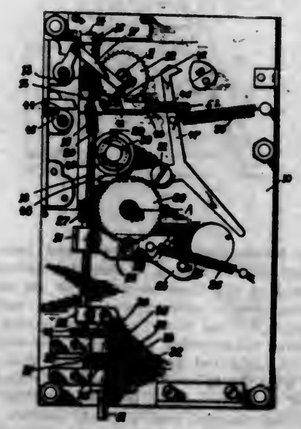
1. A bogie suspension device for vehicles, in which the load is transmitted by springs to a beam, supported by the journal boxes, the springs being placed in vertical recesses in the beams and compressible by means of a bolt, characterised by the respective bottoms of the recesses being provided with a projecting sleeve serving



to receive the bolt head and having such a length as to effectively embrace the bolt head in every position of the same.

1,635,696. LEAF-SPRING-LUBRICATING DEVICE. PRESTON UPHAM, Brookline, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 1, 1923. Serial No. 616,277. 9 Claims. (Cl. 81—3.7.)

3. A leaf spring lubricating device comprising, in combination, spring-engaging means, a wedge, piston and cylinder means operatively connected with said wedge, and a source of lubricant under pressure for actuating relative movement between said cylinder and piston to force said wedge between adjacent leaves of said spring.



1,635,697. HYGROMETRIC APPARATUS. SAMUEL S. AMDURSKY, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 7, 1926. Serial No. 79,909. 4 Claims. (Cl. 73—24.)

1. In a hygrometric device of the character described, the combination with a spray chamber, a spray device therein, a thermometric element subjected to the action of

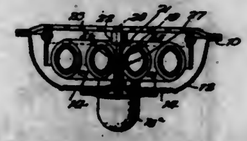
the spray, an outlet and an air inlet, of means automatically operative to remove from the spray device impurities deposited thereon including means for directing a jet of liquid against the spray device.

1,635,698. DRIVING MEANS FOR TAXIMETERS. CHARLES ANSTOTZ and WALDEMAR SAUPE, New York, N. Y., assignors to Ohmer Fare Register Company, Dayton, Ohio, a Corporation of New York. Filed July 20, 1925. Serial No. 44,758. 7 Claims. (Cl. 235—30.)

5. A driving means for taximeters, including a driving shaft, a second shaft driven thereby, a flexible connection between said shafts, elements driven by each of said shafts and a cam whereby the driving shaft is rendered inoperative in so far as the element driven thereby is concerned.

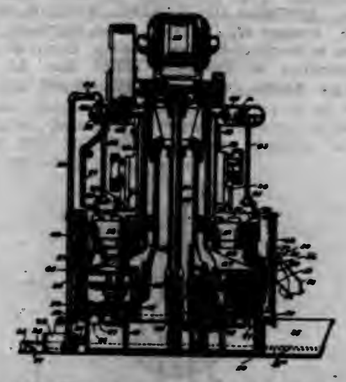
1,635,699. METHOD OF MAKING OPHTHALMIC MOUNTINGS. EARLE J. R. BEATTIE, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed June 17, 1922. Serial No. 568,901. 4 Claims. (Cl. 18—59.)

1. The method of making an article of the class described that comprises holding a non-metallic article, with a curved bore against displacement, the bore being closed on all sides except at one end, driving into the bore through the said end, while the article is so held, a non-yielding element curved to the shape of the bore but thicker than the cross dimension of the bore, and causing the element to travel during the driving action along the path of the curved bore.



1,635,700. WINDOW-SHADE SUPPORT. EDMUND S. BIGELOW, Kansas City, Mo. Filed Aug. 30, 1926. Serial No. 132,456. 1 Claim. (Cl. 156—24.)

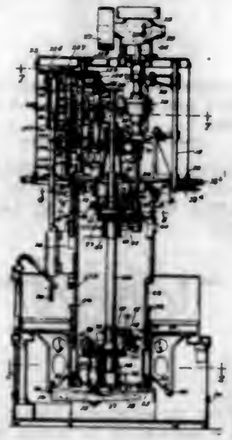
In a window shade support, a supporting member adapted to be mounted in the runway of a lower sash and provided with two spaced apart projections disposed in the same horizontal plane, and having above said projections a laterally extending lip provided with a vertical hole, and a spring plate fastened at its lower end to and diverging upwardly from said member and alined with the space between said projections and extending into said hole and held under tension by said lip and en-



gaged at its longitudinal edges by said lip, and, below said lip, having a hole adapted to receive an end spindle of a shade roller.

1,635,701. CASING FOR AUTOMOBILE HEATERS. THOMAS BOVEY, Chicago, Ill. Filed Mar. 22, 1923, Serial No. 626,933. Renewed Sept. 15, 1926. 15 Claims. (Cl. 257—136.)

3. A casing for an automobile heater which is pan-shape and has a doorway in its bottom, on each side of its center of width, doors hinged to the inner sides of said doorways, a vertical shaft or stem adapted to be given a quarter turn extending between said doorways and arms secured to and projecting in opposite directions from the lower end of said shaft or stem which latter is operable from above said casing for opening and closing said doors.

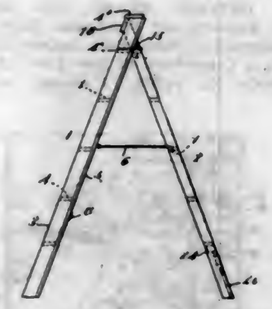


1,635,702. CUTTING COMPOUND DISTRIBUTION SYSTEM. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 9, 1924. Serial No. 691,858. 5 Claims. (Cl. 29—38.)

1. In a machine of the character described, the combination with a rotatable carrier and work supports carried thereby, of cutting compound distributing means carried by and rotatable with said carrier, reservoir means adapted to supply a cutting compound to said distributing means, means connected to said distributing

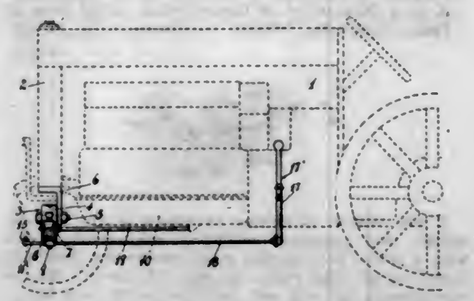
means adapted to deliver the cutting compound to the work supports, means at one point adapted to deliver the combined lubricant and cuttings from the several work supports, and a removable receptacle adapted to receive the combined lubricant and cuttings and drain the lubricant into said reservoir means.

1,635,703. MULTIPLE-SPINDLE DRILLING MACHINE. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 4, 1924. Serial No. 704,096. 37 Claims. (Cl. 77—33.)



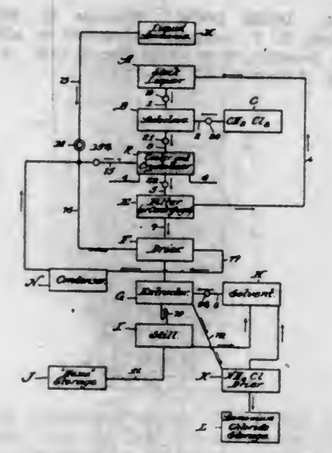
1. In an automatic machine tool of the character described, a work support, a tool slide, rotary feed means having movement in one direction connected to said tool slide and adapted to move said slide in a given point in relation to the work at one speed, other feed means adapted to move said slide to a given point in relation to the work at a different speed, said tool slide adapted by said secondary movement to move said first means with it during the movement to the limit of its traverse, said first feed means adapted to move said slide in return direction out of relation with the work at relatively rapid speed.

1,635,704. METHOD OF MAKING HOLLOW GLASSWARE. ROBERT W. CANFIELD, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 11, 1925. Serial No. 14,674. 6 Claims. (Cl. 49—83.)



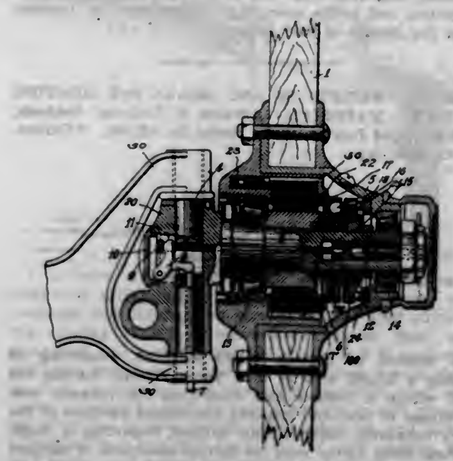
1. The method of making hollow glassware, which comprises blowing a parison and then imparting a contracted neck portion thereto by removing a portion of the air contained therein, enclosing said parison in a mold, and blowing it to final form therein.

1,635,705. COMBINATION STEPLADDER. EMILIO A. CARDARELLI, Boston, Mass. Filed Dec. 9, 1925. Serial No. 74,310. 2 Claims. (Cl. 228—18.)



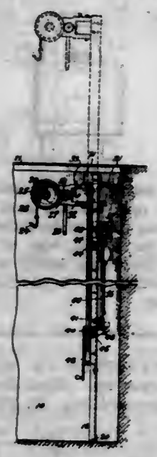
1. A step ladder comprising front and rear sections each provided with steps, a U-shaped retaining frame fixedly secured to the front section near its upper end, said retaining frame embracing the rear section and forming a guide for the latter, a removable stop rod normally extending transversely across the rear section near its upper end, said rod having its ends projecting for engagement with the sides of the U-shaped frame to limit movement of the rear section in one direction, said rod having a recess therein, and a latch member normally engaging said recess to prevent accidental removal of the rod.

1,635,706. FRONT-AXLE ASSEMBLY. ELTON R. CAREY, Long Beach, Calif., assignor to Ovelda E. Carey, Long Beach, Calif. Filed Dec. 5, 1925. Serial No. 73,336. 1 Claim. (Cl. 280—95.)



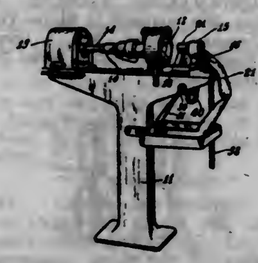
A front axle assembly for Fordson tractors comprising an axle, substantially the same width as the tractor radiator, means pivotally mounting said axle to the tractor, spindle yokes pivotally mounted at either end of said axle, said yokes being positioned below the pivot of the axle, outwardly curved arms secured to said yokes extending forwardly of and below said axle, a guide arm secured to one of said arms and extending inwardly therefrom and below the axle, a drag link pivoted to said arms, and an extension on the tractor steering arm, and a steering link pivoted to said extension and to said guide arm, said steering link being below the axle.

1,635,707. MANUFACTURE OF HEXAMETHYLENETETRAMINE. CARNIE B. CARTER, Pittsburgh, Pa., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Feb. 9, 1924. Serial No. 691,673. 16 Claims. (Cl. 260—141.)



1. The process of producing hexamethylenetetramine which comprises: reacting upon methylene chloride with ammonia present as a constituent of a solvent composed largely of water.

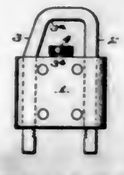
1,635,708. FRONT WHEEL BRAKE FOR AUTOMOBILES AND THE LIKE. HJALMAR SIGFRID CASSEL, Lund, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, a Corporation of Sweden. Filed Apr. 2, 1925, Serial No. 20,030, and in Sweden Apr. 8, 1924. 5 Claims. (Cl. 188—194.)



1. In a front wheel brake for automobiles and the like, the combination with an axle provided at each end with a steering knuckle member, of a wheel spindle provided with another steering knuckle member, a pin uniting the said knuckle members, a wheel provided with a hub mounted on such spindle, a brake associated with the hub, the spindle being provided with a bore constituting a bearing, a rod adapted to move longitudinally in such bore and connected to the brake, there being a bore in the knuckle pin constituting a bearing and an actuating rod located in such bore for longitudinal movement, and means for transmitting motion from the said actuating rod to the rod within the wheel spindle.

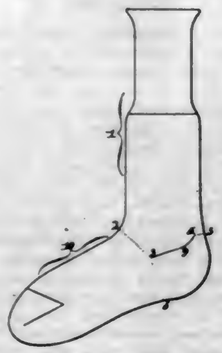
1,635,709. AREA-WAY HOIST. CHARLES K. ERNST, Buffalo, N. Y. Filed Mar. 25, 1926. Serial No. 97,247. 1 Claim. (Cl. 212—64.)

An areaway hoist comprising a mast having a lower fixed section, and an upper movable section slidable vertically on said lower section, a hoisting drum mounted on said upper mast section, and operating means for raising and lowering said upper mast section on said lower mast section, comprising a vertical gear rack mounted on said upper mast section, a gear pinion meshing with said gear rack, a horizontal driven shaft journaled on the upper part of said lower mast section and carrying said gear pinion, a horizontal driving shaft journaled on the lower part of said lower mast section and having a crank, an upright intermediate shaft journaled on the lower mast section, an upper pair of intermeshing bevel gear wheels connecting the upper end of said intermediate shaft with said upper horizontal shaft, and a lower pair of intermeshing bevel gear wheels connecting the lower end of said intermediate shaft with said lower horizontal shaft, said upper horizontal shaft being arranged in rear of said lowermost section and at right angles to said lower horizontal shaft.



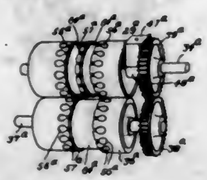
1,635,710. TUBE-SKIVING APPARATUS. ABRAM E. FALOR, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 19, 1924. Serial No. 714,415. 8 Claims. (Cl. 164—61.)

1. In a tube skiving machine, in combination, an annular member provided with a frusto-conical portion adapted to support a tube end, said frusto-conical por-



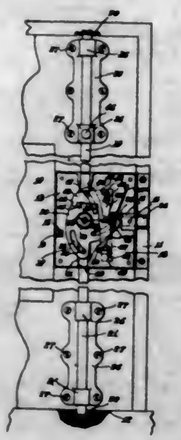
tion being hollow to form a vacuum chamber and being further provided with passage ways leading from the vacuum chamber through its outer wall, and means for making and breaking a vacuum within the vacuum chamber.

1,635,711. PADLOCK. SAMUEL R. FRAIM, Lancaster, Pa. Filed Oct. 27, 1926. Serial No. 144,543. 1 Claim. (Cl. 70—17.)



In a padlock, a casing, a substantially U-shaped shackle the legs of which pass through said casing, said casing having a cushioning member mounted in the upper edge thereof between the joined legs of said shackle, said cushioning device consisting solely in a solid member of flexible material reduced at its mid-portion and removably fitted in said casing.

1,635,712. MANUFACTURE OF HOSIERY. EMIL A. HIRNER, Allentown, Pa. Filed June 22, 1921, Serial No. 479,603. Renewed Jan. 12, 1925. 9 Claims. (Cl. 66—187.)



1. In the manufacture of seamless hosiery, the process of producing the heel pocket which consists in knitting on a limited series of needless less than one-half of the full complement, gradually widening until one-half of the needles are in use, and then immediately beginning the foot portion by circular knitting on the full complement of needles.

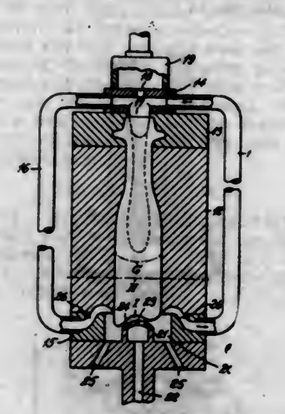
1,635,713. CANDY-MAKING MACHINE. ROBERT S. HISLOP, Racine, Wis., assignor to Racine Confectioners Machinery Company, Racine, Wis., a Corporation of Wisconsin. Filed Nov. 23, 1922. Serial No. 602,764. 11 Claims. (Cl. 107—8.)

2. In a candy machine, in combination, a pair of molding rolls, at least one of said rolls having mold cavities and at least one having stick receiving grooves, means for rotating said rolls, means for supplying sticks to said stick receiving grooves, and stationary means for forcing said sticks into the material in said mold cavities as said rolls are rotated.

1,635,714. DOOR LOCK. WILLIAM H. HOFFMANN, Brooklyn, N. Y., assignor of one-half to Alice J. L. Dolon, Brooklyn, N. Y. Filed Dec. 2, 1925. Serial No. 72,644. 7 Claims. (Cl. 70—74.)

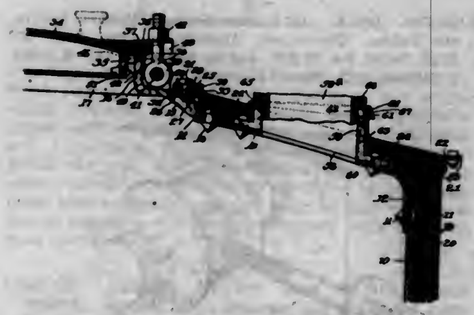
1. The combination with a lock casing, of a series of bolts guided to project axially thereof, at least two of said bolts being arranged coaxially of each other, a cam plate mounted for rotation within said casing and engaged with the inner end of each bolt, the cam plate carrying a lug movable in an arc of a circle, a tumbler yieldably engaging said cam plate lug to hold the bolts projected, and means operating to disengage the tumbler from the outside of said casing.

1,635,715. METHOD OF AND MEANS FOR HEATING COILED MATERIAL. ARTHUR S. HOLMES, Oshkosh, Wis. Filed July 24, 1925. Serial No. 45,830. 6 Claims. (Cl. 263—3.)



1. Method of heating coiled material, consisting of coiling a length of wire in a figure 8 form, placing the coil within a furnace and subjecting the forward convolutions to heat and drawing the heated portions of the wire outwardly substantially without imparting a longitudinal twist to the wire for further operation in another machine.

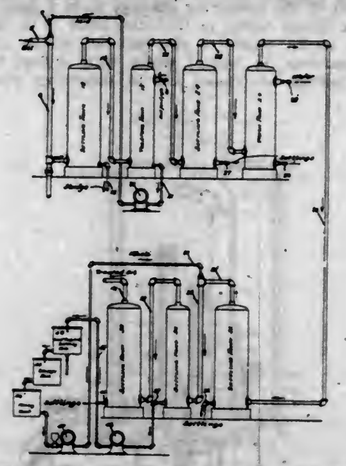
1,635,716. METHOD AND APPARATUS FOR BLOWING GLASS PARISONS. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 29, 1925. Serial No. 59,277. 6 Claims. (Cl. 49—18.)



1. The method of making blown glassware that comprises charging a parison mold with glass, compacting the glass in the parison mold by pressure applied through

the open end of said mold, counter-blowing the glass in said mold by air pressure applied at one end of said mold while leaving the opposite end of said mold open, and

causing the displacement of said glass in said mold to automatically stop the said expansion when said expansion has proceeded to a predetermined extent.



1,635,717. TANK CAR. PAUL KLEMOFF, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Feb. 10, 1926. Serial No. 87,364. 2 Claims. (Cl. 220—55.)

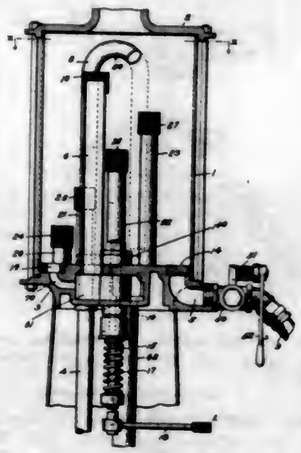
1. A tank car having a dome portion comprising a dome-head presenting an opening, a manhole frame surrounding said opening and secured to said head adjacent the opening therein, a dome-jacket spaced from said dome-head and having a portion at which it is connected with said frame, said jacket and head being spaced apart to form a chamber for insulating material, and said frame containing annular grooves, gaskets in said grooves, the outer one of said gaskets being lapped by said jacket, a flashing-ring engaging the other of said gaskets and said jacket, and means for holding said ring in place.

1,635,718. ART OF REFINING OILS. CHARLES LEAVER, Imperoyal, Nova Scotia, Canada, assignor to Imperial Oil, Limited, a Corporation of Canada. Filed Mar. 11, 1921, Serial No. 451,532, and in Canada Aug. 13, 1920. 2 Claims. (Cl. 196—40.)

1. The process of treating oils which comprises flowing the oil and a partially spent treating liquid concurrently through baffling obstructions, separating out the sludge, then flowing the treated oil in countercurrent to a stream

of fresh treating liquid, the resulting partially spent treating liquid being used in the preliminary treatment of fresh oil.

1,635,719. DOWN INDICATOR. JULIUS J. LIPP, Chicago, Ill. Original application filed Nov. 2, 1925, Serial No. 66,290. Divided and this application filed Dec. 31, 1926. Serial No. 158,218. 2 Claims. (Cl. 116—114.)

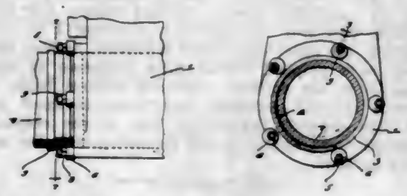


1. A down indicator for football comprising a vertical stake, an indicating member secured thereto and being provided with four vertical faces numbered 1 to 4, respectively, the upper end of said indicating member being formed as a pyramid having faces numbered in correspondence to the adjacent numbered vertical faces, the numerals on said pyramidal faces being arranged with their tops disposed toward the base of the respective pyramidal faces, and a handle extending from the apex of said pyramid.

1,635,720. LIQUID-DISPENSING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa., assignor to Correct Measure Company, Rochester, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1926. Serial No. 79,978. 4 Claims. (Cl. 221—100.)

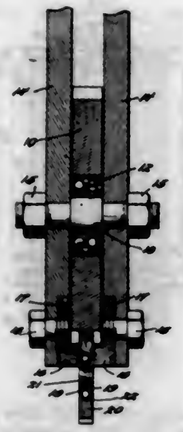
1. In liquid-dispensing apparatus a measuring chamber provided through its bottom with a delivery orifice and

a return orifice, and a valve plate provided with a succession of orifices opening at different levels movable upon the bottom of the measuring chamber from a position in which the lowest orifice in the valve plate is in registry with the return orifice in the chamber bottom to successive positions, in one of which both orifices in the chamber bottom are closed and in succeeding positions



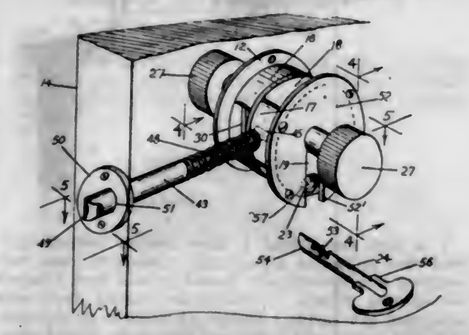
one and another of the orifices in the valve plate are in registry with the delivery orifice in the chamber bottom, the bottom of the chamber being provided with a gutter underlying the pathway of the orifices in the valve plate, said gutter terminating at an interval from the return orifice last mentioned, the diameter of the lowest orifice in the valve plate exceeding the extent of such interval.

1,635,721. PROCESS FOR THE RENOVATION OF WORN GUN BARRELS AND IMPROVEMENTS IN GUN BARRELS. PIERRE MALAVAL and RENÉ PAUL EUGENE PAQUELIER, Paris, France. Filed May 13, 1926, Serial No. 108,972, and in France Aug. 3, 1925. 6 Claims. (Cl. 89—16.)



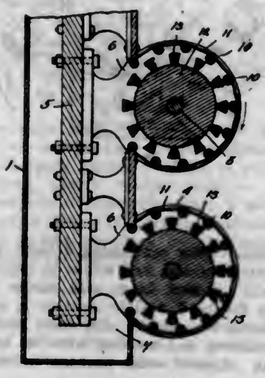
6. A liner for a gun, said liner being self-hooped to increase the elastic limit thereof, the outer diameter of said liner being less than the inner diameter of the gun.

1,635,722. PISTON-RING APPLIER. SAMUEL M. MCKEE, Cumberland, Md. Filed Feb. 23, 1927. Serial No. 170,267. 4 Claims. (Cl. 29—86.4.)



1. In a means for applying piston rings on the piston of a steam cylinder, a series of piston ring engaging members eccentrically mounted on the stud bolts which project from the end of the cylinder, each of said members being provided with means for rotating the same on its respective stud bolts.

1,635,723. MORTISING MACHINE. IVAN MILLER, Onaway, Mich., assignor to Lobdell-Emery Manufacturing Company, Alma, Mich., a Corporation of Michigan. Filed Dec. 23, 1925. Serial No. 77,406. 2 Claims. (Cl. 90—11.)

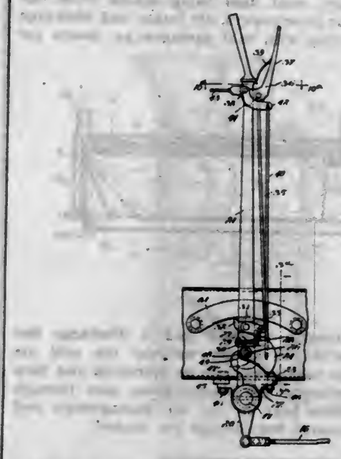


1. The combination with a driving gear of a mortising cutter adapted to mesh with the gear, the cutter having a two-part bearing, the combined thickness of said parts being substantially the same as the width of the cutter face, said bearing and said cutter having complementary ball races and antifriction balls arranged in said races, the two parts of said bearing abutting and being secured together.

1,635,724. LOCK. ARCHIBALD WILLIAM MORRIS, Kulara, via Cairns, Queensland, Australia. Filed Mar. 27, 1925, Serial No. 18,910, and in Australia Apr. 8, 1924. 2 Claims. (Cl. 70—29.)

1. A lock including a barrel portion to fit in a hole bored transversely through a door, and a bolt movable radially to and from the barrel portion and outwardly pressed by a spring, said barrel portion comprising a pair of end plates and an intermediate division plate all maintained in spaced parallel relation, a rotatable spindle passing through said end plates and division plate and having bearing in the end plates, said spindle being fitted at each end with means for rotating it and being cut away on opposite sides to provide a substantially rectangular waist portion located between the division plate and one of the end plates, a plurality of ward-plates individually slidable in guides in a plane at right angles to the spindle, each of said ward-plates having a clearance aperture (permitting the passage and rotation of the spindle) and a pair of oppositely disposed radial slots extending from the clearance aperture, one of said slots in each plate normally engaging the waist of the spindle to prevent the latter being rotated until by the operation of an appropriate key the ward-plates are moved to bring their clearance apertures into alignment and in register with the axis of the spindle, a floating yoke about the spindle formed with shoulders and with means for connecting the inner end of the bolt thereto, and, fixed on the spindle, a claw plate having claws co-operating with said shoulders to move the yoke and retract the bolt when the spindle is rotated.

1,635,725. COTTON-PICKING MACHINE. JOSEPH BROWN NEIL, York, S. C., assignor of one-third to C. L. Cobb, Rock Hill, S. C., and one-third to J. C. Wilborn, York, S. C. Filed Dec. 2, 1924. Serial No. 753,507. 7 Claims. (Cl. 56—48.)



1. In a cotton picking machine, opposed series of superposed picking units, each unit including a cage having cotton receiving peripheral openings and a peripheral cotton outlet of greater width than any of said openings, and a rotatable picking brush mounted for rotation within the cage, said brush constituting means for expelling picked material through the outlet by centrifugal force, said peripheral openings being of such size as to prevent expulsion of cotton therethrough while travelling with the brush.

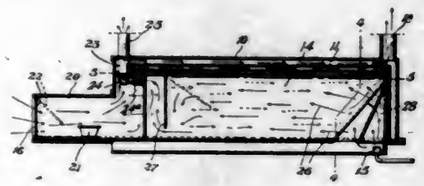
1,635,726. SAFETY DEVICE FOR HIGH-TENSION WIRES. ARTHUR A. C. OHLSEN, San Francisco, Calif. Filed Jan. 14, 1924, Serial No. 685,994. Renewed May 9, 1927. 2 Claims. (Cl. 175—265.)

1. A device of the character described comprising a pair of elongated bars formed of dielectric material, said bars being separable and lying substantially parallel to each other during separation, serrated portions formed along the contacting faces of said bars and at one end thereof, and manually operated means whereby the bars when separated may be pulled together to grip a member disposed between said serrated faces.

1,635,727. BRAKE MECHANISM. FRANK W. PICHÉ, Detroit, Mich. Filed Mar. 5, 1925. Serial No. 13,059. 20 Claims. (Cl. 188—16.)

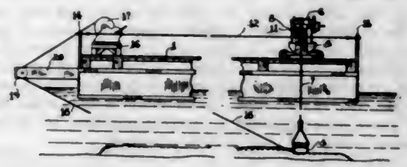
20. The combination with a vehicle frame having a pair of traction wheels and a brake for each of the wheels, a transversely extending shaft journaled upon the frame, means connecting the shaft with one of said brakes, a brake lever pivotally disposed upon the shaft and operatively connected with the other brake, a hand lever pivoted upon the shaft, an arm rigid upon the shaft, releasable coupling devices pivoted upon the hand lever and having interlocking engagement with said arm and said brake lever to effect simultaneous operation of both brakes upon movement of the hand lever, means for effecting release of either of the coupling devices independently of the other whereby either brake may be operated without operation of the other, and a latching device for said hand lever adapted when in locking position to prevent release of either of said coupling devices.

1,635,728. SHUTTLE-EYE GUIDE PLATE. ISAAC SNOW, Lawrence, Mass. Filed Dec. 17, 1924. Serial No. 756,467. 6 Claims. (Cl. 139—223.)



6. The combination in a shuttle having an eye, a bobbin chamber, and a threading chamber in continuation thereof which connects with the eye a delivery passage in forward extension thereof; of a shuttle block positioned in the threading chamber and having a thread directing guide plate at the top which extends from a position level with the top of the shuttle, downward and across a plane extending vertically through the axis of a bobbin, when in position in the shuttle, said block having a front hook in said delivery passage in forward extension of its top which curves downward in a direction away from the shuttle eye, and thence downward towards the shuttle eye.

1,635,729. FRESH-AIR HEATER. WILLIAM ANDREW SPARKS, Edmonton, Alberta, Canada. Filed Oct. 25, 1926. Serial No. 144,092. 2 Claims. (Cl. 126—116.)

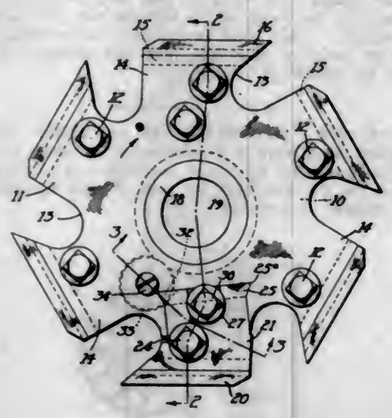


1. A fresh air heater comprising in combination, an outer casing, an inner casing spaced therefrom and adapted to provide a combustion chamber communicating with

the inner casing, a header communicating with the opposite end of said casing, a plurality of substantially V-shaped flues communicating with the combustion chamber and the header, said flues being spaced from one another to form air passageways, air intake and discharge means communicating with said passageways, means for

heating the combustion chamber and a discharge flue communicating with the header whereby the cold air passes through the passageways to be preheated and then discharged and whereby the heated gases pass through the flues to radiate heat to the air passageways and thence to the discharge flue through the header.

1,635,730. APPARATUS FOR LOCATING, PLACING, AND LEVELING BERTH SEATS FOR CONCRETE CRIBS. JESSE H. TROMANHAUSER, Toronto, Ontario, Canada. Filed Feb. 25, 1926. Serial No. 90,510. 4 Claims. (Cl. 61—64.)

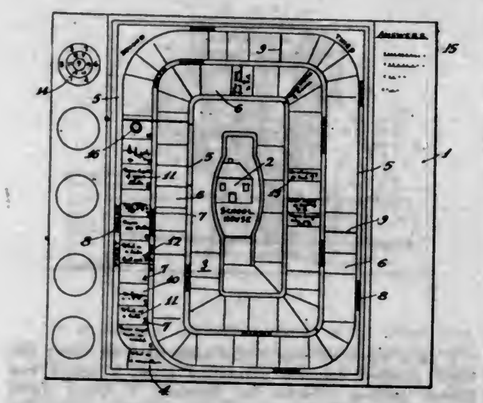


3. In apparatus of the character described, the combination of a floating support adapted to be definitely positioned over an area to be leveled; a travelling carriage movable horizontally on said support; leveling means suspended from said carriage below said support; and means for moving said leveling means to retain it in substantially the same vertical plane as the carriage as the latter is moved.

1,635,731. MAT AND METHOD OF MAKING THE SAME. WILLIAM M. WATTIE, Worcester, Mass. Filed May 25, 1923. Serial No. 641,503. 4 Claims. (Cl. 15—216.)

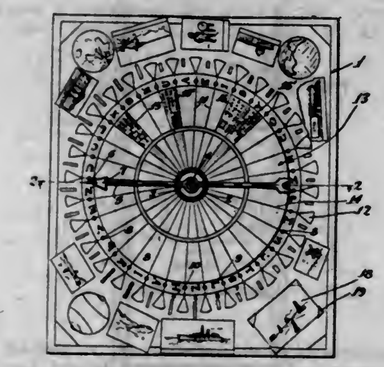
4. The method of forming mats which consists in providing a framework having perforations therein, coiling a cord, separating the coils to form separate loops and passing the loops through the perforations of the framework.

1,635,732. MOLDING CUTTER. JOHN J. WITT, Winchendon, Mass., assignor to Goodspeed Machine Company, Winchendon, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1925. Serial No. 11,034. 5 Claims. (Cl. 144—90.)



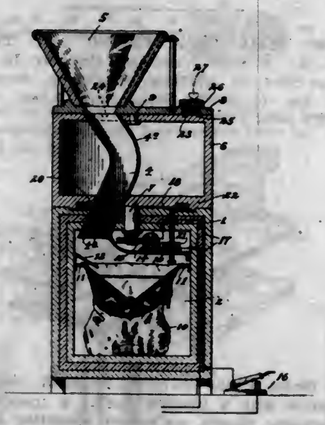
1. A molding cutter comprising a head, a plurality of cutters mounted thereon, and means to adjust one of said cutters axially of said head, said means comprising a guide-way in the head, a slide movable in said guideway, means to clamp a cutter in said slide, and means adjacent said guideway and coacting with the head, to secure said slide in adjusted axial position in said head.

1,635,733. SHINGLE AND METHOD OF LAYING THE SAME. GEORGE R. WYMAN, Walpole, Mass., assignor to Bird & Son, Incorporated, Walpole, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1924. Serial No. 739,392. 3 Claims. (Cl. 108—8.)



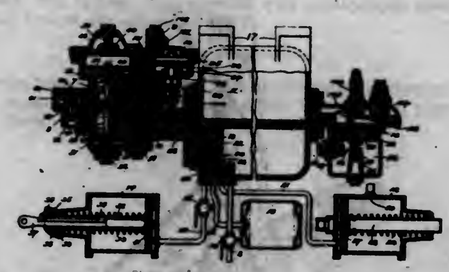
1. As a new article of manufacture, a flexible composition shingle rectangular in outline and of the same thickness throughout, having at one corner thereof a tongue formed as an integral portion of the body, said tongue having parallel side edges, the bend of the tongue, when said tongue is folded beneath the body, standing in substantial alignment with the butt edge of the shingle extending outwardly to each side of the tongue.

1,635,734. EDUCATIONAL GAME. GEORGE W. ZIEGLER, Long Beach, Calif. Filed June 9, 1926. Serial No. 114,647. 11 Claims. (Cl. 273—134.)



1. An educational game having a board with a continuous path of considerable length indicated thereon, with a goal, the path having a series of stations, some having questions, others having pictures, and others having statements of disciplinary matter, a series of playing pieces, and a series of playing implements in the form of cards having questions and indications of the manner of moving the playing pieces.

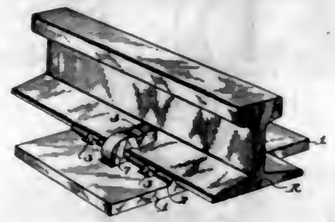
1,635,735. EDUCATIONAL GAME. GEORGE W. ZIEGLER, Long Beach, Calif. Filed June 9, 1926. Serial No. 114,648. 10 Claims. (Cl. 273—134.)



1. A game comprising in combination, a board having a rotating pointer, a disc on the board having a series of radial segments with words thereon, numerals opposite the segments indicating a number of words to be spelled, the disc having also a series of printed instructions or problems with numerals associated therewith to indicate the number of problems or the like to be solved in accordance with the position of the pointer, a second board having a path leading to the goal, the path having a series of stations, said stations being numbered, and playing implements to be advanced on said stations in accordance with the correct spelling, the problem, and position of the pointer on the first board.

1,635,736. DEPOSIT SAFE. CLARE W. BANTA, San Francisco, Calif. Filed Nov. 27, 1925. Serial No. 71,604. 4 Claims. (Cl. 109—1.)

3. A portable deposit receiving apparatus comprising the combination with a safe, of a chute leading thereinto, means for quickly closing the chute in a manner protecting the contents of the safe, an electric motor for operating said means, a switch for the motor, means within the safe for locking the apparatus in the closed chute position, and means cooperating with the last named means for breaking the motor circuit when the locking means functions to lock.

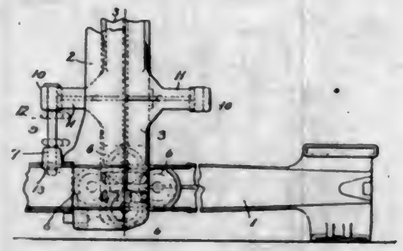


1,635,737. LIGHT AND LOAD FREIGHT BRAKE. HENRY F. BICKEL, Plainfield, N. J., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Mar. 12, 1926. Serial No. 94,809. 12 Claims. (Cl. 303—28.)

5. In a light and load brake the combination of a service brake cylinder; a load brake cylinder normally disconnected from the brake rigging; a latch mechanism operable by the actuation of the load brake cylinder to connect said cylinder operatively with the brake rigging; a valve operable at will to permit or prevent the admission of air to the load brake cylinder; an auxiliary reservoir; a load reservoir; a triple valve controlling the admission of air to the service brake cylinder from the auxiliary reservoir and the exhaust of air from both cylinders; a load cylinder application valve mechanism arranged to be urged in an opening direction by the rise of service brake cylinder pressure, and in a closing direction by load brake cylinder pressure, said

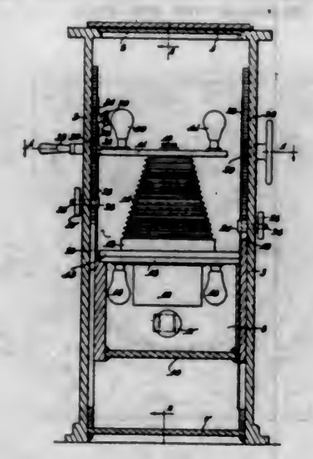
valve mechanism controlling the flow of load reservoir air in the load brake cylinder; and means rendered effective by the triple valve in full service position to connect said auxiliary and load reservoirs with each other.

1,635,738. RAIL ANTICREEPING AND TIE-PLATE DEVICE. EDWARD J. BOLAND, Freeport, Ill., assignor of one-third to Matthias L. Conley, Freeport, Ill. Filed Apr. 19, 1926. Serial No. 103,140. 8 Claims. (Cl. 238—304.)



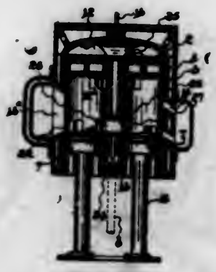
1. A device of the character described, comprising in combination with a tie-plate having a transversely disposed opening therein, an anchor consisting of a single piece of spring metal bent upon itself intermediately of its ends whereby to effect snug embracing engagement with portions of the opposite sides of a rail base, the upper side of said piece having an offset portion formed with a straight surface intimately contacting throughout its length with the adjacent face of the rail base and the lower side of said piece being formed with a straight inner face adapted to engage with the lower face of said rail base and transversely extend thereover to a point beyond the middle thereof, said lower side of the piece being snugly received in said transversely disposed opening in the tie-plate.

1,635,739. MARKING DEVICE FOR ROPE. ELLIS W. BREWSTER, Plymouth, Mass., assignor to Plymouth Cordage Company, Plymouth, Mass., a Corporation of Massachusetts. Filed July 29, 1926. Serial No. 125,677. 6 Claims. (Cl. 40—2.)



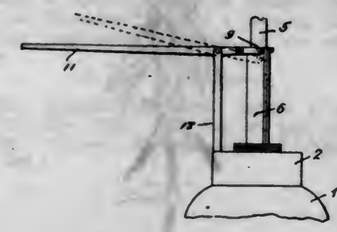
1. The combination, with a rope, of means associating information therewith comprising a thin, flexible tag, secured to a yarn within a strand of the rope and wholly located at and within the circumferential limits of said strand.

1,635,740. CAR TRUCK. SAMUEL P. BUSH, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed July 20, 1926. Serial No. 123,720. 6 Claims. (Cl. 105—182.)



1. In a car truck side frame comprising an upper and lower member, columns connecting them, a spring and bolster opening between the columns, a spring plank supported by the lower member, and means for supporting the brake gear partially by the spring plank and partially by the side frame direct.

1,635,741. PHOTOGRAPHIC ENLARGING, REDUCING, REPRODUCING, AND PRINTING APPARATUS. THOMAS COCA CARPIO, San Sebastian, Spain. Filed Oct. 4, 1924, Serial No. 741,623, and in Great Britain Nov. 29, 1923. 2 Claims. (Cl. 88—24.)



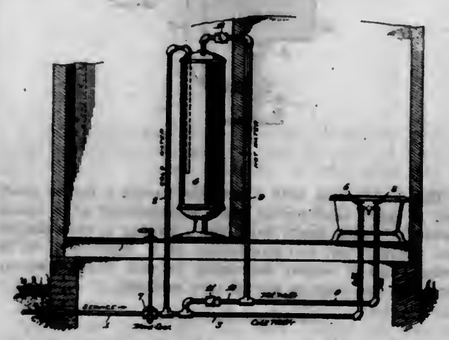
1. Photographic apparatus comprising a cabinet body, a lens support located therein, a light box located therein below the lens support, said box being provided at its top side with an opening, a light shield depending from the top side of the box and surrounding said opening, light bulbs located in the box above the lower edge of the shield and a projector light bulb movably mounted in the lower portion of the box and adapted to be moved from a position below the edge of the opening and laterally of the walls of the shield to a position underneath the shield and in alinement with said opening.

1,635,742. INTERNAL-COMBUSTION ENGINE. ADAM CRAIGON, Toronto, Ontario, Canada. Filed July 2, 1926. Serial No. 120,185. 5 Claims. (Cl. 123—53.)

1. In an internal combustion engine of the Diesel type, the combination of two cylinders arranged side by side; a trunk piston fitted in each cylinder; a stationary piston fitted in the sleeve of each trunk piston, whereby two combustion chambers are formed, one between the trunk piston and the end of the cylinder and one between the inside of the head of the trunk piston and the stationary piston; a passage connecting the outer ends of the cylinders; a passage connecting the cylinders in substantial alinement with the upper ends of the stationary pistons; an inlet port in one cylinder and an exhaust port in the other cylinder in substantial alinement with the last mentioned passage adapted to be controlled by the sleeves of the trunk piston; ports in the trunks of the pistons adapted to form a communication between the interiors of said trunks and the last mentioned passage when the inlet and exhaust ports are open to said interiors; and means associated with each of the passages aforesaid for injecting fuel.

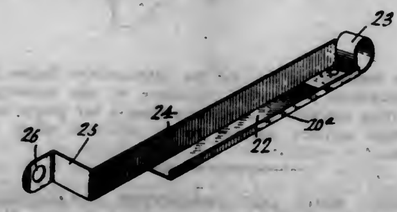
1,635,743. PISTON-PACKING-REMOVING APPLIANCE. MAYON S. DAVENPORT, Los Angeles, Calif. Filed Jan. 9, 1926. Serial No. 80,802. 2 Claims. (Cl. 81—3.)

1. Packing pulling means comprising an endwise movable and turnable element, means on said element for the connection thereof to packing on turning movement of the element, opposite lugs on the endwise movable and turnable element, and means associated with said element for the said endwise movement of the same; the said means for moving said element endwise being in the form of a lever having means to engage said lugs, and the said lever being equipped with a fulcrum support.



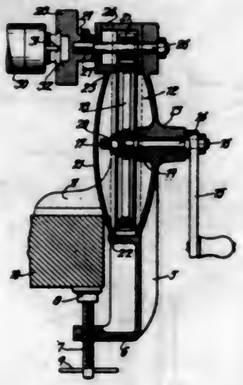
1,635,744. FACIAL MASSAGE DEVICE. WILLIAM DUNCAN, Los Angeles, Calif. Filed Aug. 20, 1924. Serial No. 733,170. 5 Claims. (Cl. 128—57.)

1. A massaging device comprising a handle, a fork pivotally mounted upon said handle, a resilient rotating element rotatable within said fork, said rotating element being pivoted upon said handle, resilient means adapted to urge said fork into a normal predetermined position



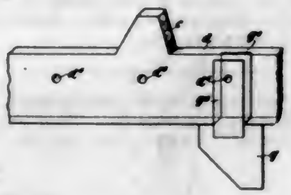
with respect to said handle, and an additional massaging element mounted upon the fork remote from the axis of rotation of the fork.

1,635,745. PLUMBING SYSTEM. WINFIELD HUNTER ELLIS, Little Rock, Ark. Filed Mar. 11, 1927. Serial No. 174,598. 2 Claims. (Cl. 137—79.)



2. In a plumbing system, a service pipe, a boiler and a cold-water pipe connected to the service-pipe, a single-way bleed-cock in the service pipe ahead of said boiler connection, a cold-water faucet and a cold-water pipe connecting the same to the service pipe inside of the bleed-cock, a hot-water faucet and a hot-water pipe connecting the same to the hot-water outlet of the boiler, and a by-pass pipe connecting the hot-water pipe to one of the cold-water pipes at a point inside of the bleed-cock, this by-pass being provided with a check-valve opening toward the cold-water side.

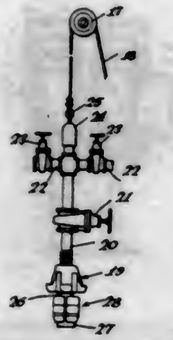
1,635,746. RAIN GUARD FOR AUTOMOBILE HOODS. MOSES P. FISHBURN, Carthage, Mo. Filed Dec. 4, 1924. Serial No. 753,967. 1 Claim. (Cl. 180—69.)



A rain guard for automobile hoods including a body portion embodying a trough having a loop at one end, said loop adapted to accommodate the rod of an automobile hood, said trough having an apertured flange at its opposite end for connection with the radiator disposed adjacent to the forward end of the hood, said trough being constructed from a single sheet of metal with the bottom extended at one end to form the loop and its side extended at the other end to form the attaching flange.

1,635,747. SPRING WINDING MACHINE. FREDERICK S. FOLGER, Flushing, and HENRY W. ALTMAN, College Point, N. Y. Filed Nov. 20, 1925. Serial No. 70,852. 1 Claim. (Cl. 81—3.)

The combination with a machine having a driven shaft and a speed multiplying gear arrangement of a chuck secured to said shaft, said chuck having a cross-shaped slot therein for accommodation of a shaft end to be wound, and a conical depression in said chuck whereby the shaft end may be guided into said slot.



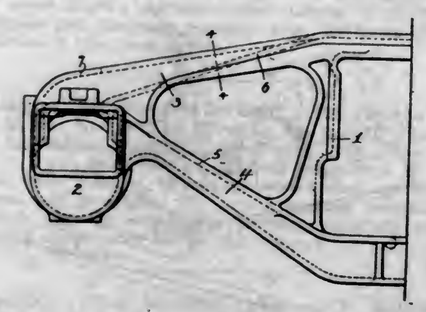
1,635,748. COMBINATION BAR FOR THE INTERMEDIATE FRAMES IN JUSTIFYING-STRIP-PERFORATING MACHINES OF THE MONOTYPE TYPESETTING-MACHINE SYSTEM. AUGUST GROOTS, Dusseldorf, Germany. Filed Sept. 18, 1926, Serial No. 136,328, and in Germany June 10, 1925. 7 Claims. (Cl. 164—112.)

1. A combination bar for the intermediate frames in justifying-strip perforating machines of the monotype typesetting machine system, comprising a bar proper and individual strikers adapted to be attached singly to said bar.

1,635,749. BLOW-OUT-PREVENTER ATTACHMENT FOR CASING HEADS. CHESTER C. HOSMER, Huntington Beach, Calif. Filed Jan. 5, 1926. Serial No. 79,327. 9 Claims. (Cl. 166—15.)

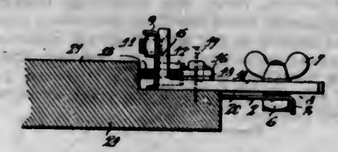
1. The combination of a casing head having a tapered packing seat, a tubular spider mounted on said casing head, a plurality of substantially vertical closure cap locking bars provided with heads and pivoted on said spider, springs tending to move said locking bars inwardly, closure cap guiding means integral with said spider disposed between said locking bars and projecting beyond the top thereof, said guiding means being provided with inclined upper faces, a tubular closure cap provided with lugs to receive the heads of said locking bars in interlocking relation, an expansible packer tapered

at its lower end carried at the lower end of said closure cap, and means on said closure cap to expand the packer against the inner wall of said casing.



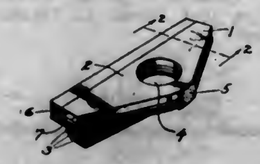
1,635,750. LABEL FOR ROPE. FRED A. JENKS, Plymouth, Mass., assignor to Plymouth Cordage Company, North Plymouth, Mass., a Corporation of Massachusetts. Filed Feb. 8, 1927. Serial No. 166,782. 8 Claims. (Cl. 40—2.)

1. The combination, with a rope, of a label therefor comprising a thin, flexible sheet on a yarn of the rope structure; and a filament wound about said yarn with its convolutions passing over said label and binding it to the said yarn.



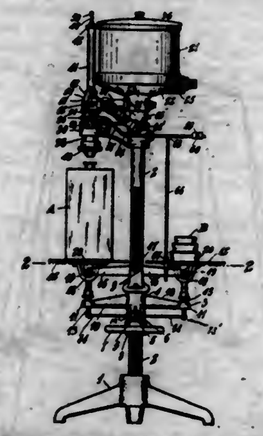
1,635,751. CAST CAR-TRUCK SIDE FRAME. GEORGE T. JOHNSON and HARRY W. STEETZBACH, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Mar. 25, 1926. Serial No. 97,341. 3 Claims. (Cl. 105—205.)

1. A cast side frame for car trucks having a column, a journal box, a compression member, and a tension member, the plate of the tension member being at the top of the same and united with the journal box at the inner corner thereof and the plate of the compression member extending obliquely with respect to its sides from



a point over the column to the journal box and united with the box approximately at the junction of the tension member therewith.

1,635,752. BUTT GAUGE. IVOR JOHNSON, Vancouver, British Columbia, Canada. Filed Dec. 11, 1925. Serial No. 74,790. 6 Claims. (Cl. 33—197.)

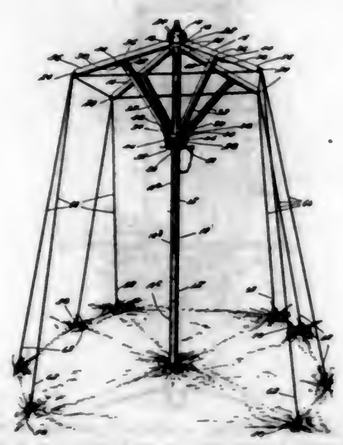


1. A butt gauge comprising in combination means for defining the length, depth and breadth of a recess to be cut, and means for removably securing the gauge upon the stock to be recessed, said last named means comprising at least one apertured member having provision for frictionally gripping a securing nail while permitting longitudinal movement of the nail therethrough.

1,635,753. LAMINATED SHIM. LLOYD A. JOHNSON, San Francisco, Calif. Filed July 31, 1924, Serial No. 729,320. Renewed May 23, 1927. 5 Claims. (Cl. 308—244.)

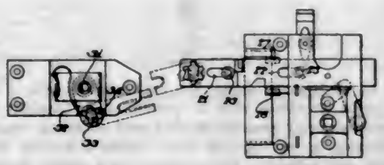
1. As an article of manufacture, a laminated shim comprising a plurality of relatively thin sheets of metal superimposed on each other, means lightly and detachably securing the sheets together, the front edge of one of the sheets projecting outwardly of the other sheets, and a block of soft metal secured thereto and extending along the front edge of the shim.

1,635,754. FILLING MACHINE. KARL KIEFER, Cincinnati, Ohio. Filed Dec. 18, 1922. Serial No. 607,756. 9 Claims. (Cl. 249—58.)



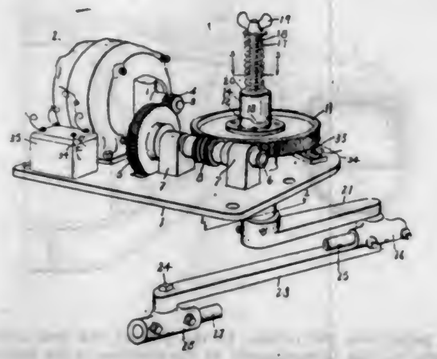
1. In a filling machine, a reservoir having an inlet, a valve controlling said inlet to said reservoir, a float in said reservoir, a toggle connected to said valve and to said float, a spout leading from said reservoir, a weighing scale extending under said spout to hold a container thereunder, and means whereby said scale controls outlet from said spout.

1,635,755. UPRIGHT PIANO. WALTER LANE, Holland, Mich., assignor to Bush & Lane Piano Company, Holland, Mich. Filed Dec. 29, 1924. Serial No. 758,701. 5 Claims. (Cl. 84—184.)



3. In an upright piano, the combination with a sounding board provided with a bridge, of an upright string plate operatively associated with said sounding board and comprising a tuning pin web recessed at the bottom thereof and provided with a string rest above the recess, a bridge bar on said string plate disposed in an opposed relation to said recess and adjacent to said string rest, strings disposed over said string rest and under said bridge bar, the edges of the string rest and bridge bar being disposed so that the strings are held under tension against both and hammers arranged to strike the strings from the bridge bar side thereof, the face of said bridge bar adjacent the hammers being inclined from its string engaging edge permitting the hammers to strike the strings in close proximity to said bridge bar.

1,635,756. TENT. ALICE F. LEACH, Brookline, Mass. Filed June 20, 1925. Serial No. 38,524. 5 Claims. (Cl. 135—2.)

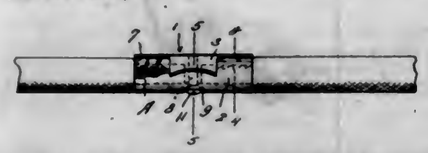


1. A collapsible tent, comprising a frame, comprising a centre pole adapted to be inserted in the ground composed of detachable sections, and having its top radially enlarged, ribs having inclined inner ends and eyes mounted on the outer ends thereof, hinges joining the inclined inner ends of said ribs to the side of the enlarged pole top, a runner element having a flat upper side slidable on said pole, brace arms having flat lower ends and inclined upper ends, hinges joining the inclined upper ends of said brace arms to the under side of said ribs, hinges joining the flat lower ends of said brace arms to the flat upper side of said runner and means to support said runner in raised position on said pole, guy ropes each threaded through adjacent rib eyes and having their ends secured to tent pegs on the same side of the tent opposite their respective rib ends spaced at a greater radial distance from the pole than the open rib ends and a tent canopy mounted on said frame having the corners thereof secured to the ground by tent pegs and the side walls thereof supported by said inclined guy ropes.

1,635,757. LATCH CONSTRUCTION. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 2, 1926. Serial No. 145,733. 5 Claims. (Cl. 292—169.)

1. A latch mechanism for an automobile door adapted to have a window of substantially the full width of the door slidably arranged therein, comprising inside and outside latch operating devices carried upon opposite sides of the door, and an interlocking member between said devices extending transversely of the door in a two part bearing member and lying substantially in the plane of the bight portion of the latch casing.

1,635,758. DOOR-OPERATING MECHANISM. FRANK R. LEMON, Vicksburg, Mich., assignor of one-third to Henry B. Crawford and Lulu Lemon Crawford. Filed May 16, 1925. Serial No. 30,823. 3 Claims. (Cl. 268—63.)

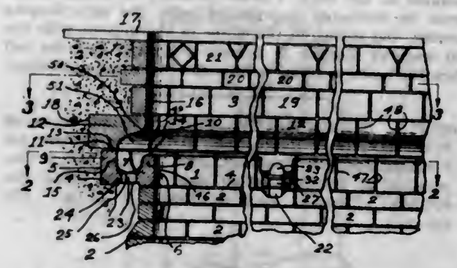


3. In a door operating mechanism, the combination of a motor, a driving gear operatively connected to the motor, a crank shaft, a driven gear coacting with said driving gear and rotatably mounted on said crank shaft, a driving clutch connecting said driven gear to said crank shaft, said clutch being adapted to yield when the load on the crank safe exceeds a predetermined amount, a double throw crank on said crank shaft, door connecting pitmen on the throws of said crank, a motor control means comprising a switch member, and a pair of switch actuating members on said driven gear disposed to stop the motor with the crank arms in a predetermined position.

1,635,759. MANUFACTURE OF WHITE LEAD. GEORGE FREEMAN LLOYD, Brighton, and FREDERICK HARPER CAMPBELL, Melbourne, Victoria, Australia, assignors to Commonwealth White Lead and Paints Proprietary Limited, Melbourne, Australia. Filed Aug. 8, 1924, Serial No. 730,937, and in Australia Aug. 10, 1923. 3 Claims. (Cl. 23—71.)

2. In the manufacture of white lead, the step which comprises reacting upon 112 parts of lead monoxide with a sulphating reagent equivalent to 10 to 16 parts of concentrated sulphuric acid in the presence of a small quantity of an acid capable of forming water soluble lead salt, and water in the proportion of not less than one-half and not more than two parts of water for each part of lead monoxide treated.

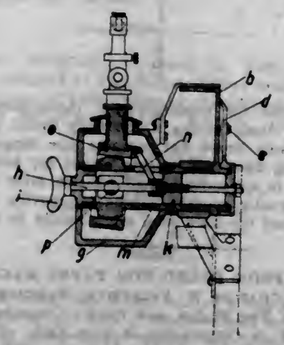
1,635,760. CONNECTER FOR ELECTRICAL CONDUCTORS. CHARLES H. LUNDY, Wickham, W. Va. Filed May 22, 1924. Serial No. 715,152. 1 Claim. (Cl. 173—263.)



A connecter for holding two electrical conductors in end to end relation, comprising a pair of cooperating interfitting sections, one of said sections being semi-cylindrical in formation so as to provide longitudinally extending slot, the edges of which are provided with notches, the other section being arcuate in cross section and formed to fit in said slot and to form a substantial cylinder therewith, and having side extensions adapted to

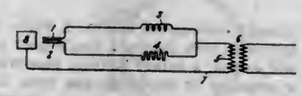
be received in said notches, a pair of series of teeth formed on the inner face of the last mentioned section, the teeth of the pair of series being pitched inwardly, inner teeth of the pair being spaced from each other, and a screw piercing the intermediate portion of the first section and threadedly engaged with the intermediate portion of the second section.

1,635,761. PROCESS OF DYEING SILK. EUGENE L. MAUPAI, New York, N. Y. Filed Feb. 1, 1926. Serial No. 85,380. 8 Claims. (Cl. 8—5.)



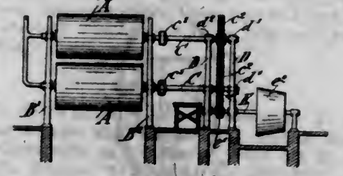
1. A step in the process of dyeing silk with a dye of the class including chromogene, autochrome, and indigosol, and a metallic salt having oxidizing properties, which comprises redeveloping previously dyed silk in a highly concentrated boiling soap solution.

1,635,762. SCUM GUTTER. MONTROSE P. MCARDLE, Webster Groves, Mo., assignor to Hydraulic-Press Brick Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 31, 1925. Serial No. 66,004. 4 Claims. (Cl. 4—172.)



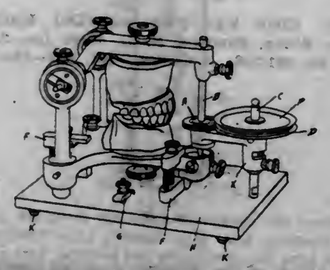
1. In a structure of the class described, the combination of a block having front and rear upwardly projecting flanges to form an intermediate gutter; and a second block having its bottom face supported on the top face of the rear flange, and having a front portion overhanging the said gutter and forming a continuation of the rear face of said gutter, the rear portion thereof projecting beyond the rear face of the flanged block to balance the weight of the overhanging front portion.

1,635,763. GUN SIGHTING DEVICE. CLEMENS OTTO, Unterluss, Germany, assignor to the Firm Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Filed Apr. 21, 1925, Serial No. 24,805, and in Germany Aug. 14, 1924. 3 Claims. (Cl. 33—48.)



3. A sighting device for guns including a barrel and trunnions therefor, comprising a telescope, a pin the axis of which is parallel to the axis of the said barrel, a tangent scale rotatable about an axis crossing the axis of the said pin at right angles thereto, and adjusting mechanism for compensating the sighting device for an inclined position of said trunnions, said adjusting mechanism comprising a screw-threaded spindle the axis of which coincides with the axis of the tangent scale, a bush coaxial with said spindle, a nut engaging with said spindle and constrained to slide longitudinally along said bush, a carrier for said telescope mounted on said pin, a ring supporting said telescope and inclinable with said carrier and a link pivotally connected at one end to said carrier and at the other end to said nut.

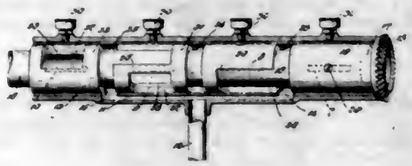
1,635,764. ARC WELDING. EARL B. PAXTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 5, 1927. Serial No. 166,214. 5 Claims. (Cl. 219—8.)



1. The method of welding with single phase alternating current which comprises splitting the phase and maintaining an arc with the dephased currents thus produced.

1,635,765. DRIVE OF DRYING CYLINDERS OF PAPER MACHINES. PAUL PRIEM, Heidenheim-on-the-Brenz, Germany, assignor to American Voith Contact Company, Inc., New York, N. Y., a Corporation of New York. Filed July 17, 1924, Serial No. 726,474, and in Germany Sept. 10, 1923. 3 Claims. (Cl. 34—48.)

1. A drive of drying cylinders of paper machines, the essential parts of which are supported by bearings located on a pedestal which stands isolated from the frame of the paper machine itself, each of the drying cylinders being connected with the adjacent part of the drive by means of a flexible coupling.



1,635,766. DENTAL MACHINERY. CHARLES A. PRIEST, Marion, Ind. Filed Oct. 1, 1926. Serial No. 138,912. 6 Claims. (Cl. 32—1.)

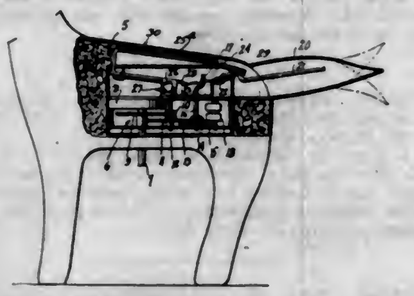
1. A device of the class described having a set of gears mounted on suitable block, an eccentric bushing mounted eccentrically within the driven gear, a set screw holding

said eccentric bushing in any desired position relative to said gear, a pulley directly connected to the driving gear substantially as described.

1,635,767. ROTARY VALVE. GEORGE F. RATHBUN, Pontiac, Mich. Filed Dec. 29, 1924. Serial No. 758,642. 4 Claims. (Cl. 123—59.)

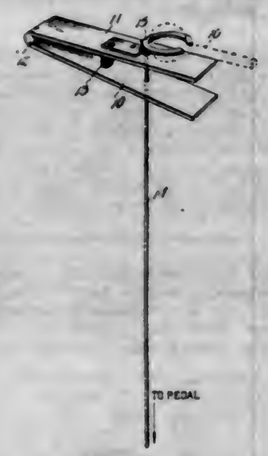
1. In an internal combustion engine, a valve casing, a plurality of cylinders each having a single port communicating with said casing, a rotary exhaust pipe within said casing, and a plurality of valves in the form of sleeves adjustably fitted on said pipe and associated with each of said ports, said sleeves being spaced endwise on said pipe whereby inlet passages are provided therebetween, said sleeves having inlet ports communicating with said passages, and said sleeves and said pipe having coinciding exhaust ports therein.

1,635,768. FAN. DOMINICK RODGERS, Pittsburgh, Pa. Filed May 17, 1924. Serial No. 714,174. 6 Claims. (Cl. 230—1.)



1. In a device of the character described, a plurality of fan blades, each having a number of vanes provided with a flat and a flaring portion, and said vanes being angularly disposed with reference to the planes parallel with, and perpendicular to, the axis of rotation.

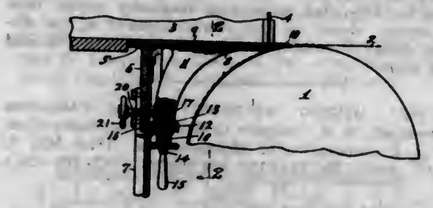
1,635,769. CHIP FAN FOR ROUTING MACHINES. VERNON ROYLE, Paterson, N. J. Filed Jan. 25, 1922. Serial No. 531,798. 6 Claims. (Cl. 170—159.)



1. An article of the character described comprising, a collar, a lateral flange developed from one edge of the collar, and blades projecting from the flange, said blades having their outer edges bent downwardly.

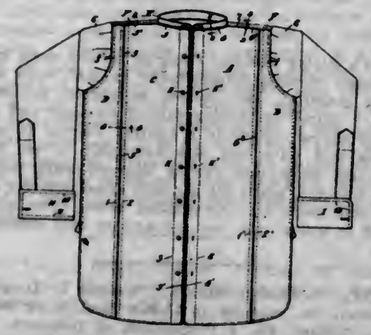
1,635,770. TAIL-WAGGING TOY. OTTO R. STARKE, New York, N. Y., assignor to The Ferdinand Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1927. Serial No. 167,119. 3 Claims. (Cl. 46—40.)

1. In a toy of the nature described, a body a tail movably connected to the body, a motor in the body, a tail wagging member extending into the tail and pivotally mounted in the body, a brake pivotally mounted on the motor in frictional engagement with the tail wagging member, and means on the motor in engagement with the tail wagging member to actuate same and wag the tail when the brake is released from the tail wagging member.



1,635,771. THERMOMETER TUBE. FRANK RANSOME SUNDERLIN, Terre Haute, Ind., assignor to Central Advertising Specialty Company, Terre Haute, Ind., a Corporation of Indiana. Filed Aug. 9, 1923, Serial No. 656,600. Renewed Dec. 9, 1926. 1 Claim. (Cl. 49—14.)

An apparatus for manufacturing thermometer tubes comprising a clamp having a relatively broad flat fixed jaw, a relatively broad flat movable jaw hingedly supported by said fixed jaw, spring means for holding the movable jaw in normally spaced relation from the fixed jaw, and manually operable means for moving the movable jaw toward the fixed jaw, substantially as set forth.



1,635,772. APRON BOARD FOR PAPER-MAKING MACHINES. CHARLES W. VALENTINE, Watertown, N. Y., assignor to The Bagley and Sewall Company, Watertown, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 82,900. 7 Claims. (Cl. 92—44.)

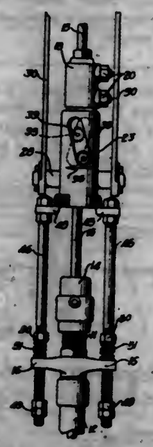
1. The combination in a Fourdrinier paper making machine, of the breast roll and the making wire, an apron board having a rigid portion and a loose portion, and means for locking the loose portion in adjusted position over the breast roll, the loose portion being of sufficient

looseness that when the locking devices are released it will tend to align itself with the breast roll widthwise thereof.

1,635,773. SHIRT. LEWIS T. WILCOX and FRANCES W. WILCOX, Peekskill, N. Y.; said Lewis T. Wilcox assignor to Wilcox Patents Corporation, Peekskill, N. Y., a Corporation of New York. Filed June 29, 1922. Serial No. 571,724. 2 Claims. (Cl. 2—119.)

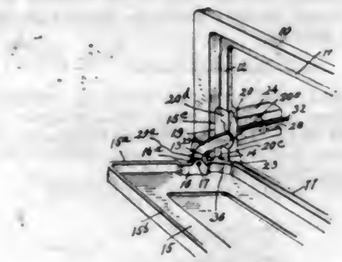
1. An open front negligee shirt having a body, neckband, yoke and sleeves, and in each front portion thereof a member comprising a front section and a side section, the said side section being permanently connected to a part of the yoke, a portion of a sleeve and a portion of the body and extending forwardly of the axillar line of the garment, the said front section extending the entire length of the garment and connected at its rearward edge to the forward edge of the said side section by a line of stitching along which it is separable from the said side section so as to be shifted to a different longitudinal position and to be reconnected to the said side section by a similar line of stitching to eliminate a worn portion at the upper end thereof.

1,635,774. BUTTON. WALTER T. ABEL, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 5, 1927. Serial No. 159,108. 1 Claim. (Cl. 24—95.)



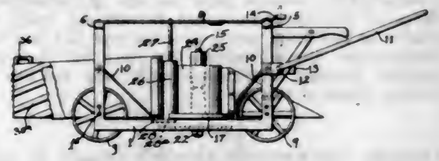
A button comprising a shell having a hub and a peripheral rim above said hub, a frusto-conical separate chamber wedged downwardly within the hub, the bottom wall of the chamber having an opening and the portions about the opening extending upwardly into the chamber, the bottom hub being pierced and the said opening in alignment with the opening of the chamber, a tack adapted to be forced through said openings, integral means in the chamber and in alignment with said openings for deflecting the prong of the tack to cause the same to curl between the side wall of the chamber and the fractured metal portions about the opening in the bottom of the chamber.

1,635,775. KEY-VALVE PAD FOR MUSICAL INSTRUMENTS. PAUL ARTHUR, Elkhorn, Wis., assignor to Frank Holton & Co., Elkhorn, Wis., a Corporation of Illinois. Filed Sept. 24, 1921. Serial No. 503,074. 2 Claims. (Cl. 84—385.)



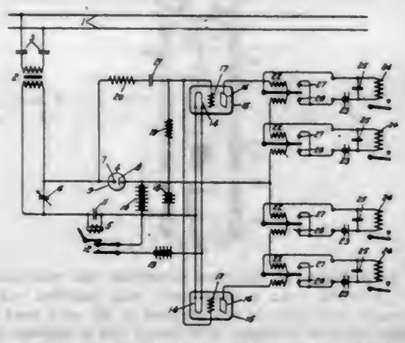
2. In combination, a key plate having a relatively short peripheral flange, an insertable pad cup for said key plate having a corresponding peripheral flange with the extremity thereof provided with an outwardly extending flange below the edge of the flange on the key plate, said outwardly extending flange on the pad cup constructed to engage the edge of the flange on the key plate, two spaced rings for the pad cup both concentric with said cup and constructed to terminate below the edge of the peripheral flange of the key plate, a pad in said cup inside the smaller of said rings, and a covering over said pad with edge portions disposed between the rings and other edge portions disposed between the outer ring and the peripheral flange of the cup.

1,635,776. SUCKER-ROD ROTOR. DELBERT F. AXELSON, Los Angeles, Calif., assignor to Axelson Machine Co., a Corporation of California. Filed Oct 31, 1922. Serial No. 598,280. 12 Claims. (Cl. 255—14.)



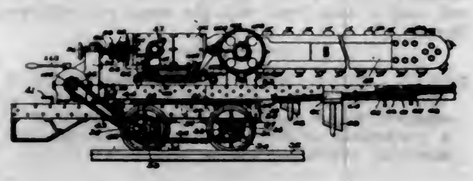
1. In a device of the class described, the combination of: a polished rod; a head upon said polished rod; a yoke upon said polished rod adapted to lift said head; an engager adapted to rotate said head; and a member having sliding engagement with said engager for rotating said engager as said head and said engager reciprocate with relation to said member.

1,635,777. DOOR-OPERATING DEVICE FOR STOVES AND THE LIKE. JEROME C. BOYLAN, Cleveland, Ohio. Filed July 1, 1926. Serial No. 119,797. 13 Claims. (Cl. 126—192.)



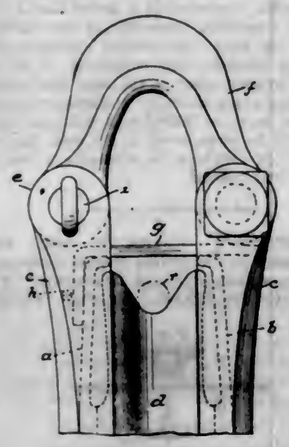
1. In a door operating device for stoves and the like, the combination of a frame provided with an opening therein, a door pivoted to said frame and adapted to close said opening, a member secured to said frame upon the side opposite to said door and provided with a central opening, a spring in said latter opening, and an arm extending through said door opening having one end secured to said door and having the opposite end within said member opening and engaging said spring.

1,635,778. CELERY-BLEACHING-PAPER-PLACING MACHINE. ALBERT P. BUSH, Chula Vista, Calif. Filed June 1, 1926. Serial No. 112,813. 4 Claims. (Cl. 47—3.)



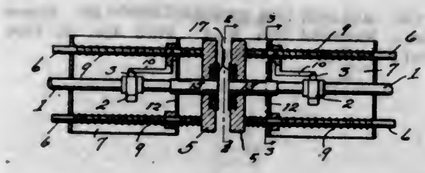
2. In a machine of the class dscribed, revolubie spaced apart paper supporting means, spaced apart guide means positioned behind said paper supporting means, and inclined paper depressing means positioned on the adjacent sides of said guide means.

1,635,779. REMOTE-CONTROL CARRIER-CURRENT SYSTEM. EMMETT F. CARTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 18, 1925. Serial No. 51,011. 6 Claims. (Cl. 177—352.)



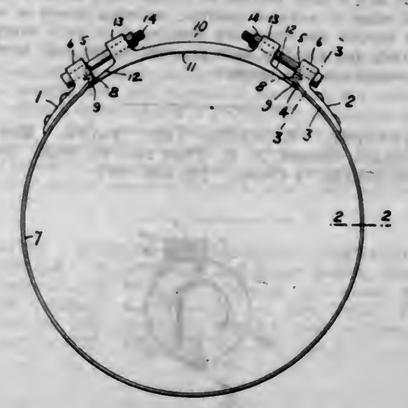
1. In combination, an electron discharge device comprising an anode, cathode, and control element, an output circuit including a tuned relay connected to the discharge device, a control circuit, means in said control circuit responsive to carrier frequency energy for controlling the supply of current to heat the cathode, and means for supplying modulating frequency energy from said control circuit to the control element of the discharge device to thereby control the energization of said tuned relay.

1,635,780. MINING MACHINE. FRANK CARTLIDGE, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 1, 1918. Serial No. 231,915. 124 Claims. (Cl. 262—28.)



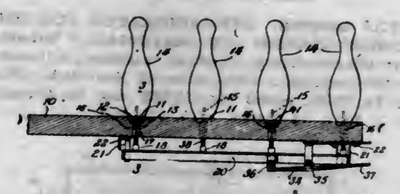
1. In a mining machine, a pair of parallel ways, cutting mechanism movable longitudinally in said ways during cutting operation, said cutting mechanism including a motor, a cutter bar having cutting elements and bodily movable during cutting in a position wherein it extends between said ways and also adjustable to cut a kerf above said ways, said cutting elements being arranged to cut a kerf to admit the bar, and means deriving power from said motor for transmitting power from one end thereof to swing said bar and actuate said cutting elements.

1,635,781. LOGGING BLOCK. WALTER H. DICKINSON, Chester, Pa., assignor to United Steel Block Corporation, Chester, Pa., a Corporation of Delaware. Filed Mar. 5, 1925. Serial No. 13,121. 5 Claims. (Cl. 254—197.)



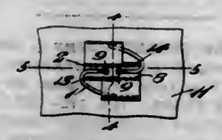
1. A pulley block having a shackle, a sheave rotatably mounted in the housing of the block, and a separable stationary rope guard independent of the block structure adapted to be inserted in the space between the sheave and the shackle while the block is under tension and which is readily removable from operative position while the block is under tension to allow the passage of a coupling through said space.

1,635,782. AUTOMATIC AIR-BRAKE COUPLER. MILTON W. DREIBELBIS, Leesport, Pa. Filed Nov. 3, 1926. Serial No. 145,959. 2 Claims. (Cl. 284—11.)



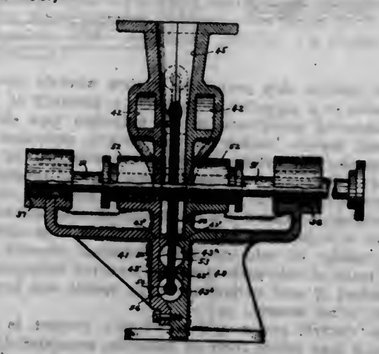
1. In an automatic air line coupler for railway cars, a pair of like devices carried by meeting cars, comprising bumper head plates, a pair of rods carried by each head plate, a perforated face plate for each device, springs surrounding each rod and bearing against said face plates, said bumper head plates being mounted for horizontal movement, a telescopic air line, one portion of which is carried by said perforated plate and is provided with a check valve and the other portion by the head plate, said valve having a valve stem with a tapered projecting end, a valve actuating bar carried by one of said rods and so located with relation to the check valve as to depress the valve stem by contacting with its tapered end and open it, when the movement of the head plate begins, and to hold it open until the head plate has returned to full forward position.

1,635,783. HOSE CLAMP. HOWARD W. GOODALL, Aldan, Pa. Filed Apr. 8, 1926. Serial No. 100,528. 3 Claims. (Cl. 24—19.)



1. A circular hose clamp including terminals having divergent arcuate and inclined inner faces and end notches, a ring section having end hooks engaging said notches and having its end portions conforming to said inclined faces, a saddle having an arcuate inner face and beveled outer faces underlapping the end portions of the ring section which conform to the inclined faces of the terminals, and means for drawing the terminals and the saddle together.

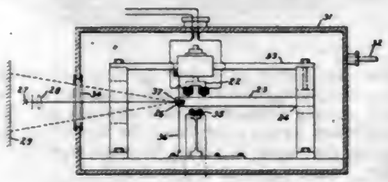
1,635,784. BOWLING ALLEY. JAMES GRIFFITH, New Toronto, Ontario, Canada, assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 23, 1923. Serial No. 634,104. 3 Claims. (Cl. 273—46.)



1. The combination of a bowling alley bed having a plurality of openings therein, a frame beneath the bed, a plurality of pins arranged in said openings and having weighted heads resting freely upon the frame, and means for moving the frame to thrust the pins upward in the openings.

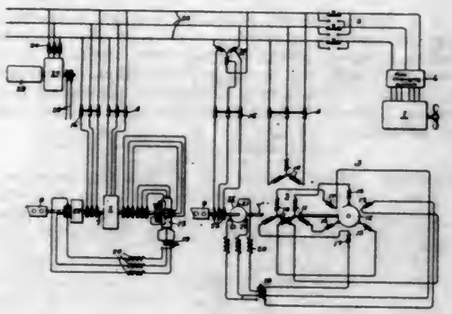
1,635,785. BUTTON FASTENER. ANNA L. GROSS, Philadelphia, Pa. Filed Apr. 7, 1926. Serial No. 100,294. 3 Claims. (Cl. 24—103.)

1. A button fastener, comprising a staple and a backing, said backing comprising a piece of sheet material having a central groove provided with apertures to receive the staple and having portions extending laterally in opposite directions from said groove, and having overlapping portions to form loops to receive the free ends of the staple.



1,635,786. PUMP. ROBERT E. L. HOLMES, Davenport, Iowa, assignor to Westco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Delaware. Filed June 16, 1924. Serial No. 720,253. 23 Claims. (Cl. 103—96.)

1. In a rotary pump, the combination of a rotor, a casing enclosing the rotor and having a suitable peripheral inlet and peripheral outlet, a curved passage formed in said casing and extending more than 270° around the casing from the inlet to the outlet, said inlet and outlet being substantially tangential to the curved passage, and crossing each other without communication, said rotor having a multiplicity of pockets therein disposed to engage liquid in said passage, and a stop adjacent the outlet and arranged to substantially prevent the flow of liquid

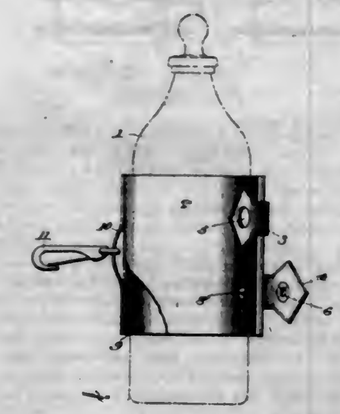


from the outlet portion of the passage toward the inlet portion, the faces of the rotor and the faces of the walls forming said passage being disposed sufficiently close to each other to prevent a substantial flow of liquid radially inwardly.

1,635,787. METHOD AND APPARATUS FOR THE FATIGUE TESTING OF MATERIAL. WILHELM HORT, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 14, 1925, Serial No. 15,653, and in Germany June 7, 1924. 6 Claims. (Cl. 73—56.)

1. The method of testing material for fatigue phenomena which consists in the forced vibrating of a sample of such material under rarefied atmospheric conditions.

1,635,788. POWER SYSTEM. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1924. Serial No. 735,098. 8 Claims. (Cl. 172—237.)

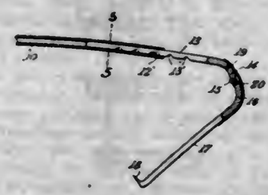


1. An electric ship propulsion system wherein current is supplied to a propeller motor from a plurality of parallel connected generators of the induction type driven by prime movers subject to momentary variations in their speeds and driving torques, characterized by the fact that a secondary winding of each of said generators is interconnected with a regulating machine and means are provided to control the excitation of said regulating machine in accordance with the resistance drop and induced voltage of said generator winding whereby the torque loads of said generators are rendered substantially independent of said variations in the speeds and torques of their prime movers.

3. An electric power system wherein current is supplied to a load device from an induction generator driven by a prime mover subject to variations in its speed and driving torque, characterized by the fact that a regulating machine having an exciting winding and means for controlling its excitation in accordance with the resistance drop and induced voltage of the secondary winding of said generator is interconnected with said secondary winding for rendering the torque load of said generator independent of said variations in the speed and torque of its prime mover.

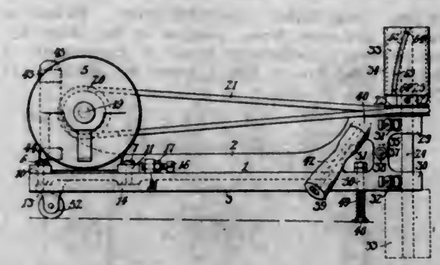
7. An electric power system comprising an induction generator subject to variations in its speed, means for setting the frequency of said system, a regulating machine, an exciting winding for said regulating machine, means for exciting said winding by a component of current of predetermined value and of slip frequency and by a component of current proportional in value to the voltage induced in the secondary of said generator by variations in the generator speed and means for stabilizing the said exciting current whereby the output of said generator is maintained constant.

1,635,789. HOLDER FOR NURSING BOTTLES. BETTIE HYMAN, Richmond Hill, N. Y. Filed Apr. 23, 1926. Serial No. 104,098. 2 Claims. (Cl. 215—11.)



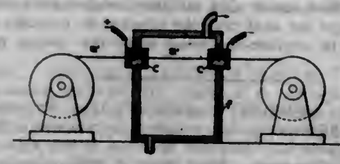
1. A holder for nursing bottles comprising a flat band adapted to wrap around a bottle and engage it by frictional contact, said band including a soft rubber lining portion no longer than the outer circumference of the bottle and a body portion so proportioned as to overlap itself when in wrapped position, fastening means on said body portion for removably securing it in such wrapped position, and a safety hook attached to the body portion for securing it to a support.

1,635,790. RADIATOR VENT VALVE. EDWARD JACOBUS, Newark, N. J. Filed Dec. 31, 1926. Serial No. 158,172. 4 Claims. (Cl. 236—66.)



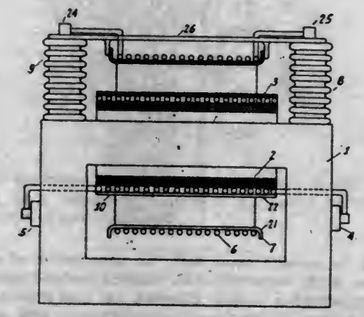
1. A valve of the character described, comprising a casing having an inlet and an outlet, said outlet having an outwardly facing valve seat, a thermostatic element mounted exteriorly on said casing to move toward and from said valve seat upon influx of hot and cold fluid respectively into said casing, and a valve head mounted between said thermostatic element and said valve seat and unconnected with either thereof to close said outlet independently of said thermostatic element upon decrease in pressure in said casing below atmospheric and freely movable independently of said thermostatic element away from said valve seat upon influx of cold fluid under pressure into said casing, said valve head being forcibly actuated into engagement with said valve seat by said thermostatic element upon influx of hot fluid into said casing.

1,635,791. ADJUSTABLE TIE CLASP. FREDERICK JAGEMANN, New York, N. Y. Filed Nov. 10, 1926. Serial No. 147,409. 4 Claims. (Cl. 24—81.)



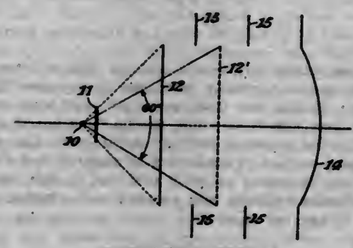
1. A tie clasp comprising an ornamental sleeve, a pair of oppositely disposed bars telescopically engaged in said sleeve, rear members pivoted to said bars, and means on said rear members to grip the rear of a necktie.

1,635,792. GRINDING MECHANISM. CHARLES BERNARD KELLER, Jenkintown, Pa., assignor to Harry C. La Rue, Jenkintown, Pa. Filed July 7, 1925, Serial No. 41,919. Renewed May 26, 1927. 4 Claims. (Cl. 51—176.)



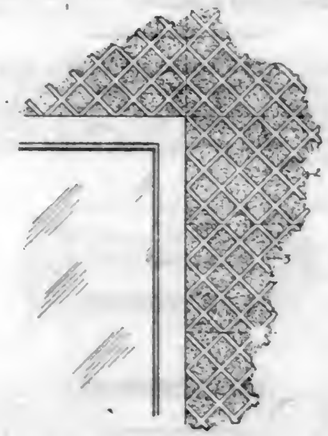
4. In a portable surfacing machine, arranged to interchangeably operate rotary abrasive tools with their axes parallel with and vertical to the floor; the combination with a frame having a journal for the rotary shaft of such a tool, and having different base members, respectively arranged to support said frame with the axis of said journal alternatively parallel with, and perpendicular to, the floor; of means arranged to rotate said tool shaft.

1,635,793. METHOD OF WORKING REFRACTORY METALS. FRITZ KOERP and KURT MOERS, Berlin-Charlottenburg, Germany, assignors to General Electric Company, a Corporation of New York. Filed Apr. 29, 1924, Serial No. 709,878, and in Germany July 14, 1923. 4 Claims. (Cl. 176—132.)



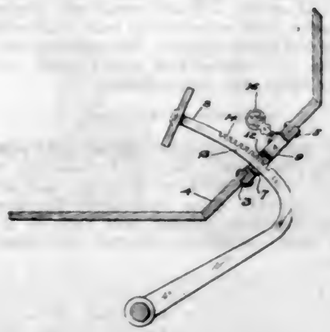
1. The method of treating single crystal refractory metal which consists in repeatedly and successively deforming said metal short of the threshold of recrystallization under conditions favorable to the interlinkage of macrocrystals, thereby incidentally hardening the metal and thereafter heating it to a temperature at which the hardness of said metal is reduced.

1,635,794. TRANSFORMER. WILHELM KUMMERER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Aug. 18, 1925, Serial No. 50,981, and in Germany Sept. 9, 1924. 5 Claims. (Cl. 175—359.)



1. A transformer comprising, a magnetic circuit, a tube of insulation surrounding a portion of said circuit, a first winding surrounding said tube of insulation, a first metal tube surrounding said first winding, post insulators resting upon said circuit, a second metal tube supported by said insulators, said second metal tube surrounding and being in spaced relation to said first winding, and a second winding surrounding said second metal tube, said metal tubes being split longitudinally.

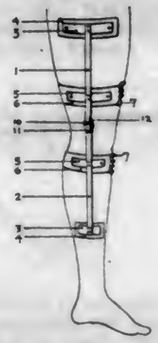
1,635,795. METHOD OF AND APPARATUS FOR PROJECTING IMAGES. ADOLPH LINNEBACH, Dresden, Germany, assignor to John H. Kliegl and Anton T. Kliegl, Copartners, doing business as Universal Electric Stage Lighting Company, New York, N. Y. Filed June 8, 1922. Serial No. 566,747. 4 Claims. (Cl. 272—10.)



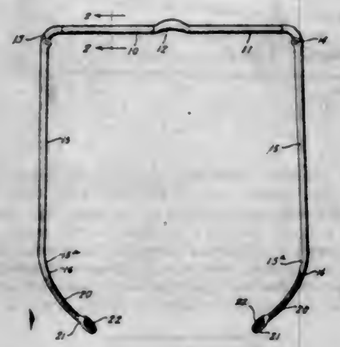
1. The method of forming a background for the stage of an amusement house, which method consists in projecting a substantially undistorted image from a translucent object upon a screen, by projecting a cone of light having an apex angle of more than 60° upon the screen through the object; and substantially preventing the passage, to the side of said object remote from the screen, of rays of light other than those bounded by the cone.

1,635,796. ACOUSTIC WALL CONSTRUCTION. GEORGE P. LITTLE, Cleveland Heights, Ohio. Filed Jan. 6, 1926. Serial No. 79,528. 10 Claims. (Cl. 20—4.)

1. In an acoustic panel unit, the combination of a base member, a rib structure, and sound absorbent material, with interlocking means disposed on the edge of the panel adapted to comprise dove-tail joints with an adjoining panel.



1,635,797. AUTOMOBILE CLUTCH LOCK. FRANK A. MIRANDE, San Leandro, Calif. Filed Sept. 16, 1922. Serial No. 588,695. 2 Claims. (Cl. 70—128.)



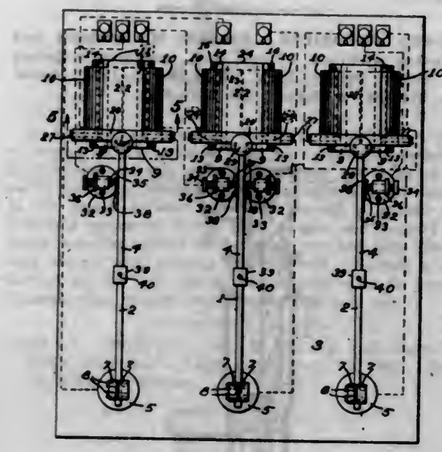
1. In an automobile clutch lock, a clutch lever provided on one side with a plurality of recesses aligned in an arc having the pivot point of said lever as its center, a key lock fixed solely to the floor board of the automobile and provided with an opening through which the recessed portion of said lever is adapted to be reciprocated longitudinally of said arc, and a bolt in said lock positioned opposite said recesses and adapted to be engaged in any one thereof.

1,635,798. ORTHOPEDIC APPLIANCE. HARRY J. MORRIS, Pasadena, Calif. Filed Feb. 9, 1925. Serial No. 7,915. 2 Claims. (Cl. 128—88.)

1. A limb straightener comprising a thigh member and a shin member pivotally connected together to constitute a knee-joint, said knee-joint having a suitable shaft mounted in borings in both thigh and shin members with suitable heads mounted on either end of said shaft, said shaft being long enough and said borings being large enough to permit lateral movement on said shaft of both thigh and shin members when said knee-joint is flexed, forming a right angle; said thigh member extending somewhat below said pivotal connection and ending in a curve and abutting against said shin member and said shin member extending somewhat above said pivotal connection and ending in a curve and abutting against said thigh member causing pressure to be exerted against said shaft heads when said limb straightener is fully or partly extended, thus allowing pivotal action under stress by forcing the bends that form that portion of the pivotal section.

1,635,799. EYEGLASS CONSTRUCTION. EDWIN D. NERNEY, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Jan. 4, 1924. Serial No. 684,338. 11 Claims. (Cl. 88—52.)

5. In construction for eyeglass temple bars, in combination, a main body portion of celluloid, means at the forward end thereof for connection with an eyeglass frame, said main body portion curving downwardly at its rear end, a metallic member extending downwardly, rearwardly and inwardly from said curved rear end of said main body portion, and a flexible celluloid covering over said metallic member, said metallic member comprising a resilient core for said covering adapted to hold the same yieldingly in against the head when the temple bar is in use.

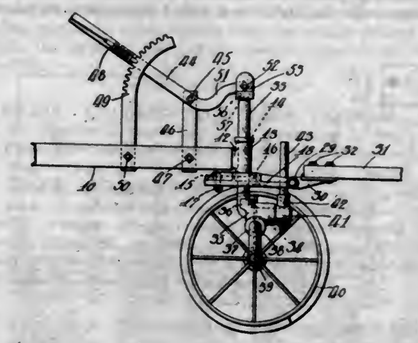


1,635,800. COMPOSITE STRUCTURE. FRANCIS G. OKIE, Philadelphia, Pa., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 4, 1922. Serial No. 541,248. 9 Claims. (Cl. 51—279.)

1. The process for making sandpaper or the like which includes as steps thereof the employment of a flexible sheet of fabric, causing a moisture-proofing material to serve as a vehicle for a binding agent, applying said moisture-proofing material and agent as a coating to the sheet, applying a grit to said coating and allowing the vehicle to penetrate the sheet and carry with it a portion of the binding agent, whereby to form an abrasive article which is flexible, moisture-proof and tenacious when dry.

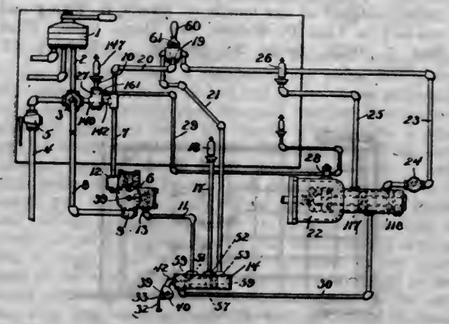
1,635,801. COMPOSITE STRUCTURE. FRANCIS G. OKIE, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Filed Oct. 24, 1923. Serial No. 670,543. 19 Claims. (Cl. 51—279.)

1. The new article of manufacture in the nature of sandpaper, comprising a flexible sheet of fabric, a grit or layer of abrasive particles, and a waterproof stable adhesive bond, including modified Chinawood oil interposed between said grit and said sheet and of a nature to adequately maintain its bonding effect in substantially full measure throughout the effective abrading life of the abrasive article even under sustained application of or immersion in water, but not deleteriously affecting the flexibility of said sheet when dry.



1,635,802. VIBRATORY DISTRIBUTOR OF ELECTRIC CURRENT. EUGENE SIXTEN SANDBERG, Allentown, Pa. Original application filed May 23, 1924, Serial No. 715,264. Divided and this application filed Apr. 20, 1925. Serial No. 24,563. 6 Claims. (Cl. 178—47.)

1. A vibratory distributor of electric current comprising a pair of electro-magnets each having a core, a yoke connecting the core ends of like polarity together and a permanent magnet mounted for adjustment with relation to the yoke.

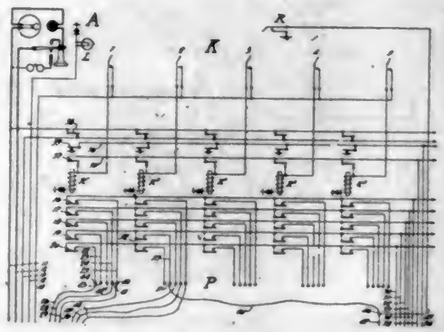


1,635,803. TONGUE-SUPPORTING TRUCK. HERBERT B. SPERRY, Chicago, Ill., assignor to Appleton Manufacturing Company, a Corporation of Illinois. Filed June 12, 1924. Serial No. 719,496. 11 Claims. (Cl. 280—83.)

1. In combination with an agricultural machine, of a stub-tongue therefor, a fore-truck pivotally mounted on a substantially vertical pivot on said tongue for supporting the forward end thereof, a guide tongue connected with the stub-tongue, means carried by said stub-tongue and engageable with the pivotal connection between said stub-tongue and truck for adjusting said stub-tongue on said foretruck, and means for transmitting

angular movement to said truck in relation to said stub-tongue, at a differential rate of movement to relative movements of said tongues.

1,635,804. ACKNOWLEDGMENT VALVE. JEAN FRANCIS WEBB, Jr., New York, N. Y. Original application filed Feb. 26, 1925, Serial No. 11,868. Divided and this application filed Sept. 21, 1926. Serial No. 136,857. 2 Claims. (Cl. 303—50.)

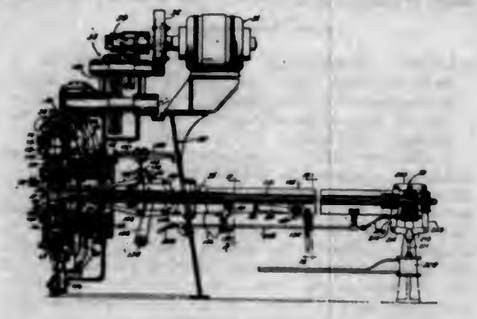


1. An acknowledgment valve comprising a casing having an inlet chamber and two outlet chambers, said casing having valve-seat passages between said inlet chamber and the respective outlet chambers, said casing having bores through the same into the inlet chamber in alignment with the valve-seat passages, screw plugs located in said bores, valves in said passages for engaging said seats, springs between said valves and the respective screw plugs normally to retain the valves seated, stems for said valves, said casing having bores to the outlet chambers through which said stems project, a lever rockably mounted on said casing and having heels to engage said stems whereby when said lever is rocked in one position one valve will be opened and when rocked in another position the other valve will be opened and vice versa.

1,635,805. TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 24, 1923, Serial No. 620,932. Renewed Dec. 3, 1926. 19 Claims. (Cl. 179—18.)

1. In a telephone system, a subscriber's line, a calling device at the station on said line manually operable in accordance with each of the digits in a called telephone

number to transmit a series of impulses over said line to the exchange, a second calling device comprising electrically operated means for automatically generating and transmitting series of impulses over said line in accordance with the digits in a called telephone number, a



manually operable circuit closer for initiating the operation of the second calling device at the option of the subscriber, and automatic switches at the exchange responsive to the impulses generated by either calling device to connect said line with a called line.

1,635,806. FOLDING BED. JOHN S. YOUNG, San Diego, Calif., assignor of one-fourth to Maude L. Young and one-half to Lane D. Webber, San Diego, Calif. Filed Sept. 7, 1922. Serial No. 586,638. 1 Claim. (Cl. 5—136.)

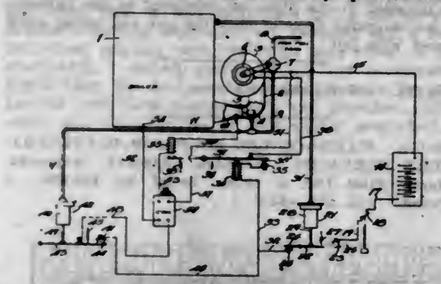
In a folding bed, a head-end supporting member provided with leg portions, other backward leg portions in spaced relation with the leg portions of said supporting member and provided with journal portions, a bed spring supporting frame pivotally mounted on one end in the journal portion of said legs and extending backwardly only from said journal member and a bed spring secured to said bed spring supporting frame and extending forwardly and backwardly of said journal portions and a spring member with one end secured to the forward end of said spring frame and its other end secured to the backward leg portions for balancing said spring and frame relatively to said head-end supporting member.

1,635,807. MEANS FOR SHEARING TUBULAR MEMBERS. WALTER E. AMBERG, Chicago, Ill., assignor to William O. Peterson and Bernard L. Engelke, Chicago, Ill. Filed Jan. 19, 1924. Serial No. 687,321. 17 Claims. (Cl. 164—40.)

1. The method of transversely severing a metallic tubular member in twain along a line of separation, which consists in subjecting said member to opposed coacting non-rotary inner and exterior cutting edges that lie in the plane of separation, and then through the medium of relative revoluble movement between the tubular member and the cutting edges to progressively shear the said member.

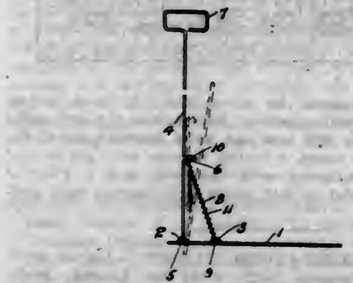
2. A machine for shearing a circular tubular member along a circumference of separation, which comprises an arbor provided with a cutting edge, means for rendering said arbor accessible in order that a circular tubular member to be sheared may embrace the same, a shear-ring exteriorly of said arbor and adapted to embrace said circular tubular member, said shear-ring being locked against rotary motion, and means for imparting an orbital movement to said shear-ring thereby progressively shearing said tubular member along the circumference of separation.

1,635,808. VAPORIZER. RAYMOND M. ANDERSON and STANLEY M. UDALE, Detroit, Mich., assignors to George M. Holley, Detroit, Mich. Filed May 5, 1924. Serial No. 711,029. 3 Claims. (Cl. 261—63.)



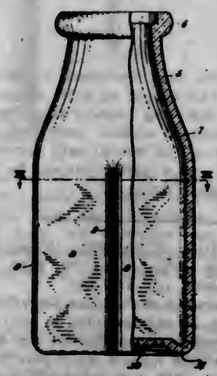
1. A vaporizer comprising a mixing chamber, a fuel nozzle discharging therein, a mixture outlet, a throttle valve therein, said throttle valve being adapted to separate the air into two equal parts and to direct the fuel into one half, two conduits leading from said mixture outlet into which said equal portions of the air are directed, means for heating that conduit into which the fuel is directed by said throttle valve, means for reuniting the two air streams into a common outlet.

1,635,809. AUTOMATIC CONTROL SYSTEM FOR BURNERS. OSCAR F. CARLSON, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,309. 14 Claims. (Cl. 158—31.)



1. In combination, a burner, electrically operated means for forming a combustible mixture for said burner, and

ignition means for igniting said combustible mixture, the setting into operation of the electrically operated means

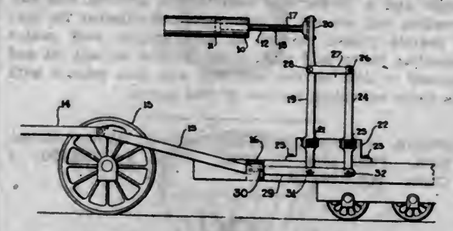


being dependent upon the prior operation of the ignition means for igniting the initial charge of the combustible mixture in the burner.

1,635,810. FURNACE-RADIATOR-FLUE CLEANER. EDGAR W. CLEVELAND, Holland, Mich. Filed Dec. 19, 1921. Serial No. 523,324. 2 Claims. (Cl. 15—242.)

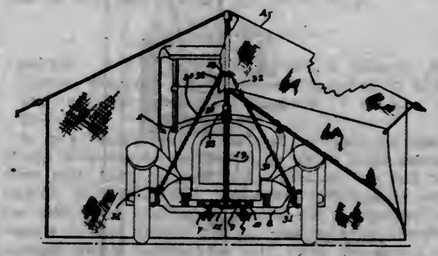
1. A device of the class described, comprising a plate of metal, an elongated flexible wire pivotally connected to the plate at one end and adjacent one edge of the plate, said wire having a laterally extending eye formed in its length between the ends thereof, a second wire pivotally connected to the plate at one end a short distance from the pivotal connection of the first wire thereto, said second wire passing through said eye, and a stop formed at the free end of said second wire to prevent disconnection of said second wire from said eye.

1,635,811. BOTTLE. IRVA J. BLAKE and HARRY H. HART, Sacramento, Calif. Filed Jan. 13, 1925. Serial No. 2,098. 2 Claims. (Cl. 215—1.)



1. A milk bottle comprising a neck portion and a body portion, said body portion being rectangular in cross section with the flat side walls merging into curved corner edges, a continuous bead depending from the bottom of the body portion with the upper end of the inner side wall of the bead abruptly merging into the bottom of the body portion at an angle to the plane thereof to define an inner cavity forming a vacuum cup, said bead being curved in cross section with the radius thereof less than the radii of the curved corner edges of the body portion.

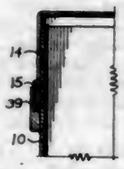
1,635,812. CHLORINATED-RUBBER VARNISH. NORRIS BOEHMER, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 26, 1924. Serial No. 734,329. 2 Claims. (Cl. 134—17.)



2. A liquid coating composition comprising a clear stable solution of chlorinated rubber incorporated with boiled drying oil, such oil being boiled to about the maximum degree compatible with the miscibility therewith of the specific chlorinated rubber employed.

1,635,813. LOCOMOTIVE DRIVING MECHANISM. JOHN LOUIS BORSKI, Anderson, Tex. Filed May 24, 1926. Serial No. 111,127. 5 Claims. (Cl. 105—37.)

1. In a driving mechanism, for railroad locomotives, of the class described, a supplementary piston rod pivotally connected to a piston rod and to the upper extremity of a vertical driving rod, the said vertical driving rod pivotally attached to a pin rigidly attached to a supporting block mounted on the running gear of the said railroad locomotive and rigidly attached thereto, a supplementary vertical driving rod pivotally attached to a second pin rigidly attached to the said supporting block, and having pivotally attached at its upper extremity a cross rod pivotally attached to the said vertical driving rod, a cross head rod pivotally attached to the cross head of the said locomotive, and pivotally attached to the lower extremities of the said vertical driving rod and the said supplementary driving rod, so as to decrease the linear motion of the said cross head relative to the linear motion of the said piston rod.

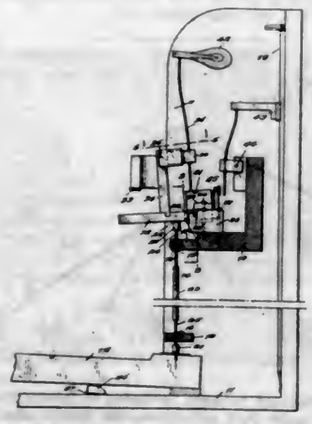


1,635,814. AUTOMOBILE ATTACHMENT. JOHN BOUCK, Akely, Minn. Filed Jan. 25, 1926. Serial No. 83,662. 3 Claims. (Cl. 135—9.)

2. A canopy for vehicles including a frame, the latter comprising angle bars secured to the under side of said vehicle adjacent the front and rear portions thereof, horizontally extending members mounted in said angle bars and projecting beyond the front and rear portions

respectively of said vehicle, connecting members extending transversely across the free ends of said horizontal members, vertically extending members carried by said connecting members, a horizontally extending member connecting the upper free ends of said vertical members and extending longitudinally over the top of said vehicle, braces between said last mentioned vertical and horizontal members and a covering supported by said frame and extending over said vehicle.

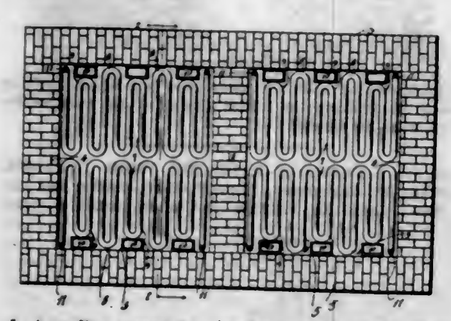
1,635,815. VACUUM PRESERVER. ARIE B. BRIGGS, Denver, Colo. Filed May 18, 1926. Serial No. 109,863. 3 Claims. (Cl. 220—1.)



1. In a vacuum preserving device comprising a container and a lid for said container, a grooved ring surrounding and secured to said container adjacent its top; a flexible gasket carried in said groove, said gasket extending above said ring; a rim formed on said lid and adapted to slide on the container wall into contact with the above extending portion of said gasket.

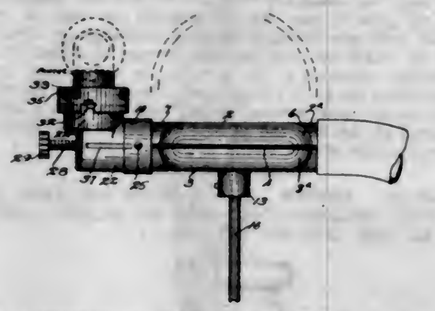
1,635,816. CONCRETE TIE. JAMES S. BROWN, Miami, Okla. Filed Dec. 17, 1926. Serial No. 155,490. 1 Claim. (Cl. 238—91.)

A railway rail tie including a body portion, a plate positioned on the body portion and having bolt openings and rows of spaced openings disposed on opposite sides of the bolt openings, adjustable fastening members having elongated openings and having pins adapted to be positioned in the spaced openings to hold the fastening members in various positions of adjustment.



1,635,817. PIANO ACTION. CHARLES EWEN CAMERON, Jr., East Orange, N. J. Filed Apr. 26, 1923. Serial No. 634,699. 23 Claims. (Cl. 84—240.)

6. In a piano action, the combination of a hammer, a stop for limiting the recoil movement of the hammer, and means between the hammer and stop for securing the hammer against rebound, said means including a V-shaped wedge engaging in a similarly shaped slot, said slot disposed in the plane of movement of the hammer, the interengaging faces of both the slot and wedge being covered with felt.

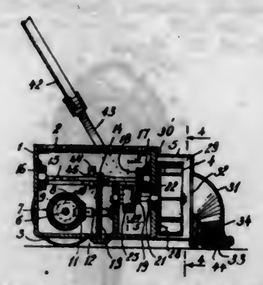


1,635,818. [WITHDRAWN.]

1,635,819. WATER-COOLED ROOF FOR REVERBERATORY FURNACES. MICHAEL CORCORAN, Anaconda, Mont. Filed Dec. 9, 1926. Serial No. 153,589. 3 Claims. (Cl. 263—44.)

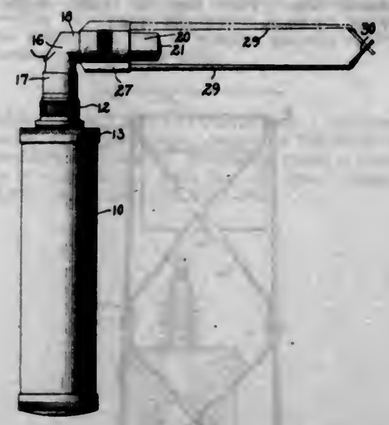
1. A cooling means for reverberatory furnaces, including an ore treating chamber having side and end walls and a roof, the side and end walls extended above the roof to form a recess, a cooling member arranged in said recess and contacting with the roof, and a filler of granular material in said recess and covering said cooling member.

1,635,820. WATER-POWER UTILITY. IRVING CUMMINGS, Los Angeles, Calif. Filed Dec. 7, 1925. Serial No. 73,741. 6 Claims. (Cl. 253—136.)



6. A device of the class described, including a motor shell for a wheel and having an inlet nipple tangent to the wheel, and a mounting element engaging the nipple and connectible with a conduit outlet, and having a valve to vary flow to the wheel; said element having a lateral gasket cup and a gasket therein to jam against the end of the conduit outlet.

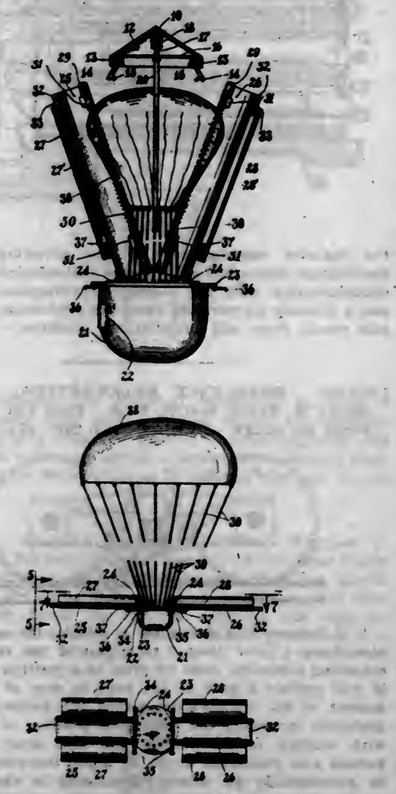
1,635,821. SUCTION CLEANER. PASQUALE DADDIO, New York, N. Y. Filed June 26, 1923. Serial No. 647,896. 2 Claims. (Cl. 15—18.)



1. In a suction-cleaner of the class described, a driving-mechanism housing, an axle mounted in said housing and having ground-wheels secured thereto for driving it, a one-way clutch on said axle, a bevel-gear loose on said axle and connected with and actuated by said clutch, a short-shaft at right angles to said axle and provided with a small bevel-gear meshing with said bevel-gear on

the axle, speed-multiplying gearing comprising a large gear-wheel fixed on said short-shaft and a counter-shaft parallel with said short-shaft and provided with a small gear-wheel meshing with the large gear-wheel on said short-shaft, a second gear-wheel on said counter-shaft larger than the first-mentioned one, a short fan-shaft parallel with said counter-shaft and provided with a small gear-wheel driven by said second gear-wheel on

said counter-shaft, a one-way acting clutch on said fan-shaft serving to drive the fan in one direction, said small gear-wheel on said fan-shaft being located between the fan and the one-way clutch thereon, a fan housing mounted on the forward end of said driving-mechanism housing, the said fan shaft extending into said fan housing, a fan on said shaft in the fan housing and said fan housing being provided with an intake and an outlet, said outlet being adapted to be connected with a dirt collector.

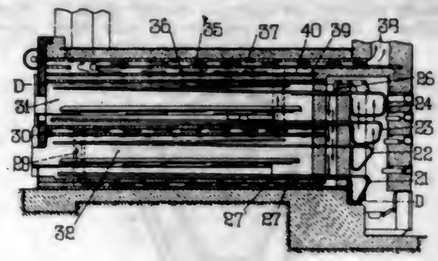


1,635,822. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Geneva, N. Y., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Mar. 5, 1925. Serial No. 13,236. 2 Claims. (Cl. 128—6.)

1. In combination with the illuminating head of a diagnostic instrument, a light condensing lens, a sleeve carrying said lens and adjustably mounted on the illuminating head, an extension on one side of the sleeve, a reflector support mounted in said extension, and a reflector carried by the support in line with the sleeve.

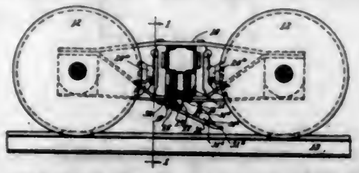
1,635,823. PARACHUTE. ERNESTO DI GIULIO, Lynn, Mass. Filed Feb. 25, 1927. Serial No. 170,957. 3 Claims. (Cl. 244—21.)

3. A parachute with associated holding and releasing means for a flying machine, comprising a cone shaped member secured to the flying machine, a gondola, central wing members hingedly attached thereto, end wing members hingedly attached to the central wing members, the end wing members being foldable against the central wing members, means for normally urging the end wing members to open position, means for normally urging the central wing members to open position, means for releasably securing the end and central wings in closed position to the cone shaped member, said latter means



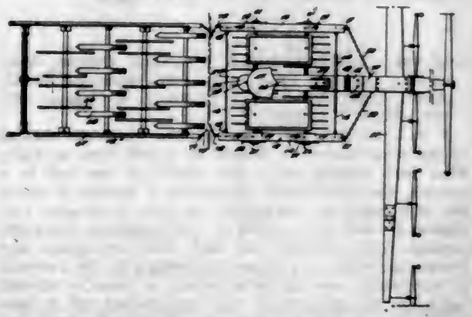
consisting of levers pivoted to the cone shaped member, means for engaging the levers to the wings in a certain position of the levers, a disc slidably mounted in the cone shaped member, a spring urging the disc to lock the levers in the said certain position, and a rod attached to the disc for manually moving the disc from the locking position, and a collapsed parachute sail attached to the gondola, and housed within the folded wings.

1,635,824. BAKER'S OVEN. WILLIAM DREDGE, Manchester, England. Filed Nov. 9, 1925, Serial No. 67,922, and in Great Britain Nov. 26, 1924. 6 Claims. (Cl. 107—63.)



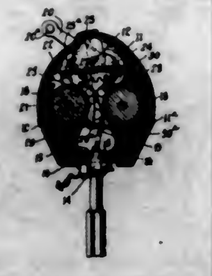
5. In a baker's oven of the kind in which the heating of the oven-chamber is effected by closed tubes partially filled with heating liquid and heated at one end in a furnace, the combination comprising a furnace in which the said tubes are heated at one end, a chamber contiguous to said furnace and in communication therewith through which chamber the said tubes are passed and therein subjected to a secondary heating by the products of combustion passing therethrough, a chamber extending below the sole-plate of the oven-chamber and in communication at one end with the chamber in which the secondary heating of the tubes is effected, a chamber external to and superimposed upon the top of the oven-chamber and having communication with the interior of

the oven-chamber at a plurality of points so as to form a collecting-chamber for drawing off superfluous vapors from the oven-chamber, a chamber external to and superimposed upon the collecting chamber, vertical conduits connecting the front end of the sole-plate chamber with



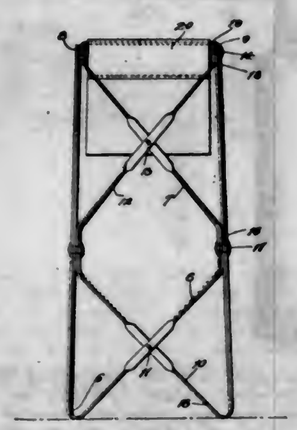
the chamber superimposed on the collecting-chamber, controllable means for placing the collecting-chamber in communication with the chamber superimposed thereon, and a chimney for carrying away the combustion products and vapors from said superimposed chamber.

1,635,825. EMERGENCY BRAKE-SETTING DEVICE. HENRY M. EAKIN, Seattle, Wash. Filed Feb. 27, 1926. Serial No. 91,241. 8 Claims. (Cl. 246—171.)



1. A brake-setting device for a vehicle, the said device comprising a lever pivoted to a part of the vehicle and extending forwardly from its pivot to a position such that it will contact a part of the road in case of abnormal descent of the vehicle-body toward the roadway, means positively governing the lower-most position of the lever with relation to the vehicle, the said lever being so formed and associated as to be urged downwardly only by substantially all débris encountered in the forward movement of the vehicle, and means operatively connected to the lever for applying the brakes.

1,635,826. AGRICULTURAL IMPLEMENT. WASHINGTON J. ENGLE, Urbana, Ill. Filed Feb. 5, 1923. Serial No. 617,122. 7 Claims. (Cl. 55—30.)



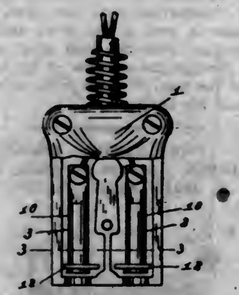
1. In an agricultural tool, the combination with a frame, comprising side members and cross struts pivoted thereto, of brackets depending from the side members, boxes pivoted on upright axes in the brackets, cross shafts having their ends in the boxes, and disks on the shafts.

1,635,827. RAZOR SHARPENER. PAUL A. FRANK, Akron, Ohio. Filed Nov. 10, 1926. Serial No. 147,465. 5 Claims. (Cl. 51—86.)

1. A razor sharpener comprising a pair of frame structures adapted to be closed together upon the frame of a safety razor, an abrading roll journaled on each frame structure, means for driving said rolls, and means for oscillating between said rolls a blade pivoted on the razor frame, the said oscillating means comprising members mounted on the respective frame structures and adapted respectively to force the blade in opposite directions.

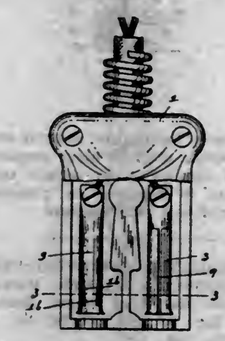
1,635,828. CAMP STOOL. REINHART F. FRANZDORF, Defiance, Ohio. Filed Sept. 24, 1926. Serial No. 137,545. 1 Claim. (Cl. 155—136.)

A chair including a pair of pivotally connected sections, each section embodying a length of metal bent intermediate its ends and extending inwardly and rearwardly, the ends of the length of metal being disposed in proximity to each other, another length of metal having one end secured between the ends of the adjacent length of metal and bent to provide a horisontal bar, said last mentioned length of metal extending downwardly and



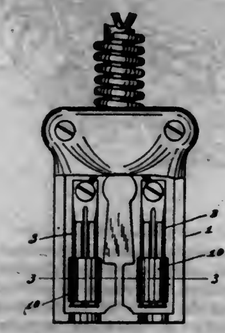
bent to provide a leg section, the free end of the last mentioned length of metal being secured to the body portion of the last mentioned length of metal.

1,635,829. PROTECTING COATING FOR COVERED CONDUCTORS AND METHOD OF APPLYING THE SAME. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 22, 1927. Serial No. 177,424. 15 Claims. (Cl. 91—68.)



11. In the art of electrical insulation, a fibrous jacket or covering for electrical conductors having a coating of stearin pitch and a film of wax-like material applied to the surface of the stearin pitch.

1,635,830. ELECTRICAL CONNECTER. WILLIAM J. GAGNON, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 29, 1924. Serial No. 695,972. 3 Claims. (Cl. 173—332.)



1. A separable connecter for electrical conductors comprising a contact socket and a contact plug adapted to mate therewith, said plug comprising a hollow cylindrical bimetallic shell adapted for frictional and electrical contact with the contact socket, said shell being longitudinally split to permit its lateral expansion under the influence of heat.

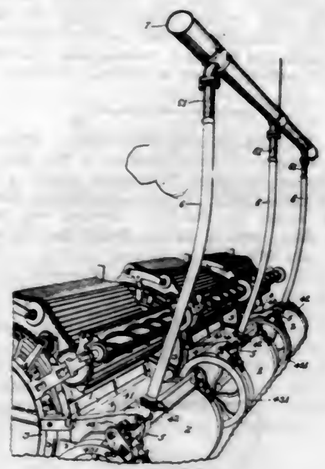
1,635,831. ELECTRICAL CONNECTER. WILLIAM J. GAGNON, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Feb. 29, 1924, Serial No. 695,972. Divided and this application filed Sept. 18, 1925. Serial No. 57,101. 8 Claims. (Cl. 173—332.)

1. A connecter for electrical conductors including a longitudinally split socket formed within an inwardly projecting plug engaging resilient contact-tongue at one side of the split, and having a thermostatic element tending under the action of heat to contract the body of the socket.

1,635,832. ELECTRICAL CONNECTER. WILLIAM J. GAGNON, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Feb. 29, 1924, Serial No. 695,972. Divided and this application filed Oct. 1, 1925. Serial No. 59,835. 3 Claims. (Cl. 172—332.)

1. A connecter for electrical conductors including a polygonal contact socket of sheet material, said socket being longitudinally corrugated, and a thermostatic element in connection with said socket and tending under the influence of heat to contract the latter.

1,635,833. CLOTHESPIN. CHARLES GERBACZEWSKI, Jersey City, N. J. Filed June 4, 1926. Serial No. 113,650. 1 Claim. (Cl. 24—137.)



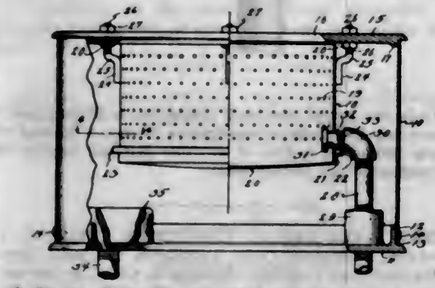
A clothes pin comprising forwardly and rearwardly disposed hinge elements, a pin pivotally connecting said hinge elements together, side members mounted on said

hinge elements, a spring disposed in recesses in the rearward ends of said side members for urging said rearward ends apart to force the forward ends thereof together, and a screw disposed through registering openings in said rearwardly disposed hinge element and in the

side member mounted thereon for securing said side member to said rearwardly disposed hinge element, the end of said screw being adapted to engage said spring for tensioning the latter to regulate the gripping power of the forward ends of said side members.

1,635,834. PNEUMATIC CARD-STRIPPER SYSTEM. WILLIAM H. GOLDSMITH, Brookline, Mass., assignor to Abington Textile Machinery Works, Boston, Mass., a Trust. Filed Dec. 9, 1926. Serial No. 153,555. 15 Claims. (Cl. 19—109.)

1. A suction-stripper system comprising, essentially, a plurality of suction-strippers operating concurrently at a plurality of machines to extract by suction waste, dirt, etc., from among the teeth of card-clothed surfaces of the said plurality of machines simultaneously, air-exhausting means, and a piping-system of dimensions giving volumetric displacement capacity at least equal to the combined displacement capacity of the inlets of said plurality of suction-strippers, and also providing as far as the confluence of the said suction-strippers with the said piping-system a working degree of vacuum substantially uniform with the degree of vacuum at the said air-exhausting means.

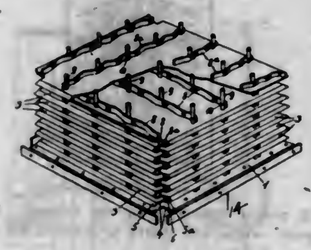


1,635,835. TOY. WILLIAM D. GOOD, Akron, Ohio, assignor to The Good Rubber Company, Kenmore, Ohio, a Corporation of Ohio. Filed Jan. 20, 1927. Serial No. 162,298. 4 Claims. (Cl. 46—37.)

1. In a toy, an inflatable, elastic balloon, a base upon which the balloon rests, and a stem on the balloon, the base having an aperture therein and a crevice having walls which are adapted to pinch the stem, said crevice being spaced from the aperture, the stem being passed

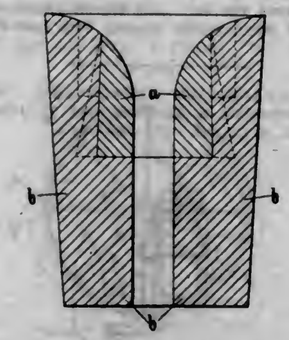
downwardly through the aperture and along the under surface of the base and upwardly through the crevice by which it is pinched to retain the air within the balloon.

1,635,836. OIL BURNER. JAMES T. GROTENHUIS, Orange City, Iowa. Filed May 13, 1926. Serial No. 108,823. 7 Claims. (Cl. 158—87.)



1. In an oil burner, a casing having an open top, a centrally apertured cover plate loosely resting over said top, a mixing bowl suspended from said top and surrounding said opening, an oil delivery pipe secured in the base and terminating near the bowl, and a nipple extended through a wall of the bowl and having a detachable connection with the said pipe, said nipple being accessible through the aperture of the cover plate and removable into the bowl to allow removal of the top and cover plate from the casing.

1,635,837. COMBINATION PHONOGRAPH AND RADIO CABINET. ALFRED H. HAAG, Baltimore, Md. Filed Dec. 29, 1924. Serial No. 758,485. 3 Claims. (Cl. 274—2.)

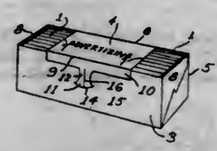


2. In a device of the character stated, a horizontally disposed amplifier, inlets of different lengths leading to the rear thereof from a plurality of sound reproducing devices, and a vertically disposed tone modulator pivoted at the rear of said amplifier and extending towards the exit portion thereof and controlling the exit of sound waves from either of said inlets in combination with a horizontally disposed bar in the front of said amplifier, and a manually operated rod projecting from said modulator and guided by said bar.

1,635,838. HEAT-EXCHANGING ELEMENT. EUGEN HABER, Berlin-Charlottenburg, Germany. Filed Feb. 3, 1922. Serial No. 533,929. 6 Claims. (Cl. 257—245.)

1. An improved heat exchanging element comprising in combination a bottom plate, a top plate and a plurality of intermediate plates, all of said plates having angle portions cut away at the corners, the edges at the ends and at the sides of the intermediate plates being alternately bent downward and upward so that by superposing the plates, cells are formed between said intermediate plates which are alternately open at the ends or the sides so that two flues are formed, and corner pieces inserted in the cut-away corners of all the plates to separate the air flue of the element from the flue for the heating gases.

1,635,839. NOZZLE FOR LADLES USED IN POURING MOLTEN METAL. JOHN KNOWLES HASSALL, Rotherwood, near Ashby-de-la-Zouch, and ANDREW HARRIS, Woodville, England. Filed June 11, 1926, Serial No. 115,167, and in Great Britain June 11, 1925. 2 Claims. (Cl. 22—84.)

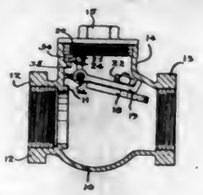


1. In a foundry ladle, a nozzle composed of fireclay and a magnesite, the outlet portion of the nozzle being constructed of fireclay and the inlet portion thereof being constructed of magnesite.

1,635,840. METAL PROPELLER. JAKOB HAW, Friedenau, near Berlin, Germany. Filed Jan. 15, 1925, Serial No. 2,584, and in Germany Oct. 15, 1924. 4 Claims. (Cl. 170—159.)

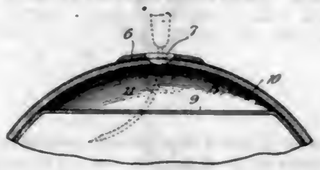
1. A metal propeller for aircraft comprising a dished casting closed at the inner end over its entire periphery and formed wtih cross bars, flange means on the edge of said dished casting, cover plates secured to said flanges and said cross bars, a foot firmly connected with said casting, steel rods fixed to said foot and screw nuts mounted on said steel rods transmitting the stress exerted on said casting to said steel rods.

1,635,841. BRAID PACKAGE. HENRY HEBELER, Jr., St. Louis, Mo., assignor to St. Louis Braid Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 27, 1924. Serial No. 746,035. 1 Claim. (Cl. 206—44.)



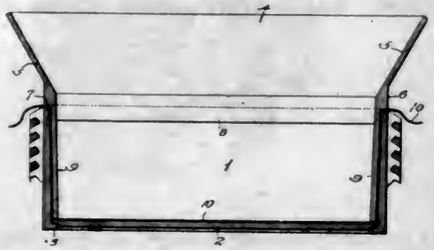
A container substantially rectangular in shape, formed of semi-flexible material having an open top and an integral closure projecting from one side thereof, the ends of the closure terminating short of the ends of the container, whereby openings remain at either end of the top when the latter is spanned by the said closure, the opposite side wall of the container containing a slit, said closure having an integral depending flange engaging said side wall and terminating in a tongue adapted to engage the said slit, said tongue having a neck narrower than the slit and a terminating head wider than the slit, and the said head being split to render the same collapsible in width.

1,635,842. CHECK VALVE. JOSEPH HIRSHSTEIN, Cleveland Heights, Ohio. Filed Sept. 20, 1924. Serial No. 738,833. 5 Claims. (Cl. 251—123.)



5. In combination, a valve body having a valve seat, a branch, a valve closure member, said branch having bearing portions extending from the throat thereof, an arm swingably mounted within the branch supporting the valve closure member, a fulcrum bearing member sup-

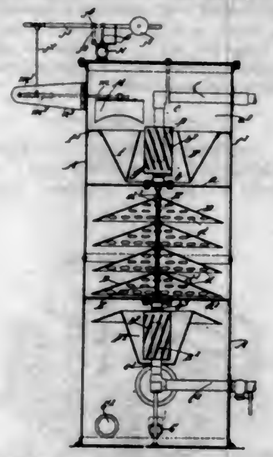
ported in said bearing portions and affording a double pivotal suspension for the arm and suspending the valve closure member, an extension formed on the fulcrum



member and adapted to cooperate with a fixed portion of the throat of the branch, thereby limiting the movement of said fulcrum bearing member.

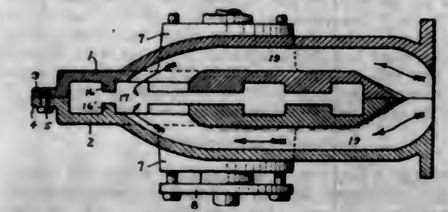
1,635,843. METHOD OF PRESERVING EGGS. GEORGE HOFMANN, Chicago, Ill. Filed June 20, 1923. Serial No. 646,545. 22 Claims. (Cl. 99—8.)

1. The method of preserving eggs which consists in introducing liquid antiseptic material into the interior of the egg to an amount sufficient to cause the contents of the egg to completely fill the space within the shell.



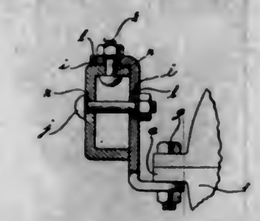
1,635,844. HOPPER FOR MOLDS. JOSEPH J. HOFFMANN, Denver, Colo. Filed Apr. 13, 1926. Serial No. 101,710. 2 Claims. (Cl. 226—51.)

1. A hopper for molds having a surrounding shoulder adapted to rest upon the rim of the mold, depending side strips adapted to extend a slight distance into the mold and depending end plates adapted to extend to the bottom of the mold, said side strips and end plates being adapted to be inserted in a bag, thereby to facilitate the insertion of the bag in the mold.



1,635,845. MEANS FOR SEPARATING WATER AND OTHER IMPURITIES FROM MINERAL OR OTHER OILS OR LIQUIDS. HASTINGS JOHN HOLFORD, Addiscombe, England, assignor of one-half to Percy Portway Harvey, London, England. Filed Sept. 9, 1925. Serial No. 55,273, and in Great Britain Nov. 8, 1924. 5 Claims. (Cl. 210—51.)

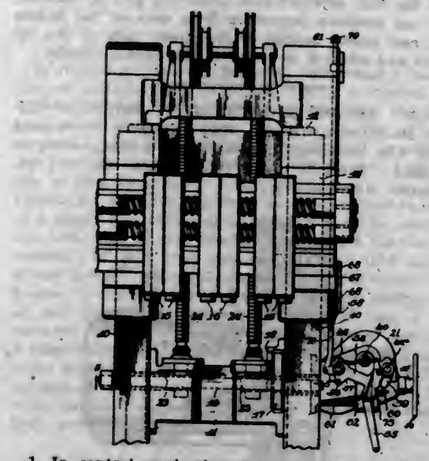
1. Means for separating water and other impurities from oils or like liquids, comprising a column provided with a series of vertically arranged baffles, a freely mounted rotatable distributor into which the liquid enters and through which it passes, reaction surfaces on the said distributor whereby it is rotated by the entering



liquid as it passes through, and an external deflecting surface against which the liquid is directed by said distributor.

1,635,846. PUMP. ROBERT E. L. HOLMES, Davenport, Iowa, assignor to Wesco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Delaware. Filed Feb. 11, 1925, Serial No. 8,554. Renewed Dec. 11, 1926. 6 Claims. Cl. 230—14.)

1. A rotary pump comprising a rotor having a primary and a secondary series of liquid propelling pockets, and a casing for said rotor adapted to enclose the same and define therewith a pressure developing chamber within which said primary series of propelling pockets operate and a second chamber within which the secondary series of propelling pockets operate, a connecting passage between the first and second chambers, and a supplemental port opening directly into said connection passage.



1,635,847. CRANK-CASE REPAIR ARM. HENRY Y. HOOPER, Montclair, N. J. Filed Sept. 17, 1925. Serial No. 56,832. 5 Claims. (Cl. 180—64.)

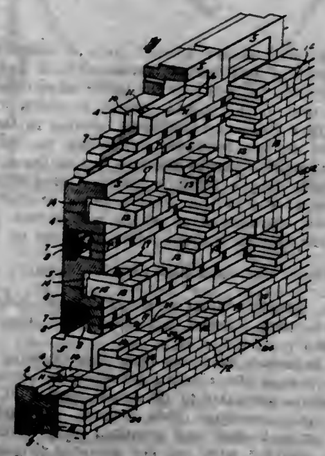
2. A supporting bracket comprising an upper flange to engage a supporting member and lower flanges to engage a supported member, means to secure the lower flange to the supported member, an oversized tapered bolt

hole in the upper flange adapted to overlie a co-operating bolt hole in the supporting member, a co-operating tapered plug adapted to be seated in the tapered bolt hole and having an eccentric bolt hole therein, and a bolt to engage the co-operating holes of the respective members whereby in seating the flange on the supporting member the plug will be automatically adjusted so that its bolt hole alines with that of the supporting member.

1,635,848. CONTROL AND FEED FOR BORING AND DRILLING MACHINES, ETC. WILSON P. HUNT, Moline, Ill., assignor to Moline Tool Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 26, 1925. Serial No. 52,573. 4 Claims. (Cl. 77—32.)

1. In control mechanism for reciprocable tool carriers or the like, a shaft, means for rotating said shaft and reversing the same, separate means for rotating the shaft at a reduced speed, clutches for operatively connecting both of said means to the shaft and having spindles extending laterally therefrom, a lever mounted on one of said spindles, a lateral member thereon, engaged by a part of the carrier when the latter has moved a predetermined distance, a rod connected to said lever, stops on the carrier and rod for actuating the latter, and a coiled spring surrounding said rod and supported by the stop on the latter, said spring adapted to be engaged and compressed by the stop on the carrier whereby to move the lever.

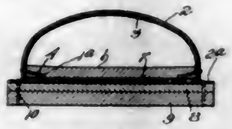
1,635,849. BICYCLE WHEEL. MARTIN ISGUERRA, Kanopolis, Kans. Filed Dec. 27, 1924, Serial No. 758,328. Renewed Apr. 21, 1927. 4 Claims. (Cl. 301—58.)



4. In a bicycle, a rim, a bracket attached to said rim and presenting a hollow boss, an internally screw threaded sleeve rotatable in said boss, a spoke having a screw threaded end engaging in said sleeve, said sleeve being formed to present a notch and an annular groove adjacent said notch in the wall of its bore, a collar slidable on said sleeve and held against rotation with respect to said sleeve, a lug projecting from said collar and normally engaging in said notch, and a spring bearing on said collar to retain the latter in position with the said lug engaged in the said notch.

1,635,850. CLOTHESLINE HOLDER. CHARLES L. KUBISTA, Sleepy Eye, Minn. Filed Dec. 26, 1922. Serial No. 608,983. 8 Claims. (Cl. 68—3.)

1. A clothes-line holder including a post having an aperture, means carried by said post and adapted to have the line passed thereabout to permit withdrawal and extension of the line through said aperture to object-supporting position, tension means normally to hold the line in retracted inoperative position, a detachable cover for said aperture adapted to have one portion of the line secured thereto, and means on said cover slidably to engage another portion of the line whereby upon withdrawal of the cover a plurality of line sections are presented for support of objects.



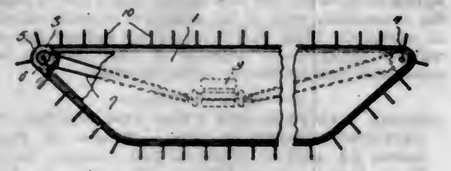
1,635,851. VENTILATED FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn. Filed Sept. 17, 1923. Serial No. 663,110. 3 Claims. (Cl. 110—72.)

1. A wall structure comprising a permanent wall having laterally spaced vertical rows of pockets, in combination with a replaceable inner wall including shelf-

forming tiles having their inner portions anchored in the pockets of said permanent wall, said permanent and replaceable walls being spaced to form an air gap between them, and the blocks of the permanent wall being spaced from each other so as to afford horizontal air passages and air ports, which latter connect said horizontal air passages to said space between the permanent and replaceable walls, and ports in said inner wall connecting said space between walls to the combustion chamber of the furnace.

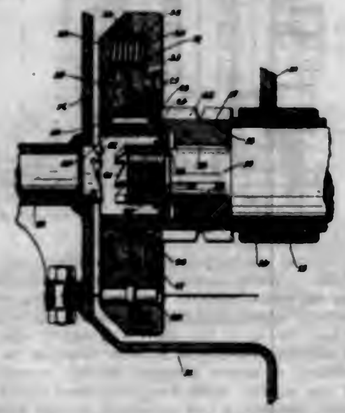
1,635,852. SHOE. LAURIE S. MACDONALD and JOSEPH E. SMALL, Brockton, Mass., assignors to Thompson Bros. Shoe Co., Brockton, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1925. Serial No. 65,183. 1 Claim. (Cl. 36—16.)

A shoe embracing in its construction an insole of extra thickness and an upper secured directly to the insole by stitches passing through the entire peripheral face of the insole and the sub-tending portion of the upper, a sheet of cork conforming to the contour of the insole and covering its entire area but inclosed within the upper beyond the insole-attaching stitches, an outer sole dimensioned to provide a marginal extension projecting outwardly around the entire periphery of the shoe, the upper, beyond the insole stitching, having a marginal extension forming means for attaching the peripheral portion of the outsole to the shoe, and a row of stitches uniting the projecting margins of the upper and of the outer sole around the entire periphery of the shoe.



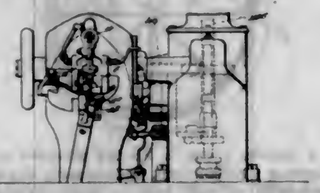
1,635,853. LABEL FOR LIVESTOCK. MINNIE W. MILLER, Salt Lake City, Utah. Filed Nov. 19, 1925. Serial No. 70,133. 2 Claims. (Cl. 40—3.)

1. An animal marker formed from a single strip of pliable material and embodying an indicia and a suspension portion, the width of the latter being considerably less than that of the indicia portion to enable its ready insertion in a comparatively small opening in the ear of the animal to be identified, and means on the indicia portion to securely engage the free end of the suspension portion, said means being so located intermediate the extremities of the indicia portion as to provide a loop, the internal dimensions of which will permit positionment of the marker without undue pressure on the part enclosed.



1,635,854. BOAT. WILLIAM MILLER, Blair, Nebr. Filed Dec. 16, 1925. Serial No. 75,730. 1 Claim. (Cl. 115—63.)

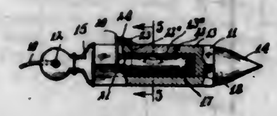
A flat bottomed boat, the ends thereof being inclined inwardly toward the bottom, transversely extending rotatable shafts journaled in the upper portion of the boat adjacent the respective ends thereof, sprocket wheels mounted on each shaft and arranged in pairs, the top of the boat provided with cut out portions through which the sprocket wheels are adapted to extend, sprocket chains trained over the aligning sprocket wheels of each pair and encircling the top, bottom, and ends of the boat, a series of paddle blades extending transversely across each pair of sprocket chains and secured at their lower edges thereto, channeled tracks arranged in pairs



around the boat adjacent each respective pair of sprocket chains, leg members depending from each of the paddle blades, and rollers carried by the lower ends of the leg members and adapted to travel in the channel tracks.

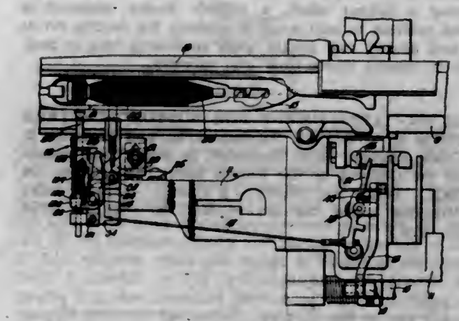
1,635,855. INTERNAL-COMBUSTION ENGINE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 10, 1923. Serial No. 673,871. 1 Claim. (Cl. 74—6.)

In an engine, the combination with the crankshaft thereof, of a member mounted on said crankshaft adjacent the end thereof and having an extension around but spaced radially from the end of said crankshaft, a vibration damper mounted on said extension, a sleeve extending inside of said extension and having a flange to retain said damper on said extension, said sleeve also having a flange at its inner end, and a device on said crankshaft and abutting against said inner flange for retaining said sleeve and damper in position.



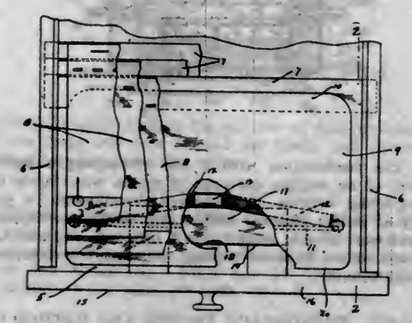
1,635,856. SEWING MACHINE. ALFRED R. MORRILL, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 11, 1919. Serial No. 329,952. 42 Claims. (Cl. 112—35.)

1. A chain stitch sewing machine having, in combination, stitch forming devices including a hook needle, a looper, and mechanism acting automatically upon stopping



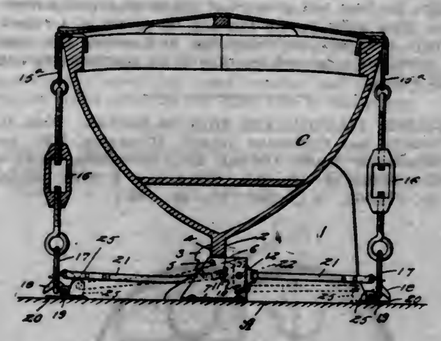
the machine to sever the thread between the shoe and the machine and to grip the end of the thread leading from the supply before the needle is looped in the last cycle of operations, and to cause the needle to misloop during the last cycle.

1,635,857. COMBINATION PLUMB LINE AND LEVEL. HENRY MURRAY, Jersey City, N. J. Filed June 4, 1926. Serial No. 113,668. 2 Claims. (Cl. 33—216.)



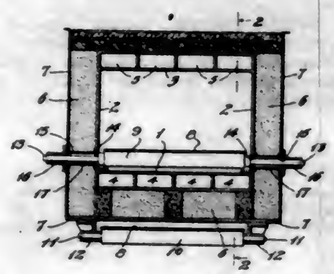
1. A level of the class described comprising a body portion of hexagonal cross-section having a central longitudinal opening therein extending from one end thereof and terminating in spaced relation to the other end thereof, a level vial adapted to be inserted in said opening through the first mentioned end of said body member, a plug comprising a projection having an opening therein for receiving a cord to adapt said level to be used as a plumb bob, said plug being adapted to be inserted in the outer end of said central longitudinal opening after insertion of said level vial for retaining said vial in a proper position, said body portion having a recess therein formed by the removal of a semi-cylindrical section thereof for permitting observation of said vial, a hinge mounted on said body portion adjacent said recess, and a supplementary body portion pivotally mounted on said hinge shaped to conform with the curvature of said semi-cylindrical recess, and adapted to be disposed therein with its outer surfaces flush with the surfaces of said body portion.

1,635,858. FILLING-FEELER MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed July 11, 1924. Serial No. 725,390. 5 Claims. (Cl. 139—270.)



1. A loom having, in combination, a lay, a shuttle, a filling feeler mechanism, a controller, said filling feeler mechanism comprising a feeler lever and a filling engaging member yieldingly mounted on the lever and pressed toward the shuttle, a filling feeler holder, and connections between the holder and the controller, the holder cooperating with the filling engaging member to prevent the latter from following the bobbin rearwardly after replenishment more than a limited distance, so that the yielding movement of the filling engaging member is limited until critical exhaustion is approximated, whereupon the filling feeler holder ceases to restrain the movements of the filling engaging member.

1,635,859. FILING DEVICE. ELMER L. OUCHIE, North Tonawanda, N. Y., assignor to Rand Kardex Bureau, Inc., Tonawanda, N. Y., a Corporation of Delaware. Filed June 15, 1925. Serial No. 37,132. 7 Claims. (Cl. 129—16.)

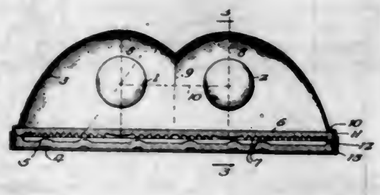


1. In a filing device, a drawer adapted to receive a series of cards in nested position, a bottom stop adapted to yieldingly press against the end card of said series, and catch means adapted to maintain said bottom stop out of engagement with said cards so as to permit the removal of a card.

1,635,860. LIFEBOAT HOLDING AND LAUNCHING MECHANISM. GEORGE W. P. OVERMAN, Norfolk, Va. Filed Oct. 6, 1925. Serial No. 60,825. 6 Claims. (Cl. 9—22.)

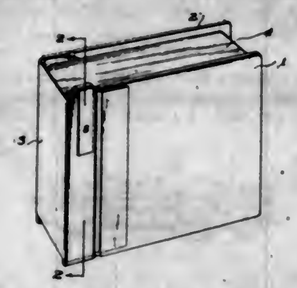
6. In a lifeboat holding and launching mechanism, an operating shaft for holding and releasing a lifeboat arranged longitudinally of the boat when in position on chocks, notched disks arranged to engage the boat keel and hold the boat on the chocks, said shaft being geared to said notched disks, spur hooks adapted to be pivotally mounted on a ship's deck and to engage gripe hooks engaging the side rails of the boat, and means operatively connecting said shaft and the spur hooks aforesaid to actuate them simultaneously with said disks to hold and release the gripe hooks.

1,635,861. LEER CONVEYER. KARL E. PEILER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Aug. 31, 1925. Serial No. 53,550. 7 Claims. (Cl. 49—47.)



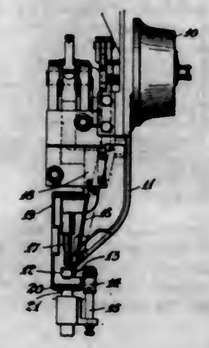
1. The combination with a leer embodying a heated tunnel, of an endless conveyer of woven wire fabric for transporting articles of glassware therethrough, a plurality of rollers disposed within said tunnel for supporting the ware-bearing strand of said conveyer, and bearings for said rollers disposed without the heated environment of said tunnel.

1,635,862. PHONOGRAPH RECORD AND METHOD OF PRODUCING THE SAME. ROBERT QUAIT, Jr., Brooklyn, N. Y., assignor of one-half to Jacob M. Ehrlich, New York, N. Y. Filed July 10, 1923. Serial No. 650,736. 35 Claims. (Cl. 18—48.3.)



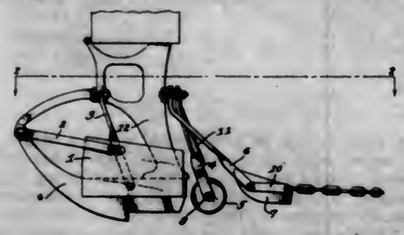
1. The herein-described method of producing sound-records, which consists of printing upon a core of fibrous material such as cardboard, treating said printed core with a water-soluble waterproofing, drying it out, applying to said dry treated core a solution of pure transparent and essentially gum-free cellulose-ester, drying out the same to constitute a transparent and practically non-thermoplastic intermediate coating, applying to said dry coated core a mixture of an abrasive in a solution of transparent cellulose-ester containing a suitable amount of gum-content, drying out the same to constitute a transparent surface-coating that will become sufficiently plastic under the heat and pressure of the usual pressing-operation, then under heat impressing the ridges of a record-matrix into said surface-coating, and cooling the same to constitute a pressed record with its aforesaid printing still visible.

1,635,863. ILLUMINATED SIGN OR SIGNAL. PAUL H. SCHULZ and CHRISTIAN JESSEN, Milwaukee, Wis., assignors to Traffic Control, Inc., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 8, 1923. Serial No. 661,560. 9 Claims. (Cl. 40—136.)



1. A front for an illuminated sign comprising a glass member having translucent portions thereof shaped to correspond in frontal contour to desired sign letters, each of the said portions having a uniform transverse section with a convex rear face and a relatively narrower concave front face.

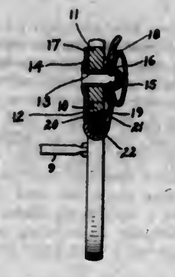
1,635,864. BOOK PULLER. SIDNEY J. STERN, Chicago, Ill. Filed Sept. 20, 1926. Serial No. 136,479. 1 Claim. (Cl. 281—33.)



In combination with a book, a book pull composed of a single strap fastened in a vertical position to one of the sides of the book cover, one end of the strap being loose and adapted to hang over the side of said cover so it can conveniently be gripped by the hand.

1,635,865. RIVET-SETTING MACHINE. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed Jan. 12, 1926. Serial No. 80,721. 6 Claims. (Cl. 218—3.)

4. In a riveting machine, an anvil, a driving plunger having a lateral offset, a slidable pocket mounted in offset relation to said anvil, a raceway for feeding rivets to said pocket, said pocket being resiliently held in position to receive rivets from said raceway.



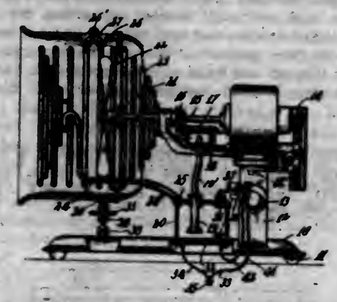
1,635,866. ATTACHMENT FOR COTTON PLANTERS. JAMES S. TOWNSEND, Sacaton, Ariz., and WOFFORD B. CAMP, Shafter, Calif., dedicated, by mesne assignments, to the Citizens of the United States. Filed Dec. 24, 1925. Serial No. 77,572. 1 Claim. (Cl. 111—85.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

In combination with a planter shoe, a V-shaped scraper blade mounted on the forward end of the shoe for removing clods and dry surface soil adjacent the planter shoe,

thereby enabling the planter shoe to penetrate moist earth to make a groove having a slight and uniform depth, means for depositing seed in the groove, a narrow roller for pressing the seed in the bottom of the groove, inwardly earth directing means for covering the seed, and means for leveling the earth, the expanse of the covering and leveling means being less than that of the scraper, thereby leaving nothing but fresh earth for covering the seed.

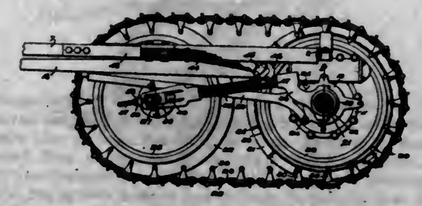
1,635,867. GOGGLES. GEORGE L. TULLY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 2, 1925. Serial No. 12,003. 4 Claims. (Cl. 88—41.)

4. In a device of the character described in combination with a lens frame having a pair of lens rims connected by a bridge having a longitudinal split, a resilient member on one of the split portions, a strap connected to one of the split portions extending over the resilient member and around the other split portion, and interengaging members on the first split portion and the strap adapted to hold the two split portions closely together through the action of the resilient member.



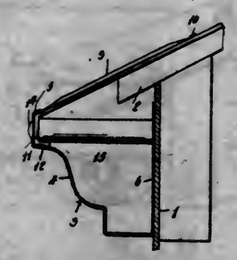
1,635,868. MARKING TICKET. GUSTAF A. WALLIN, Brooklyn, N. Y., assignor to A. Kimball Company, New York, N. Y., a Corporation of New York. Filed July 2, 1923. Serial No. 648,908. 4 Claims. (Cl. 40—21.)

1. A marking ticket comprising a strip of two plies of flexible non-metallic material secured together face to face, a soft wire stiffener interposed between said plies and extending longitudinally thereof, a tongue formed from the strip and extending parallel with the stiffener, the said strip being scored transversely adjacent the free end of the aperture left by the tongue to present a line of fold whereby when the ticket is folded at the score about a portion of the article to be marked with the tongue and the apertured portion of the strip lying at opposite sides of the article the free end of the tongue and the article are clamped between the said apertured portion of the strip and the back-folded end and thus the tongue and the ticket are securely held in position.



1,635,869. AIR COOLING OR HEATING APPARATUS. DEZSÖ WEISZ, New York, N. Y. Filed Aug. 17, 1925. Serial No. 50,567. 2 Claims. (Cl. 257—137.)

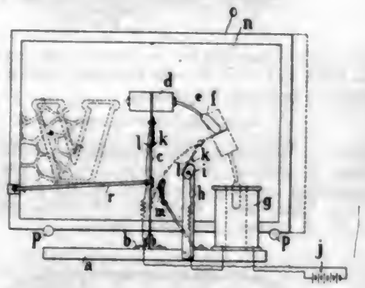
2. In a device of the class described, having a fan blade and a fluid circulating pipe formed into a plurality of convolutions in two sections in the front and rear of said fan blade respectively, the combination of a casing, said casing being composed of two parts hinged together at the top, said hinge connection being formed with a



movable joint connecting the sections of said convolutions in the front and rear of said fan blade, and means for adjustably supporting the casing.

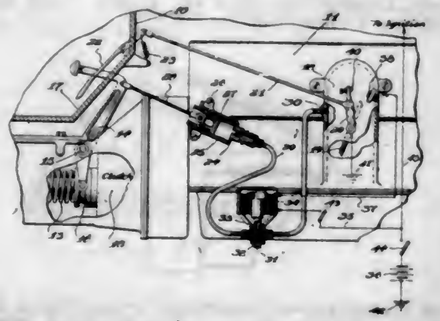
1,635,870. VEHICLE PROPELLING MECHANISM. VIRGIL D. WHITE, West Ossipee, N. H., assignor to Snowmobile Company, Rochester, N. H., a Corporation of New Hampshire. Filed Apr. 16, 1925. Serial No. 23,503. 9 Claims. (Cl. 180—22.)

1. In a motor vehicle, the combination of an axle, two driving wheels carried by said axle, a load sustaining frame, springs which support said frame and permit it to move up and down relatively to said wheels, brace members attached to said axle and moving therewith relatively to said frame as the latter moves up and down, two auxiliary wheels, and two auxiliary wheel carriers each attached to said axle intermediate the outer side of said frame and the adjacent wheels and intermediate the associated brace member and the adjacent driving wheel adjacent the inner side of the latter.



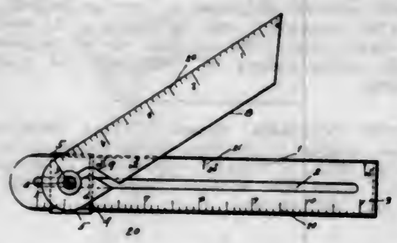
1,635,871. EAVES-TROUGH HANGER. JOSIAH C. WILSON, Richmond, Va. Filed Feb. 4, 1926. Serial No. 85,971. 1 Claim. (Cl. 108—29.)

In combination, an eaves-trough, a strap having an outer angular end presenting a downwardly extending vertical member provided with an opening and contacting with the inner surface of the outer wall of the eaves-trough, said end also presenting a horizontal member extending inwardly from the lower end of said vertical



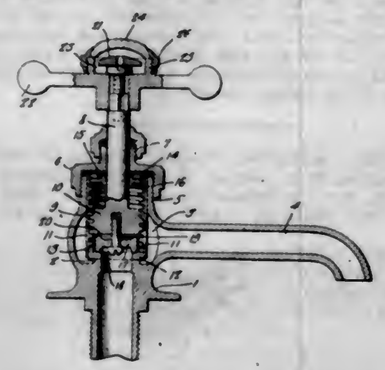
member, a sleeve or tube positioned with its inner end in contact with the inner surface of the inner wall of the eaves-trough and with its outer end resting upon said horizontal member and contacting with said vertical member, said horizontal member supporting the outer end of the sleeve or tube and said vertical member holding the sleeve or tube against outward movement, and a nail passing through the walls of the eaves-trough and through the opening in said vertical member and through the tube.

1,635,872. ELECTRIC MOTOR. VINCENT WISNIEWSKI, Berlin, Germany. Filed June 3, 1924, Serial No. 717,551, and in Germany June 6, 1923. 4 Claims. (Cl. 172—126.)



1. In an electric motor, a frame, an electromagnetic winding on said frame, a pendulum on said frame having a mass of magnetic material to be attracted by said winding when energized, a stationary contact on said frame, a movable contact on said pendulum to conductively engage said stationary contact and become disengaged from the same before said pendulum reaches the end of its oscillation, means to prevent a further conductive engagement between said contacts until the pendulum has returned to the same point of its oscillations, and circuit connections from a source of power to said winding and contacts.

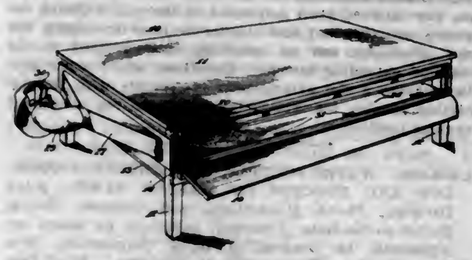
1,635,873. MOTOR VEHICLE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 8, 1922. Serial No. 559,447. 11 Claims. (Cl. 74—107.)



1. In a motor vehicle, the combination with a motor and a clutch, of means for manually operating the clutch, and means operated by the motor tending but not sufficient to operate the clutch.

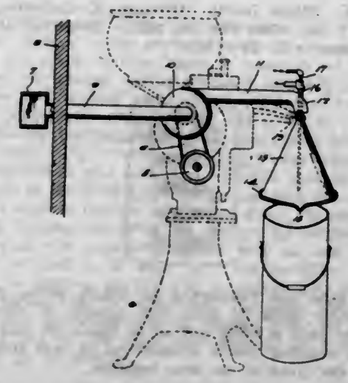
1,635,874. COMBINATION CUT-OFF SCRIBER AND BEVEL SQUARE. ROY A. WYNKOOP, Detroit, Mich. Filed Sept. 27, 1926. Serial No. 137,914. 2 Claims. (Cl. 33—102.)

1. A combination cut-off scriber and bevel square adapted to use for carpenter joinery, comprising a thin metal gage blade having a slotted recess formed nearly the entire length thereof and having one end of said blade bent at right angles to the side of said blade, and forming an end angle bar thereby, an adjustable angle bar slidably mounted on said gage blade, capable of being moved to any desired position thereon, bolt means engaging said adjustable angle bar and the slotted recess of the gage bar, and a detachable blade member engaging said bolt, said detachable blade being capable of turning to any desired angle with said gage blade.



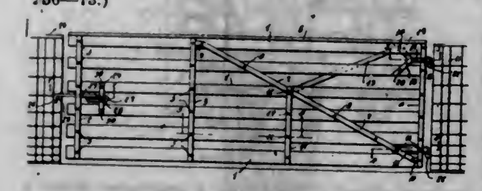
1,635,875. FAUCET. WILLIAM F. ALBRECHT, Salt Lake City, Utah. Filed Dec. 10, 1926. Serial No. 153,946. 4 Claims. (Cl. 251—156.)

1. A faucet of the class described comprising a body, an internally threaded barrel removably fitting in the body and capable of being reversed in the body, a washer carried by each end of the barrel, either one of which is adapted to engage the valve seat in the body, a valve head threaded to engage the threads in the barrel and having a part for engaging the washer at the inner end of the barrel, said barrel having holes therein for permitting the escape of the water into the spout of the washer, a stem connected with the head, a handle on the stem and a cap encircling the stem and threaded to a part of the body for removably holding the parts in position.



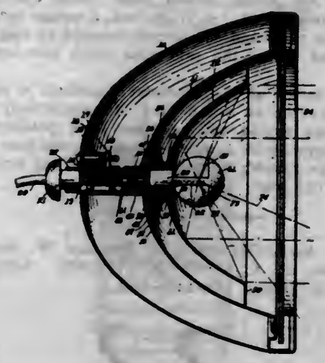
1,635,876. FUR-DRYING APPARATUS. HENRY A. ALTER, Yonkers, and HERBERT J. WOLLNER, MORRIS SCHWARTZMAN, and BENJAMIN SCHWARTZMAN, New York, N. Y. Filed Mar. 11, 1927. Serial No. 174,582. 7 Claims. (Cl. 34—26.)

1. A fur drying apparatus comprising a cabinet having inlet and outlet openings respectively provided in opposed walls thereof, and spaced converging fur receiving panels removably supported within said cabinet between



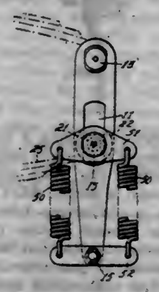
said inlet and outlet openings and co-acting with certain other opposed walls of said cabinet to provide an enclosed conduit between said inlet and outlet openings.

1,635,877. AERATOR AND COOLER FOR CREAM SEPARATORS. IRVING S. ANDERSON, Franklin, Minn. Filed June 1, 1926. Serial No. 112,962. 5 Claims. (Cl. 257—53.)



1. In combination, a conductor pipe, a blower associated with said conductor pipe, one terminal of the conductor pipe being directed downwardly, a water outlet pipe extending through the downwardly directed portion of the conductor pipe co-axially therewith, a cone-shaped container into which the lower end of the water exhaust pipe is threaded, and a water intake pipe extending through the water outlet pipe into the container terminating adjacent the bottom end thereof.

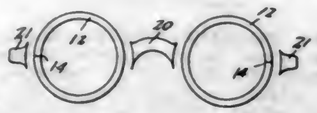
1,635,878. GATE. EDWARD E. ANSON, Clarksville, Ohio. Filed Feb. 12, 1925. Serial No. 8,836. 1 Claim. (Cl. 256—73.)



A gate comprising horizontal slats, a vertical bar secured to the slats at the hinged end of the gate, a second vertical bar secured to the slats between the ends of the gate and located nearer the free than the hinged end thereof, a diagonal brace secured to the slats and extending from the lower end of said first bar to the upper end of said second bar and having horizontally disposed end portions contacting with said bars, a vertical brace positioned between said bars and extending downwardly from the diagonal brace, said vertical brace being located nearer the second than the first of said bars and secured to the diagonal brace and certain of the slats, a second diagonal brace extending upwardly from the point of connection between said first diagonal brace and vertical brace in the direction of the hinged end of the gate, a lower strap positioned between a pair of slats and secured to said first vertical bar and said first diagonal brace, an upper strap positioned between another pair of the slats and secured to said first bar, said upper strap being provided with oppositely inclined arms secured to said last named pair of slats and the second inclined brace, and a vertical bar secured to the slats adjacent the free end of the gate.

1,635,879. HEADLAMP SHIELD. SAMUEL F. ARBUCKLE, Detroit, Mich., assignor to Monogram Lens Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 28, 1924, Serial No. 688,947. Divided and this application filed Mar. 10, 1924. Serial No. 698,011. 4 Claims. (Cl. 240—48.6.)

1. A light shield for lamp bulbs comprising a plate in front of the bulb having a conformation corresponding to that of the bulb with a base edge below the lamp filament axis, said plate being attached directly to the lamp.



1,635,880. SHOCK-ABSORBER SHACKLE. FREDRICK DONALD ARMSTRONG, West Kogarah, near Sydney, New South Wales, Australia. Filed Nov. 21, 1924, Serial No. 751,341, and in Australia Dec. 27, 1923. 2 Claims. (Cl. 267—29.)

1. A relief shackle for leaf springs characterised in that the shackle is constituted of a pair of rectangular section slotted bars spaced apart by a fixed foot member

and a fixed shackle bolt and which carry a movable shackle bolt which extends through the slots in the bars, said movable shackle bolt suspended from the shackle foot bolt by helical springs in tension and fitted with washered slide blocks operatively disposed in said slots, said blocks having through holes therethrough from a grease cell in the shackle bolt to the working faces, said holes adapted for distributing lubricant on said faces in the movement of said blocks in the shackle bar slots.

1,635,881. OPHTHALMIC MOUNTING. NELSON M. BAKER and FRANK FRASER, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 25, 1923. Serial No. 670,678. 3 Claims. (Cl. 88—41.)

1. An ophthalmic mounting of the character described comprising eye pieces formed from rolled tube stock, said stock being cemented at its end, a bridge cemented between said rings and end pieces cemented to said rings at the point where the said tube stock has been cemented.

2. In a device of the character described, a pair of lens rims having an outer layer of substantially semi-circular cross section and an inner layer parallel with the outer layer, both layers being one continuous piece, and a bridge member cemented to each of the lens rims to connect the same.

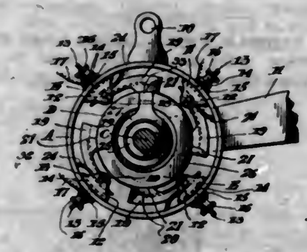
1,635,882. RATCHET DRILL. HERBERT W. BARBOUR, New Bern, N. C. Filed Oct. 7, 1925. Serial No. 61,145. 3 Claims. (Cl. 145—70.)

3. A ratchet device comprising a body, a pair of gear wheels rotatably mounted on said body, a frame member having legs straddling the gear wheels and pivotally mounted on said body, a handle fixed to the frame member and including a stationary tubular section, a rod mounted within the tubular section for axial and angular movement relative thereto, the inner end of the rod projecting in between the gear wheels, pawls pivoted to the inner end of the rod, spring means for urging the pawls into engagement with the gear wheels when the rod is properly positioned angularly, a grooved washer in which said spring is mounted, said washer non-rotatably held on the inner end of the rod, and locking means on the inner end of the rod to hold said washer, pawls and spring into cooperating relation, and whereby to prevent inward displacement of said pawls, means for limiting the outward axial movement of the rod, a spring coacting with the rod and tubular section for urging the rod outwardly, and an operating member fixed to the rod and extending laterally therefrom, said tubular section having a slot arrangement co-operable with the operating member for releasably locking the rod in desired angular position.

1,635,883. WATER-SOLUBLE CONDENSATION PRODUCT AND PROCESS OF MAKING SAME. KARL DAIMLER, FRANZ MARSCHALL, and GERHARD BALLE, Hochst-on-the-Main, Germany, assignors, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1924, Serial No. 755,099, and in Germany Aug. 12, 1922. 6 Claims. (Cl. 260—159.)

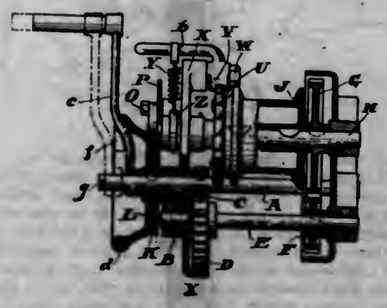
1. Process of producing water-soluble condensation products which consists in treating with a powerful sulfonating agent the resinous oil condensation product obtainable by heating in the absence of a condensing agent an aralkylhalide with an aromatic polynuclear hydrocarbon.

1,635,884. SHOE LACE. MICHAEL K. GILEWICZ, New York, N. Y. Filed Feb. 10, 1927. Serial No. 167,318. 4 Claims. (Cl. 24—143.)



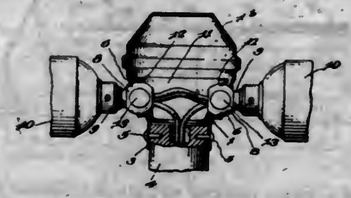
1. A shoe lace comprising an elastic lacing member permanently fixed in place and capable of stretching when the shoe is being put on or taken off, and disengageable securing means independent of said lacing for locking the front of the shoe together.

1,635,885. COMBINATION WHISK-BROOM HOLDER AND SHOE POLISHER. LAWRENCE E. GOELLER, Circleville, Ohio. Filed Dec. 4, 1926. Serial No. 152,646. 3 Claims. (Cl. 15—227.)



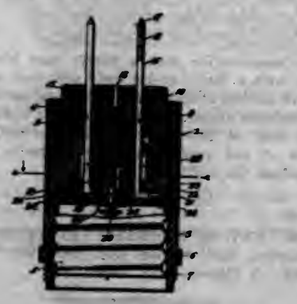
1. A device of the character described comprising an open ended casing adapted to receive the human hand, a shoe shining element attached to one wall of the casing in such a manner as to form an article receptacle between the wall and casing, a flap carried by the casing and normally overlying one end of the device, and means for detachably connecting the flap to the casing wall on the opposite side of the shoe shining element, consisting of ear portions extending from the free end of the flap, adapted to be fastened to the casing wall by any suitable means.

1,635,886. COMMUTATOR. EDWARD GRATTON, Detroit, Mich. Filed June 2, 1925. Serial No. 34,408. 1 Claim. (Cl. 200—26.)



In a commutator of the character described, the combination with a casing provided with an arm for regulating the spark, a cam shaft, a plurality of binding posts in the casing, spring actuated pivotally mounted arms on said binding posts, a sleeve for the cam shaft formed with an annular shoulder and a slot in one end, an insulating washer adapted to contact with said arms and formed with a central annular recess adapted to fit on the sleeve and to engage with the shoulder thereon, a slot in the washer communicating with the annular recess, a contact member adapted to fit on the shaft and into the annular recess in the washer, an extension integral with said member provided with an arm having its end adapted to fit flush with the periphery of the washer, a securing pin adapted to engage with the slot in the sleeve and to extend into the shaft and a cup shaped cap screw-threaded to engage with the screw-threaded end of the shaft and designed to retain the securing pin in position.

1,635,887. HOIST. CHARLES C. HANSEN, Easton, Pa., assignor to Ingelsoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 23, 1926. Serial No. 137,299. 1 Claim. (Cl. 254—186.)



A winch comprising a drive shaft, a handle mounted on said drive shaft and free to move longitudinally thereof, a brake drum connected to said drive shaft having a flange forming a hand wheel, said flange being notched to receive said handle and provided with a pair of lugs extending toward each other and partly inclosing said notch.

1,635,888. CLUSTER CONSTRUCTION. CHRISTIAN HANSON, Chicago, Ill., assignor to Advance Parcholite Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 6, 1925. Serial No. 41,765. 3 Claims. (Cl. 240—78.)

1. In a cluster construction a shell consisting of a base having a neck and provided with a plurality of openings, a resilient band having spaced portions secured to the shell and provided with holes in alignment with said openings and balls frictionally engaged by the walls surrounding said holes and said openings.

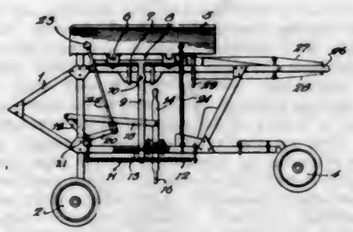
1,635,889. COMBINED LAMP SOCKET AND CURRENT TAP. WILLIAM ILE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed May 19, 1925. Serial No. 31,488. 3 Claims. (Cl. 173—334.)

1. A device of the class described including an insulating body having spaced longitudinal openings and provided also with spaced transverse openings intersecting the longitudinal openings and communicating therewith and at their ends opening through said body, double contact springs arranged in the transverse openings, each consisting of a strip of flat material bent intermediate its ends to form an open-sided recess and straight alining portions extending in opposite directions from the open side of said recess, said oppositely directed portions being bent back upon themselves intermediate their ends to form resilient inwardly extending contact fingers arranged at acute angles to said oppositely directed portions and terminating adjacent the closed side of said recess and spaced therefrom, and conductor bars passing through said longitudinal openings and passing snugly through and conforming to the configuration of said open-sided recesses of the contact springs for clamping the closed side of the recess of each contact spring against the adjacent wall of the respective transverse opening whereby to secure the contact springs in relatively fixed position in the insulating body.

1,635,890. IMPALING TRAP. JEROME D. JEFFERSON, Federalsburg, Md., assignor to Del-Mar-Va Sales Company, Laurel, Del. Filed Mar. 9, 1927. Serial No. 173,829. 10 Claims. (Cl. 43—79.)

10. An impaling trap comprising a base having at one side a horizontal supporting surface, spaced by an intermediate recess from an abutment at the opposite end of

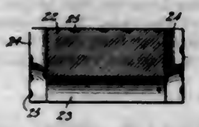
the base, said spaced portion being provided with an aperture to permit access thereto, a sliding impaling pin mounted upon the supporting portion to engage the abut-



ment, and a trigger engaging said pin and disposed intermediate the pin and aperture and in alignment with said aperture.

1,635,891. COMPACT EJECTOR FOR VANITY CASES. WILLIAM G. KENDALL, Newark, N. J. Filed Jan. 11, 1927. Serial No. 160,440. 6 Claims. (Cl. 132—83.)

1. The combination with a vanity case having a hinge provided with a pintle and a body provided with a catch, of a plate having a knuckle surrounding said pintle, said plate extending across the bottom of said body, and means forming part of the plate interlocking with the catch structure of the vanity case for normally holding the plate against the bottom of the body.

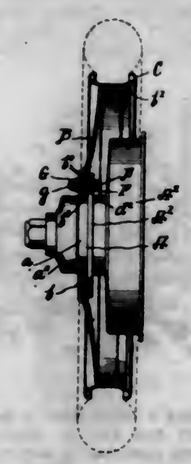


1,635,892. FLYING MACHINE. ELMER GLENN KINZIE, Logansport, Ind. Filed Oct. 18, 1926. Serial No. 142,344. 5 Claims. (Cl. 244—20.)

1. In a flying machine of the character described, the combination with a frame, of a T-bar having a vertical portion and a horizontal portion, the said bar being pivotally connected with the said frame, springs attached to the frame and to the lower end of the vertical portion of the T-bar to hold the same elastically in place, wings secured to the bar pivotally and in adjustable relation thereto, means for working the wings up and down, a tail plane mounted at the rear of the said frame, and means for actuating the tail plane.

1,635,893. CORNICE BLOCK. JOSEPH LYNCH, Perth Amboy, N. J. Filed Mar. 8, 1927. Serial No. 173,708. 4 Claims. (Cl. 72—86.)

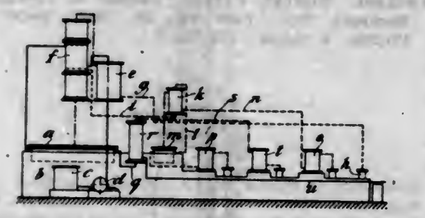
1. A block of the class described of generally rectangular formation having a longitudinally extending groove in its under face adapted to receive a supporting rod, and having a transverse groove in one of its end faces intersecting the first mentioned groove and adapted



to receive a hanger bolt, said second mentioned groove being enlarged to accommodate a supporting rod encircling eye on the hanger bolt.

1,635,894. VEHICLE WHEEL. ANDRÉ JULES MICHELIN, Paris, France. Filed Apr. 16, 1920, Serial No. 374,505, and in France Dec. 8, 1913. 34 Claims. (Cl. 301—63.)

1. A vehicle wheel comprising a hub, an annular dished web plate of resilient metal provided with a flanged periphery, and with a central annular reinforce integral therewith and adapted to slip freely over said hub, and means for detachably connecting the reinforced central portion of said web plate to said hub.



1,635,895. VEHICLE WHEEL. ANDRÉ JULES MICHELIN, Paris, France. Filed Apr. 16, 1920, Serial No. 374,506, and in Great Britain May 20, 1916. 21 Claims. (Cl. 301—63.)

12. In a wheel of the type described, the combination with a hub having a plurality of laterally-extending studs, of a body mounted on said hub and a tire rim mounted
